We drove this 2½ ton Rolls Royce over a bridge made entirely of St. Regis paper to prove a point

The point is that paper can be stronger than you think. Especially if it's in the form of corrugated box material.

The roadbed of this bridge was made out of six layers of St. Regis triple-wall corrugated–a material we supply a lot of to the U.S. The verticals were made of five layers, and the triangles of four.

Triplewall is made up of three layers of the corrugated "medium" and four layers of linerboard. And it can withstand 1,100 lbs. per square inch of puncture pressure on its side. And on its edge, a 12 x 12 in. piece can take 930 lbs. A mere seven layers of paper!

The strength of corrugated isn't only in the paper itself. It's the structure. The shape of the medium is one of the strongest structures known. In Colonial Virginia walls were built in the corrugated, or serpentine form. And they're still standing today, although they're only one brick thick.

Corrugated box material is a sandwich. A wavy corrugated medium is squeezed between two rollers with meshing teeth. That's the meat of the sandwich. The bread is two layers of heavy paper called linerboard.

Since it was patented in 1871, corrugated has been one of the mainstays of the American distribution system. In fact, the corrugated box is one reason we have the most efficient distribution system in the world.

And St. Regis has had its share of innovations in the field. Partly because we're one of the largest makers of linerboard in the world. And partly because of our tec nology and marketing thrust.

All this reflects the marketing stance of St. Regis toward all our packaging, paper, lumber and constructio products. To use the full weight of our technology in serving our markets and in renewing the forest resource our products come from.

St. Regis—serving Man and Nature.

There is nothing gross about profit.

347620

When a large corporation reports a profit, it's fashionable in some circles to blame the corporation and the profit for all the ills of our economy.

Yet, when people prosper from their own hard work, that's lauded as a guarantee of our democratic society.

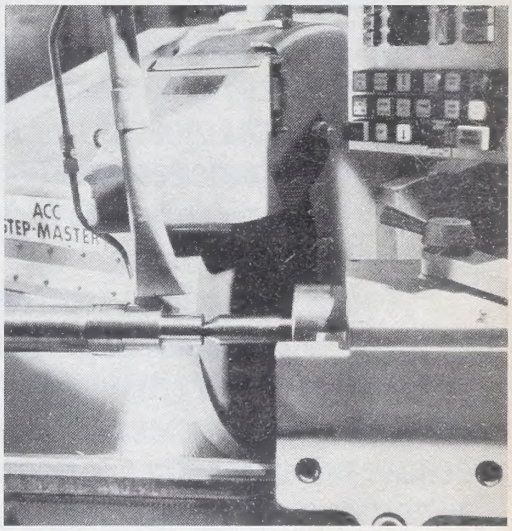
But after all, what are corporations? They are businesses (groups of people) owned by stockholders (more people).

And what happens to that profit? First off, as much as half goes out as taxes. Which eventually end up benefiting the public (people).

About forty per cent of what's left is paid directly to stockholders (more people) as dividends.

And those "retained" profits (which average 3¢ on a dollar of sales) are used to buy new machinery, build new plants and make more jobs for (you guessed it!) people.

If there is anything "gross" about profit, it is the notion that, somehow, the people don't benefit from it.



The Grinding Machine Division's Stepmaster™ computer-controlled grinder automatically grinds multiple shaft diameters, a big improvement in grinding technology.

Delta is an air line run by professionals. Like Dot Turnipseed, Ticket Sales Agent.

She has spent most of her 10 years with Delta making telephone reservations. But she loves meeting customers face to face in her job at a downtown ticket office.

Tycoons, tots, globe-trotters and first-timers. She has a warm welcome for everyone.

And Dot doesn't just sell tickets. She finds an earlier flight, a lower fare, an easier connection for her customers. Because when it comes to people, Dot couldn't care more. And that goes for all 32,000 Delta professionals.

Delta is ready when you are.

This is Delta's Wide-Ride L-1011 TriStar with "living room" cabins 8 feet high and 19 feet wide. You fly in quiet luxury.

31st ANNUAL REPORT ON AMERICAN INDUSTRY

This special issue is built around FORBES' own yardsticks of management performance. They are used to measure the performance of the 1,006 largest U.S. public companies, with sales in the latest 12 months of at least $275 million.

Features

The Economics Business
heerful Days In The Dismal Science. If there were no onomists, where would we all go for economic certainty? To gypsies, probably," says one of their number. **34**

The Who's Where Rankings

The FORBES Yardsticks
hat they are and how they are calculated. **40**

Where To Find The Company
n alphabetical index to 1,006 companies in this issue, and a mmary of the yardstick rankings. **41**

Who's Where In The Industry Groups
ow 30 major industries and 82 subgroups compare on the ORBES yardsticks. **244**

Who's Where In Profitability
ow the largest U.S. companies rank in return on equity and turn on total capital. **248**

Who's Where In Growth
ow the largest U.S. companies stack up in sales and earn-gs-per-share growth. **259**

Who's Where In The Stock Market
ow the largest U.S. companies fared in the stock market er the last five years. **267**

The Industry Reports

Aerospace And Defense
Ask not what recession will do to this industry, with both commercial and military markets booming. Ask rather which company will be the late bloomer. **211**

Automotive
The storm warnings are up with strike threats, the need for big spending to meet federal fuel and safety standards in the face of rising interest rates and a possible recession. **224**

Chemicals
While inflation is steaming along at a full 9%, the chemical industry finds it tough going to eke out price increases of 1% and 2%. **204**

Construction
After two glorious years the housing market is turning soft. Will 1979 be a rerun of 1973? Everyone hopes not. **62**

Electronics
With major markets booming, costs generally under control, most electronics companies should show modest earnings gains this year. **154**

Energy
Without price deregulation, the oil industry could go the way of steel and the railroads. Unfortunately deregulation is as politically unpalatable as it is economically necessary. ...**91**

Finance
The prosperity that financial institutions have enjoyed for the past two years is going to be tested in 1979 in a variety of ways. **115**

Food And Drink
Trade down from or trade down to? In a recession it pays to look closely at product lines, even in this industry. 83

Forest Products And Packaging
Wood and papermakers escaped a downturn last year. This year many of them are not likely to be so lucky. 195

Household Products And Apparel
With seriously overextended consumers and the prospect of a housing slump, there's little question that the boom is over for many of these companies. 150

Industrial Equipment
With the U.S. starting to look like the antique shop of the industrial world, capital goods makers may finally get away from the once inexorable cycle of following the economy down. 216

Information Processing
IBM is winning even while it is losing in one of the few major industries that is still showing explosive growth. 230

Leisure
Some companies in this business have forgotten what happened to the grasshopper in Aesop's Fables when the snow began to fall. 129

Metals
This year's recession isn't going to hurt the aluminum industry. Nothing in sight promises much help for the ailing copper industry. 145

Multicompanies
For several compelling reasons—low stock prices and high interest overseas among them—the urge to merge and acquire goes on. 238

Personal Products And Health Care
Are things like yoga and jogging and weight watching bad for business? For some businesses, yes. 99

Retail Distribution
Department stores are dumping inventories, discounters are trying for a new image and retailers are bracing for a slowdown in 1979. 122

Steel
The U.S. had the most profitable major steel industry in the free world in 1978. That wasn't saying much. 108

Supermarkets And Wholesalers
Take your eyes off the basics for one moment in this busine and you're in trouble—especially in a downturn. 13

Transportation
Anyone who thinks deregulation will bring prosperity to t railroads and truckers as it did to the airlines had better thi again. 5

Utilities
The telephone business is getting more competitive; the g business, more gas. But the electricity business is gettin federal regulation. 7

Money And Investments

The Economy
Inflation: Can We Check The Escalation? By the end of 197 inflation should be down to 7% or less and headed lowe True, 7% is still a horror. Nevertheless, the trend will b important. 28

Is Inflation An Illusion? The fact that the distribution income has not changed means that the entire economy i in effect, indexed to inflation. That means that inflatio is easier to bear and less of a distortion than most pe ple believe, but also that it will be extraordinarily hard t stop. 28

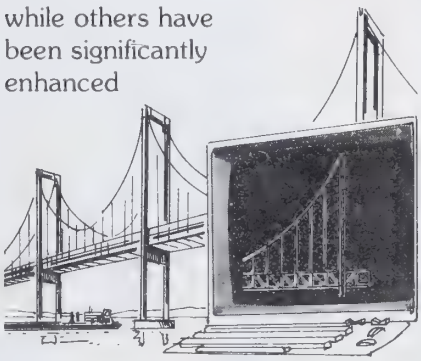
You can have the same computing capability that helps create Boeing airplanes ...from Boeing Computer Services

Capability to help managers manage.

Our newest management system EIS — Executive Information Service — is the most comprehensive program for financial planning, reporting, and control. Customers tell us that EIS gives them a total look at their operation — from personal management planning, departmentally, to complete consolidation of the financial management of the company. Originally created for Boeing's needs, EIS has been enhanced for use by all financial executives. Many companies are now using it, and BCS can make EIS available for your operation.
It's a service that can be tailored to your business yet is flexible enough to grow with business expansion. To respond to the day-to-day business problems — planning, analysis, reporting, forecasting and control — take a look at a responsive management system — EIS.

Capability to help engineers design.

Engineering power like the new STRUDL — an advanced structural analysis package on the CYBER 175 — makes engineering time more productive while cutting computer costs. Other engineering software packages — a complete library from energy systems through project management — provide the opportunity for greater personal engineering creativity and productivity. Use them to take over routine calculations, absorb overloads, and carry out complex analyses. Some of the engineering packages are exclusive, while others have been significantly enhanced



by BCS to provide the newest computerized engineering features. Whether your company is large or small, whether you use computer time interactively or in batch modes, BCS could have the package that fits your engineering program.

Backed with total support.

BCS currently serves 1900 clients and provides more service, more support, and more efficiency than you'll find from most computer service firms.

BCS has the training personnel, the technical representatives, the specialists — in all disciplines — to keep you "on-stream." And, we designed our products to meet customer's needs.

With over $200 million of IBM, CDC, DEC, and other manufacturers' hardware, BCS gives you tremendous computing capacity and productivity improvement capability. And, having one of the world's largest, privately-owned communications networks, you get fast access — from your office or in one of ours in 80 cities.

Elements for your success.

When you need financial problem-solving, specific engineering programs, commercial bank and thrift institution services, data processing software, or sheer machine capacity, there's a wide range of capabilities available from BCS — a competitive, full service company. For an immediate consultation on your problem, call or write W. Thomas H. MacNew, Director of Marketing Communications at (201) 540-7722, Boeing Computer Services Co., 177 Madison Avenue, Morristown, N.J. 07960.

The U.S. had the most profitable major
free world in 1978. That wasn't saying

"The Continental Corporation has paid continuous cash dividends for 125 years. That's longer than all but a dozen companies on the Big Board."

John B. Ricker, Jr., Chairman and President

"Since 1853, The Continental Corporation has paid cash dividends every year. And that's a record surpassed by only twelve of the almost 1600 companies listed on the New York Stock Exchange.

"With that kind of history behind us, our task, of course, is to make the future fit the past—a job we work at every single day.

"What exactly are we? Basically, I guess you'd have to call us a holding company for insurance concerns. A lot of insurance concerns. In fact, in property and casualty insurance we're the seventh largest American company.

"Although the major portion of our revenues comes from property and casualty operations, we're stepping up our activity in life and health insurance, international insurance and reinsurance, and financial services. Put them together and you can see why, with over $6 billion in assets, Fortune ranks us as the tenth largest diversified financial corporation.

"What's more, we're performance-minded. In 1977, we reported record results—in revenues, income, assets and shareholders' equity. Revenues were up to $2.8 billion, while operating income rose to $250 million. And operating income for the first nine months of 1978 continued at an all-time high, up 26% over the same period in 1977.

"But our operations tell only part of the story. With prudent management, net investment income from our $3.8 billion portfolio has more than doubled over the past seven years, amounting to $240 million in 1977. And it's up again in 1978—22% for the first nine months.

"Of course, one of our primary goals is to live up to our responsibilities to our shareholders. Our continuous cash dividend payout record speaks for itself. And since 1960, we've increased our dividend 13 times. Over a ten year period ending in 1977, we've shown a 10.4% average total return to investors.

"That kind of record pushes all of us at The Continental Corporation to get on to even bigger and better things. For instance, we've recently moved to take full advantage of the new Insurance Free-Trade Zone in New York, the first of its kind in the U.S."

For our latest financial reports, write The Continental Corporation, Dept. C, 80 Maiden Lane, New York, New York 10038.

THE CONTINENTAL CORPORATION

The Continental that means insurance.

Side Lines

Our new assistant publisher

There's a brand new name—and another Forbes—on the masthead. The addition is Christopher C. (Kip) Forbes, 28, who has been promoted to vice president and assistant publisher of Forbes magazine. In his relatively brief working career, Kip has played quite a number of interesting and impressive roles.

For the past two years, Kip was the publisher of *Nineteenth Century*, a quarterly magazine produced by Forbes Inc. on behalf of The Victorian Society in America. This beautifully presented periodical portrays the arts and cultural artifacts of the era between 1790 and World War I. This month, The Victorian Society takes over its publication. Under Kip, *Nineteenth Century*'s advertising volume increased impressively; its editorial content won praise from art scholars, collectors and dealers.

Kip graduated with high honors in art history from Princeton University 1972. Recently, he wrote a book Hermione Waterfield on Forbes m zine's extensive collection of the w of Peter Carl Fabergé, jeweler to the sian Imperial Court in the late 19th early 20th centuries *bergé: Imperial Eggs Other Fantasies*, Scribn $19.95). This lavishly lustrated book has ent a second printing.

Kip Forbes, Margaret Kelly
New assignments.

As assistant to Publ er James J. Dunn, Kip now be working chi on the advertising sid this magazine. He's stranger to the ad ga before taking over the magazine, he worked several years as a For advertising salesman.

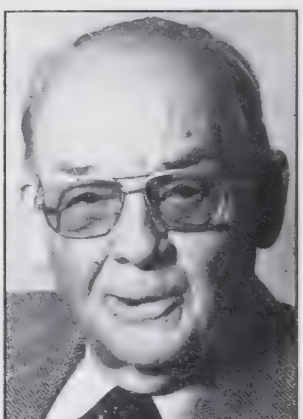
Taking up Kip's tas curator of Forbes' ex sive art collection wil Margaret Kelly, who been *Nineteenth Century*'s general m ager and who has a masters degree in from New York University's Institut Fine Arts.

Goodbye, but not farewell

One evening in the summer of 1949, Malcolm Forbes, then assistant publisher of this magazine, met a knowledgeable, articulate securities analyst. Impressed, Forbes asked Lucien Hooper to write a column of financial advice. In his autobiography, Hooper thus described the results:

"Forbes at that time had a circulation of about 65,000. . . . I was becoming connected at the right time with a magazine which was about to grow rapidly in reputation, influence and profitability."

Forbes' circulation increased tenfold in the decades that followed, and Lucien Hooper became both friend and counselor to several generations of businessmen. Nevertheless, he was no overnight wonder, but already a wise and experienced investment man when he came to Forbes. Born on a Maine farm in 1896, he went to Harvard and thence to newspaper reporting, financial writing and Wall Street. In Hooper's first Forbes column *(Aug. 15, 1949)* he warned readers not t taken in by investment fads (". . . re shrewd buyers anticipate vogues inst of buying into them"). For three deca Lucien Hooper has been dispensing c mon sense. If the stock market was r ning away on the upside, he would cou caution; when panic vailed, he would cou against despair. Inv ment gimmicks and vestment "geniuses" their brief moments on stage, but Hooper's ca Yankee wisdom remai as valid and useful as ev



Lucien Hooper
Thirty years of advice.

Everything ends. A this issue, in order to lig en his work load at Lucien Hooper will ce writing his Forbes c umn. But we emphasi He is *lightening* his lo not shedding it. His adm ers will have a chance to how sharp and vigorous still is when he appears television's *Wall Street Week* Jan. 12. A Lucien will continue to serve his dozen clients as a vice president of the respec Thomson McKinnon Securities. "I exp to be on the job for a long time," he s cheerfully. ■

MAI presents the world's second greatest writer.

If William Shakespeare, the world's greatest writer, could be interviewed today you might hear something like this:

Interviewer: Sir, what would you write about today?
WS: About two plays a week.
Int.: How could you do that?
WS: I would use MAI's extraordinary Wordstream™ word processing system.
Int.: But isn't that for speed and accuracy in *business* communications?
WS: Yea, verily—but it beats a quill pen! It's the system that works with push-button simplicity to help writers, as well as businessmen, avoid a comedy of errors. Your completed work is always perfect, so all's well that ends well.
Int.: Then you would call MAI's Wordstream system...?
WS: ...the world's *second* greatest writer!

Thank you, Mr. Shakespeare, but simplifying computer technology for *business* is really what MAI is all about.

Our Basic Four® computer systems are acclaimed for their simplicity of operation by small and large businesses alike, the world over.

Our Sorbus subsidiary, thanks to innovative and simplified techniques for the repair and maintenance of all types of data-processing equipment, has become the nation's largest third-party computer service network.

If you would like to know more about the MAI companies, and the extent of our manufacturing, sales and service operations here in the U.S. and in over 30 countries internationally, please send for our Annual Report and other literature.

It takes a smart company to make computer technology simple.

OUT

THE OVERWEIGHT OFFICE.

Kodak microfilm can trim paper fat and reduce paper-handling costs significantly. How? By stemming the flow of more and more paper into your office filing systems.

We realize that a modern office can't function without its minimum daily intake of paper. But adding more paper just means adding more flab to filing systems. And a flabby filing system means more time spent filing, retrieving, and sometimes misfiling important papers.

That's why you should look into the Kodak Reducing Plan. It can cut down your paper intake and reduce paper-handling costs significantly. How? Through microfilming, key element in the Kodak Reducing Plan.

Of course, like all reducing plans, ours requires a little will power. Like taking time out right now to clip the coupon. Want to get your office back into fighting trim? The first place to start cutting is right here on this page.

Snow warning

The railroads that were paralyzed by last winter's brutal weather—"devastated" is the word used by Interstate Commerce Commission Chairman Daniel O'Neal—will be getting some extra help. The ICC is gearing up its own weather information service for lines in 30 states, reaching from New England to the Rockies and south into West Virginia, the hardest hit areas last year. The plan is to give roads and shippers daily snow bulletins which would guide them in adjusting schedules to meet impending storms. When tracks are blocked, the commission will dispatch extra agents from its offices to help supervise loading and unloading and, if need be, the ICC will invoke its emergency powers to stop or reroute freight. The ICC will get its basic data, even as you and I, from the National Weather Service.

The mouse that roared

Poet Bobbie Burns sang of the mouse as a "wee, sleekit, cow'rin', tim'rous beastie," but to Pacific Gas & Electric the beastie is a billion-dollar bugbear. The big West Coast utility has plans for two new generating plants in the San Francisco Bay area at the confluence of the San Joaquin and Sacramento rivers. One, coal-fired, is slated to cost about $2 billion; the second, on the other side of the water, will burn low-sulfur oil and the company has ticketed $863 million to build it. But it has been discovered that the swampy stretch surrounding the meeting of the rivers is the habitat of the salt-marsh harvest mouse, known to zoologists as *Reithrodontomys raviventris halicoetes* and, more importantly, listed officially as an endangered species. The law is unequivocal: Nothing, but nothing, can be allowed to harm an endangered species. So, in addition to its other expenses for the two plants (which the company says must be built or the Bay Area faces blackouts by 1985), PG&E is now considering the possibility of creating new marshes to replace the land used for the building sites. That, it hopes, will placate the environmental authorities and, of course, the *Reithrodontomys raviventris halicoetes.*

Corruption confusion

Patience will have to be the watchword for businessmen who have been awaiting some kind of official guidance on what they may and may not do under the 1977 Foreign Corrupt Practices Act, which is designed to outlaw bribes, "improper" commissions and other shenanigans in international trade. Many corporations, particularly among the multinationals, have been pressing for such help, charging that its absence was forcing them simply to forego dealing with countries where such practices are a way of life. The Commerce Department, which is charged with promoting U.S. exports, was equally upset. Congress did not order any guidelines for the Corrupt Practices Act (as it had for the Arab boycott law), but last September President Carter did direct the Justice Department to prepare them. Justice has demurred, primarily because it does not want to tie itself down on what it chooses to prosecute in the future. The delay, however, does not mean that nothing is happening. M Richard, chief of the fraud sectior Justice's criminal division, is workin what department spokesmen describ a brochure that, it is hoped, will solve problem. This is due for publication the early months of 1979 maybe.

Home, sweeter home

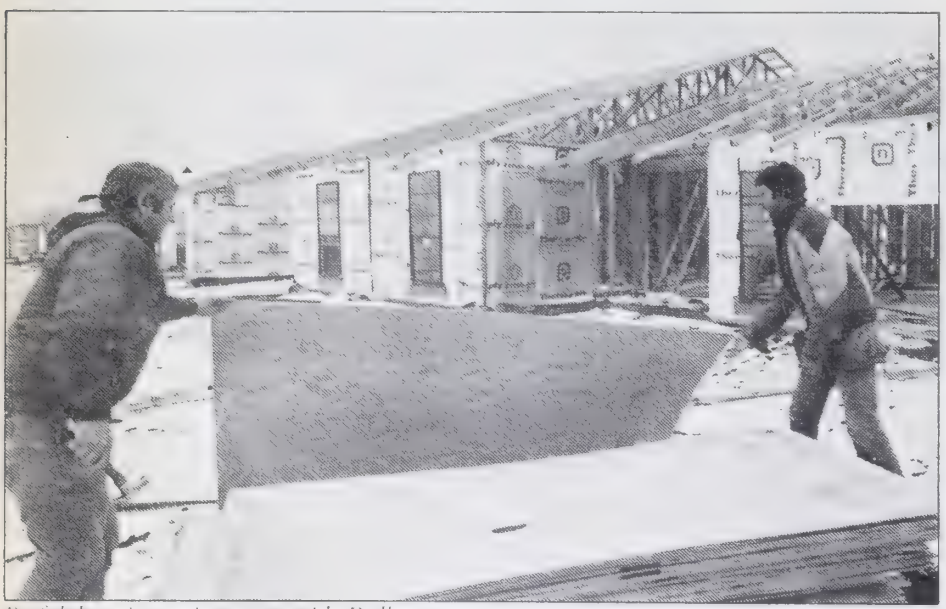
Soaring home prices may have becon cliché, but there is more to the incre than inflation. One factor is that bu today want more house than in for years. Thomas H. Harter, chief ecc mist for the Mortgage Bankers Ass ation, points out that between 1970 1977 the median area for new one-fan homes went from 1,510 to 1,720 sq feet. Other changes noted by Har During the same period, the percent of new houses with two or more b rooms jumped from 48% to 70%; th with dishwashers went from 42% 82%; homes with fireplaces increa from 35% to 61%; even those with rages moved from 58% to 68%. Des the climb in prices—and interest rate Harter expects demand for new home remain strong until at least 1989, cause the number of Americans in 25-to-34 age group will grow.

You can't win

A cool reception is in store for that p posal by Robert H. McKinney, heac the Federal Home Loan Bank Board, give savings and loan associations m leeway in competing with banks. T idea is to let the savings and loans set new savings accounts, called paym order accounts, that customers can to pay bills. The purpose was to offset least in part, the new authority gi banks to transfer money from savings checking accounts and cover overdra The American Bankers Association c McKinney's plan a "pig in a poke" a suggests dropping it, at least until furt study. And even the U.S. League of S ings Associations, voice of the S& thinks its members will have to be lowed to pay higher interest rates on new accounts. Otherwise, it says, th will be "second rate."

A vote for Wall Street

The zig-zagging stock market got other vote of confidence on Wall Stre The Boston-based Fidelity Group, for first time in more than ten years, bringing out a new equity fund. T Group, with 18 mutual funds already the market, calls this one Fidelity As Investment Trust. The strategy will be



Prefab housing going up outside Dallas
Prices may be higher but there are more garages, more fireplaces and more room.

WHEN WANG TALKS IBM LISTENS.

(and so do Honeywell, Burroughs, DEC, UNIVAC, H.P., and Data General)

That's because when Wang systems "talk" they employ industry standard data communication procedures. Fact is Wang's computers and word processors are talking to other systems around the world. Our broad range of interfaces allows our systems to be integrated into a wide variety of corporate computer networks.

Wang data communication capabilities are designed and developed uniformly across both computer and word processor product lines. This approach to standardized communications means Wang systems can "talk" to a variety of computers, and you can conveniently combine Wang Computers and Word Processors into distributed networks.

Wang's communications allow our users to build systems in distributed processing, electronic mail and remote data entry environments. Wang systems offer multiple data communication protocols including: IBM 2780 3780, HASP, 3275, along with TTY among others.

Wang is the 2nd largest manufacturer of small business computers. A large number of these systems employ industry standard, high performance data communications to expand their efficiency in distributed data processing applications.

An increasing number of large corporations are finding Wang communicating word processors the key to office automation. During the first six months of availability, Wang Communicating Word Processing Systems were ordered or installed by twenty of Fortune's fifty largest corporations.

If your EDP requirements include data communication networks of modern distributed systems—both computers and word processors, then take a look at a company with years of data communications experience on all its industry leading systems. For more information mail this coupon to Wang Laboratories, Inc., Lowell, MA 01851, or call (617) 851-4111.

invest the no-load fund's money in c panies whose market prices, in Fideli judgment, are low in relation to b value. Inflation and the market's ove performance, says Fidelity Vice Pr dent Dorsey R. Gardner, have pus many issue prices far below their a worth. For example, for the companie the Dow Jones industrial average, G. ner notes, the ratio of book value market price is close to its lowest p in 40 years. The Group's approach, G ner says, comes straight out of W Street's bible, *Security Analysis*, the cla work by Benjamin Graham and Da Dodd. Fidelity plans to get away fr earnings growth, price/earnings ra and dividend yields, and to concentr on such factors as asset replacement ues, potential earnings turnaround better return on assets.

Detroit's dreams

The annual forecasting derby in Det is under way. General Motors Chairm Thomas A. Murphy is repeating his b ish prediction of last year and sees 1 million industry sales for the 1979 m els. Henry Ford II predicts a more mod 14.8 million in car and truck sales, the experts in the Commerce Dep ment are saying 14.9 million. Who w win? GM President E.M. (Pete) Estes l a word of caution for those reading D troit's form charts. Commenting on boss Murphy's success with his 19 forecast, Estes noted that "prophecies the automobile business are pretty mu self-fulfilling." In other words, Murp knows that he can always rely on t number one automaker's massive sa force to help make his dreams come tr

The Olympic spirit

The Kremlin has taken another sm step into the automotive age. Gearing for the hordes of visitors expected for t 1980 Olympic Games in Moscow, t Russians have decided to add at leas few service stations to its rudimenta road net. The European half of t U.S.S.R., where most of its citizens li boasts a total of just 350 servic- statio the U.S. has a total of 171,300 gas s tions. Last month, Moscow quiet signed a deal with West German Daimler-Benz to staff 13 strategically l cated service stations with factor trained mechanics, and to operate a fl of emergency vehicles. The Merced manufacturer says it hopes to make modest profit and, a deadpan spokesm adds, "in keeping with the Olympic sp it, our aid will not be confined to Me cedes vehicles." ■

Guaranteed overnight package service.

It doesn't just mean you can get your money back. It means you won't have to.

Next Day Express Mail guarantees* overnight service by 10 a.m. Or your money back. All of it.

But we know you really want to get your package there on time. Not to get your money back.

This guarantee is our straightforward demonstration of confidence. After all, we handle millions of packages that have this guarantee. So you better believe we're going to be on time.

All you have to do is to get your package to an Express Mail Post Office before 5 p.m. Anything mailable, up to 70 pounds.

We'll get it to the destination Express Mail Post Office ready to be picked up as early as 10 a.m. the next business day.

City to city, Post Office to Post Office, by 10 a.m. Guaranteed.

What does it cost? A lot less than you'd think. For example, it's only $8.50 to get a 5-lb. package from N.Y. to L.A.

For about two dollars more, we'll deliver it right to their door by 3 p.m. If not earlier. Weekends and holidays, too.

We've got over 1,600 Express Mail Post Offices in over 1,000 cities. Look in the Yellow Pages under Air Cargo for the Express Mail Post Office nearest you.

Got something to ship in a hurry? Ship it Express Mail.

With our guarantee, we have to be tough on ourselves. And that makes it easier on you.

EXPRESS MAIL®
NEXT DAY SERVICE

*Our guarantee: 100% refund of Express Mail postage upon application at origin if mailed by 5 p.m. at an Express Mail Post Office and not available for claim at a destination Express Mail Post Office by 10 a.m. next business day or delivery not attempted to addressee by 3 p.m. of the next day (unless delayed by strike or work stoppage). ©1978

Follow-Through

Thirty years of change

On a cold, clear day in January 1949, Harry S Truman took the oath as the 32nd President of the United States and, in effect, assumed command of the Free World. The American dollar then was not just the dominant currency; it was the only strong one. Militarily, the U.S. loomed even larger, with the only existing nuclear weapons locked in its arsenals. The U.S. economy, the machine that had powered the Allied victory in World War II, was helping to rebuild a world that war had shattered. Two of the four policy points listed in Truman's inaugural address were based on the economy. The U.S., he said, was dedicated to "world economic recovery," and he called for a "bold new program" to make "the benefits of our scientific advances and industrial progress" available to the rest of the world.

That same month, FORBES *(Jan. 1, 1949)* undertook its first Annual Report on American Industry, a broad-gauge study of the economy Truman wanted to harness for global recovery. Both the President and the magazine were dealing with a far simpler world. The U.S. gross national product then was $258 billion; in 1979, GNP has to be measured in trillions. The Marshall Plan was just beginning to help rebuild Western Europe. Germany lay in ruins, and as Truman took his oath American planes were flying in food and fuel to keep Berlin alive. Japan was still ruled, economically and politically, by Douglas MacArthur.

Thirty years later, with the dollar taking a global beating, the U.S. is selling German banks billions of deutsche mark-denominated bonds to bolster it, the t public issue of U.S. securities in a fore currency. Washington and Tokyo are tering 1979 locked in hard bargainin the U.S. tries to slow the flood of Japar imports that has brought cries for h even from the American steel industry 1949 steelmaker to the world.

That first FORBES survey posed questions for the ten major industrie examined. Some are valid today; oth sound naïve. "Will radio's lusty offspr television," it asked, for example, "str a death-blow at its still youthful paren FORBES didn't think that would happe but for the wrong reason. The rep noted the limited range of TV signals, high cost of programming for video other drawbacks. The caution m sense in 1949, when 100 million Am cans tuned in to Truman's Inaugural— radio. Television, however, did go swiftly to overshadow its "still youth parent" and to siphon off the major sh of broadcast advertising revenues. St today, the U.S. has about 5,000 ra stations in the AM band alone, and Federal Communications Commiss will ask the World Administrative Ra Conference for enough additional quencies to put 800 more commer AM stations on the air.

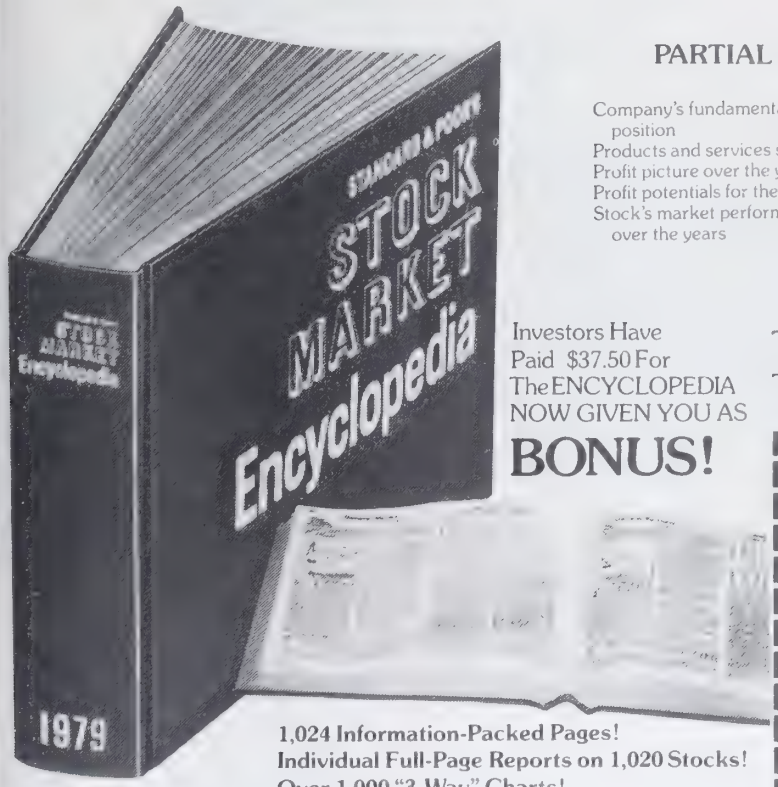
The 1949 FORBES analysis was as beat on the nation's railroads as it reserved about TV's success. Again, without reason. The 1949 figures for rails read like the timetable to the Pro ised Land—operating revenues of $ billion, freight revenues up 13%, 100,(new freight cars added during the y and close to 10,000 new ones joining fleet each month. Those numbers hel

1949: Harry Truman takes his oath of office from Chief Justice Fred Vinson
For businessmen, some thirty-year-old questions won't go away.

Announcing Standard & Poor's $37.50 Bonus to Investors!

THE NEW 1979 STOCK MARKET ENCYCLOPEDIA

The Results of Standard & Poor's Multi-Million Dollar Research Over The Years Into The Investment Merits of 1,020 Common Stocks Published in ONE Comprehensive, Easy To Use 1,024-Page Reference Volume! This authoritative 1979 STOCK MARKET ENCYCLOPEDIA contains, we believe, more significant information on a greater number of stocks than has ever before been assembled between the covers of one book. Comprehensive reports on 1,020 widely traded stocks...tens of thousands of important investment facts that answer practically any question you may have regarding a stock...over 1,000 individual stock charts...an invaluable addition to your investment library. We want you to use it and profit from its use in conjunction with a 10-week $24.50 trial of Standard & Poor's famous weekly Investment Service, the OUTLOOK – and not pay us one additional penny for this $37.50 volume! If at any time during this period you feel you are not getting many times your money's worth from the weekly OUTLOOK, cancel it and receive a prompt refund on the unused part of your subscription. You keep the ENCYCLOPEDIA regardless.



1,024 Information-Packed Pages!
Individual Full-Page Reports on 1,020 Stocks!
Over 1,000 "3-Way" Charts!

PARTIAL CHECKLIST OF VALUABLE CONTENTS

- Company's fundamental position
- Products and services supplied
- Profit picture over the years
- Profit potentials for the future

1979 FORD LTD

INTRODUCING A NEW AMERICAN ROAD CAR.

D Landau 4-Door Sedan

More front seat room
More rear seat room
More handling ease
More window area
More driver convenience
.than the 1978 LTD.

he 1979 LTD was engineered to ake driving on today's American oads a pleasure. With a new com ination of roominess, handling ase and driver convenience for the TD. This new LTD is a beauty.

This year's LTD has been designed with more passenger room inside to help give you comfort on even the longest trips—with more head room, leg room and shoulder room—front seat and back—than last year's LTD. Yet the new LTD is actually easier handling and easier parking than before, even in tough city traffic.

In addition to its standard 5.0 litre V-8 engine, the full-size 1979 LTD offers you an impressive list of standard features, in 2-door, 4-door and Wagon models.

Ford LTD for 1979. A New American Road Car designed to take you across town or across the country in full-size roominess. See your local Ford Dealer, and test drive the new LTD on your own roads.

Follow-Through

lster FORBES' conclusion that "in spite their troubles . . . the railroads today ok like an industry which can solve its oblems given continuing good business d a fair break by the government." nfortunately, the break, when it came, as almost all bad. *Sic transit* business ecasting.

Riding the tide of postwar demand, men in 1949 were battling to overcome "shortage" psychology and FORBES uld say, in those dear, dead pre-OPEC ys, "There's no shortage of oil—domes- proved reserves are the highest in story. The story, worldwide, is the me." The concentration was on the mestic side of the petroleum indus- —the only cloud FORBES could spot as "the question of the armed forces' quirements." Expectations were for an er-increasing flow of oil and FORBES ated in a comment that seems ironic day: "If the Middle East oil program velops as scheduled, pressure upon this untry and the Western Hemisphere ll be materially eased." And even if the supply should dwindle, the 1949 report ted, ongoing research into synthetic els, coal-into-oil conversion, recovery shale oil and other projects would be ere to fill the gap. Those substitutes are ll out there somewhere, but the U.S. ll has to get them into automobile gas nks and industrial boilers.

The skies belonged to the U.S. in 1949 d the country's war-born aviation in- stry, in FORBES' view, had bounced ck from its low-level years of 1946 and 47 with blue skies ahead. The industry as powered, however, by Pentagon or- rs and the report wondered whether rcraft manufacturers would need "an- her war-inspired shot in the arm to ep from plummeting to new lows." istory and the worldwide explosion of travel have answered those doubts. oeing was still losing money as 1949 ened, even though it boasted the big- st backlog of unfilled orders for any rcraft company, about $450 million. oeing is soaring into 1979 with a back- g in billions and the payload is in com- ercial jet aircraft, not warplanes.

Thirty years, particularly three de- des as tumultuous as those since 1949, ould make any forecast sound in retro- ect as quaint as Nostradamus. An in- resting commentary on FORBES' first rvey is how persistent some of the estions it posed have proved to be. Will house scarcities and high prices ntinue" to plague construction, for in- ance, is still as timely as today's weath- So is wondering whether the utilities n "continue to keep revenues above penses, without rate increases." ■

THIS IS ALL IT TAKES TO COLLECT MANY PAST-DUE BILLS.

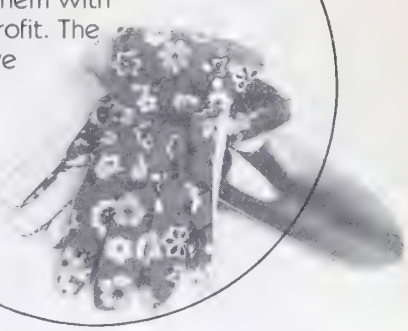
In Tennessee, we grow our own.

Many new industries are moving to Tennessee, yet two thirds of our industrial growth comes through expansion of existing industries. The Enterprise Development Division works strictly with these existing businesses, assisting them with programs to help them grow and profit. The way we look at it, getting you to move to Tennessee is only one third of the job. The other two thirds is helping you grow after you've planted yourself.



Tennessee.

Plant yourself in fertile ground.

Readers Say

New format—(cont.)

SIR: Two boos and a hiss for the new look in FORBES.
—Reade B. Nimick
Haverford, Pa

SIR: Fortunately, this tampering with the form will not ruin the substance of the magazine.
—George Duyer
Los Angeles, Calif.

SIR: Your new layouts and graphics are extremely inviting and readable. They match the magnetism of the content. Yours is the most readable magazine around today.
—David Brown
New York, N.Y.

SIR: Congratulations on your superb new design. I eagerly await the inevitable refinements.
—Lawrence Miller
President,
Design Alliance, Inc.
New York, N.Y.

SIR: A big plus for highlight articles with Bookman Bold typeface.

But a big minus for 18 pt. Garamond Light italic. Side Lines *(Nov. 27)* says that you want to amplify the meaning of the headline of the illustration or graphic. If it can't be easily read, then it can't do much in the way of amplifying anything. Please, a little more ink with the italicized type.
—Albert Edwards
Sanibel, Fla.

SIR: Please substitute for Trump a more substantial body typeface.
—William Burton
New York, N.Y.

SIR: You have triumphed using Trump.
—James E. Conner
Baltimore, Md

SIR: I liked your magazine better the old way.
—Philip Kessler
Westport, Conn

SIR: Count this reader as being happy with your new graphic attire.
—Howard Upton
Tulsa, Okla

AT&T wouldn't show a loss

SIR: The question you asked *("'Standard accounting practices,'" Fact and Comment, Dec. 11)* is one which others h asked: namely, if we showed more preciation expense, wouldn't we h lower earnings?

The answer is that our earnings wo remain the same. Regulatory comm sions tell us what depreciation we m charge as expense and allow this depr ation to be recovered in the ta (prices) they allow us to charge to customers. Presumably if the comm sions allowed us to book depreciatio the same rates which IBM uses, the c missions also would allow us commer rately higher tariffs.
—John D. deButts
Chairman,
AT&T
New York, N.Y.

We blew it

SIR: I applaud your statement ab Mexican oil *("We gringos are kidding o selves, not Mexico," Fact and Comment, D 11)* and also how we need someone "l brilliant and more intelligent" than En gy Secretary Schlesinger.

The fact that the Japanese lent Mex $1 billion (oil related help) is sickeni Now we can watch our neighbor s their oil to Japan instead of to us.
—Virginia R. Brown
Birmingham, Ala.

SIR: I simply wish to praise the intell tual honesty of your comments on Me can oil and gas.
—Edmund Cunningham
Naples, Fla.

Airbus—the best bargain

SIR: Economically the European Air consortium may not make sense *("E ain's newest albatross," Nov. 27)*, but y have missed the point. Consider a po ble alternative, another general Europe war.

Would the Krupps *et al* have bacl Hitler if France, Germany and Engla had been deeply financially involved i mutual program in the 1920s? Maybe the best bargain going, after all.
—Charles T. Leonard
Seattle, Wash

Kudos for Kahn?

SIR: Suggest you wait for tax bill bef sending too many awards to Mr. Ka *("Kahn: not even time for kudos," Fact a Comment, Nov. 27)*. Cost of subsidiz

Technology is providing the means for illiterate Americans to obtain the basic skills they need to get jobs

CONTROL DATA CORPORATION

More than a computer company

Functionally illiterate adults. Many have never before really succeeded at anything. But now at last things are changing.

The difference is computer-based education, another example of technological innovation applied to solve one of society's critical problems: improved quality, equality and productivity of education. Computer-based education is a revolution in learning that is well underway. No matter who you are, the revolution will affect your life...favorably.

In a test just completed by Control Data in Baltimore, PLATO® computer-based education helped functionally illiterate adults improve their reading and math skills at least a grade level in 20 hours or less. Other tests in Minnesota, Texas and Maryland showed comparable results.

Now, the functionally illiterate and many of the unemployed can deal with the true cause of their plight: lack of basic education and job skills. Students can learn at their own pace individually or in group sessions. The computer offers the finest in curriculum materials...and infinite patience with each student.

Teachers will have more time for individual student attention, less lecture demands. Taxpayers, staggering under ever-increasing educational costs, will be relieved to learn that each generation of computer-based education will cost less and less as the knowledge base builds. And quality of education will be uniformly excellent. Profit-minded business managers are already training thousands of workers more rapidly, effectively and economically.

> ***"Technology is know-how. Simply stated, it's a way of doing things. How to grow two stalks of rice in place of one is know-how or technology. The design of equipment to heat homes with solar energy is another example."***
>
> ***William C. Norris***

In the forefront of this learning revolution, Control Data has in operation the most advanced computer-based education system in the world, the PLATO system. More than 50 learning centers, offering PLATO computer-based education courses are already in operation in major cities.

For more information on how technology can better serve society, write for our booklet series entitled, "Technology, Our Tireless Servant". In this series, Mr. William C. Norris, Chairman and Chief Executive Officer of Control Data Corporation, explores ways in which technology can be employed to solve problems of employment, energy, food, education, health, housing and the environment. Copies of these provocative booklets can be obtained without cost.

ARTWICK
RISK MANAGER

A TRUE STORY OF HOW A MULTINATIONAL CORPORATION DISCOVERED THEIR MILLION DOLLAR POLICY WASN'T WORTH A DIME.

It happened to a multinational American corporation (who prefers to remain nameless).

And unfortunately, their story isn't that uncommon.

They had a million dollar Boiler and Machinery Policy with the same coverage in 30 different countries. At least that's what they thought they had.

But when they suffered a loss in one of the countries, they found out they weren't covered for it.

And, they couldn't collect a dime on it.

Now, you may ask, how could this have happened?

Well, what they didn't realize is that their policy was with an American insurance company who worked with independent overseas affiliates. Which means they were covered by a different insurance company in every country.

And of course, every company has a different way of writing a policy, and every country has different rules and regulations. So the way a policy reads in one country may not be the same in another country.

And that's why their story had an unhappy ending.

It's also why they came to American International Underwriters, a member of AIG.

AIU gave them what we call our "No Foreign Intrigue" Policy, a master policy that allows for variations in individual countries and is designed to fill in gaps in coverage. (In their case, it was a Boiler and Machinery Policy with coverage in 30 different countries.)

AIU is the largest writer of all kinds of insurance for U.S. businesses abroad. We have a network of our own offices in over 130 countries providing underwriting, claims and engineering services. So we can solve any insurance problem you may have internationally.

It's also our policy to have every AIU office run by our own local people who know their country's language, customs, laws and government regulations.

So when you do business with us in a foreign country, there's never anything foreign about it.

Our "No Foreign Intrigue" Policy is just one of more than 300 policies AIG offers through our more than 160 member companies.

For more information on AIU, send in the coupon below.

With us, you'll always know exactly what you're getting.

No surprises. No international intrigue. No million dollar mistakes.

AIG'S "NO FOREIGN INTRIGUE" POLICY

Please send me more information on AIU.

Norelco®
185 Pocket
dictating machine
and UltraSlim™ Executive Notetaker.

Two reasons to start talking.

Talk can be cheap. Or expensive. When you dictate to a pocket-size Norelco, talk is cheap. Because you're saving time for both yourself and your secretary. And here are two of the best reasons you'll ever find to start talking.

The low-priced Norelco 185 fits pocket or purse, and features options such as the use of A.C. current, telephone or conference recording. The 185 captures every word crystal clear for fast, easy transcription. Yet it's priced to let you equip an entire field force.

The new lightweight UltraSlim slips into a shirt pocket, fits your hand gracefully. Yet it contains all the features described above, plus the adjustable sound screen which lets you dictate clearly anywhere, even against loud background noise. Designed in jewelry-finish metal. Both units are compatible with the entire Norelco dictation system.

Send the coupon today and get all the facts on how to save by talking.

Fact and Comment

By Malcolm S. Forbes, Editor-in-Chief

1979 WILL BE A GOOD YEAR

There's even a chance it could be too good, and that would bad.

Only a collapse of President Carter's will to bridle inflation uld bring on a severe recession.

Despite the alarmist yapping of most economists, it's not hard-nosed actions of the President but his failure to stick hem that would bring on a dire downturn. Early Administion panic and reversal of course at the first sign of the cure ting—that would really blow the economic scene.

There will be some important downers. OPEC's jump is very gh. Housing starts will be off, and not just because of record erest rates. I haven't seen it referred to, but the new tax 's appreciable reduction of taxes on the gains from the sale oldsters' homes is putting more homes on the market. On other hand, the prospect of a stabilized dollar is going to eash much of that too-long-postponed capital spending.

ure, the reduction in federal and state spending brought on taxpayers who've finally Had It will hurt those getting less he federal largesse. But that, too, will be offset by those who able to keep a little more of their own earnings to spend as y see fit.

Unemployment may climb a bit as spending shifts direction, total *employment* will be little, if any, less.

n addition to putting the rein instead of the spurs to the federal deficit, our hemorrhaging trade imbalance is going to be staunched. Indeed, it conceivably could cease, during the year ahead. Farm exports may reach a record $29 billion, and exports of merchandise are now climbing at a rate three times greater than the rise in imports. Newfound foreign faith in the dollar is contributing mightily to the fight against inflation.

If the President stands firm on the present course, so will the dollar. As a sign that brakes are taking hold, the stock market will not go below its present absurd level. It will begin a climb that will more nearly reflect the real values that are so much greater than current bargain-basement prices indicate.

A year ago this sentence concluded our forecast: "I think those who predict that 1978 will end up down have their analyses down side up."

Most economists are again Cassandra-ing, nearly unanimously proclaiming that the price of curbing inflation has to be recession.

They are as wrong as usual.

The price of *not* curbing inflation will be recession. If the President falters, growing faint in his follow-through, then indeed 1979 will be a bad year.

Otherwise, the restored faith in the buck abroad, and the curbing of its evaporation in value at home, will guarantee that 1979 is a good year—a most good year.

MAYBE GM'S DIVIDEND CUT

uld have made the headlines and sharply depressed the ck market no matter how it was announced.

ut it shouldn't have.

he reason for the cut should have engendered—after any ection—a rise in the market.

General Motors cut its year-end extra dividend by 75 cents a re (to $2.50 this year from a record $3.25 in 1977) to help finance a $9.5-billion capital expenditure in the 1978-79 period. How stupendous a vote of confidence in the economy can a company cast?!?!!?!!!

That was the news, not the six-bit dividend cut.

Anyone who thinks that spending some money for intelligent corporation communications is a waste should keep this classic case in mind.

KENNEDY CAN WIN ANTIBIGNESS FIGHT

Senator Kennedy brings in an antibigness bill that's nei- extreme nor retroactive, it could—easily—become law re 1979 becomes history.

he muddies the measure with attempts to bust up existing nts simply because of giantness and totally unrelated to nopoly, that effort won't succeed.

ennedy would have support from a considerable segment of business community for a law that would outlaw huge corporate mergers. It has been the successful companies of any and all sizes who've been seized by the business Caesars. Under present circumstances, who's to blame the aggrandizers? Corporate tills have been bulging with cash; absurdly low stock market prices make for irresistible takeover temptations. It's so much cheaper, so much quicker, so much more exciting to grab from the outside than to grow from within.

Such "growth," of course, adds no new factories, no new jobs

per se; in fact, "management efficiencies" usually result almost immediately in less of each. The other side of the coin is that the huger corporation can invest more and for longer periods in R&D and has a clout that sometimes helps carve a hunk out of business markets abroad.

Kennedy is considering several approaches:

- a simple ban on mergers involving companies with sales exceeding $500 million, or a cutoff at the $100 million figure;
- a company controlling over 10% of a market or among the top ten producers of a product cannot be conglomerated;
- an outright banning of mergers among the top 100 corporations or top 200;
- requiring big companies to spin off assets equivalent to those involved in a planned takeover;
- no interest deduction allowed on loans made to finance acquisitions.
- Exceptions could be made for mergers that can prove the combination would increase competition.

Says Kennedy, now chairman of the powerful Senate Judiciary Committee and also of the Antitrust & Monopoly subcommittee: "I am especially concerned with the ease with w the major conglomerates and the large multinational oil c panies can swallow up major chunks in any other dom industry. . . . The potential for additional mergers and acq tions is staggering. Exxon, for example, could tomorrow the J.C. Penney Co., Du Pont, Goodyear and Anheuser-B using only its accumulated cash and liquid assets."

Rightly or wrongly, an antibigness bill is very apt to pa not only has political appeal, it has considerable support i business community.

Doubters need only look at the number of state legislat that have passed measures designed to safeguard nati companies with sizable operations within their borders f conglomerators.

Busting up present biggies won't pass. The track recor GM, AT&T, IBM, GE, Kodak and a few other famed Nam innovation, in pricing, in competition, in winning mar abroad and creating new ones are too good. They have w spread public support in spite of the assaults of the nume Nadering nabobs.

NEPOTISM IS NOT SOMETHING

we preach in FORBES. As you may have noticed, it's something we practice. In connection with the announcement of son Christopher's appointment as assistant publisher and election as vice president *(see Side Lines, p. 8)*, his brother Steve, who also appears on FORBES' masthead, said: "It could be said at an early age we came to the attention of management."

As printed on a Better Mottoes card someone handed me other day, "Nepotism's not so bad if you keep it in the fami

WANT A HOT STOCK TIP?

We're often asked by friends and others to recommend "a good stock to buy now." Invariably, I duck.

But here's one we'll be putting our money on—Houston Natural Gas.

It's not merely because there's no end to the increasing need for what it sells. Several companies can make that claim. But what HNG has is Bob Herring as CEO, and, as my father used to say, "I never bought a stock based on the balance sheet. I always bought management."

We luncheoned Bob here again recently, and, though we gave him little time to eat, he never stopped feeding us food for thought. One delightful Herring anecdote:

"Joanne and I were invited to come to the Philippines for the dedication of a hospital in Manila which had been patterned somewhat after the Texas Heart Institute that I am president of. We went out with Dr. Cooley, who is our chief surgeon, and his wife. It so happens that Mrs. Marcos had just returned from Red China. She'd had a tour of some three weeks, and showed us the movies of her tour. Included in her trip was her request for 80,000 barrels of oil, which she'd been able to buy for $7.60 a barrel, even as the Chinese were selling about three times as much oil to the Japanese at $11.60 per barrel.

"So, while I was dancing with Mrs. Marcos one night, I said to her: 'How in the world did you talk the Red Chinese into selling you oil at $7.60 a barrel?' She said, 'Well, Bob, I wen over the country. We had a great visit, I was well received, on the last day the people asked me what they could do for said, "Well, we are a little developing nation nearby. admire tremendously what you have done for your people we need 80,000 barrels of oil a day."

"What will you pay for it?" they said. And she s "We'll leave it up to you." She said they appare had meetings that evening and again the next m ing. And it was after lunch the next day they cam her and said, 'Would $7.60 a barrel be all right?'

"So I have been taking my beautiful wife to S Arabia ever since."

And here's one Right-On Herring perception:

"Houston Natural had a dinner party for abou analysts here in New York City. And we were asked s questions about what Washington policy was going to be this type of thing. I had not particularly liked the typ questioning, because we were enjoying a rather spectac earnings growth at that point. At the end of the evening, I s 'You people bother me with the type of questions you ask, a am going to make a comment about the way you analyze thi I think you are totally wrong. For example, if I tonight wer announce I have a new venture that in 2½ years will double earnings but, because of its nature and cost, I am going to h about three down quarters, every one of you would leave h and sell my stock.' And they all admitted I was right."

ONE OF THE SAVVIEST MOTOR MOGULS

in a world not overly supplied with bright ones is Dr. Joachim Zahn, chairman of Daimler-Benz, who's made Mercedes an undisputed worldwide success and symbol of same. We were chatting with him and with Prudential Life Insurance CEO Bob Beck the other day, when the good doctor observed: "You know, Mr. Beck, you are one of the few for whom being a totally good Christian is totally good business. You sincerely pray that we all have good health and long lives."

Incidentally, Good Christian Bob, just back from Brazil, commented that he was enormously impressed with the "first-rate caliber of the government men I met in Brasilia, and the intensity of the work ethic that prevails there." That's a refreshing thought about a land most famed for its Carnival, carioca and waltzing inflation.

SINCE THIS IS THE SEASON OF HOLDING HANDS

holding heads on mornings after, it might be in the holiday it to point out that we Americans consume far less spirits ı much of the rest of the world.

tuart Watson, Heublein's not-unprejudiced head, said to us other day: "I feel that Americans are managing alcoholic erages rather well. God knows they need to be compliment- ɔnce in a while in a society which seems to spend its time ng to find fault with its fellowman!"

He mentioned a chart which showed that the U.S. ranks 23rd in per capita consumption of *all* alcoholic beverages; that we're 8th behind such countries as Poland, Japan, Canada, Luxembourg, East Germany, Netherlands and the U.S.S.R. in downing spirits, and 13th among beer-drinking nations. As for the boom in wine, we're only 30th in that lineup.

Those with hangovers may find some comfort in knowing they have fewer fellow *miserables* domestically than overseas.

ASPIRATION

usually exceeds the requisite perspiration.

INSPIRATION

and perspiration are related by more than rhyme.

WHEN FOES BECOME FRIENDS

By M.S. Forbes Jr.

The Association of Western Pulp & Paper Workers has filed a lawsuit challenging the legality of President Carter's "voluntary" wage and price guidelines. Republican Representative Jack Kemp and ten other federal legislators have weighed in with their own brief supporting the plaintiffs.

The courts will probably rule in their favor. Bad news for President Carter? Just the opposite.

Wage and price controls are no antidote for inflation, as 4,000 years of history have shown.

The chief virtue of the Carter guidelines is that they have checked temporarily the growing inflationary psychology that was gripping this economy. Now almost every major company is making an effort to comply. The same is true on the labor front. Without the guidelines, the Teamsters would probably have won a settlement averaging 13% a year. Now they may get 9% or 10%, which is above the "limit" of 7%, but lower than it would have been otherwise.

This kind of cooperation cannot last for long. But at about the time the guidelines begin to do more harm than good, the courts will be declaring them null and void. Thus Carter will have it both ways. He can blast the Republicans for undermining his attack on inflation. Simultaneously, his wage and price standards do not become a serious political and economic liability.

Back in 1935, Franklin Roosevelt's chief antidepression instrument, the National Recovery Administration, was beginning to jeopardize the economy's recuperation from the catastrophic Depression. The Supreme Court's "nine old men" conveniently got FDR off the hook by declaring the Blue Eagle illegal. Economic activity increased and FDR went on to a smashing reelection victory.

Carter might enjoy the same good fortune. By this summer, the Administration's more meaningful anti-inflationary moves—stabilizing the dollar and tightening the budget—will be starting to work. Carter will appear to be attacking inflation as successfully as FDR looked to be curing the Depression in 1936.

FALSE PROPHETS

For those worried about economists' forecasts of a 1979 recession, this tale—

Before Californians overwhelmingly approved Proposition 13 last June, UCLA's highly respected economists came out with a study warning that passage of the tax-cutting initiative would be an economic disaster for the state, costing hundreds of thousands of people their jobs.

Now UCLA has issued a subsequent report. Its conclusion: Not only would the state's accumulated budget surplus be large enough this year to bail out local governments (their property tax revenues were severely cut by Proposition 13) but, because of its economic growth, the state could *increase* the amount of this aid 2% annually over the next four years and still maintain a surplus. The feared belt-tightening is not going to pinch very much after all.

The lower tax rates could so stimulate the state's economy that California will, in the years ahead, end up with more tax revenues than it would have had otherwise.

UCLA's forecasters maintain, meanwhile, that they have nothing to be ashamed of in that first report. They say, in effect, "You should have paid more attention to our assumptions and our caveats."

Economists, like stock market "experts" (including this one), are more skilled at rationalizing their failed prophecies than accurately crystal-balling the future.

Other Comments

Often comments by others stimulate, irritate, abuse or amuse this editor's mind.—MSF

Avoiding Intellectual Injury

Any person who observes the following rules will never injure himself by intellectual work. To do no hard intellectual work for half an hour before eating or for an hour after eating. If compelled to break this rule in an emergency, eat but little. To take an average of ten minutes relaxation as often as once in an hour and a half. To take two walks a day, or an equivalent thereof in the open air, of an hour each, or one of two hours, and to take vigorous exercise of the arms and chest for 20 minutes some time during the day.

—*Omaha World-Herald*, Mar. 2, 1896, reprinted in *Antiques*

"Uncontrollable" Baloney

When you ask around Washington why Congress doesn't stop inflation by cutting federal spending, you are apt to hear a lot of defeatist talk about "uncontrollable" items and the like. This, of course, is utter nonsense. Every dollar of the $500 billion the federal government spends is controllable. Indeed, Congress is charged explicitly by the Constitution with controlling the budget. What people really mean when they say "uncontrollable" is that Congress has made promises to a lot of people and finds it politically inconvenient to withdraw them. . . .

Instead of asking where to cut spending, it should start asking what federal spending is of any value to the nation. It's surprising how simple the problem then becomes.

A Senator's Common Sense

When Senator Abe Ribicoff of Connecticut made an issue of the MIG-23s with Prime Minister Kosygin in the Kremlin recently, Senator John Glenn of Ohio told him that he had known about the MIG-23 deal for almost a year and thought it was a false issue. Any airplane could be a nuclear weapon, Mr. Glenn said. He had a little plane of his own, and anybody could roll a nuclear weapon out the door of a Piper Cub, but the MIG-23s in Cuba, he said, were no argument for raising objections to the control of strategic nuclear weapons.

—James Reston

Equal Treatment

Tell your bosses what the real world is all about, advised Robert J. Flaherty, senior editor, FORBES, at the Public Relations Society of America's conference on "The Investigative Climate—How it relates to you, your company and your client" in New York. Mr. Flaherty said that, in dealing with the business press, corporate execs should "read the sports pages and know that they're not going to get any better treatment than the heads of the Yankees and the Red Sox."

—*Advertising Age*

Save Life or Art?

There is no intellectual or emotional substitute for the authentic, the original, the unique masterpiece. "Still," Paul Mellon [commented], "someone quotes the sculptor Giacometti as having said, 'If a house were on fire and I could take out a Leonardo or a cat, I would rescue the cat. And then I would let it go. It is life itself that counts.' "

—*Town & Country*

Entrepreneurs

The solitude and responsibility produced a resolute and thoughful breed of men; many more sheepherders than cowboys rose to become citizens of substance and wealth. And though little praised often scorned, they were proud of hard life that had fashioned them. God's sake," one of them admonish writer of a later era, "don't pictu sheepherder with a longhandled cr and a face like Jesus Christ. And d give him so few as a dozen sheep cro ing close to him and licking his h Give him a sizable flock of at least 2, and let them keep at a respectful dista He was a sheepherder, not a shepher

Your next right-hand man should be a machine.

Panasonic Omnivision II™ VHS™ can do things for you that are not humanly possible. Even for the best right-hand man—or woman. Omnivision II VHS is a video cassette system. With a Panasonic video camera, it becomes a complete communications tool that lets you record and play back demonstrations, speeches and discussions. And, as corporations large and small have already discovered, it can help executives save money and use their time more effectively.

You can deliver an important address to stockholders in one meeting and simultaneously demonstrate your new product to potential customers at another. Simply record both appearances on Omnivision II.

Omnivision II lets you educate your personnel in branch offices while reducing their expensive and time-consuming trips to the home office. For example, you can record your best salesperson's technique on Omnivision II and send the tapes to your branch offices. The result: you can have a more productive sales force.

Omnivision II can also save you trips to branch offices, plants or other locations. Panasonic battery-operated portable VHS decks and cameras can bring new plant sites, warehousing operations and production-line techniques right into the home office.

Omnivision II VHS lets you be in two places at the same time.

Panasonic Omnivision II is part of a complete line of "Industrial Strength" video communications equipment. It's geared to the special needs of industry. And its applications are almost limitless.

For more information on Panasonic Omnivision II VHS, just mail in the coupon. You'll see why your next right-hand man should be our machine.

If there were no economists, where would we all go for economic certainty? "To gypsies, probably," says one of their number. But the gypsies never had it so good.

Cheerful Days In The Dismal Science

Sir Isaac Newton | John Law | David Hume | Francois Quesnay | Adam Smith | Alexander Hamilton | Jean Baptiste Say

By Lawrence Minard

MULTIMILLIONAIRE Paul A. (for Anthony) Samuelson, MIT's Nobel prize-winning economist, likes to recall this anecdote from the New Deal days:

"When Roosevelt's economist, Leon Henderson, was foisted FDR's aide, Louis Howe, Howe told him: 'Leon, I want you know where you stand. You see these buttons on my coat eve? They're no damn good, Leon, but everybody says I've tta have 'em, so I do. And it's the same with you.' "

Times change. Today nearly everybody has such buttons on eir sleeves—and economists, from being obscure academi- ans, have become, in their own right, media stars and entre- eneurs. We now have as many economists as dentists.

Some of them may end up rich. "My income? Your guess of 00,000 to $500,000 a year is not far off," says conservative onomist Alan Greenspan of New York's Townsend Green- an. Greenspan makes his money advising corporate clients likely directions of the economy and charging them from 5,000 to over $100,000 for his time and statistics. He is, in ect, a businessman who sells facts and figures, opinion and etoric. And at a very smart markup.

Greenspan is no rarity.

According to MIT's Samuelson: "There are as many econo- ists in the U.S. as chiropractors—about 20,000, which is the embership of the American Economic Association." But a oader definition is suggested by Rice University history ofessor Thomas Haskell (currently at Princeton's Institute Advanced Studies) in his remarkable book, *The Emergence of ofessional Social Science:* "Professionals," says Haskell, "are rsons who claim to possess esoteric knowledge which serves the basis for advice or services rendered to the public for muneration." Substituting "economist" for "professional" allows us to include among economists college dropout Eliot Janeway, who has made millions convincing his clients and lecture audiences that he possesses esoteric economic knowledge and inside information (FORBES, *June 15, 1971*).

The U.S. Labor Department figures there are over 115,000 working economists—one economist for every four lawyers, one for every two CPAs and one for every dentist. Surprisingly, only 10% of the 115,000 are employed in teaching. Another 10% work for government. Most of the rest work for private business. Businesses, like governments, now feel the need of those buttons on their sleeves.

Pay? For academics, around $25,000 for teaching four days weekly; but academics willing to exert themselves can easily double their incomes by consulting—or better yet, writing textbooks—on the fifth day and weekends. Business economists—perhaps because they have less chance to become media stars—do somewhat worse: Last year the typical member of the National Association of Business Economists (NABE) earned $33,000 plus an extra $5,000 in outside income. At $38,000 a year, the business economist is about on a par with the typical U.S. lawyer in terms of earning power.

Add up all the salaries, book sales, economic forecasting and consulting firm profits, and the economics industry could easily be worth over $2 billion a year.

If prostitution is the oldest profession, economics may well be the newest.

Adam Smith, for example, was not even an economist in our modern sense. The University of Edinburgh sage was a moral philosopher—a man of wide interests and great depth. Jean-Baptiste Say was a successful businessman, David Ricardo a rich stockbroker. It was not until Cambridge University's great Alfred Marshall came along in the late 1800s that people understood that market supply and demand were as

Thomas Malthus **John Stuart Mill** **Karl Marx** **Thorstein Veblen** **John Maynard Keynes**
vid Ricardo **E. Bohm-Bawerk** **Alfred Marshall** **Frank Knight**

Wassily Leontief Milton Friedman Burton Malkiel John K. Galbraith Michael Evans
Paul A. Samuelson Otto Eckstein Robert Heilbroner Lawrence Klein

interdependent as the blades of a scissors. Only in 1885 did Richard Ely, an upwardly mobile young Johns Hopkins University economist, create the American Economic Association. Membership within a year: 181, of which 23 were clergymen. By 1909 membership was still only 1,000; World War I and the new income tax helped boost that to nearly 3,000 by 1925.

Then came the Great Depression and the New Deal. Most Americans looked hopefully to the dismal science for answers other than socialism or communism. The government began raiding the universities for economists, who suddenly achieved great power and prestige in the allocation and planning necessitated by World War II. Soon business was into the act. The profession has never stopped growing.

One of the country's best economics departments, MIT's, didn't even exist in 1930. MIT will award about 30 economics Ph.D.s this year.

In the old days, the idea of economic forecasting or of manipulating the economy never occurred to people. All the great American "robber barons" needed to know in their predominantly agricultural economy was: *How good are this year's crops?* If the crop was a big one, then the railroads would flourish hauling the grain, and the steel mills would go all out to fill orders for new freight cars and new track for the railroads.

Listen again to MIT's Samuelson:

"The world was pretty complex back in Queen Victoria's time. But then it wasn't the business of anybody in government to do anything about it. Obviously that is untrue today. People can't kill themselves in Guyana without a $9 million item in the federal budget. The Mississippi can't overflow its banks without 13 different agencies getting involved. So it's the new responsibility thrust on government by populist democracy that explains much of the rise of the economics profession. The government is in every act willy-nilly."

Isn't it ironic that populist democracy should spawn wh new aristocracies—like economics?

One new, *very* profitable area is economic forecasting. forecast industry is dominated by three firms: Data Resour Inc. (revenues: $33 million), Chase Econometrics Associa (nearly $15 million), and Wharton Econometric Forecast As ciates ($3.4 million). Other respected names include C MAPCAST subsidiary and Merrill Lynch Economics.

To see *how* profitable this business can be, look at publi traded, Cambridge, Mass.-based DRI Corp. Founded ten ye ago by Johnson Administration economist Professor Otto E stein of Harvard University on $1 million in borrowed mon DRI now nets around $6 million on its annual $33 mill revenues. Eckstein employs 580 workers (mostly Ph.D.s . M.B.A.s) who turn out monthly economic forecasts and k DRI's primary asset—its 5 million time series, which tr historical relationships among specified variables—up to da They also develop and maintain the 40-odd industry and gional models. DRI's basic $15,000 annual subscription pr gets you the macroforecast plus access to DRI's prized d base; the average customer pays $40,000 for those plus ind try studies, and a smattering of the firm's 600 clients pay up $500,000 a year for DRI's entire product line. Eckstein figu that around two-thirds of DRI's revenues come from retail his computer's time (which costs at most $20 per hour) clients at $80-plus per hour. "But what econometrics rea does," says Eckstein, "is to provide the rationale for apply our vast computer technology to business decision maki You see, what I learned from IBM was to bundle the servic to work directly with clients, and not simply hand them numbers and send them off to a terminal."

How good are the forecasts? That's embarrassing. In

Henry Kaufman **Martin Feldstein** **Pierre Rinfret** **Eliot Janeway**

conomics is like the detergent usiness: To be successful you ust differentiate your product.

cial recession of 1974-75 they exhibited a distressing herd ntality, and the herd headed in the wrong direction.

'The information is too perfect for there to be much differ-e among them," explains Steven McNees, 36, a bearded, T-trained economist and vice president of the Federal Re-ve Bank of Boston, who deserves a slice of some prize for nparing what forecasters say with actual economic results. esides," he adds, "it's safer to be part of the crowd."

According to a paper soon to be published by McNees, the wd really blew it in their forecast of the 1974-75 recession. oking at 1974 the median forecast was: 7% inflation, 5.9% employment and 2.2% real economic growth. Actual re-ts: 11.6% inflation, 8.1% unemployment, *minus* 5.6% wth. "And the *really* discouraging thing," McNees told BES, "is that they all *knew* about OPEC and the oil price drupling when they made those forecasts."

ust before OPEC's Dec. 16 oil price increase of 15%, the wd was predicting a "soft landing" for 1979: a mild reces-n late in this year, slight real growth of 2%, 7.7% inflation 6.5% unemployment. But given the 1974-75 results, why en at all?

McNees: "For one thing you don't subscribe to these fore-ters for their perfect accuracy. You subscribe for their data es and for a feel, an understanding, a *story* of what the nomy will do. Often you buy the individuals: warm Otto stein, conservative Larry Klein, or flamboyant Mike Evans. ides, all of us make forecasts—explicitly or implicitly—all time. Buy a house? Sell a bond? The decision is a forecast and the better the information, the better the forecast will be. By going to a top forecaster you improve your chances. Anyway, suppose I proved all forecasters are charlatans. Where would businessmen go then? To gypsies, probably."

Great businessmen in India frequently consult their astrologers before making a major move. Mankind is like that. It wants esoteric assurance that what it does is in harmony with the great vibrations in the economy and in the universe.

There is this, too: Forecasters are sometimes right. Throughout 1978 Henry Kaufman, top economist at Wall Street's Salomon Brothers, had predicted far higher interest rates than the crowd—so accurately that the stock market fluctuates when Kaufman speaks.

Certainly the gypsies, astrologers and medicine men never had it so good. Otto Eckstein draws over $200,000 a year from DRI, *vs.* what some say is a $250,000 annual draw by Chase's Mike Evans. On the other hand, Evans has pocketed only $3 million or so on selling Chase to the Chase bank. Eckstein's and his family's 20% holding in DRI is worth $7.5 million at current prices, up from $3 million when he took DRI public two years ago. (Other major DRI stock winners: Harvard economist Martin Feldstein, president of the National Bureau of Economic Research, and his two daughters.)

In many ways the economics business is no different from, say, the detergent business: To be a success you must differentiate your product from the next fellow's. For every Cheer, Tide and Whisk, economics has some law, theory, curve or other gimmick that has made its owner famous and perhaps rich. Some of the economics business' better-known gimmicks:

- Adam Smith's Invisible Hand, which Smith developed early in his career as a religious-psychological precept (see his *Theory of Moral Sentiments,* 1759) and which has been overused ever since to defend laissez-faire economics.

This year alone quiet Campbell McConnell will receive around $400,000 in textbook royalties.

• Say's Law (1803), devised by Jean Baptiste Say, which held that supply creates its own demand (and so there cannot be depressions).

• University of Pennsylvania's Sidney Weintraub's WCM (for Wage Cost Markup) theory, which asserted prices were determined simply by marking up the wage rate.

• The London School of Economics' A.W. Phillips' once-acclaimed and now debunked Phillips' Curve, which purports to say there is a tradeoff between inflation and employment.

There is this to be said for economic gimmicks: If yours catches on, it can make you rich, quickly. Just take today's "in" gimmick, which, as anyone who watches talk shows or reads *Time* or *Newsweek* knows, is Arthur Laffer's Laffer-Curve. This curve purports to show that there is an optimal level of taxation beyond which tax revenues will fall—in other words, if the state taxes away everything there will be nothing left to tax. Simplistic? Of course. Profitable? You bet. Laffer, who lives in a $225,000 house with swimming pool and makes $30,000 a year as a business and finance professor at USC, says he is now getting "between 35 and 40 requests a week to speak. I've had to start charging for my time." His price: $4,000 per talk, putting him almost in a lecture-fee class with Nobel prize-winners Samuelson and Milton Friedman. Laffer happily says he will make "over $100,000 this year."

You might wonder how young Arthur Laffer attained such prominence. Answer: In 1974, fast-rising political star and U.S. Congressman Jack Kemp saw an article in the *Wall Street Journal* by Associate Editor Jude Wanniski about economist Robert Mundell. Wanniski, who recalls that Laffer was "an ex officio adviser" to the *Journal*, introduced Kemp to Laffer. The *Journal* has since trumpeted the Kemp-Roth tax-cut bill and its economic guru, Art Laffer. And Wanniski, who recently left the paper, has written a fast-selling book about Lafferian economics.

We might add here a snippet from Haskell's *Emergence of Professional Social Science*. Haskell refers to the summer of 1885, when young Richard Ely was organizing the American Economic Association: "Ely nostalgically recalled 'tramping through the rain' with E.R.A. Seligman to the Associated Press office after the charter meeting of the AEA, 'to see that we had such publicity as we both felt we deserved.' "

So if you're a young economist about to be on the make, take a tip from politicians and aspiring actors: Be nice to journalists. They can make you a media star.

But our subject is economics, not the sociology of science. What else do economists do besides sell forecasts?

Economic consultants are in hot demand. This piece of the economics industry is dominated by three private firms which between them gross some $25 million annually.

The country's oldest economic consulting firm is 100-employee, $5 million (revenues) Robert Nathan Associates of Washington, D.C. Started in 1946, it is primarily a government contractor. It advises South Korea's government on developing new urban centers; it may analyze the costs and benefits of using U.S. Army paramedics in civilian life. "If I only wanted to make money," says founder Robert Nathan, "I'd do nothing but corporate work. Look: Our corporate work accounts for up to 75% of our profits, but less than 40% of our revenues."

Not to cry: By billing out young $20,000-a-year (*i.e.*, $10 an hour) economists at $22 an hour, Nathan earns between 12% and 15% on his equity, after taxes.

Boston's Charles River Associates (185 employees, $7 million in revenues) and Manhattan-based National Economic Research Associates (260 employees, over $10 million in revenues) both work mainly for private industry. Recently CRA analyzed ferro-scrap plant location economics, and NERA investigated the cost to the public of abandoning nuclear pow plant construction. Their equity returns, to judge from Rob Nathan's example, are probably double Nathan's.

One real gold mine for hungry economists familiar w market-concentration economics is expert-witness work today's fervid antitrust business. And we mean fervid: In t Justice Department's case against IBM, for just one examp IBM will call 5 economists to testify on its behalf, and t government will use over 20 for its side.

Says New York antitrust lawyer Barry J. Brett, who recen helped Berkey Photo win an $87 million judgment agai Eastman Kodak: "It has become so commonplace for eco mists to be employed in litigation that you almost *have* to br in an economist for your side even if you don't want to—a countervailing force against the other side's economist. S you get *your* economist to offset *their* economist's testimo and let the judge or jury decide on the basis of the r evidence. You simply cannot be devoid of your own exper even if his testimony illuminates nothing."

There's no doubt, of course, that an economist *can* illur nate matters. Jay Gould, founder and proprietor of New Yor $1.5 million (revenues) Economic Information Systems, In testified on behalf of Beatrice Foods Co. when the FTC tried block Beatrice's acquisition of $245 million (sales) oran juice-king Tropicana Products. "The government's case," calls Gould, "rested entirely on convincing the judge that t relevant market involved in the merger was $250 millio said the market could be as large as $2 billion, but was proba only $800 million." Apparently the judge believed Gould: T $490 million acquisition was completed last August.

For his testimony, Gould received $800 per day, plus penses—a total of perhaps $12,000 which Beatrice foods w have no trouble passing on to orange-juice drinkers. (You do think *companies* pay the cost of government-fighting, do yo

And as top-rated economists go, Jay Gould comes che Robert Nathan Associates' Nathan, NERA's President Irv M. Stelzer, and Charles Rivers Associates' President Ger Kraft all charge $1,200 *or more* per day for their time. Eat y hearts out, you top-ranked Wall Street lawyers and Big Ei CPA firm senior partners!

A word of warning to academic economists trying to str it rich as expert witnesses: Watch out for quicksand. Cou rooms are not like computer laboratories. Yale Universi eminent economist Merton J. Peck found this out the h way. Here's what happened:

When Berkey sued Eastman Kodak, Kodak hired Peck prepare expert economic testimony that Kodak's domin market share resulted from a history of superior manufact ing, *not* a history of acquisitions or predatory practices. I early in his research Peck wrote to Kodak's law firm, Dono Leisure Newton & Irvine, that he was not convinced by argument. The Kodak lawyers decided not to turn this in mation over to Berkey's lawyers. When Berkey's lawyers fir ly did discover Peck's wavering letter, they savagely and p licly ripped Peck's tesimony, his pride, and perhaps his repu tion to shreds.

Late last year the negligent Donovan Leisure lawyer, M lon Perkins Jr., went briefly to jail for contempt of court in sensational case. Peck, who was paid around $70,000 for work, has returned to Yale.

Economists' malpractice? There is no such thing—yet. I according to one of Citibank's 50 staff economists: "We talk all we want from our numbers but we're told *never* to anything in writing. We're afraid someone may sue us if t act on our information and we're wrong."

Who are the most prominent practitioners of this not esoteric art—which at the very least helps make our confus world more intelligible and, at best, may help make it m manageable?

Flip to page 3095 of the current *Books In Print*. We find th this entry:

Samuelson, Paul A.
—*Economics,* 10th ed. (illust.) 1976. Text ed. 16.95. Instructors manual 5.95. Study guide by Robinson 5.95. Test bank 5.95. Transparency masters 15.00. McGraw.

or those of you who graduated from college a decade or more o, test banks are ready-made exam questions for teachers d transparency masters are reproductions of the book's arts and graphs for overhead classroom projection.)

Economics is Paul Samuelson's introductory economics text-ok that has sold nearly 4 million copies. As the entry above ows, it is also a mini-industry whose entire product line goes $50 and provides income not only for Samuelson but also , among others, the author of the study guide, for the onomists who update the editions and for McGraw-Hill itors who look after things like test banks and transparency asters, not to mention book sales.

Paul Samuelson not only teaches income distribution; he *distributes* income. (His own take from *Economics*: about $200,000 a year and perhaps $5 million over the remark-le book's 30-year history. To this add his MIT salary, over 0,000; his *Newsweek* columnist's fee, over $10,000; his lec-re fees, reportedly around $7,000, and Samuelson's annual rnings come to well over $250,000 per annum, though he uses public comment on the estimates.)

Samuelson is not alone. The University of Nebraska's quiet mpbell McConnell's introductory textbook currently out-ls Samuelson's, 200,000 copies per year to 100,000. This ar McConnell will receive around $400,000 in royalties. her top-sellers in the 1.1-million-students-a-year introduc-y market: *The Economic Problem* by Robert (*The Worldly losophers*) Heilbroner and Lester Thurow; *Economics* by chard Lipsey and Peter Steiner; *Economics: Principles, Prob-s, Decisions* by Edwin Mansfield; and *Contemporary Econom-* by Milton Spencer, who was unsuccessfully sued a few years ck by McConnell for plagiarism.

These six books and their ancillary products will probably ss over $11 million this year, thanks to surging demand for sic economics from today's pragmatic student bodies.

How can we forget John Kenneth Galbraith? This Harvard fessor and critic of what he calls "private affluence/public ualor" has 14 books in print; this tally does not count joint thorships. Price for all 14: $64 if you buy paperbacks, $121 if u don't. With such a broadly diversified product line, it esn't take many individual title sales to pay the upkeep on lbraith's Gstaad, Switzerland ski chalet. And Galbraith has ne the other scribblers one step further: In 1977 the BBC, nerican PBS and Canadian public television spent $2 million produce his 26-part program, *Age of Uncertainty.* Galbraith d a handsomely illustrated, $17.95 book to the TV program. e U.S.-published edition has already sold over 80,000 copies us 70,000 more paperback copies) and an edition published Japan has sold 500,000 copies! Author's royalties are usually ound 12.5%. You figure it out.

Not to be outdone by liberal John Galbraith, conservative lton Friedman is producing a TV show, *Free Man, Free rket,* to be aired later this year. He, too, will tie a book to e show.

The future of the economics business? Don't look for the fession to solve the world's number one economic problem, gflation. "It is not yielding to promising lines of research," ys Samuelson, who believes the profession has already begun shift from macroeconomics to microeconomics. Thus we n expect to know more about how individual businessmen d industries behave, while less attention will be paid to how fine-tune the entire economy.

Otto Eckstein of DRI and Harvard agrees with Samuelson on e intractability of stagflation: "We *understand* stagflation. e problem is, our present democratic society would not accept what would be needed to cure it."

But *do* look for the economics business' phenomenal growth to continue. As economic consulting firm NERA President Irwin Stelzer puts it:

"I can tell from how hard it is for me to hire economists and from the way the government is snapping them up, paying them $25,000 or $30,000 a year to start, and up to $50,000 for experienced economists. The Energy Department is loaded with economists to implement the new Energy Act, which means business must load up to figure it all out. The more the government does, the more parallel work corporations must do. Economists are now on a par with lawyers."

On a par with lawyers—and CPAs and geophysicists and chemical engineers and journalists and dentists and all the other "better jobs" our complexifying society is deftly creating. These "better jobs" are, of course, new jobs and new costs—they must be paid for by increasing old prices. Does a bread company hire an economist (or an affirmative action expert, pollution control engineer, public relations man or staff psychiatrist) where it had none before? Then the price of bread must ultimately go up; how else can the bread company pay these worthies? In short, it is not only government deficit spending that puts up the price of bread and causes what we call "inflation." Our society is becoming daily more complex, creating dozens of new functions and hundreds of thousands of desirable new jobs that didn't exist before: nuclear engineers and stockholder relations specialists, astrophysicists, art "experts" and economists of every stripe and shade. (We suppose we ought to include business journalists to establish our objectivity.) These people produce little that is tangible and all of them must be paid. So, the price of bread and houses and cars goes up. *(For more on this aspect of inflation, see* FORBES, *Nov. 15, 1976 and Sept. 15, 1977.)*

Are those 100,000-odd economists worth that fraction of a penny extra on a loaf of bread? Our answer to that is to repeat the old advertising adage: We know that half our advertising is wasted but we don't know which half. Consider this—and it is true of any form of scientific seeking: In Switzerland in the late 1850s, after failing first as a journalist and then as a businessman, Marie Esprit Leon Walras tries his hand at economics and in a dazzling display of mathematical wizardry describes the economy in a highly abstract system of simultaneous equations. Absolutely useless—until 60 years later, in Moscow, when Wassily Leontief—building on Dr. François Quesnay's *Tableau Economique* (of 1758)—makes Walras' equations solvable and operational and produces the first sophisticated input-output table—still largely useless, for not until the 1940s, at MIT, is a computer developed that makes the Quesnay-Walras-Leontief invention *practical.* Finally Leontief wins a 1973 Nobel prize for the feat.

Was it worth the 200-year wait? Of course. Input-output techniques are used in planning everything from railway freight systems to developing economies. Says MIT's Samuelson: "Theoretical economics of the most rarified sort are in fact shot through the bone, muscle and fat of American business life. From the work on capital budgeting and leverage to the use of operations research in inventory control—to accounting, which is at bottom economics—it has permeated all of business. Nobody runs business on hunches anymore the way 1910 tycoons did."

And a good thing, too, because if modern economics has not solved all of our underlying economic problems it has certainly helped moderate the severity of the business cycle and helped make more efficient the management of enterprises that are far too vast and complex to be run out of the coat pocket of an old-fashioned captain of industry. By helping to make capitalism more gentle, economics has probably played a part in saving much of the world from socialism. For that we should all be willing to pay a bit more for a loaf of bread and not begrudge Ken Galbraith the millions he has made criticizing the system that nurtured him. ■

The Forbes yardsticks: 1978

How to use them

The heart of the Forbes 31st Annual Report on American Industry is the statistics that measure management performance in 1978 of the 1,006 biggest public companies, with latest fiscal year sales of over $275 million.

The Forbes yardsticks, as we call them, size up the companies in several essential ways. We measure their profitability in terms of return on stockholders' equity and on total capital. We measure their growth in both sales and earnings per share. For current trends we track these figures for the latest 12 months. For a longer view, we look at them over five years. We also measure stock market performance, debt-to-equity ratios and net profit margins.

Using all these measures, we compare each of the 1,006 companies against competitors in its own industry and against all 1,005 other companies. Finally, we compare the major industry groups themselves against one another. (We explain below how the principal yardsticks are calculated.) The Forbes yardsticks comprise the most comp rundown on the performance of co rate America you'll find anywhere.

To locate a company, refer to the t that begins on the opposite page: "Wh to find the company." It lists the 1, companies alphabetically and gives page where you will find the story ab its industry and the appropriate y sticks. You will also find in the alp betical listing how that company sta up against the others in profitabi growth and stock market performanc

How they are calculated

Return on stockholders' equity

Companies obtain their capital from two sources: stockholders and creditors. Return on stockholders' equity is the percentage return on the stockholders' portion of the capital. We express earnings per common share (primary basis*) as a percentage of the stockholders' equity per share (assuming conversion of all convertible preferreds) at the start of the year. The five-year return in our yardsticks tables is the average of the returns calculated for the years 1974 through 1977 and the 12-month period ending with the most recent quarterly report. (For companies whose fiscal years end in January, February or March, the years 1975-78 are used in place of 1974-77.)

Return on total capital

This figure is the percentage return on a combination of stockholders' equity (both common and preferred) plus capital from long-term debt (including current maturities), minority stockholders' equity in consolidated subsidiaries and accumulated deferred taxes and investment tax credits. The profit figure used in this computation is the sum of net income, minority interest in net income and estimated aftertax interest paid on long-term debt—in other words, income before charges (which means, primarily, interest payments on long-term debt) relating to the nonequity portion of the capital.

The return on total capital is a "basic" measure of an enterprise's profitability. It does not reflect—as the return on stockholders' equity does—the effects of financing decisions upon profitability. For companies that derive all of their capital from common equity, the two profitability measures would of course be identical. But a company that employs debt wisely can thereby boost its return on stockholders' equity well above its return on total capital. The time periods employed for this calculation are the same as for return on stockholders' equity.

Debt-to-equity ratio

The debt-to-equity ratio tells us to what extent management is using borrowed funds (leverage) in an attempt to upgrade profitability. It is calculated as of the end of the last reported fiscal year by dividing long-term debt (including current maturities) by the sum of stockholders' equity, minority stockholders' interests and accumulated deferred taxes and investment tax credits. A high debt-to-equity ratio makes earnings more volatile and is usually considered prudent only in relatively stable industries.

Net profit margin

The net profit margin gives a view of profits different from either the return on stockholders' equity or the return on total capital. Calculated by dividing net profits for the latest 12 months by net sales, it reveals what percentage of each dollar of revenue is available for payment of dividends and reinvestment in the business. Net profit margins vary widely from industry to industry.

Sales growth

This is a bit tricky. To even out short-run distortions caused by very poor or very good years, we reach back over ten years to measure five-year sales growth. We take the average sales for the most recent five years (1974 through the latest 12 months) and compute the percentage change from average sales for the preceding five years (1969 through 1973). We then express that change in terms of a five-year compounded annual rate of growth, since the midpoints of the two periods are five years apart.

Earnings-per-share growth

As with sales growth, we go back ten years to calculate the five-year rate of earnings-per-share growth. Using primary earnings per share, we compare those for the most recent five years against those for the preceding five years and express the change in terms of a five-year compounded annual growth rate.

** This assumes that all "common stock equivalents"—convertible bonds, convertible preferred stocks, warrants and stock options—have been converted into common shares.*

Think of ALL·STEEL as increased worker productivity.

What makes it happen is one of the most comprehensive lines of office furniture available. Our furniture is designed to improve your office environment. That means you can attract the kind of people you're looking for, and they can be more productive.

What makes it possible is our unusually comprehensive line. An almost endless choice, to accommodate any office plan.

ALL·STEEL
ONE OF THE [illegible] COMPANIES

All-Steel also protects your investment. Everything you buy from us now will be compatible with whatever you need in the future. Design continuity is built in.

We have the capacity to produce what you need, when you need it. And we can get it to you, and service it, through our national distribution network.

If you're planning an office, for more information, write to: All-Steel Inc., Aurora, IL 60507.

Crown Royal
It was a very good year.

300 SD

These two Mercedes-Benz cars just rewrote Diesel history–by adding the word "performance."

It was a 1-2 punch that forever shattered the "stodgy Diesel" image. First, that ultra-streamlined 195.4-mph coupe sped to 9 world records in 12 hours on the power of a revolutionary Diesel engine. Then Mercedes-Benz put the same basic engine in a car you can buy: the 300SD Turbodiesel Sedan. At long last, the performance Diesel is here – and from stoplights to filling stations, the benefits must be experienced to be believed.

Do not confuse the Mercedes-Benz 300SD Turbodiesel Sedan with any Diesel automobile you have driven or heard about before.

It is the most technically advanced Diesel that Mercedes-Benz has ever built – but beyond this, it is probably the most *exciting* Diesel automobile anyone has ever built for public sale.

"The most stunning quality of the 300SD, by far, is its acceleration."

– AUTOWEEK

Generating much of that excitement is an engine unlike any ever used in a Diesel car before: a 5-cylinder, 3-liter, *turbocharged* engine.

After testing the Turbodiesel with this power plant, *Road & Track* magazine reported that its 0-60 time of 12.7 seconds eclipsed all other production Diesel cars available today.

Diesel driving, transformed

The effect in everyday driving must be felt to be fully grasped.

You are turbocharged away from stoplights, up long grades, through passing maneuvers, with a feeling of power to spare. In highway traffic, you can maintain the pace with velvet ease.

That newfound sense of power is no illusion: turbocharging this Diesel engine boosts maximum power by 43 percent – and maximum torque by a lusty 46 percent.

195.4-mph Diesel engine

The engine that powers the 300SD Turbodiesel Sedan barely differs in design and major components from the engine that recently made performance history.

The date was April 30, 1978. The place, a circular 7.8-mile track at Nardò, Italy. Driving in relays, dodging fog, fatigue and the odd errant hedgehog, four drivers piloted their fin-tailed C-111/3 research vehicle around and around and around – until, 12 hours later, 9 new world speed records had been set. That C-111/3 had lapped Nardò at an average speed of 195.4 mph for the full 12 hours – including one extraordinary lap at 203 mph.

Diesel efficiency unchanged

Yet the most amazing news about the Turbodiesel engine may not be its performance at all.

Note that while it was averaging 195.4 mph for those 12 hours, that C-111/3 record car was also averaging 14.7 miles per gallon.

In short, you can have your cake and eat it too. Vivid new performance has been injected into the Diesel engine – without subtracting from its legendary fuel efficiency by as much as a single drop.

For example, compare the Turbodiesel with the lively 300D Sedan and its similar but un-turbocharged engine. Though a larger car than the 300D and a good 320 lbs. heavier, the Turbodiesel is not only quicker in acceleration; it uses *even less* fuel. EPA estimates show 29 mpg in highway driving, 24 mpg in the city. (Your mileage of course will depend on the condition and equipment of your car and on where and how you drive.)

"The handling is superb, the suspension always in control. It is a pleasure to drive...and drive ...and drive."

– AUTOWEEK

The 300SD Turbodiesel would be newsworthy even if there were nothing new under its hood.

It is the roomiest Diesel Mercedes-Benz has ever built, the most sumptuously appointed, and the most civilized to ride in.

"On the sound meter," *Road & Track* found, "the 300SD's readings were virtually identical to those of the 450SEL we tested last May."

But despite a plush interior environment of soft velour carpet and hand-finished veneers and thickly padded seats, the Turbodiesel shines in brisk driving; it aims for over-the-road performance seldom found in "luxury" or "prestige" sedans.

Consider some vital statistics. It is less than 18 feet long, needs a mere 2.7 turns of the steering wheel lock-to-lock, and whips around within a turning circle of 38 feet. It is almost playfully maneuverable.

And it needn't be babied along on back roads. The fully independent suspension helps assure that the tires are in constant contact with the road. The car is not knocked off course by every bump and pothole.

The engineers even built a shock absorber into the Turbodiesel's steering system, to help muffle the jolts before they can reach your hands on the wheel. Engineering luxuries abound: gas-pressurized shock absorbers, light-alloy wheels, and four-wheel disc brakes.

Power-assisted steering and brakes, and a precision-engineered automatic transmission with *four* speeds, help make this performance car almost physically effortless to drive.

Can you resist a test drive?

With the 300SD Turbodiesel, AUTOWEEK concludes, "The Diesel passenger car has come of age."

It seems only logical that the company that pioneered the world's first production Diesel passenger car in 1936 should, two million cars and 50 years of experience later, pioneer the performance Diesel sedan.

© 1978 Mercedes-Benz of North America, Inc., One Mercedes Drive, Montvale, N.J. 07645

The record-breaking Mercedes-Benz C-111/3 (right) and the 300SD Sedan, powered by the same basic turbocharged Diesel engine

The energy world is faced with a burning question.

The problem: how to burn coal as a major energy fuel without contaminating the atmosphere.

FMC has two effective solutions: (1) coal preparation systems, which, among other benefits, reduce the sulfur content in coal before it is burned (2) a patented double alkali scrubber system, which removes sulfur dioxide and particulates caused by coal combustion.

FMC has been advancing coal technology for more than 70 years. Our mining vehicles and equipment, processing and handling systems, rail cars, and furnace hopper systems set standards for the industry. With FMC technology, a process has been developed to convert coal to synthetic crude oil and pipeline quality gas.

Tell us your needs. FMC serves worldwide markets for mining and construction equipment, petroleum and fluid control equipment, material handling, industrial and agricultural chemicals. Write FMC Corporation, 200 East Randolph Drive, Chicago 60601. Or call 800-621-4500 (in Illinois: 312-861-5900).

FMC

nyone who thinks deregulation will bring rosperity to the railroads and truckers as it id to the airlines had better think again.

Transportation

By James Cook

IT WAS A seemingly revolutionary, but in reality, almost stupefyingly elementary notion: What if you ended ose controls on market entry and pric- the government had imposed on nsportation for generations, and let rriers go about their business as they eased? Cut prices or raise them, enter w markets or withdraw from old ones sound business judgment would dic- e? In short, what if you let competi- n do the job that regulation had at- mpted and never really succeeded very ll in doing?

Academicians had talked of such ngs for years, but in taking over as airman of the Civil Aeronautics Board months ago, Alfred Kahn, Cornell iversity's regulatory guru, put them o effect. A good half of the airline dustry was appalled. The result would chaos: cutthroat price competition, gging profits, disaster. But Kahn per- ted, and before he moved on to be- me Carter's chief inflation fighter, the lines were propelled—some of them cking and screaming—into a new age. Led by a maverick Texas outfit, Texas International Airlines, the industry was encouraged to offer sharply reduced fares to passengers who were prepared to fly at times when the industry's traditional customers didn't want to. One discount fare promptly followed another. Far from bankrupting the industry, competition proceeded to transform it. Air travel turned out to be an almost classically price-elastic market. And as the airlines began offering tickets at discounts of 50% and more, depending upon the circumstances, and filling planes that had long flown empty, they found themselves tapping a vast new market for low-priced, nonessential passenger service. Overall, demand boomed, soaring 18% in the first nine months of last year, profits expanded spectacularly and an industry that only a few years ago seemed nearly bankrupt found itself being deregulated into the biggest and best year in its history. The FORBES yardsticks make clear the impact: a breathtaking 24.8% return on equity in the latest 12 months, *vs.* a 10.5% five-year average.

From Kahn's point of view, the industry's newfound prosperity was really secondary. "One reason we wanted to move toward competition," he told FORBES, not long before taking his new job last November, "is that it will be beneficial to consumers. The other proviso is the implicit premise on our part that a competitive industry is capable of being financially healthy. It is entirely conceivable that deregulation will force people to become leaner, more efficient, more careful. They're not free to overacquire, enter markets that might not be logical for them to enter, secure in the knowledge the government will bail them out."

Congress was so impressed by Kahn's argument and the industry's performance that last fall it passed a bill enacting Kahn's notions into law—freeing the industry from control over its routes by 1982 and over fares, mergers and acquisitions by 1984. In the meantime the carriers were free to enter one new market a year, pull out of an old market on 90 days' notice, cut fares in noncompetitive markets by as much as 50% or raise them as much as 5% without CAB approval or 10% in markets where there were four or more carriers competing.

The airlines are understandably uneasy sometimes, because in slashing fares, they become vulnerable to a recessionary traffic slump. But in deregulating the industry Kahn never promised them a rose garden. Deregulation wasn't supposed to spare the industry the consequences of poor business judgment, any more than regulation itself had been able to protect it from the ruinous excess capacity poor management created twice in less than two decades.

Of course, the merits of airline deregulation haven't been proved by one summer's boom, but the first results were so spectacular that the Administration and Congress promptly began talking about doing the same thing for the rest of the carriers. President Carter hoped airline deregulation would be the precursor of deregulation in other overregulated industries, and deregulator Kahn argued there was even less reason to regulate trucking than airlines.

Maybe so, but success in airline deregulation doesn't guarantee success in the rest of the transportation business. For one thing, real reform is difficult in Washington. Airline deregulation was politically popular. The public loved the

lower fares, and the public votes. However, the general public does not much use trucks and railroads—except indirectly—and therefore, deregulation of these industries does not have the same political constituency.

And politics is only half the difference. By cutting prices, the airlines have induced more people to fly. But truckers and railroads move goods, mostly, not people. Cutting freight rates is not going to expand the size of the market. Cheaper shipping rates are unlikely to cause the appliance industry to produce more refrigerators, say, or the steel mills, more steel. Instead of expanding the market and lowering unit costs in transportation, lower prices are simply going to come out of the hides of the truckers and railroads. The ultimate result could be less competition, not more, as the weaker companies are forced under.

Congress had earlier attempted to deregulate the railroads' ratemaking in the so-called 4R Act of 1976, only to be thwarted by the Interstate Commerce Commission, which interpreted the act's market dominance provisions so narrowly as to leave a good 50% of the industry's traffic still under rigid control. The free market advocates are almost certain to try again, only this time with trucking. Senator Edward Kennedy expects to introduce legislation deregulating trucking later this year, and in November 1978 the ICC's Chairman Daniel O'Neal came up with a group of proposals that would in effect deregulate all but the common carrier truckers, ease entry even there and establish a range within which price changes would not be subject to ICC review.

The other members of the Commission greeted O'Neal's proposals with a notable lack of enthusiasm, but in November, ostensibly in the interest of saving fuel, the ICC took a major step toward deregulation by authorizing private carriers to solicit backhaul traffic from other shippers for the first time. By such means, the ICC could deregulate much of the trucking industry without any need for congressional action, just as the CAB had the airlines, but the American Trucking Association denied that the ICC had the option and took the matter to court.

Cheaper shipping rates are unlikely to cause the appliance industry to produce more refrigerators, or the steel mills, more steel. Instead of expanding the market and lowering costs, lower prices are going to come out of the hides of the truckers and railroads. The result could be less competition, not more.

Trucking will be a tough nut to crack. You would be hard put to find anybody in the regulated surface transport business who thinks that truck deregulation is a good idea—not the railroads certa ly, who face the prospect of their un gulated truck competition growi worse; not the common carrier trucke who long since have found the unre lated truckers the common enemy of regulated carriers; and not the Tea sters Union, which wants to keep t trucking rates high so as to have healthy cow to milk.

The airlines basically compete wi each other and only to a small deg with buses and Amtrak. But the truc barges and railroads compete not o with one another but also with ot trucks, rails and barges.

Regulation has kept the trucks and w ter carriers healthy and prosperous, bu has helped to bankrupt a good portion the railroad industry—not simply t seven companies absorbed by Conra but the Boston & Maine, the Rock Isla and the Milwaukee as well—and thre ens such once-prosperous carriers as t Illinois Central Gulf and conceival even the Seabord Coast Line. The 5.3 five-year return on capital the railroa average on the FORBES yardsticks, against the 13.1% of the motor carrie understates the disparity. As the IC calculates it, the railroads last y earned only 1.3% on their net inve ment, *vs.* 23.8% for the truckers, 21.07 for the water carriers.

That's why Kahn and Kennedy ch the trucks as their next target.

Deregulation is never going to bri any new competitors into the railro

The name that's a leader in calculators and electronic cash registers

KIDDE

Victor Business Products is Kidde's outstanding performer in office products. The reasons? More than 6,000 branches and dealers offering sales and service to every U.S. county and 80 nations. State of the art products like the new 600 series calculator that sets new standards for reliability and performance. And premium features across the line, without premium price tags.

Victor electronic cash registers are also scoring big in the fast-moving world of retailing. With ECR products that range from stand-alone units to expandable systems with data communications capabilities.

These products, and hundreds of others from Kidde, have helped produce record sales, net income and earnings per share year after year. And now sales are approaching $2 billion. To learn more about Kidde, write for our Annual Report. Walter Kidde & Company, Inc., 9 Brighton Road, Clifton, New Jersey 07015. And to find out more about the Victor Business Products, call Victor's toll-free number (800) 447-4700; in Illinois (800) 322-4400.

business—it costs too much. Who would invest new capital in an industry where its largest and most successful companies average less than 6% on their capital? But trucking is a different matter. In an industry where a driver can buy a $60,000 rig for maybe $9,000 down and go into business for himself, open entry could conceivably transform the industry. Thus deregulation will bring a rash of new competition into the trucking business: competitors who will price-cut their way into the market and set off a wave of mergers that will transform trucking into a far more concentrated business than it is now. The short haul and regional truckers may well be squeezed out, and the big national companies—outfits like Yellow Freight, Roadway Express, Consolidated Freightways and McLean Trucking—will come to dominate the industry. And it is likely that the same will happen with the entrenched companies in freight forwarding (Transway International) or contract leasing (Leaseway International).

Deregulating the truckers while leaving the railroads regulated could, in addition to disrupting trucking, come close to being fatal to the railroads, with newly deregulated truckers price-cutting into the railroads' remaining markets.

"I think," says ICC Chairman Daniel O'Neal, "the government will have to be concerned about the disruptive effect of changes in the system. Actions we take as far as motor carriers are concerned should be read in conjunction with how they affect the railroads. Some commodities carried by the railroads are vulnerable to motor carrier competition—agricultural commodities, anything that moves in full trucks. There's one reason for regulating the motor carriers: because of their threat to the railroad industry."

Sad to say, O'Neal has a point.

Deregulation isn't likely to produce anything like the boom conditions that airline regulation has. Freight transportation, unlike passenger traffic, is basically price inelastic. The volume of freight traffic is determined by the level of the economy. So what you may do by deregulating ratemaking is to divert traffic from one carrier or mode of transport to another.

All you really may accomplish is to reduce the general rate level of the carriers involved, a reduction that the railroads at least no longer have the financial resources to withstand.

And the truth is that, in terms of their costs, transportation rates are in general probably too low. Veteran rail analyst, Isabel Benham, head of Princeton, Kane Research, calculates that since the end of the 19th century the U.S. government has spent nearly $130 billion developing U.S. highways and waterways, as against $2 billion on railroads, and this indirect subsidy has enabled barges and truckers to price their services for less than they would have otherwise and to force the railroads, in competing with them, to underprice their services as well. The result has been a progressive dissipation of railroad capital and a corresponding inability to provide the service that in many transportation markets is far more important than costs. "The motor carriers," says ICC Chairman O'Neal, "are doing well because they provide pretty darned good service."

"Actions we take as far as motor carriers are concerned," says ICC Chairman O'Neal, "should be read in conjunction with how they affect railroads. Some railroad commodities are vulnerable to motor carrier competition. There's one reason for regulating motor carriers: because of their threat to the railroad industry."

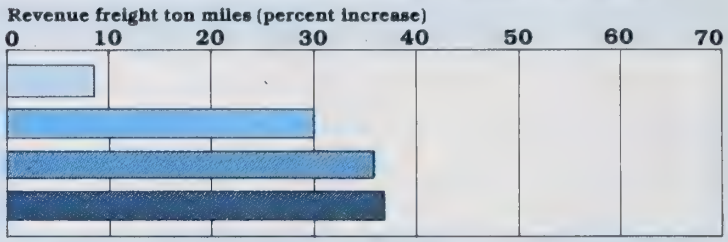
And they do. So good, in fact, that even with a rate level nearly five times that of the railroads they have easily walked off with the market. Transportation is a volume business, and the volume—the most profitable volume at that—has increasingly gone to the truckers and water carriers, leaving the railroads particularly vulnerable to the cost inflation of the Seventies. Railroad freight traffic has admittedly expanded 8% since 1970, but that compares wit 36% gain for the truckers, 37% for barges. And the railroads, squeezed the profits they need to keep going, h responded by increasing their rates more rapidly than the truckers hav increasing them, over the past ei years, 60% on average, *vs.* 40% for truckers—a move that has probably c them even more of the growth t might otherwise have been entitled t

What the railroads obviously need still higher rates—to restore their ba earning power—and greater flexibility adjusting them up or down to suit competitive environment. But ratem ing freedom is probably no lon enough. What the railroads need e more is the imposition of user charges their competitors to even out the ineq ties created by government subsidi highways and waterways, and this wo almost certainly mean that the rate le in both railroads and trucking would ri

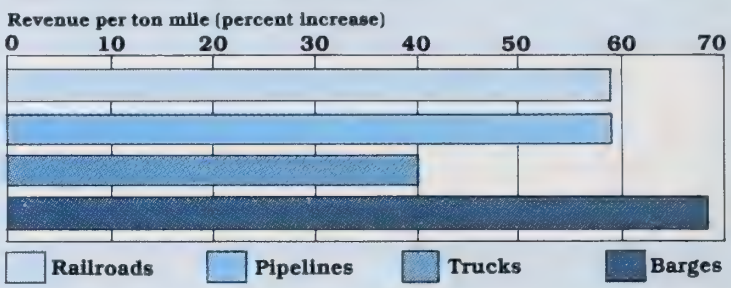
But even without user charges, M gan Stanley's transportation expert dras Peterey argues, long-term deregu tion of trucks and rails is unlikely produce the lower prices across the bo the politicians dream about. It wo only lessen competition in trucking, courage prices to rise and could furt weaken the railroad industry. "The c ous effect," he says, "would probal mean many increases rather than creases in freight rates. Once the weal firms are squeezed out, prices will go again." Deregulation in the air cargo

Growth rates & rate growth

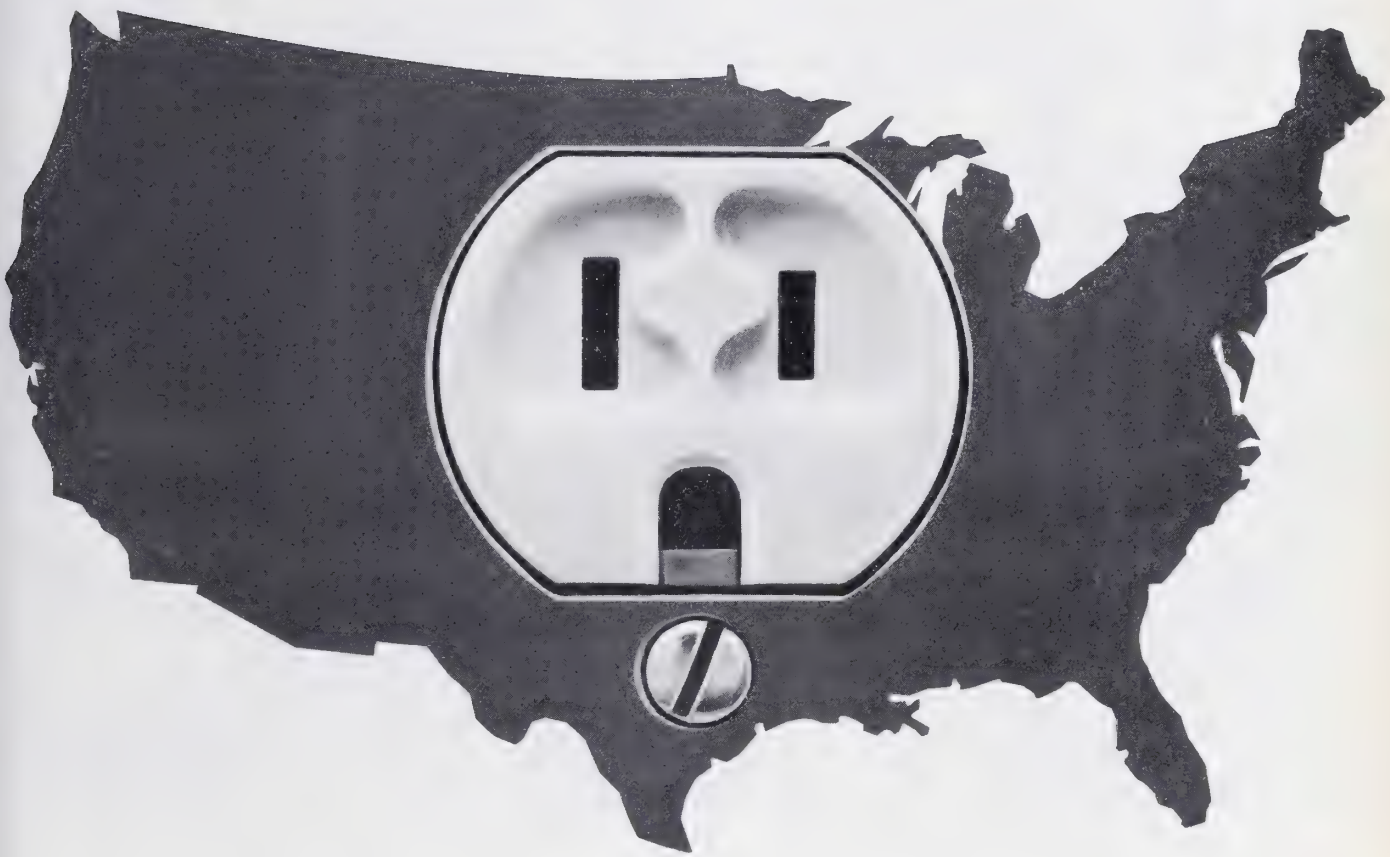
Transportation may be a growth industry, but not everyone in it is growing at the same pace. Between 1970 and 1977, revenue ton miles increased only modestly for the once dominant railroads, but boomed for the competing oil pipelines, truckers and barges.



Over the same period the railroads magnified their competitive disadvantage by increasing their rates far faster than the truckers and increasing them nearly as fast as the lower cost barges and oil pipelines. The disadvantage is growing.



Electricity will do the work that keeps America working.



When there is a shortage of energy, a nation suffers many problems: a slowed economy, impaired transportation, lost jobs, and a lowered standard of living.

No one wants to do without energy, but there are problems in providing it. About 50 percent of our oil is imported. We want to become less dependent on foreign countries so that our nation's economic stability—perhaps even your job—will not rest on the whim of a foreign government. We must make the best possible use of our available domestic energy sources, coal and nuclear fuel—particularly the breeder reactor, which actually produces more fuel than it consumes.

An important part of solving the energy problem will be electric energy generated from these domestic energy sources. Coal and nuclear fuel meet their energy potential only when converted to electricity. At Middle South Utilities, we're working to provide enough electric energy to keep our economy strong and our people working. We have our region's first nuclear-fueled generating unit in operation, a second approaching commercial operation, and three more under construction. By 1990, we plan to have 10 coal-fired units in operation.

Middle South Utilities is making energy that makes sense.

MIDDLE SOUTH UTILITIES

dustry may have got the air cargo business booming at last, but the result so far has been higher, not lower, fares. Kahn explains the anomaly by suggesting that fares were probably too low—just as they probably are throughout the surface transportation industry. So in the end deregulation may prove to be not the deflationary device some of its proponents suggest but an inflationary one—or if not that, one which encourages transportation to reflect its true costs for the first time in generations.

Deregulation is popular in Washington these days, and *that* is good news for those who believe in free enterprise. But Congress would be wise to go slow on deregulating trucks and railroads because lower prices are not what the railroads need to survive. As things now stand, because freight rates may already be too low, the taxpayer subsidizes trucks and barges, and railroad stockholders and bondholders subsidize most railroads. If the aim of deregulation is to bring freight rates down, the result may be to increase the need for subsidies and to reduce rather than enhance competition. That's a sad thing to say but probably true.

If the politicians and bureaucrats still dream of the benefits of trucking deregulation, hardly anyone seriously suggests that this offers any solution for ocean shipping. Companies like Alexander & Baldwin (Matson Lines), Transway (Waterman Steamships), Seatrain Lines or Moore-McCormack have suffered too long at the hands of cut-rate foreign, and largely Russian, competition. What these carriers want is regulation in order to stay alive: rigid rate regulation in e change for a secured market positi "You can't have a staunch allegiance antitrust," says Transway's vice pre dent-law, Lawrence Berman, "when t rules of the game are not controlled the U.S. So pooling arrangements are t name of the game."

In short, there is no easy answer to t question of deregulation. Can one opt inconsistency? Favor deregulation the railroads, favor only restricted der ulation for the truckers? One probab can. What transportation needs is pra matic, not ideological, solutions. The b sic problem, of course, is how do y unscramble eggs. And the answer is, course, you can't do it. All you can ho to do is stir them around so they don get too lumpy. ■

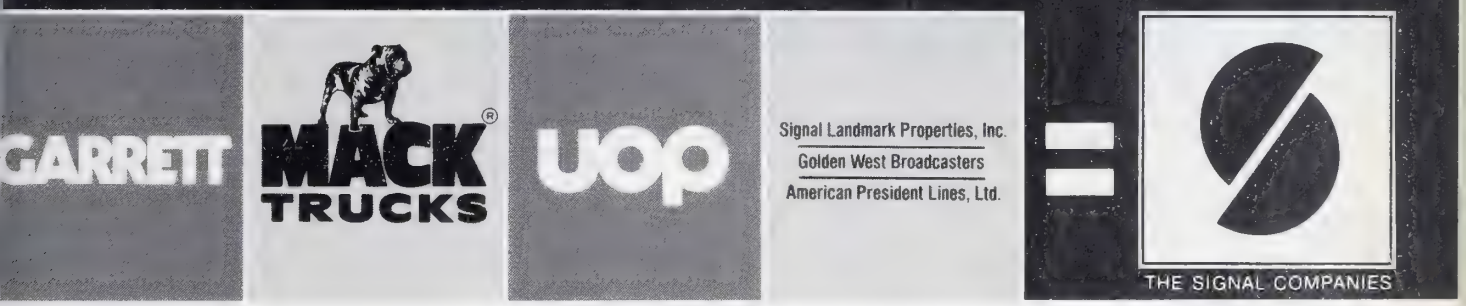
When Garrett, Mack, UOP, and the whole team score, Signal wins.



GARRETT—The Garrett Corporation is a high-technology company with major markets in the aviation, automotive, and general transportation industries. At the end of the third quarter, Garrett's record backlog totaled $1.1 billion and nine months earnings were $34.3 million—up 27% over 1977.

MACK—Mack Trucks, Inc. holds a substantial share of the North American market for heavy-duty diesel trucks, and a commanding share of the export market. The result has been a record nine months with earnings of $55.6 million—up 103% over 1977.

UOP—UOP Inc. is a world leader in providing technology for the petroleum refining, petrochemical and chemical industries, as well as for environmental control systems and engineered products. UOP's contribution to Signal's nine months earnings was $13.3 million—up 48% over 1977.

OTHER INVESTMENTS—This group of companies involved in real estate, broadcasting, and shipping has one common feature—profitability. The group contributed earnings of $17.7 million for the first nine months of 1978—up 42% over 1977.

It all adds up to a record nine months. Sales are up 21% to $2.7 billion, earnings up 62% to $117.4 million. This continued strong performance reflects Signal's management strategy of developing a command of advanced technology in all units. Its success is creating the capital for future Signal successes.

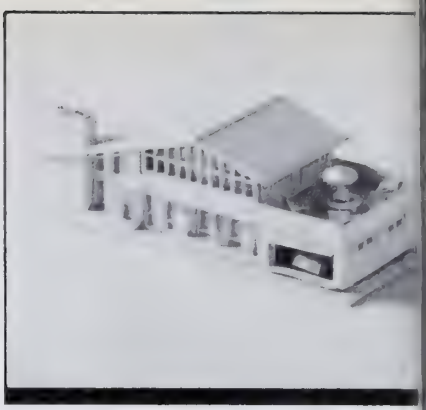
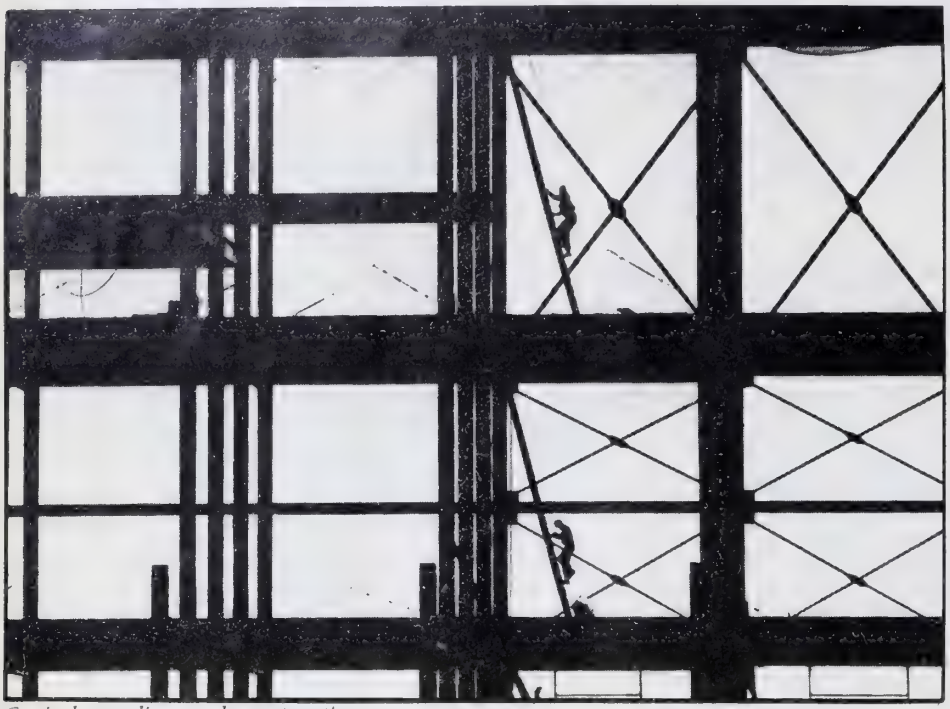
The Signal Companies

One Signal success leads to another.

After two glorious years the housing market is turning soft. Will 1979 be a rerun of 1973? Everyone hopes not.

Construction





Capital spending and construction
The much-heralded boom faces another delay.

A SLOWDOWN but no slump is in the cards for house building in 1979. Profits will slip a bit from 1978's fantastic levels, but not by much. The way most construction executives see it, the late 1978 switch by the Carter Administration to a policy of monetary restraint is a deterrent, but not a disaster.

You've heard that before? The old "soft-landing" scenario. Wall Street is *very* skeptical. After the October stock market crash, stocks of building material manufacturers were dragging bottom. Old stalwarts like U.S. Gypsum, PPG Industries and Johns-Manville were selling for a mere five times projected 1979 earnings. The market was saying that these earnings couldn't last.

In recent decades construction in all its forms has been the economy's swing industry. When the Federal Reserve tightened money, the immediate impact was on building. The reason is obvious: You can't build a house or a hotel or office building out of current income; you need to borrow. And if money is hard to get, the first thing hit is building.

As usual, Chairman Jim Walter of Tampa, Fla.'s Jim Walter Corp. ($1.7 billion in sales) cuts right to the heart of the matter. "I sure don't like to see money this expensive," drawls Walter, "but I'd sure rather see money expensive than nonexistent."

Nothing dries up construction like a lack of funds. The problem isn't just interest rates. Last year double-digit mortgages became commonplace and mortgage rates on the West Coast pushed 11% at year-end. On a $50,000 mortgage the difference between 8½% and 11% is a staggering $26,000 over the life of a 25-year mortgage. Yet demand for mortgages continued virtually unabated. "There just doesn't seem to be any reluctance this time among house buyers to pay what are historically high rates," says Champion International Executive Vice President John A. Ball. If Americans are scrimping they seem to be doing so somewhere other than in housing, making this once cyclical industry a good deal less so.

So the real question in 1979 is: Just how tight will money become? In 1977 and for most of 1978 consumer debt grew at a staggering 17% annual rate, alm double the pace of the mid-1970s.

Obviously the supply of money i going to permit an increase like tha 1979. But that's not to say money dry up completely. Clearly, the Fed the other authorities are trying to that construction doesn't bear the en brunt this time. But a question rema Can the economy be that fine-tur Even if home buyers are willing to sp 11% and more for mortgage money, the savings and loans be willing to 10%-plus for six-month savings ce icates to get the lendable funds?

This industry's best bet for 1979 is million housing starts. This will be ab 20% below 1978's level, a quite bear decline considering that sales in the quarter were so much stronger than been expected. So there's an elemen hope in this comfortable number. A two torrid years when starts ran arou million units this industry would alm welcome a pause that refreshes be the startup of another boom, whicl expects to begin early in the 1980s. ' will be better off with fewer hou starts," says Chairman Frank M. C sen of Dallas' Centex Corp., who lieves most firms need a respite un their profit margins are to be furt eroded. "This country has neither labor nor the supplies to keep goin the present rate without fueling exc inflation," explains house builder C sen. In parts of California and the So west, the price of cement in a year climbed 19%, lumber is up 15% union plumbers in San Francisco get an hour on construction sites.

While those increases helped make price of housing prohibitive for m first-time buyers, they virtually ins this industry's profit margins will main respectable should President Ca do another about-face and impose m datory price and wage controls. Un the Nixon-era controls, construct firms fared badly. Then they were lowed to raise prices only in line with average level of increases set in the p two years when prices had been h down by lack of demand. This time w demand strong most firms have pas along most of their higher costs. So

eraging will be to their advantage. By nature, construction men are optiists. They build more in anticipation an against firm bookings. This ouldn't be the first time they've misdged the underlying strength of their arket. Back in 1973 they also welmed what they thought was going to a lull, only to see housing starts plunge the next two years by 43%. Is there y chance 1979 will turn into a repeat of 73? Could there be a bust ahead with l but the strongest companies giving up eir recent huge gains in earnings? *(See rdsticks.)*

"This is a cyclical, volatile business, d I do get nervous after two good ars," says Champion's Ball, who adits changing circumstances are forcing m to temper his natural optimism mewhat. But that said, Ball typically sists too many things have changed in is industry to make a prolonged slump housing and construction likely.

For a start, look at demand. "Pretty ell everybody is convinced housing nstitutes the only hedge against the evitable surge of inflation," says Ball. s not much of an exaggeration to say ousing has replaced glamour stocks as e smart place to invest. As respected ilding analyst Douglas A. Kass of New rk's Glickenhaus & Co. puts it, "In a ciety with a progressive tax structure e ours, home mortgages remain the ost appealing and most obtainable tax elter for the masses."

Figure it this way. As more wives enter the work force either out of economic necessity or self-fulfillment, more families are hoisted into higher tax brackets. But if they go deeper into debt by buying larger houses financed with huge mortgages they can use the interest charges to lower their tax payments. After all, that's what the rich have been doing for years.

Apart from diamonds (which doubled in value in 18 months), what other investments have fared half as well lately as housing? The median price of a typical new house in the Washington, D.C. area in 1978 jumped from $68,000 to $80,000. Nobody apparently seems to mind that housing around the nation's capital is now so expensive that almost every second house sold is bought by a two-income family.

Then, too, demographics are helping house sales. The post-World War II babies are forming families of their own and needing more accommodation. The key 25-to-34 age group, the big buyers of

Closing the money door for housing

Home buyers are less frightened by high interest rates than in the past, but the harsh fact of economic life remains: A rising prime rate signals less funds ahead for construction loans and mortgage lending. A downturn in housing starts now seems inevitable.

The New Insuranc

For the first time in this country, primary insurance covering large or unusual commercial risks can be written free of policy form and pricing regulations—a development made possible by New York State's "free-trade zone" for insurance.

A brief review by INA of an insurance topic of interest to business executives.

On July 20, 1978, Governor Hugh Carey signed into law a New York State bill that should have the long-range effect of helping to put this country's business-insurance marketplace on an equal competitive footing with many foreign locations traditionally regarded as world centers of the industry.

While the focus of attention will understandably be on New York at this stage, this imaginative legislation could produce a ripple effect across the country. Observers believe it will serve as a model for other states to follow in liberalizing the regulations and operating conditions that often tend to restrict competition in the insurance industry.

Now effective

Under the legislation, effective September 1, specially licensed insurers in the state are now able to write primary policies on large corporate risks – contracts with an annual premium of $100,000 or more – without the need for prior state approval of rates and policy provisions. (However, the state will require such insurers to maintain at least twice the capital surplus normally required and will oversee their operations.)

An unhampered market

In effect, the state of New York thus becomes a "free-trade zone" for insurance, the first of its kind in the United States. In it, large-scale buyers and sellers of insurance can do business swiftly and conveniently, unhampered by legalistic restrictions. As such, the free-trade zone will provide a more productive environment for insurance transactions – one that is responsive to the sophisticated

'ree-Trade Zone

risk management needs of business today.

Moreover, the advantages of the New York free-trade zone also apply to policies covering unusual or unprecedented risks, including those with premiums well under $100,000. Among them are such diverse exposures as insurrections, catfish farms, animal rides, ear piercing and new drugs. And for contracts involving risks outside the U.S., there are possible tax concessions offered by the state.

An American Lloyd's?

All of this inevitably suggests that with its free-trade zone New York is creating an American version of Lloyd's of London. The world's largest single insurance market, Lloyd's is known for its exceptionally broad range of insurance coverage, including both very large and highly unusual risks. Its operations are free of government control and it can provide quick and imaginative responses to insurance needs. These are the same kinds of advantages that the New York free-trade zone is also expected to deliver, although initially on a smaller scale.

The parallel with Lloyd's will also be heightened with the opening in 1979 of the New York Insurance Exchange, which will allow individual investors and others to participate in the underwriting of both primary and reinsurance risks.

Clearly, the New York free-trade zone should attract much insurance business that up to now has been written abroad. Competition will be spurred to the benefit of insurance buyers. And together with the new Insurance Exchange, the free-trade zone should bring capital to the United States, creating jobs and stimulating American insurance markets.

Strong support from INA

INA has strongly favored the creation of both the New York free-trade zone and the New York Insurance Exchange and is pledged to their support through active participation. INA Special Risk Facilities can provide professional counsel on the use of both facilities to risk managers, agents and brokers who may consider using them. And the Insurance Company of North America which will operate in the free-trade zone, maintains offices in New York City.

* * *

The Insurance Company of North America was founded in 1792 in Independence Hall, Philadelphia. Today it is the largest component of INA Corporation's international network of insurance and financial service companies. In property and casualty insurance and risk management services, life and group insurance, health care management, and investment banking, INA and its affiliated companies offer a unique combination of products and services to business and industry around the world.

INA insurance products and services are available through selected independent agents and brokers. For further information on the New York free-trade zone for insurance, write to INA Corporation, 1600 Arch Street, Philadelphia, Pa. 19101.

Grand jeté to the U.S.A.?

To an insurance underwriter, a ballet dancer's legs are merely another form of commercial risk for which coverage must be provided. Usually such "exotic" risks are placed overseas.

But with the opening of the New York free-trade zone, dancer's legs, in policy form, may be about to execute a broad leap across the Atlantic — back to the United States.

INA
The Professionals

houses and durables, is increasing at triple the rate of the total population. In the 1960s some 23 million Americans turned 30. In the 1970s, 31 million will reach this age. But in the 1980s no fewer than 40 million will pass that mark, becoming prime candidates for housing.

Another plus is the burgeoning remodeling market. Only five years ago spending for property remodeling was running around $20 billion a year. Last year, $35 billion. Remodelers add some 4 million rooms annually, which is equivalent to building an extra 700,000 new six-room houses. "This is business that increases no matter what's happening to the housing cycle," says Masonite Corp. President Robert N. Rasmus. Masonite now gets 34% of its business from remodeling, and expects this market by the early 1980s will contribute more to sales than new housing.

Okay, all this sounds great, but what about the key question: Are the funds going to be available?

When the Federal Reserve tightened money, the immediate impact was on building. Clearly, you can't build a house or office building out of current income; you must borrow.

What kept this industry humming throughout 1978 was the introduction by the savings and loan associations last June of money market certificates with interest rates tied to U.S. Treasury bills. Instead of an outflow of funds in 1978's third quarter, the S&Ls found their coffers swollen by $12 billion. They had plenty of money for mortgages.

In large measure, the success of these certificates delayed the federal government in putting a damper on the overheated economy. Once the Treasury hiked its rates in earnest, however, the S&Ls increasingly found themselves in the unenviable position of paying n as much in interest as they were all to charge for their mortgages under usury laws. Anyone can figure out t interest rates move even higher, o that matter, stay high throughout increasingly the S&Ls will have money for mortgages. Again, how the optimists claim that changes—nical ones, this time—will lessen chance of a major collapse in housir

For instance, the secondary mort market today is far better organized than four years ago. The introductio 1975 of variable rate mortgages, the chasing of conventional mortgage the Federal Home Loan Mortgage (Freddie Mac), plus the government' fluence in standardizing mortgage d ments have all helped make mortg attractive again to the big financial i tutions. Life insurance companie 1977, with Prudential and Metropo Life in the lead, began investing in gle-family mortgages after many y

Free. The kit that will move you, in no uncertain terms, to a decision on a company airplane.

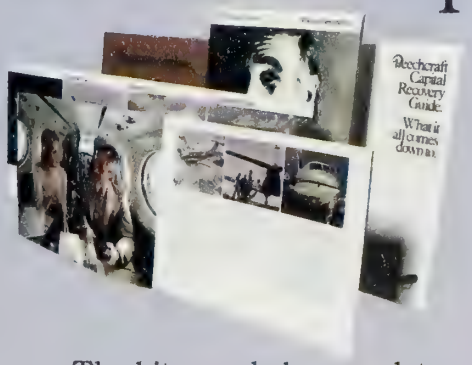
Hundreds of successful companies of all sizes could tell you about the advantages of owning a company airplane.

But how can you be sure a business airplane would be a good investment for your company?

Send for the free Beechcraft Business Flying Kit.

It's specifically designed to help you, step-by-step, take a realistic look at whether a company airplane can help solve your business travel problems.

And it promises you up-front answers to real questions you have about owning a company airplane. How do you determine the need for one? How do you select the right size aircraft? What financing plans are available?



The kit even helps you determine the actual net capital cost to your company of a business airplane like the Beechcraft Super King Air shown here.

And this year, the kit has been updated and expanded with new information that makes objectively evaluating a company airplane even easier.

We'll be the first to concede that a company airplane isn't right for everyone. But once you've read the free Beechcraft Business Flying Kit, you'll know if it's right for you.

Send for it today.

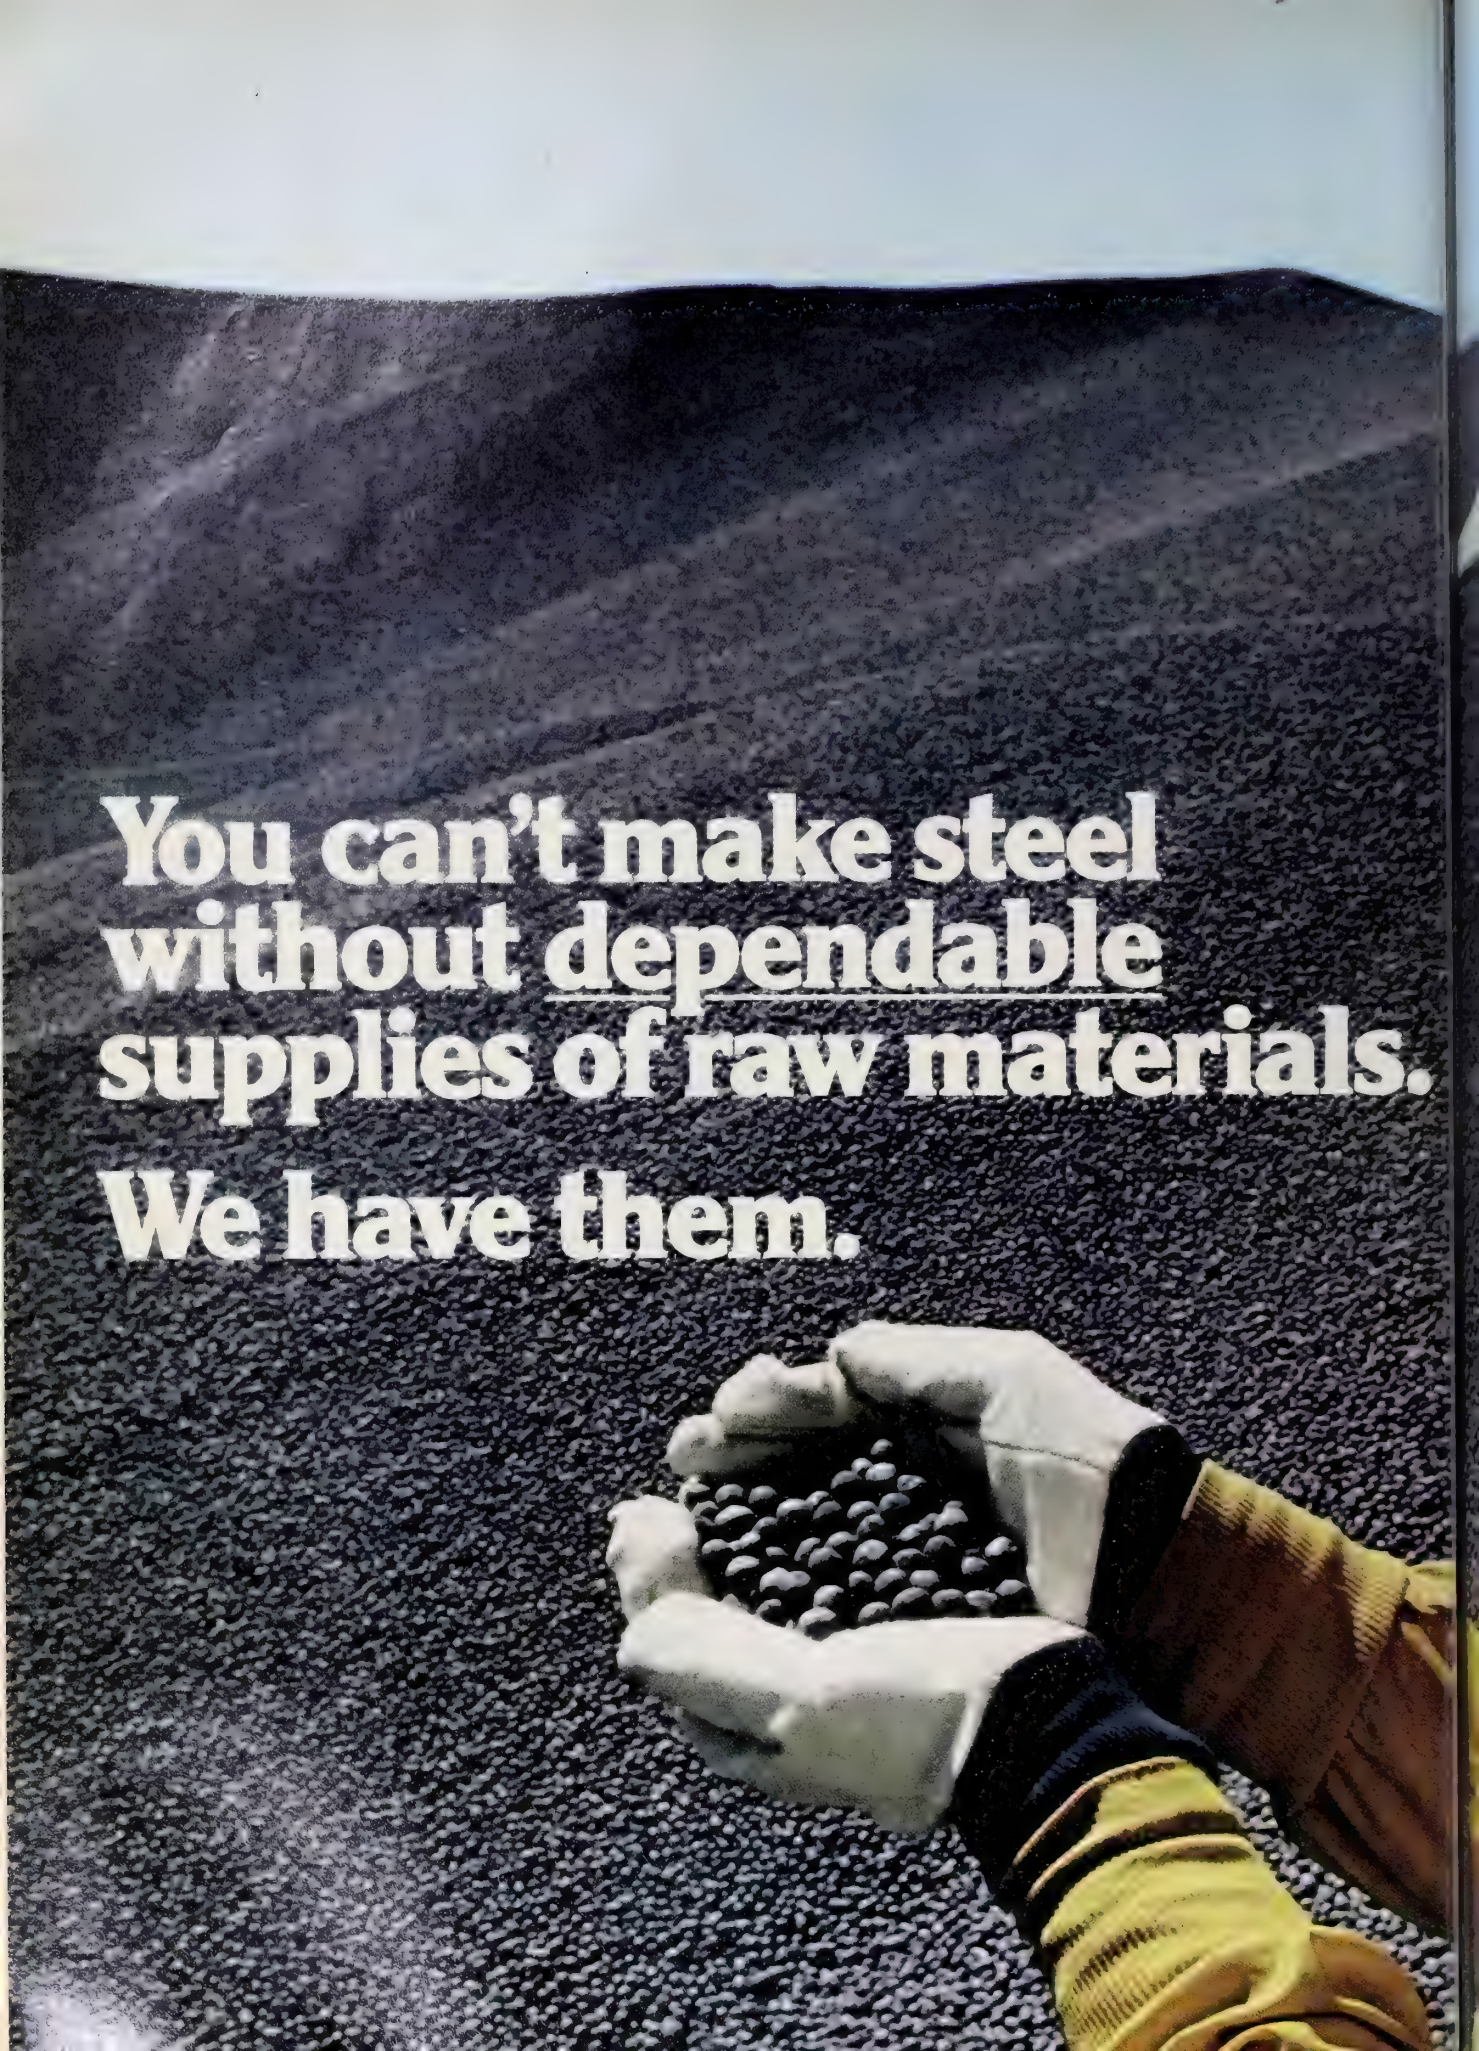
Write on your company letterhead to: Beech Aircraft Corporation, Dept. K, Wichita, Kansas 67201. Ask for our free Business Flying Kit, and please mention if you're a pilot. If you'd rather call, make it collect and ask for Dick Schowalter, Jr. 316-681-7072.

Member of General Aviation Manufacturers Association

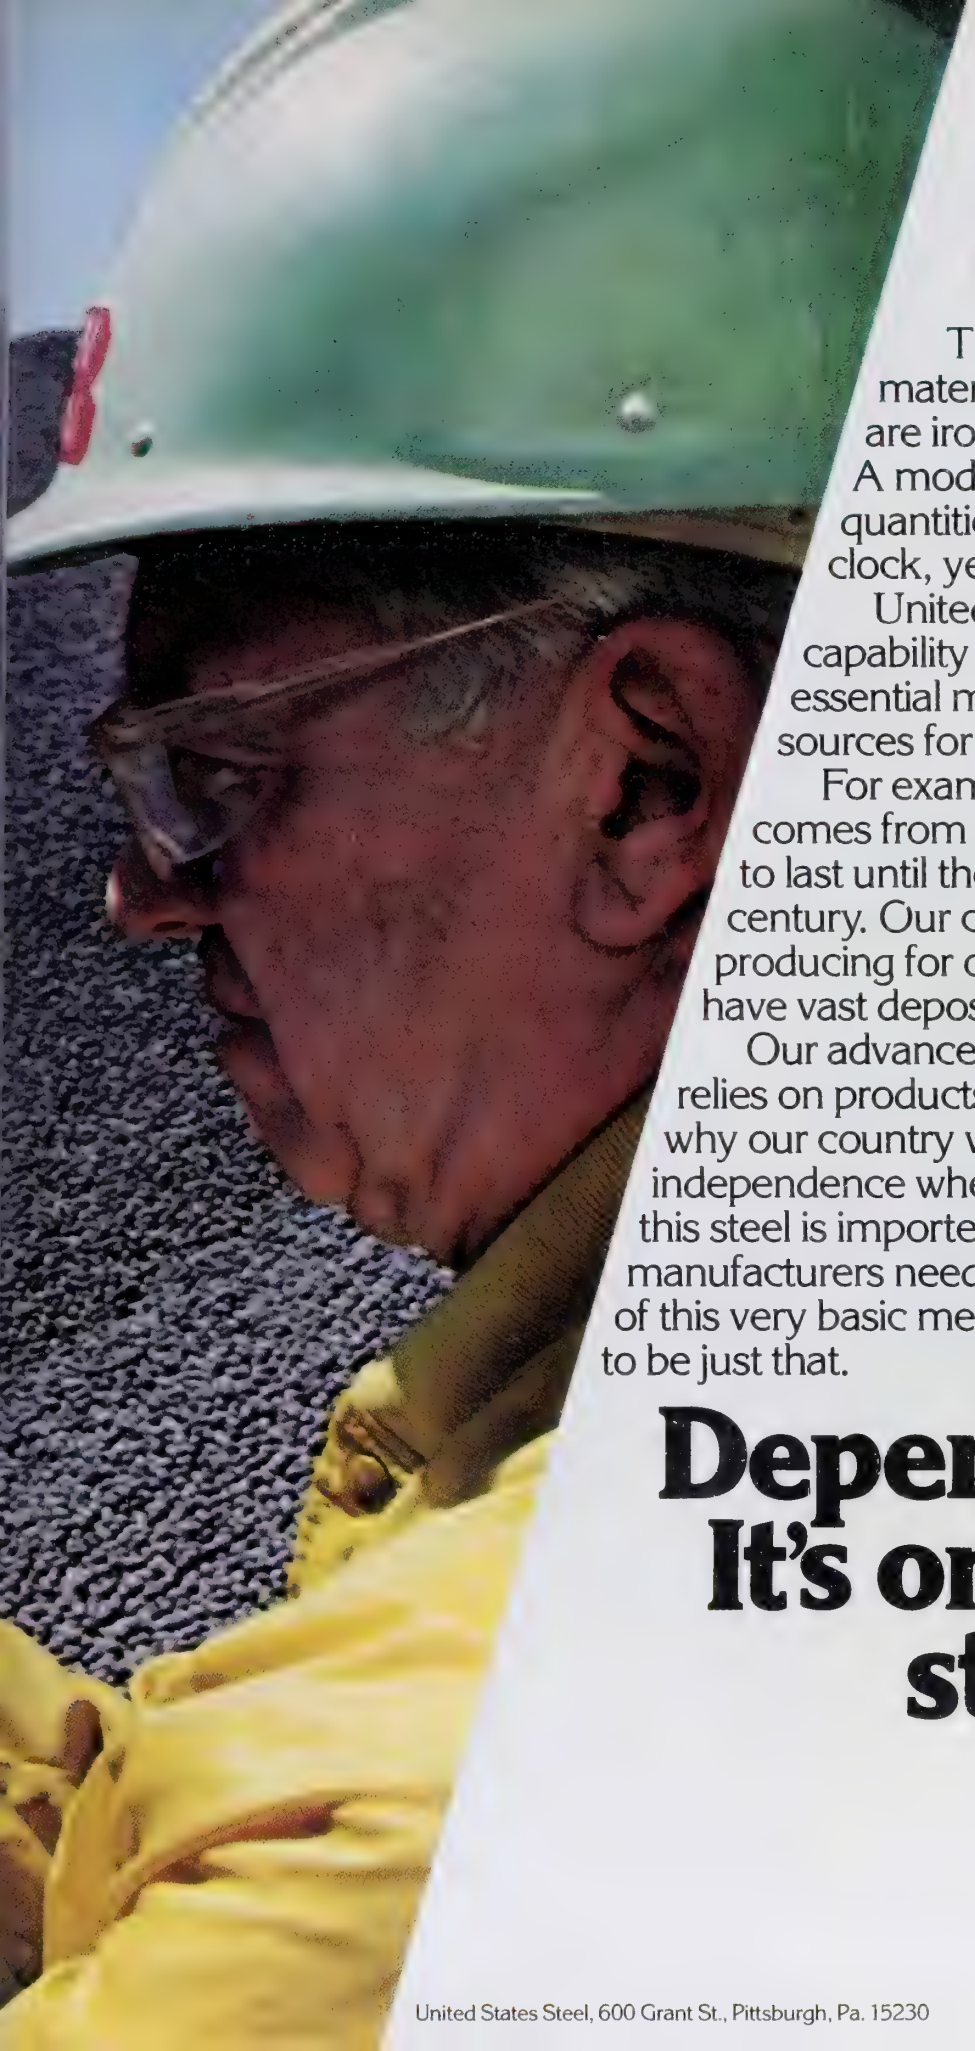
Beechcraft AVIATION CENTER

The jetprop Beechcraft Super King Air. The world's best selling turbine powered airplane. It can carry 8 to 15 people in boardroom comfort at nearly half the speed of sound.

Know any friends who want to learn to fly? Tell them about the General Aviation Manufacturers Association Take Off Sweepstakes. They could win a $50,000 airplane just for earning their private pilot license. Have them call TOLL FREE, 24 hours a day, any day and ask for the BEECH "TAKEOFF" operator: USA 800-447-4700 (in Illinois, 800-322-4400); Canada 800-261-6362 (Toronto, 445-2231).



You can't make steel
without dependable
supplies of raw materials.
We have them.



Three of the basic raw materials used in steelmaking are iron ore, limestone and coal. A modern mill requires immense quantities, every day, around the clock, year in, year out.

United States Steel has the capability of providing much of these essential materials from its own sources for decades to come.

For example, most of our iron ore comes from reserves that are expected to last until the middle of the next century. Our coal mines should continue producing for over 100 years, and we have vast deposits of limestone.

Our advanced American way of life relies on products made from steel. This is why our country weakens its economic independence when a significant amount of this steel is imported. Furthermore, American manufacturers need a reliable domestic source of this very basic metal. We intend to continue to be just that.

Dependability. It's one of our strengths.

USS

United States Steel, 600 Grant St., Pittsburgh, Pa. 15230

sence from this market. So while ortgage money will be a lot tighter, nances are that in 1979 it will not be nexistent.

With the economy now clearly in a ate of greater flux, more firms found it xpedient to adopt new strategies or pol- h up old ones. U.S. Home, the nation's rgest house builder, for example, after a ecade of boardroom turmoil and medio- re earnings, reverted to a strategy first ied in the 1960s. "The key is not to get ocked into one product," explains hairman Guy R. Odom, who is pushing wider range of models to fit every- ody's budget. Similarly, giant Weyer- aeuser, which is big in building and ortgages as well as lumber, is peddling wer-priced, smaller units. "The con- umer must settle for less," says Weyer- aeuser Vice President John Creighton. wens-Corning Fiberglas is prospering om the insulation boom, but is also ushing its fiberglass as a roofing materi- . Roofing shingles are a $1 billion-a- ear business, and OCF believes glass bers' share of that market, already up

House building in Utah
A slowdown even in the Sunbelt.

from virtually nothing to 15% in three years, can reach 50% in 1981 at the expense of organic felt.

What of heavy construction? "We are still like the bridegroom standing at the altar waiting for the bride to arrive," says Fischbach & Moore Executive Vice President Philip Heller. "We know we're going to get married, but we don't know when." The long-awaited boom in capital spending is still just that. "It's been a hell of a disappointment," says Morrison-Knudsen President William H. McMurren. "What capital spending there has been too often went to knock down a few walls and upgrade equipment, but not for new plants."

What makes the delay ticklish for many of the bigger construction outfits is that some of their lucrative overseas ventures appear to be drying up. The tremendous earnings gains shown by firms like Santa Fe International, Fluor and Parsons *(see yardsticks)* came from designing and building refineries, ports, harbors, even cities in the Middle East and from oil drilling platforms for the

North Sea or other foreign ventu
"We're being hammered out of S
Arabia by the Koreans, and there's
to no orders coming from the N
Sea," complains Santa Fe Senior
President Frank E. Reynolds, who po
out that hungry European construct
firms are now fighting U.S. compa
for business in their own backyard in
Gulf of Mexico. "I doubt a lot of pe
are making money," sighs Reynolds.

Surprisingly, the most bullish firms
those in cement, which probably
fered the worst setback in the last re
sion. While total industry sales are
pected to slip 3% or so, big outfits
Lone Star and Ideal Basic figure they
gain market share and may boost e
ings in 1979 by 10% or more. "Cem
will still be on allocation this year," s
Ideal Basic President John A. Love,
calling how, in order to compensate
shortages in 1978, cement was impo
from as far away as Japan and Norw
"We are looking at another four to

***By nature, construction m
are optimists, building mo
in anticipation than again
firm bookings. This would

judged the market.***

years of shortages," adds Lone Star Pr
dent James E. Stewart, who like Lov
busily adding a plant in the Gulf Co
region.

Too optimistic? Maybe. Dallas-ba
Gifford-Hill Chairman John R. Hill
thinks so. "When I see everybody
nouncing new plants in the same gen
market area, I pull back," says H
whose plans call for a limited expans
in the north Texas market.

Still, the odds are that this time arou
the construction industry will not c
lapse as it did in the mid-1970s. All th
changes cannot but help. But this s
remains an industry whose fortune c
turn almost overnight. So the wise m
agers are those who talk up good tim
while quietly dropping cautious anch
to windward. Listen to wily Jim Walt
whose firm fared better than most in t
last recession. "The last time arou
when money became tight we w
heavily in short debt," explains Walt
"So in the last couple of years I've do
over $250 million in long-term finan
ing." Walter isn't taking any chances
staying entirely with short-term mon
which may have to be rolled over a
prohibitive interest rate. Walter,
short, is hopeful but keeping his powd
dry. If the optimists are right and t
decline is only moderate, some of th
low P/Es are going to look terribly che
six months from now even if earnings
come down a bit. ■

How did Gannett become one of the big wheels of Fortune?

By delivering. Good newspapers. And good financial news.

According to Fortune Magazine's latest "500" issue, Gannett ranked 7th among 500 U.S. corporations in return on investment to its shareholders over a 10-year period.

Now, on our 11th anniversary as a public company, we'd like to share with you the highlights of Gannett's growth history.

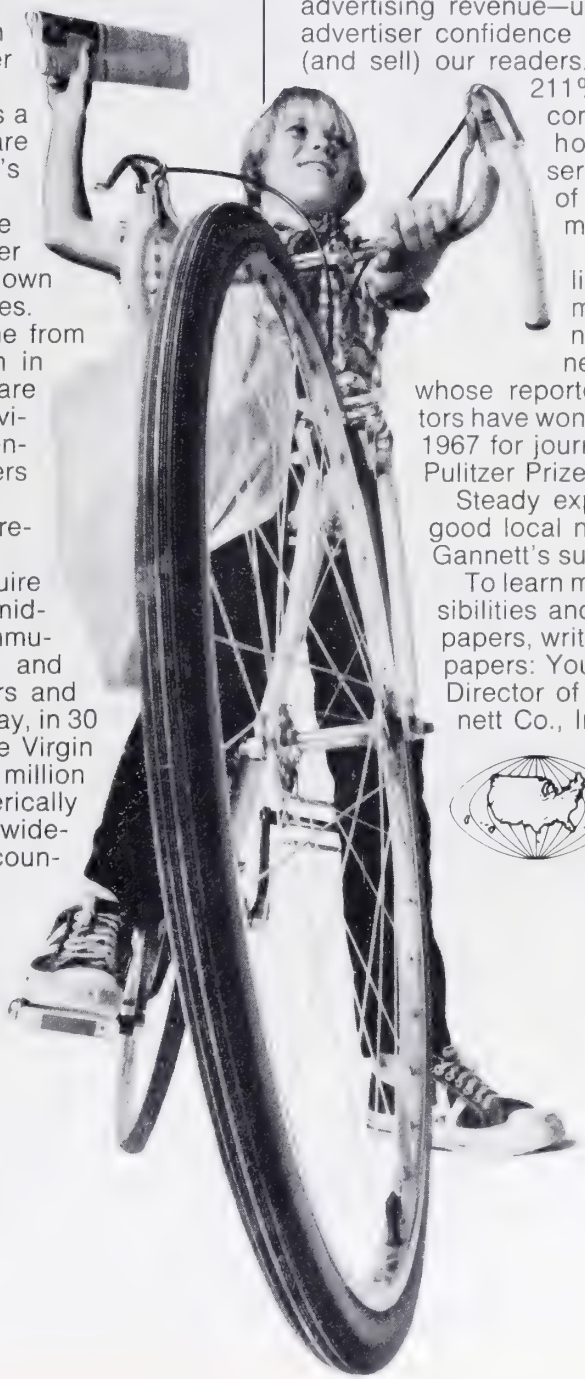
Since going public in 1967, we've increased our earnings every quarter for 44 consecutive quarters. No down quarters even in recessionary cycles.

In that same period, we've gone from $184 million to over $557 million in sales, increased earnings per share from 58¢ to $2.60, improved our dividends from 22¢ to $1.40 and enlarged our group of daily newspapers from 28 to 78.

Delivering exceptional financial results didn't just happen.

First, Gannett set out to acquire newspapers in healthy, growing middle-sized markets. In sound communities as different as Burlington and Boise, Fort Collins and Fort Myers and San Bernardino and Santa Fe. Today, in 30 states, in the U.S. territories of the Virgin Islands and Guam, we serve over 3 million reader families. We're the numerically largest and geographically most widespread newspaper group in the country. And, we plan to extend our successful acquisition program to other dynamic growth media.

Second, Gannett set out to grow internally. Our advertising revenue—up 206% in 10 years—reflects advertiser confidence resulting from ads that reach (and sell) our readers. Our circulation revenue—up 211% in 10 years—reflects reader confidence resulting from good hometown newspapers which serve the varied wants and needs of their readers and their communities.



Most important, Gannett delivers an indispensable commodity—locally edited, community-minded, reader-serving newspapers. Good newspapers whose reporters, photographers, and editors have won more than 2,500 awards since 1967 for journalistic excellence, and seven Pulitzer Prizes in Gannett's history.

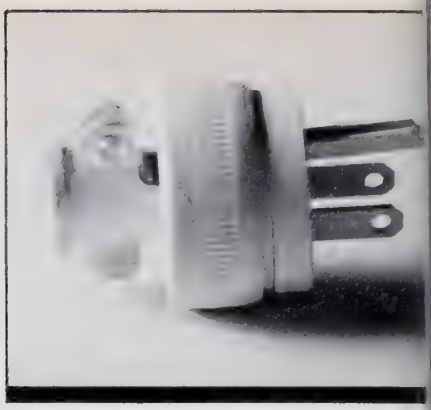
Steady expansion, internal growth, and good local newspapers are the secrets of Gannett's success.

To learn more about the exciting responsibilities and rewards of America's newspapers, write for your free copy of "Newspapers: Your Freedom Wrapper," care of Director of Information, Dept. F W, Gannett Co., Inc., Rochester, N.Y. 14604.

Gannett

*Gannett has announced agreement in principle to merge with Combined Communications Corporation, a Phoenix-based diversified media company with seven television stations, 13 radio stations, two newspapers and outdoor advertising facilities in 11 U.S. states and in major Canadian cities.

The telephone business is getting more competitive; the electricity business, more federal regulation. But the gas business gets more gas.



Utilities

NEW YORKERS, who willingly spend $100 a month to park their cars or $50 for a mediocre dinner for two, complain bitterly about paying Consolidated Edison an extra couple of dollars a month to enable that utility to maintain a fair return of 11.3% on its investment. That the typical Manhattanite gets a month's dependable gas and electric service for less than the cost of a pair of Broadway musical tickets doesn't seem to please him. Neither does the fact that his telephone service is the best and cheapest in the world. Instead he overwhelmingly elects a candidate for state attorney general who promises to fight for cheaper telephone service. Utilities for better or worse, are sitting ducks for politicians and consumerists.

Take the telephone companies, for example. They are probably in the best situation of all the utilities for the simple reason that they are experiencing real growth. People made more long distance phone calls last year than ever before—up 13% from the above-average gains of the year before. At the same time the companies were able to hold down costs because of the move to electronic switching, so they had productivity gains. Rate increases, geared to interest coverage, were granted in many cases, so industry profits improved an average 16% on sales gains of 13%.

As for this year, American Telephone & Telegraph Co. outgoing Chairman John deButts says, "It would be unrealistic to expect the growth of our business to continue at the accelerated pace of the last several quarters." He adds, however, that he expects the company to sustain its earnings progress. General Telephone & Electronics Corp. Chairman Theodore Brophy says he "personally believes we are going to see continued growth on the telephone side of our business. If the economy turns down substantially, the growth may not be as great, but I think we can still see healthy growth ahead."

The telephone industry's growth is due, in part, to its increased emphasis selling services and not just sitting ba and waiting for demand to grow. Tl emphasis is a response to the regulat reforms that began when the Fede Communications Commission star allowing such competitors as Carterfc and MCI Telephone Communicatic into the telephone equipment and p vate line communications business the late Sixties. They intensified l year when the Supreme Court decic against reviewing a related decision.

Meanwhile, Congress is consideri revamping the law under which t phone companies operate, the Comm nications Act of 1934, and the Justi Department continues pursuing its an trust suit, which aims to break up A Bell. Thus, the telephone compani have plenty of problems, but as long they can continue to grow at a good c they can probably continue to surmou them and produce fair returns for th shareholders.

Why have finance and industry discovered the Chicago Mercantile Exchange?

It works.

For years people in finance and industry thought of the Chicago Mercantile Exchange — if they thought of it at all — as a place where farmers and arcane people called speculators exchanged pork bellies and other odd-sounding items for mysterious reasons of their own.

But in 1972, something remarkable happened. The always-innovative C.M.E. established a division, the International Monetary Market, to trade futures contracts in a half dozen major foreign currencies. These were followed by contracts in gold, 13-week U.S. T-bills and one year U.S. T-bills.

For the first time, corporations, banks, funds and many others looked at futures trading as it pertained to their own business, and they discovered something very interesting — it works! A worldwide open auction market, which is what the I.M.M. is, greatly increases competition. Competition increases efficiency. Companies doing business abroad need not suffer monumental losses in foreign exchange. Businesses that loan or borrow millions of dollars can determine their interest rates with a much greater degree of certainty. Speculators, a necessity for market liquidity, found the new market challenging and exciting. The result is a booming marketplace where billions of dollars worth of futures contracts are exchanged annually.

The open market, one of the oldest ideas in the world—and one of the newest. It also goes by another name. It's called "free enterprise".

And it works.

CHICAGO MERCANTILE EXCHANGE

International Monetary Market Associate Mercantile Market

444 W. Jackson Boulevard, Chicago, Illinois 60606

A federally licensed contract market

ıdards, electricity was still a bargain
the U.S., but the public no longer
ceived it as such. Since then the pow-
ompanies have become a favorite tar-
of politicians and self-appointed
rdians of consumer rights.

)n top of that, for the power compa-
s, unlike for the telephone companies,
nand began to flag. In spite of last
r's general prosperity, demand for
ctric power increased by only about
to 5%, down from 7% to 8% in the
rs before the oil crisis.

aced with uncertainties about future
nand, utilities have been going slow
ordering new plants. Compounding
problem is the question of what
es of new plants to build. Certainly
oil or gas—those have been prohibit-
The EPA is still writing regulations to
ılement the most recent Clean Air
Amendments (July 1977). No one
)ws how they can be met, or at what
t, if coal is burned. Then, too, there
the perennial labor problems in the
l mines. As we went to press, the
erior Department announced that it would release, early in December, its environmental impact statement for its long-awaited coal-leasing policy.

Most utility men would still prefer to go nuclear. But the attacks on nuclear power plants have by no means subsided.

The capital cost of both coal and nuclear plants is enormous. Yet, many state regulatory commissions have ruled that the cost of that capital,

Drilling for new gas had already doubled as a result of 1976's threefold price increase. The increases scheduled in the new law will encourage more exploration. Ironically, now the uncertainty for the gas industry is demand.

which is the interest on the construction funds, can't be included in the rate base until the plants are actually producing electricity. It's not surprising, therefore, to see companies joining together more and more frequently to build power plants.

The companies are also coming up with new financing techniques. One (FORBES, *Oct. 30, 1978)* is to tap the tax-exempt bond market by teaming up with municipal utilities. Here, however, the burden is shifted to the taxpayer, who pays an indirect subsidy to the owners of the new tax-exempt bond.

In the future the electrics will have the federal government overseeing them to a much greater extent than ever before. The President's original energy proposal would have ordered specific conservation measures, such as time-of-day pricing. As enacted, the law doesn't mandate those measures but does call for the Secretary of Energy to get involved with state utility commissions to make certain that utilities are trying them out. The new law says, too, that utilities must help their customers arrange to install and finance insulation but can't sell it to them.

So the companies must get their customers to buy as little of their product as possible but be prepared to supply them with as much as they might want and be able to determine a good 10 to 15 years in advance how much that might be.

To the gas producers, pipeliners and distributors, the supply situation is looking better than in years. The energy bill that finally became law in November may be a regulatory nightmare with its 27 categories of gas (or 33, depending upon how you interpret it), but it does do one thing: It increases incentives for finding natural gas.

"Additional supplies will become available almost immediately," says Eugene Luntey, president of Brooklyn

Behind every great Western temporary is a dedicated Western manager.

Only experienced temporary help managers can bring out the best in their temporaries. By making the right assignments—for everyone concerned.

Western managers have this personnel know-how. More than 30% have been with Western over five years. Many have been on your side of management so they have a particular understanding of your needs. And all draw from the company's 30 years as a quality temporary help specialist.

They recruit innovatively, test carefully, interview thoroughly, and assign selectively. You will appreciate their expertise in analyzing and evaluating a temporary's potential for meeting your specific requirements.

That's why Western's the one to call whenever you need temporary help. We're in the white pages.

Union Gas Co. Robert Herring, chief executive of Houston Natural Gas Corp., confirms that view. "Five [interstate] pipelines have already been in here," he said in late October. He now feels free to sell them gas that had been available only to the now price-controlled intrastate market, which was oversupplied.

Drilling for new gas had already doubled as a result of 1976's threefold price increase. The price increases scheduled in the new law will encourage even more exploration. How much new gas will result? Estimates run as high as 5 trillion additional cubic feet annually by 1985.

Ironically, now the great uncertainty for the gas industry is demand.

By law, industrial users must bear the brunt of gas price increases, and so they are switching wherever *possible* to coal or oil. Thus, the industrial market is severely limited for gas companies.

The gas companies will, however, be able to take on new residential customers, which most of them had not been able to do for several years. Is this enough? John Gillum, manager of research at Rotan Mosle, Inc. in Houston, points out the industry is moving 60% less gas through the interstate pipeline system than it did in the early Seventi With markets limited and prices hig new growth is not likely to be wild. F years everybody has started his speec "Natural gas is running out," says Broo lyn Union's Luntey. "So it will take tin to build back demand."

Despite these problems on the dema side, more of these companies will looking good this year just because higher prices and greater availability.

Amid the confusion and crosscurren one thing is clear: Whatever it may ha been in the past, running a utility cor pany is no longer a soft touch. ■

The Cheetah can't protect itself, let alone its young.

Are you protecting all you should?

The Cheetah's inability to cope with changes in its habitat puts it in a tenuous position. It's difficult to imagine such a threatened animal providing security to others.

If you're responsible in any way for the protection of an industrial property, you're also responsible for protecting the employees; their jobs and well-being. The practice of loss prevention can strengthen that protection. And that's where Allendale Insurance can help.

Factory Mutual System

Allendale Insurance

Allendale Park, Johnston, Rhode Island 02919

Stress ribs disfigure a printed coffee can so it looks like this. Not very pretty.

Beautifully printed IP paper label covers this can so it can have more stress ribs and less steel.

How International Paper gives the wrinkled can a face lift—and helps food processors save a pretty penny

Those wrinkles you see around cans are stress ribs.

Canmakers press them into cans to make them stronger.

There's a limit to the number of ribs a food manufacturer can tolerate on his can, because he wants it to be readable and look enticing on supermarket shelves.

More ribs, less metal

But if more ribs could be engineered *into* the can, less metal would be needed *for* the can. And that could save food processors money.

Keeping a warehouse full of cans for different brands, promotions and sizes ties up a lot of money, too.

The Coca-Cola Company Foods Division faced those problems with its coffees and posed them to International Paper.

IP's packaging experts came back with a money-saving idea that was remarkably simple: *cover that can with a beautifully printed paper label.*

IP's idea offered Coca-Cola Foods many attractive advantages:

1. Savings on metal. They could replace their can of heavy-gauge ribbed steel by using a less expensive can of lighter-gauge steel with *more ribs.*

2. Less inventory. Instead of having to carry high inventories of printed cans of many different kinds and sizes, they could just store the necessary sizes of unprinted cans—and keep on hand their inventory of printed paper labels in a smaller space.

IP paper labeling lets processors keep an inventory of many different labels instead of many different cans. A big savings in storage space!

3. More readable label. Stress ribs distort graphics on printed cans and make them less attractive on supermarket shelves. With stress ribs covered, the label is easier to read and can have more sales appeal.

4. More marketing flexibility. Printed cans call for more advanced planning and a big investment in special cans. With paper labels, product managers could react to changing market conditions more quickly and get price-off or other promotions on shelves faster.

IP's experts showed Coca-Cola Foods how our high-speed presses can print labels with all the mouth-watering realism of the finest photograph.

We showed them our versatility. IP can print labels for almost any package anyone puts out. For food products like coffee, frozen juice, salad dressing, soup, peanut butter; or other products like bar soap, dishwashing detergent, motor oil, household cleanser and fabric softener. Even wine.

21 different combinations

Coca-Cola Foods put IP's idea to work. Now they save with IP labels on 21 combinations of grinds and sizes for their Butter-Nut and Maryland Club brands.

A beautiful paper label to cut costs on metal cans is only one example of International Paper's creative solutions to our customers' problems in every industry—from food processing to meat-packing to building to publishing to energy to hospital supplies and many more.

May we help you?

Harris interactive computer terminal system
in U.S. Steel's order entry department

In information systems, Harris produces data processing terminals, general-purpose computers, word processing systems and supervisory control systems.

Harris intelligent interactive computer terminals handle a variety of data processing applications. In order entry systems, they're helping companies process orders more efficiently — and serve their customers better.

Harris technology works worldwide — in communication equipment, information systems, government systems, semiconductors and printing equipment. For information, write: Harris Corporation, Melbourne, Florida 32919.

COMMUNICATIONS AND INFORMATION HANDLING

'rade down from or trade down to? In a ecession it pays to look closely at product ines, even in this industry.

Food and drink

gistered Hereford on a farm near Lexington, Ky.
they're breeding on the farm, they're not round roasts in the supermarket.

THIS IS A YEAR when we are likely to find out how defensive individual food and drink stocks still are. ast year most of the industry showed it uld deal with inflation pretty handily. lany of the basic food commodities rged upward in the first half, threaten- g to pinch the margins food companies ave been happily widening since the aotic markets of 1974-75. No problem: he companies raised their prices in the cond half, partly to recoup, partly per- aps to anticipate possible price con- ols; and the consumer responded by aying them.

Comes recession, which most indus- y CEOs expect, the ongoing shift nong the packaged-food companies to- ard even more highly manufactured od products will be in for a test. These igh-value-added" items, things like epsiCo's fast-growing Frito-Lay prod- cts, Green Giant's (and others') frozen astic pouches containing vegetables nd "butter sauce," or some of the more icey breakfast cereals (like Quaker ats' products), are both relatively high- argined and popular. But ultimately they are expendable, or at least replaceable with cheaper, lower-margined items. The question is, will the consumer substitute?

William Maguire, the well-respected top food analyst at Blyth Eastman Dillon, fears he will. "But companies like Heinz, CPC International, General Mills and Ralston Purina would remain classic defensive companies," Maguire promises. "Those are some of the companies whose products are mostly traded down *to*, not down *from*."

Meanwhile, a study by another noted food analyst, Robert Cummins of Loeb Rhoades Hornblower, indicates unit volume growth for packaged grocery items has been slowing toward zero for several years. This is difficult to measure well, since trends vary so from product to product, but the report massages authoritative A.C. Nielsen data on 75 leading supermarket items to elicit an overall trend. It finds that unit volume grew 3% a year on average until 1973, but since the beginning of 1974 has shown a decidedly different pattern. First, unit volume *declined* in late 1974 and first-half 1975

on a year-to-year basis. All right, that was the worst recession in 30 years. But despite an encouraging snapback in 1976-77, unit volume (*not* dollar volume, remember) has managed to struggle to only a 1% compounded growth rate since 1973. This including one of the three longest of seven economic expansions since World War II. The study is flawed, in a sense, in that paper products like tissues, and plastic wrap and household cleaning items were folded into the supermarket-oriented calculation, but these latter items are inherently faster-growing than food.

This hardly means that people are giving up eating. But the population's growth rate has slowed, the inexorable shift toward eating away from home as women fill the work force continues, there are the constant pressures of chronic inflation to consider—and the fact that only in 1978 did household incomes regain the heights of the 1973 peak when measured in constant dollars has taken its toll as well.

It's true, as food company executives love to point out, that people have to eat, but *eat what*?

The consumer's sensitivity to inflation will be particularly important this year. Food is something he buys almost every day, so he is supremely aware of its rising cost, and food prices, especially meat, are headed further up. It's the start of a new beef cycle, the point where supply is lower and demand high. But it's a peculiar cycle: As the price rises, beef supply perversely *shrinks* at first—cattlemen hold back breeding cows from slaughter to build up their herds. It takes a couple of years for the coming abundance of calves to mature to market weight. So domestic beef production will shrink 5% or more this year while prices continue to zoom. At the same time, pork production will expand only slightly. Pig farming has become more complex than throwing slops to the hogs; there are now economies of scale that require sophisticated facilities that in turn require sizable capital investment, and pig breeders have been unwilling to commit themselves to costly expansion plans.

None of this spells particularly good news for either consumers, food packag-

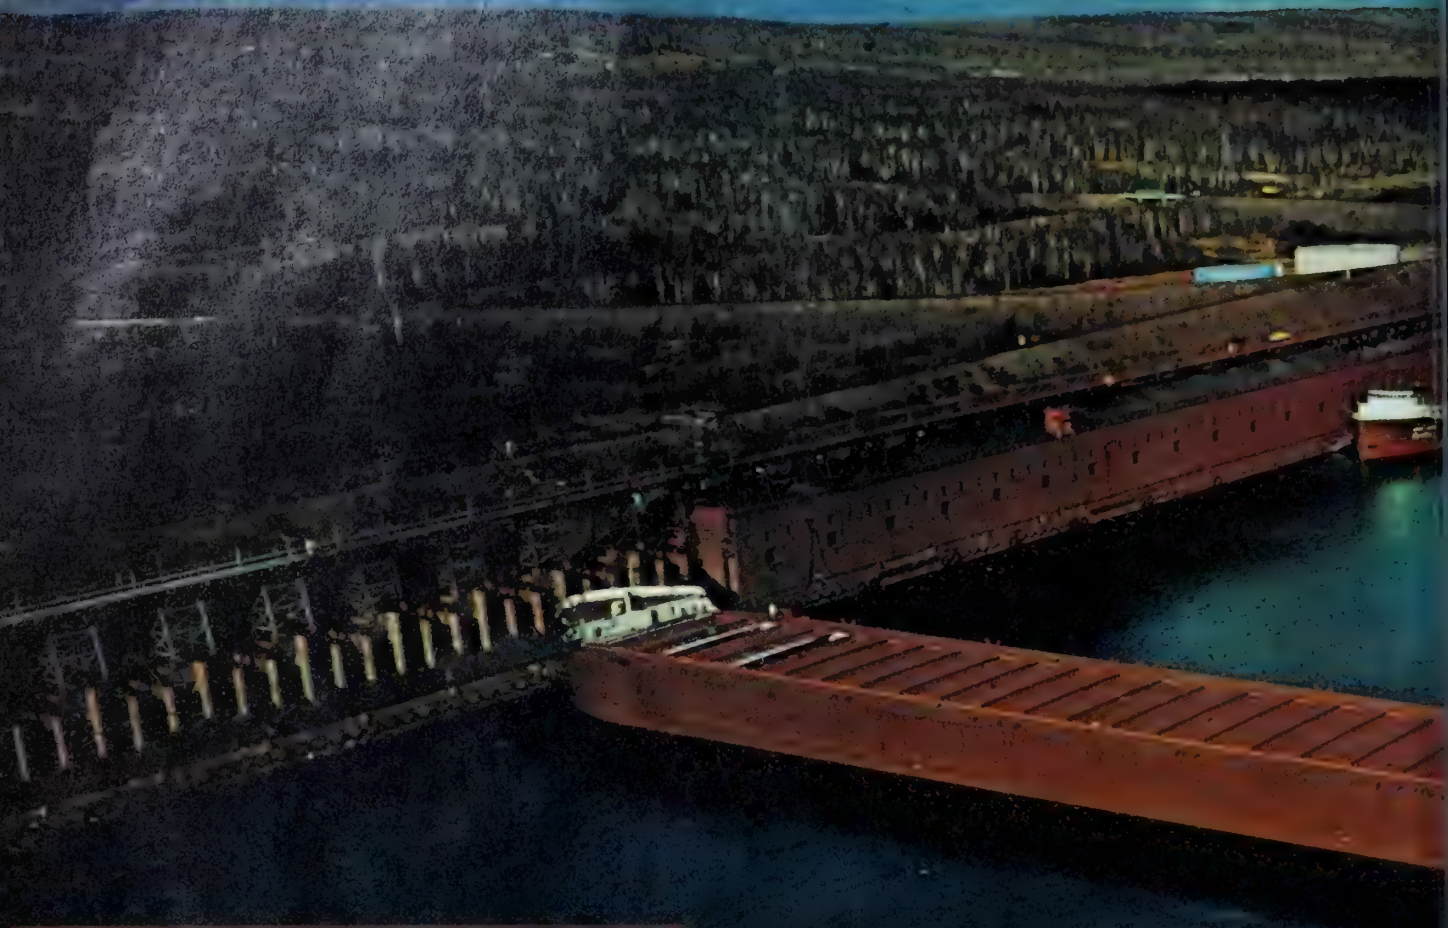
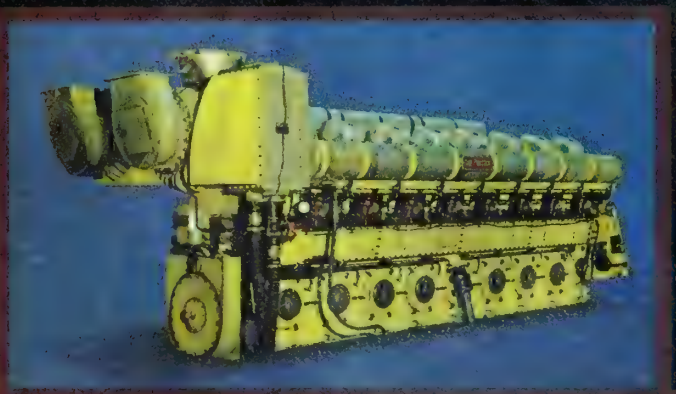
How this Great Lakes Goliath gets all of its drive from an industrial products company like Colt Industries.





The *M/V James R. Barker*, fleet flagship of the Pickands Mather subsidiary of Moore McCormack Resources, is longer than three football fields and can carry 59,000 long tons of iron ore pellets. Driven by two 16-cylinder Colt-Pielstick diesels from our Fairbanks Morse Engine Division, this Great Lakes bulk freighter cruises at 15 mph. Our diesels also provide power in electric generating plants, in nuclear submarines, and on offshore drilling rigs. Along with such other well-known Colt Industries products as Crucible specialty steels, Garlock industrial seals and components, Menasco landing gear, and Holley carburetors, Fairbanks Morse diesels help make us a leading supplier to the industrial sector of the U.S. economy. For our latest financial reports, write Colt Industries Inc, Dept. C. 430 Park Ave., New York, N.Y. 10022.

Crucible specialty steels ☐ Trent welded stainless steel pipe and tubing • Crucible permanent magnets and coil springs • Fairbanks Morse diesel engines • Fairbanks scales • Pratt & Whitney and Elox production equipment Quincy compressors • Central Moloney transformers ☐ Chandler Evans fuel controls • Fairbanks Morse pumps • Holley carburetors ☐ Garlock industrial seals ☐ Menasco shock mitigation systems ☐ Colt firearms

Colt Industries

We help process one-fourth of all the oil and gas the world uses every day.

And that's being accomplished by just one member of Combustion Engineering: C-E Natco.

C-E Natco helps de-salt, de-foam, de-water and do other processing needed to prepare oil and gas for the pipeline.

And, besides processing it, we also help drill for it, extract it, pump it, clean it, deliver it and refine it.

Gray Tool Company, a new member of the C-E family, pioneered the first wellhead assembly able to operate at pressures of 30,000 pounds per square inch—extending the search for oil and gas into earth layers too difficult to control before.

C-E Crest has designed systems that produce 10-million barrels of oil a day.

C-E Lummus engineered over 30% of Europe's refining capacity. And is responsible for the design and construction of deck facilities for off-shore platforms in the North Sea that can withstand 130-mph winds and 100-foot-high waves.

We do more than help process oil and gas.

For over 60 years, we've been supplying equipment, technology and research to help produce energy, conserve it, squeeze more use out of it, even convert it to new forms.

For more information about our activities around the world, write Combustion Engineering, Inc., Dept. 7008-33, 901 Long Ridge Road, Stamford, Connecticut 06902.

The Energy Systems Company

s or meat packers. (Meat packers typi-lly operate on razor-thin margins and ake their money on greater volume, t price per se.) Nor for some restau-nts—steak house chains like Pills-ry's Steak and Ale. On the other hand, th the purely grass-fed cattle raised for mburger meat in especially short sup-, the government may relax import strictions on hamburger-grade meat. iat could ease the pain for some of the st-food chains—Pillsbury's Burger ng, for instance.

Meanwhile, one would expect non-eat commodity prices to be flat or low-this year, since virtually the entire untry and for that matter much of the rld enjoyed record or near-record har-sts last year, and grain and soybean cks are becoming massive.

The consumer's sensitivity to inflation will be particularly important this year. Food is something he buys almost every day, so he is supremely aware of its rising cost.

Unfortunately, farmers are still a much-feared voting bloc around Washington. "If the government was really concerned about inflation," complains William Knobler, senior analyst at Oppenheimer & Co., "you'd expect flattish prices. But look: The target price for wheat is going up from $3 to $3.40 a bushel, there's still a 20% set-aside [of farmers' acreage] in wheat—we had that great wheat crop last year in spite of it—10% set-asides in feed grains and now they're talking about establishing set-asides for corn, too. And the raw sugar price has already gone from 10 cents to 15 cents over 1½ years by administrative fiat."

Moreover, in an inflationary economy, all the transport, labor, packaging, advertising and other "value-added" costs between farm and consumer will be going up, too. Oh well, at least a flush farm belt should give the agricultural commodities companies—seed-producers like Pioneer Hi-Bred and DEKALB AgResearch, or outfits like Central Soya, the giant feed manufacturer and soybean processor—a good market in which to operate.

With the election behind, look for a higher price for sugar next year, if the

FRISCO

St. Louis-San Francisco Railway Co.

Frisco Territory includes: Alabama, Arkansas, Florida, Kansas, Mississippi, Missouri, Oklahoma, Tennessee, and Texas.

sugarmakers are unlucky enough to get what they want. Low sugar prices are in large part what has kept the profits out of the HFCS—that's high fructose corn sweeteners—business. The newer formulas are finding increasing use as a substitute for sugar, invading even, or rather especially, the huge and vital soft-drink market. The long-range promise of HFCS has drawn in major competitors: Standard Brands, A.E. Staley Mfg., Archer-Daniels-Midland, CPC International, plus some others. The growth is huge—25% a year—and the stakes enormous, but the profits so far have been marginal or nil because of sugar prices and the rush into production which has been increasing supply 30% a year. Everybody already in is gritting his teeth and hanging on. (Standard Brands has had to grit the most according to Maguire's figures. He reports its exposure in HFCS is greatest of the majors and, so far at least, the costliest to earnings.) But the last wave of HFCS plants (they take about two years to plan and build) is mostly going into place this year, and the low profitability seems to be discouraging to further adventures in expansion just now. Too much of a rise in the price of sugar, unfortunately, could pump some promise of profits into the HFCS industry just when it would do the sugar people the least long-run good.

There are other questions besides inflation on the food industry's mind; for instance, the progress of the saccharin debate. At the moment, the stuff is theoretically banned as possibly carcinogenic by the Food & Drug Administration, except that the ban is under a congressional moratorium expiring in May. Opposing the original Canadian studies and a National Academy of Sciences' review putting saccharin under a cloud is a contrary study, under the auspices of Johns Hopkins, no less, absolving it. Watch for some excitement in May.

All the major food and soft-drink companies share another predicament: What to do with a mature domestic market? The two main answers are the same in both categories: You diversify, or expand overseas, or both. In soft drinks, PepsiCo is the diversifier, Coca-Cola Co. increasingly the traveler abroad. Among the food companies, both trends are long established, and still continuing. Carnation got 18% of its 1977 income from abroad, and Heinz, 22%. FASB-8, therefore, has reared its head; both of these companies, and others with heavy overseas positions, reported boosts in foreign earnings last year because of the dollar's relative weakness.

Among liquor and beer stocks, the winners and losers under previous trends look like they will continue, respectively, winning and losing. Anheuser-Busch and Philip Morris' Miller continue to fight it out for beer dominance at the expense of Schlitz, Coors, Olymp Pabst and so forth. When it comes to hard stuff, the consumer, whatever feelings about inflation, still seems w ing to pony up for special name bra with cachet and for light liquors. S gram, the largest distiller, has long b suffering from the shift away from dark whiskies, but may feel some ben from its light liquor and rum lines fo change; and Liggett Group, which of J&B Scotch, Campari and Metaxa liqu and Wild Turkey bourbon (much pri among bourbon aficionados), also see well placed.

Among food stocks that stand to be fit from this year's trends, General Fo seems to be one that especially deser notice. This is another company t Maguire singles out as still defensi

98 cents at retail in New York
Will a 53-cent can do, instead?

While it is heavily into packaged foo much of its product line leans tow what people regard as cheap staples near-staples—Jell-O, cereals, Tang a for a little frivolity, Kool-Aid. And increasingly normal coffee busin where there's mostly just competitio worry about, is a welcome trend ind to a company that gets 40% of sales fr that staple beverage.

Another stock that bears watchin for good or ill, but certainly not for defensiveness—is United Brands. At porate death's door a few years ago, it been struggling back. Earnings have s back up to something resembling spectable levels, and the company paid off its preferred arrearages and clared a common dividend. Perh more significant still, there's little dr beating for the stock going on just n The Milstein brothers are still keepin low profile, and it's almost impossibl find an analyst on Wall Street who lows the stock. hat's holding up oil price deregulation? Unrtunately, deregulation is as politically unalatable as it is economically necessary.

Energy's clouded future

iller pushes pipe into the good, and formerly bountiful, U.S. earth
e prospect: diminishing returns and regulated prices.

By James Flanigan

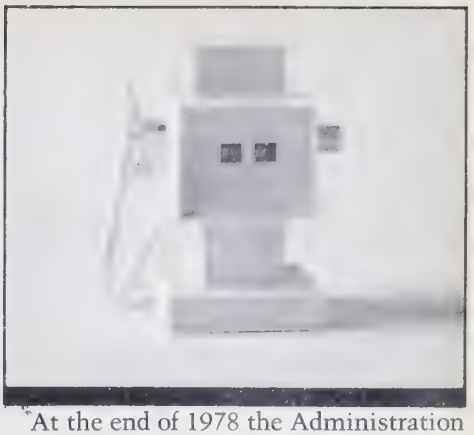
HE AGED but still handsome oilman, one of the industry's great builders, gripped the edge of his k, looked over the rims of his Ben nklin spectacles and said deliberately: the next few years you'll see U.S. oil npanies being acquired for their as-, as pools of natural resources."

n arresting judgment, one the gentlen doesn't wish to be quoted on bese he says "it might influence peo-" Just when some expect and others that oil company cash flows will buy their businesses, here is a retired intry giant looking at things from the osite direction: the oil companies mselves as merchandise for buyers erested in natural resources. Japanese ers, perhaps, or German.

Oil companies, even the biggest and t of them, can be bought in the stock rket today for some 50% or less of r asset value, according to estimates he John S. Herold Co., Inc. consulting n. There are persuasive arguments t this reflects not market madness but the market's reading of future earnings prospects for the oil companies as they struggle to maintain output and their returns on investment in an age of government regulation of oil prices.

It is this regulation as much as anything else that explains why oil company assets sell at such a discount. Which is why the great and probably acrimonious energy debate of 1979 will be over the deregulation of crude oil prices. Mandatory controls expire May 31, but President Carter has the option to extend them until Sept. 30, 1981. Pre-1973 oil is priced now at $5.65 a barrel, post-1973 at $12.61. Meanwhile the world oil price, following OPEC's latest action, is close to $14 a barrel.

Carter promised dollar-holding foreigners last year that he would get the U.S. price up to the world price in an attempt to cut consumption and imports. He failed to do that last year with his proposal to tax away the difference between the U.S. and world prices. Congress wouldn't buy it. How deregulation will or won't occur will be the main industry-government argument this year.



At the end of 1978 the Administration seemed most concerned to raise the old oil price, either by straightforwardly setting it at $6 or $7 a barrel or by enlarging the definition of a stripper well so as to entitle more old production to the world oil price. The idea basically is to give the industry incentive to spend money on more water flooding and other production-enhancing techniques on the old, playing-out wells.

But as for new oil, the Administration's thinking—insofar as it was revealed in statements by James Schlesinger and John O'Leary of the Department of Energy—was that the current price seemed incentive enough to get the industry to invest in exploration and production of oil in the U.S.

It is this kind of government attitude—saying really that government will decide what is a proper rate of return—that drives the industry nuts. It misses the whole point of investment economics which looks to future values of the products invested in, especially in the case of oil, as those values will be affected by scarcity.

The oil industry today is seeking to make a 15% discounted cash flow rate of return on its investments because that is what it thinks it will need to replace current investments with new ones in an inflationary future. The industry's economists tell it that the replacement cost of a barrel of oil today is around $16. That the U.S. price should be below that, and regulated to boot, means that the industry can hope only for an 11% to 12% rate of return on its current investments—which is about in line with the historic rates of return this industry has made in less inflationary times.

The stock market recognizes this fact, yawns and prices oil companies where they are today. The industry had been exciting when there were prospects for dramatic changes of fortune—a vast new discovery of oil, a new province of enormous wealth opened up. The market is saying that there is small chance of such bonanzas from the industry's current investments, geared toward stabilizing declining output rates in the U.S.

This stabilization effort is enormously expensive. Far from going on an acquisi-

tion binge with their cash flows, the oil companies are plowing tremendous amounts of money into exploration and production in the U.S. Since 1973, the watershed year of the great oil price rise and embargo, the oil industry has invested an average of $12 billion a year in domestic exploration and production—treble the annual investment level in the six years prior to 1973, according to figures compiled by Chase Manhattan Bank's energy economics division.

But the impact of inflation in the industry has been horrendous. The Commerce Department's Bureau of Economic Analysis uses a special oil industry price deflator because the GNP deflator—which measures overall inflation—doesn't come close. The $12 billion-a-year average in domestic exploration and production becomes $8 billion in real terms. This year the industry will pour some $16 billion into such investment and yet achieve an under-$1 billion gain over the 1972 level of $5.7 billion.

Intense drilling activity has spurred demand at almost any price for oil-field equipment and services; drilling costs escalate geometrically as wells go deeper than historic levels of 6,000 feet. But the payoff to date is unimpressive. Most of that money has gone into projects in the lower 48 states, yet production there continues to decline. While Alaska's new supplies have halted the slide in U.S. oil production overall, the decline in the lower 48 has been merely slowed from a 5% annual rate five years ago to 3.1% last year.

Alaska has increased the domestic production of Atlantic Richfield, Exxon and Sohio, as well as—to a lesser extent—Phillips and Mobil. Other major companies, such as Shell, Gulf, Standard of Indiana and Standard Oil of California, hope to stabilize their declining production this year or next.

Those companies, with the aid of recent breakthroughs in geophysical technology, are finding oil in the Overthrust Belt of the Rocky Mountains in Wyoming, Montana and Utah or in the Williston Basin of North Dakota. Exploration is intense, too, in older regions, such as the Tuscaloosa Trend in Louisiana and in the Gulf of Mexico. The new techniques have brought the success ratio down to one discovery in three attempts from the historic one-in-eight or more. As a corollary, though, it is a new and historically expensive kind of domestic exploration. Wells must be drilled deeper, necessitating costlier equipment used over a longer time; complex geological formations that defeated past generations of oil explorers yield to new instruments, but at a cost. For those who produce drilling equipment and services—the Schlumbergers, Halliburtons and Dressers as well as the rig builders and contractors—this is good news. It is bad news for oil company shareholders.

It makes for heavy exploration charges, which are expensed and therefore depress current earnings in a period of active exploration. But more important, such charges place a heavy front-end load on the investment that must be paid back out of ultimate production four or five years down the road. If the government maintains a tight, restrictive regulatory attitude toward crude oil prices, the oil companies that are pouring so much money into domestic exploration today would begin to show a pattern of drab reported earnings but luridly burgeoning cash flows from depreciation and depletion. In a sense the oil companies would be going underground. Paine Webber Mitchell Hutchins oil analyst Bruce Lazier notes how the compan are "burying" past earnings back in n exploration.

To prevent this from developing, t oil companies will be fighting hamm and tongs for crude deregulation t year. Late last fall, industry optimi that something intelligent might be do on oil prices, after all, was tempered recognition that deregulation would r be politically popular this year—not i mediately helpful on inflation.

Twenty years ago, when domestic prices were unfavorable, the indus

If the government maintains tight, restrictive regulatory a titude toward crude oil price the oil companies that are pou ing money into domestic expl ration today would begin show a pattern of drab report earnings but lurid cash flows

took its exploration money overse There are fewer opportunities to do t today following the era of nationali tions. Even in the abundant North S the British government is talking higher taxes on future discoveries.

Alaska, the only hope of signific new supplies of oil in the U.S.—site the largest U.S. oil find ever, the No Slope—lies at present under the great cloud of government reluctance and vironmentalist pressure. In the lower the situation is this: "If you bought le acreage years ago and you've got the p ple with a good history of finding oil, i better than selling bras and panties." says Geoffrey Hertel, the first-rate analyst of Houston's Rotan Mosle.

But if you don't have the acreage,

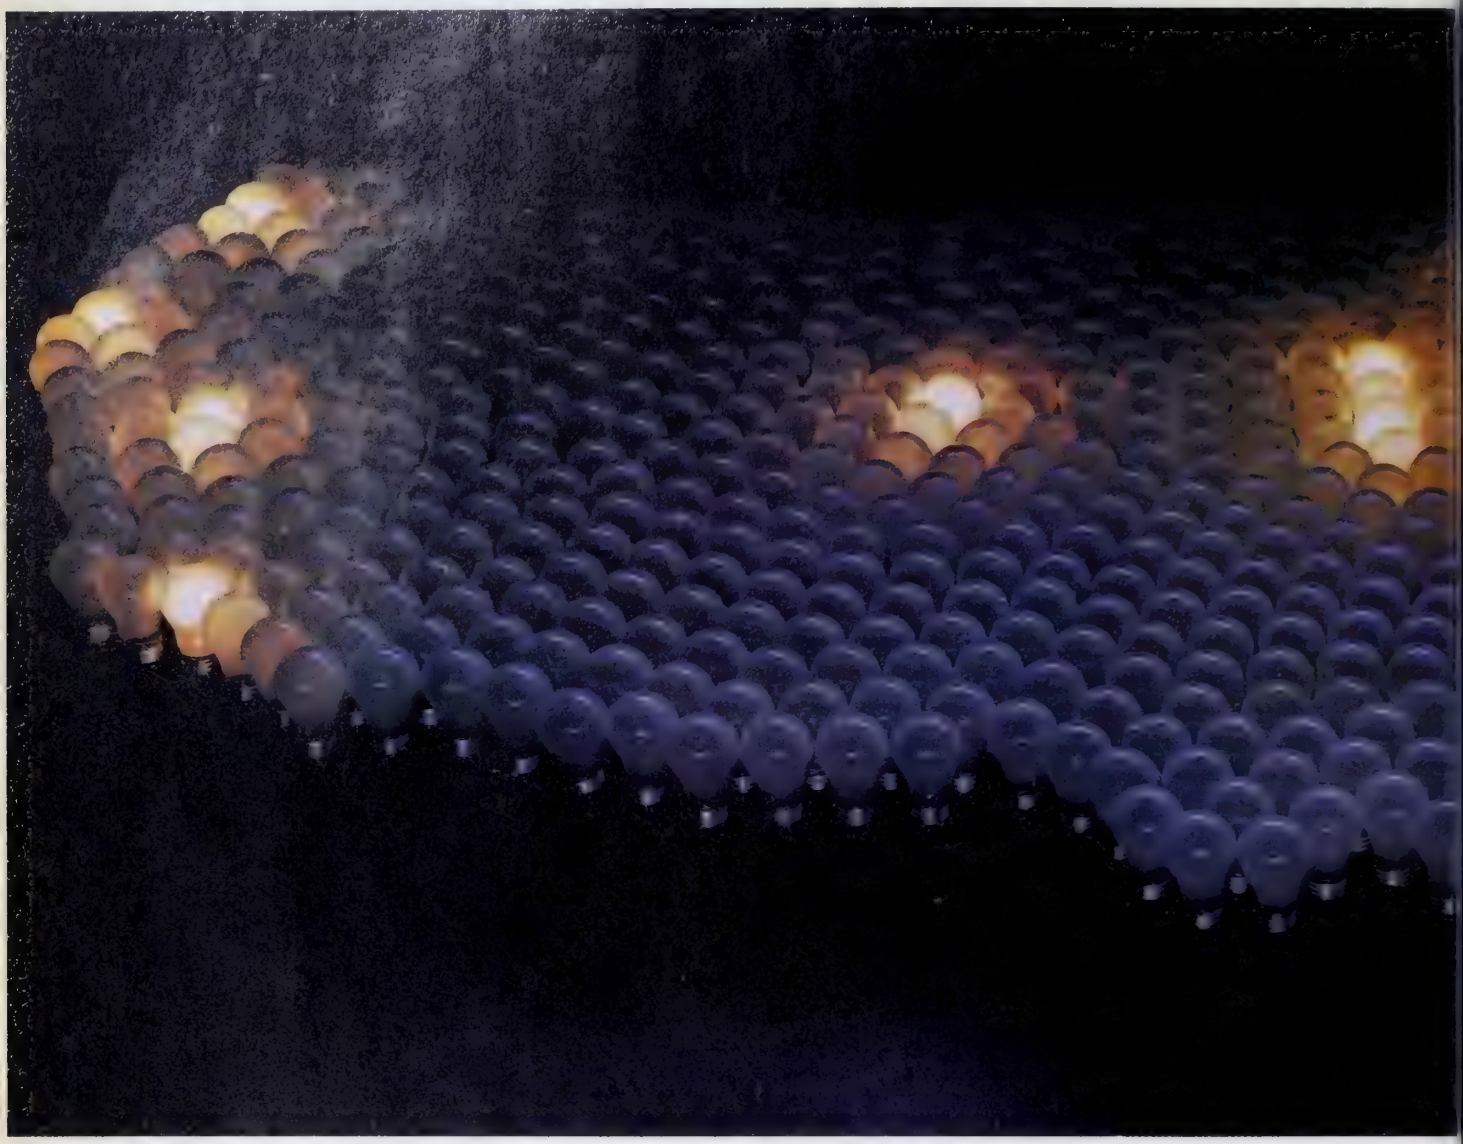
70 BRIGHT SPOTS IN



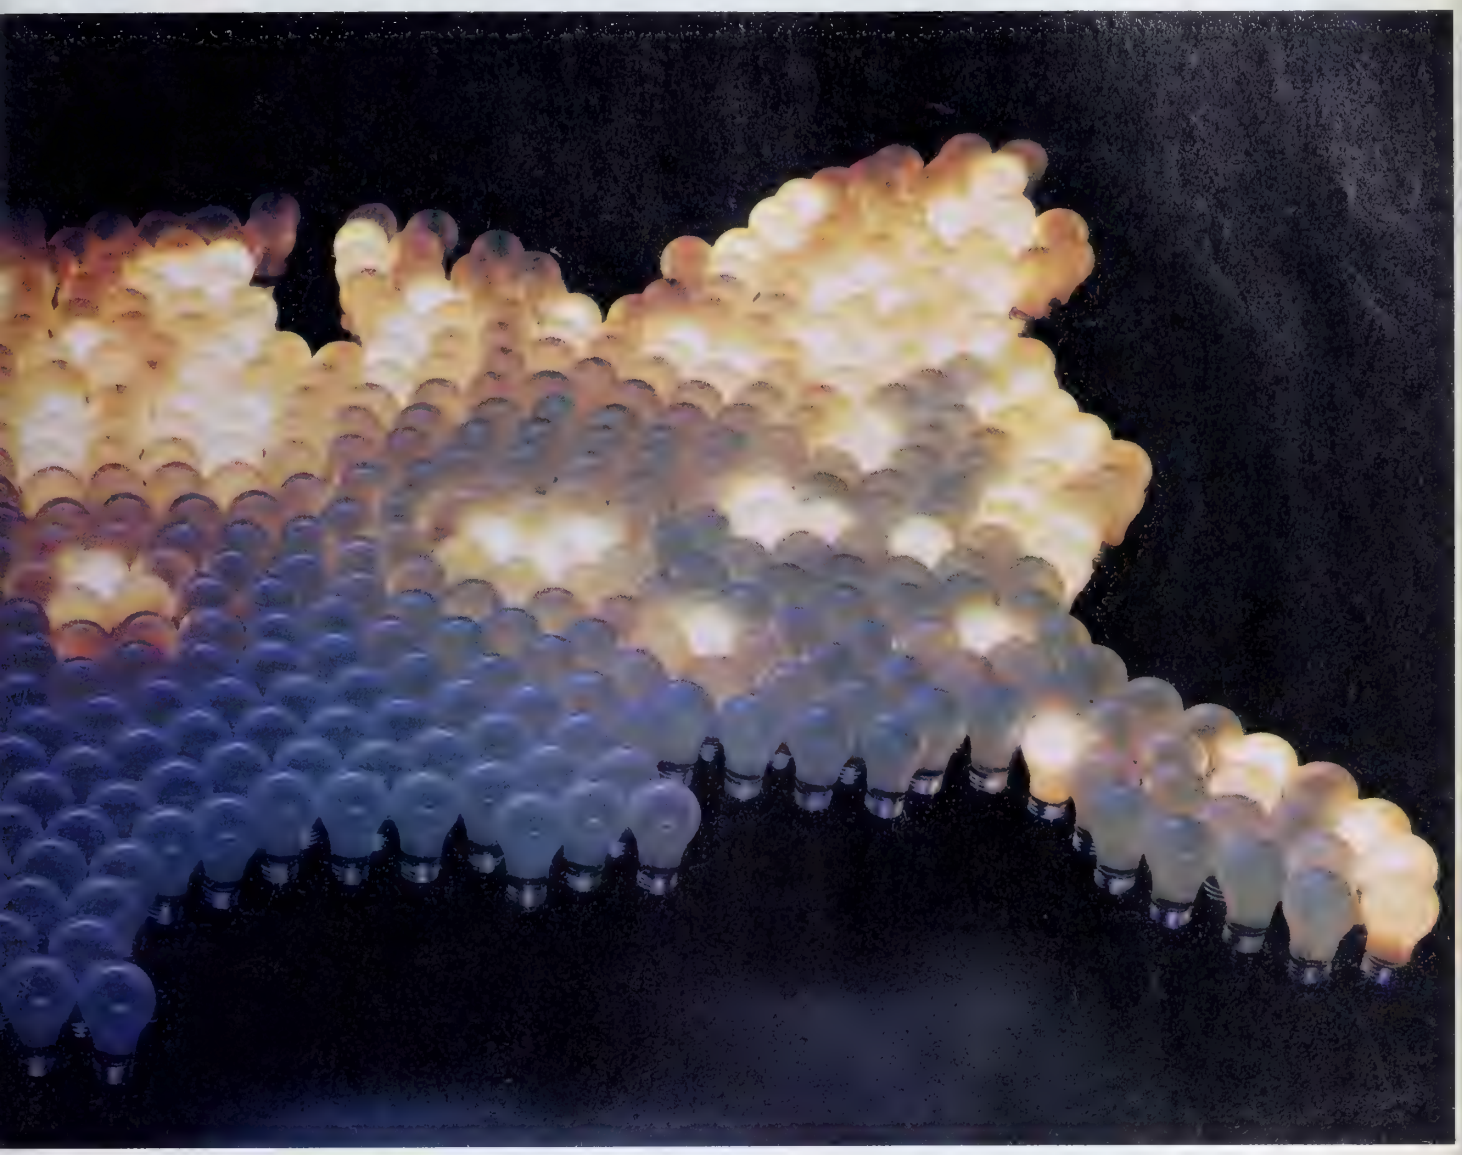
Through every energy shortage nuclear plants have kept the electricity flowing.

Since 1973, America has faced one energy problem after another. An oil embargo. A natural gas shortage. Rising oil costs. And a coal strike.

Yet, time after time, one energy source has been there when America needed it. 70 conventional nuclear power plants supply America with millions of kilowatt hours of electricity every day.

Last year, they supplied 250 billion kilowatt hours of electricity... enough to

AMERICA'S ENERGY PICTURE.



educe our dependency on oil imports by as much as 12%.

America needs a balanced energy policy. One that's built on nuclear ower and coal as well as other sources of energy.

If you agree, write your Congressman. It's one way we can all help make merica's energy picture even brighter.

Westinghouse

A POWERFUL PART OF YOUR LIFE

From conserving energy to renewing resources... Union Camp is part of your life.

We all hold the future in our hands. At Union Camp that awareness has spurred our efforts toward increased energy self-sufficiency and perpetual renewal of our forest resources.

Today, we're meeting more than half our energy requirements by using by-products to produce steam and electricity. In just over five years, increased energy efficiency and greater use of by-product fuel has reduced our fossil fuel consumption over 28% per ton of paper produced.

What's more, unlike fossil fuels, the by-product fuel Union Camp uses comes from trees—a renewable resource. For every tree harvested, we plant three more. Last year alone, we planted more than 30 million seedlings and each year we get more wood fiber from the same amount of land.

Conserving energy and replenishing forests helps make the future look a whole lot better for everyone. That's the way we want to grow!

Union Camp

t really afford to gear up the expen- effort needed in exploration, you're r to sell out. Which is what Orin ns, chairman of Ashland Oil, is do- -selling, that is, Ashland's relatively l $200 million (sales) exploration production division. Ashland will entrate on its main, $3.3 billion s) business: refining. "It's recession- f," says Atkins, because "there's more demand than there is capacity in the market."

Atkins is stating bluntly the truth that other companies are realizing. Their refineries are running typically at 80% to 90% of capacity, but demand for their products has caught up with supply. The U.S. industry is partially shielded from huge refining surpluses in Europe by the U.S. government's entitlements program. New refineries are not being built in the U.S.; expansion of existing refineries is modest. Mostly it is a case of modification to turn out more unleaded gasoline or to handle high-sulfur crude oil. The result is that refining could be a good business in the U.S. But product prices, too, remain regulated and this catches refiners who must buy foreign crude in a squeeze. The government will address

deregulation of product prices as w this year.

If the integrated companies, which compass all the big companies, ca maximize their profits in crude oil p duction, they will have to do it in refining and marketing ends of th business. Such a transformation of industry has been talked about ever sin the Arabs took over Middle East oil, taxation and accounting still favor production over refining. Which bri us back to where we started: Deregu tion of crude oil prices is the industr best hope.

The coal industry in the past beca assets-rich but earnings-poor; as a resu much of it was acquired by others, no

While Alaska's supplies ha halted the slide in U.S. oil pr duction overall, the decline the lower 48 has been mere slowed, from 5% five yea ago to 3.1% last year.

bly oil companies. The surviving in pendent coal companies look with rel to the new year following strike-blotch 1978. But federal regulation hangs lik cloud over this industry, ironically in ery way but price. A confusing, confli ing variety of clean air laws, mine saf laws and strip-mining laws affect t markets and economics of coal.

The metallurgical coal market— which Westmoreland, Pittston and Ea ern Gas & Fuel depend importantly— in disarray, but only partly because st operations are slow worldwide. Anoth reason is that U.S. coal can't be cok economically in U.S. furnaces as a res of clean air laws. The coal, therefore, being shipped to Europe, coked there a the upgraded product shipped back to t U.S.—the balance of payments sufferi in the process.

Utility customers for steam coal awaiting clearer signals from the gove ment before placing orders for coal. W they have to pay a premium for lo sulfur coal? Will installation of scrubb allow them to use high-sulfur coal? L year saw a significant order placed by t Tennessee Valley Authority for low-s fur coal from Pittston. Thus the gove ment itself seemed to be saying, Pay t premium for environmental quality. B who knows for sure? The industry a its customers will be watching the g ernment, again, this year.

As indeed will the entire energy indu try, because it is regulated by the gove ment. And that is probably the ba reason a veteran oilman and the sto market have such a dour appraisal of future. Look what regulation did to t railroads. And look at what governme pressures are doing to steel. ■

re things like yoga and jogging, weight atching and meditation bad for business? or some businesses, yes.

Personal products and health care

WHETHER JOGGING is good for you is debatable, but as a symptom of the American people's increased interest in physical fitness it does well for a healthier future. People are exercising more, eating and smoking less and in general striving consciously for a longer and more vigorous life.

But it's an odd wind that doesn't blow nobody bad, and this one is no exception. Women are as concerned as ever about their appearance. But although cosmetics manufacturers are pushing a more glamorous look, much of the market prefers a natural appearance. By and large, those who jog more pop pills less. Prescription drug volume growth has slowed.

"Drug industry prescription unit growth used to be about 8%, year in and year out, in the late Sixties and early Seventies," says John F. Hindelong of Lehman Brothers. "It's been steadily declining since then. In 1977 it actually dropped into negative growth and the rise in 1978 is due to the significant increase in upper respiratory infections." New products if successful, of course, will can buck the trend. SmithKline's new anti-ulcer drug, Tagamet, clearly demonstrates that: Last year Tagamet sales exceeded $280 million and accounted for about one-third of profits. In 1979 Tagamet may cross the $350 million mark. It has pushed SmithKline's return on equity to 34.8% from a five-year average of 25.5%. But that's quite a change. Just five years ago, it was considered the industry's stepchild with one of the lowest P/E ratios: Only 14 *vs.* an industry average of 28 at the close of 1973.

So far, SmithKline is an exception. There has been an industrywide new-product lull. Even now, with some new drugs coming onto the market, it remains questionable whether they will have a strong impact on the bottom line. It costs over $70 million and takes seven to ten years to bring a new drug to market. What's more, pharmacists are now able to substitute cheaper versions for doctor-prescribed brand name drugs on which the patents have expired. The generics are squeezing the potential return on those big research dollars.

The drug companies are responding to this problem in different ways. Merck struggled through a poor first nine months in 1978 with an aging product line that held earnings growth to 9% *vs.* a five-year growth rate of 13.3%. But Merck may be about to produce some real trend buckers. This year will tell: Three new products have been Federal Drug Administration-approved and were introduced late last year: Clinoril, a new anti-arthritic; Timoptic, a glaucoma treatment and Mefoxin, an antibiotic.

In contrast, Lilly has diversified. Though it still spends the same high 9% of sales on research, it decided as early as 1970 to put some funds to work in other fields—like Cardiac Pacemakers, Inc., acquired last year. By 1980 half of its sales may be from outside pharmaceuticals. It's also taking partners in research—like San Francisco's tiny Genentech, Inc.—in hopes of producing commercial human insulin. Two things have helped sustain the drug industry's overall five-year return on equity of 20.2%: Prices are increased and large overseas earnings are inflated by the weak dollar as profits return. Written prescriptions may grow only 2% to 3% from now on, but the industry has added on an annual 5% price increase. That means the same total growth at 8% as in the early Seventies. How much longer this can be kept up is a question. Says Shearson Hayden Stone's David H. MacCallum, "Foreign currency gains this year have been very important to the industry's income account. To repeat that performance in 1979 means the dollar must remain weak. Your guess is as good as mine on the dollar, but I think it's a low-quality way to record earnings gain." Example: Merck got an estimated one-half of its earnings abroad; Pfizer, 60%—earnings that might erode this year if the dollar bounces back.

Hospital supply firms have little to cheer about, either. The average hospital stay is down from 8.3 days per patient ten years ago to 7.6 today. This is partly because people recover from operations faster now, and also because equipment that used to be found only in a hospital now is in a doctor's office.

The other reason is soaring costs. The average U.S. hospital room plus services costs $190 a day. For over a decade,

Over 11,000 runners at the start of the New York City Marathon
What's it got to do with the price of aspirin?

many people believed that because they didn't pick up the medical bill directly—private insurers or the government did—the sky was the limit. For example, we spent 8.9% of the GNP or $182.2 billion on health care in the last fiscal year.

Now the government has begun to press for controls on hospital costs. That affects both the hospitals, which account for 40% of total U.S. health expenditure, and their suppliers. In the face of possible congressional action to put a 9% cap on cost increases, hospitals initiated voluntary cuts that it claims held the rise to 12.8% last year *vs.* 16% in 1977.

A solution may be in the private sector—fast-growing hospital management companies like Humana and others that now own or operate about 8% of U.S. hospitals. Highly leveraged Humana (on $83 million equity, it carried $244 million in long-term debt) built 43 hospitals in the last eight years, but with construction costs per bed now at $80,000 to $100,000 it has found it cheaper to acquire. Its unfriendly acquisition of American Medicorp last year doubled its capacity to 16,317 beds for a mere $56,000 each. Says Humana's CEO David A. Jones: "As a whole, hospital construction has declined sharply—which is bullish for our industry. It means more intensive utilization of existing facilities." Although Humana's average patient stay bottomed out at 6.2 days last year, occupancy increased 3% to 57%. Still, it will be the mid-Eighties before the beds in Humana's existing facilities are reasonably filled, which means s net profit margins of 3.4%.

All of this—the proliferation of hosp management chains with bulk buyers generally harder bargaining by all hosp

WE TACKLED A TOUGH ONE IN GABON.

Much of the economy of this West African country is tied up in its mineral and timber products. The problem was getting these products out of remote, back-country regions and exporting them – fast! To do so meant building two new bridges over the Bakoue and Coma Rivers, plus extending airport runways to accommodate today's jumbo jets.

Gabon needed some $20 million. So our international people got moving on the problem – fast! Soon the Bank of Boston was acting as agent bank for the whole deal, analyzing the projects, and putting a complete financial package together with other banks. Result: new productivity and prosperity for an emerging nation in need of help.

We're the bank that specializes in this kind of swift, creative decision-making. Tough, international financing problems are right down our alley, and we've got 10,000 people around the world to tackle them.

Bank of Boston is one of the leading banks in the world with strong facilities in 40 countries (and more than $2 billion currently committed to overseas lending). And in the U.S. we have full-service facilities (Bank of Boston International) in New York, Los Angeles, and Miami, as well as our headquarters staff in Boston who specialize in financing, factoring, leasing, foreign exchange, and all related services.

Where in the world can we tackle the next tough project for your company?

The many worlds of RCA

Consuming about as much power as a 100-watt bulb. RCA color TVs save energy.

It takes a lot of electricity to power the television sets in 71 million homes. Now it can take less.

Most new RCA color TV models feature our 100% solid state Xtended Life chassis—the finest we've ever put into a color set. It runs cooler using substantially less energy than our previous solid state receivers. Depending on screen size, it saves 26 percent to 34 percent of the electricity required before. And it uses only one-third as much energy as older RCA tube-type sets.

Technological advances like this have always helped RCA to be a strong seller. In 1977, RCA shipped more sets than in any other year in its history.

From television sets to Hertz rental cars, from Banquet® frozen foods to weather satellites, RCA is dedicated to innovation, quality and steady growth.

shipping operation (Sea-Land), thre fourths of its earnings are still from t bacco. That's even though its bran aren't growing faster than the industry a whole. Worse, its Winston, once nu ber one, is losing ground to Marlbo Says Joseph F. Abely, chief financial of cer: "The domestic tobacco business today the cash register of the compan which we are employing to broaden o consumer products business." In fa Reynolds' domestic tobacco business throwing off $200 million a year in cas

What about cosmetics and toiletrie For 14 years—until 1972—sales of the products grew 50% faster than total pe sonal spending. Then 1974 proved th this once recession-proof industry w no longer invulnerable. In the past fi years, personal spending has grow 10.5%, but cosmetics and toiletries ha trailed at 8.6%. True, last year cosmeti sales were up 10% to $12.5 billion, b even the most optimistic analysts do expect that to happen this year. So c

The tobacco market grew les than 1% last year, all of it i low-tar cigarettes. As th ranks of smokers diminis more militant efforts to ba smoking are inevitable.

metics producers, like the tobacco indu try, are diversifying. Widely diversifi Chesebrough-Pond's has Ragú spaghe sauce, which has cornered 60% of a $2 million market; Vaseline Intensive Ca lotion has 27% of the $175 million ha lotion market; and Q-tips, 75% of t cotton swab market. Now C-P is faci Procter & Gamble's Wondra, a mas merchandise hand lotion aimed direct at Vaseline Intensive Care.

Even the giants—Avon and Revlon are moving into new fields. Avon h been helped by its move into costu jewelry, a market where it has increas sales by 50% last year to $370 millio Avon has captured over 25% of all U. costume jewelry sales in a five-year pe od. Late last year, Avon offered to mak a tax-free exchange of 1.95 million of i shares for all 2.3 million shares of Tiffa & Co.'s common stock. The value: estimated $103.6 million. Revlon's d versification into specialty health-ca products has turned out well. But i move into ethical drugs has diluted ove all returns. Last year operating margi on Revlon's domestic pharmaceutica dropped to 18% from 27% two years ag mainly because of the acquisition of lo er margined Armour and Biomedical.

Having a strong franchise in aspirin cigarettes or doctors' prescriptions is sti nicely profitable but not as profitable as easy to maintain as it once was.

Transcendental meditation anyone?

SEND YOUR PLANT LOCATION EXECUTIVE TO ONE OF OUR SMALL TOWNS, AND HE MAY NEVER COME HOME AGAIN.

These days, crowded cities are becoming popular places to move away from.

People prefer to live where there's actually room to live. And so do the companies they work for.

Which illustrates why small towns in North Carolina are big in American industry.

The quality of life is good. So good, that when many relocating companies transfer people here, they often have a hard time moving them again.

Of course, something besides wholesome liveability makes our towns attractive to new business.

Namely, the labor force that's already living in them.

They want the jobs economic development brings in.

And, because the work ethic still exists here, North Carolina has one of the lowest work stoppage rates in the nation.

With this combination of space and willing labor, your company can prosper in the serenity of small town living.

Yet, you're never any notable distance from active urban centers.

And, when it comes to considerations like transportation, energy and operating costs, our advantages will amaze you.

To learn more about the state people don't want to leave, write: North Carolina Department of Commerce, Industrial Development Division, Suite No G 7, 430 N. Salisbury Street, Raleigh, NC 27611.

Or call 919-733-4151.

Better yet, send your location man to examine the situation firsthand.

However, once he's here, don't be too surprised if he forgets about going home.

NORTH CAROLINA

The U.S. had the most profitable major steel industry in the noncommunist world last year. That wasn't saying much.

Steel

Twenty-six-year-old blast furnace at U.S. Steel's Fairless Works
A new plant by U.S. standards. An old plant by world standards.

In 1978 steelmakers logged their best results since the boom of 1973-74: Return on equity nearly doubled to 6.5%, shipments passed the 96 million mark, *vs.* 91 million in 1977, and the U.S. industry became the most profitable among the free world's major producers.

Meanwhile, Japanese and major European steelmakers were at best doing little better than breaking even. Because of a world steel excess capacity estimated by the CIA at 80 million tons, or 13% of the world capacity, the Japanese announced they will be reducing work forces and cutting capacity by 5 million to 8 million tons (5% to 8%) in the future. The Europeans, too, notably the French, have indicated they will cut capacity. Is the promised land, therefore, at hand for this U.S. industry? Not a chance. The capacity cutbacks will be more than offset by developing nations, which have been adding plant at a fast rate. To remain competitive in the future world steel environment, U.S. companies will have to modernize their plant.

Eventually about 20% of U.S. capacity will have to be shut down in the same painful way Bethlehem bit the bullet in 1977. U.S. steelmakers, held back by poor cash flow, have been slow to adopt the major steel technologies of the last generation—the basic oxygen furnace and the continuous caster, for example. Only 11.8% of U.S. industry is equipped with continuous casters *vs.* 40% in Japan.

Such modernization costs money—more than U.S. steelmakers have. One new integrated medium-size facility—called a Greenfield site in the trade—is estimated to cost at least $5 billion; a so-called Brownfield site (an integrated extension to an existing plant) costs over $2 billion. With total industry profits of a little over $1 billion in 1978, it is obvious that the U.S. industry will be unable to finance the necessary modernization.

In the last 15 years Japan has built nine new supermills; European nations like Great Britain, Italy and France have added modern capacity; and developing nations like Korea, Taiwan and Brazil have built brand-new steel industries. But U.S. steelmakers have opened only one new, medium-size Greenfield site (Bethlehem's Burns Harbor, Ind. plant; present capacity: 5.3 million tons). Even t only replaced obsolete capacity. "Th has been no increase in domestic ca bility in the last ten years despite the t that both the U.S. economy and st consumption has grown," says Beth hem Chairman Lewis W. Foy. "So, effect, there has been a lessening of U.S. steel industry's capability to t care of the domestic market."

Then how come steel companies the U.S. did better than their coun parts around the globe in 1978? Mai because of the Carter Administratio trigger price mechanism, which, in fect, created a price floor for steelmak As a result, American producers w able to get price increases of about 12

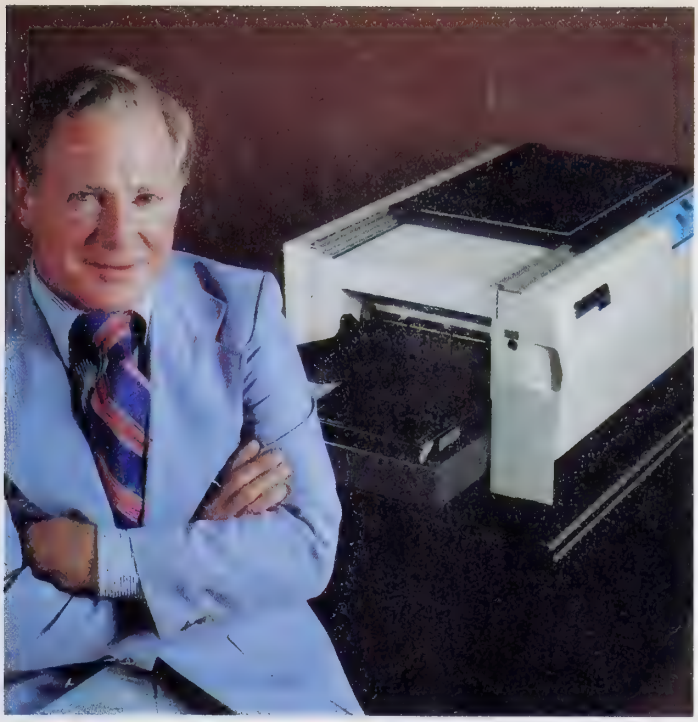
That's considerably higher than 8% outlined in Carter's inflation gui lines—and it's a big reason steelmak aren't likely to have such a good yea 1979. Carter has already indicated will make steel a bellwether for "vol tary" compliance by trying to hold increase in the trigger price next yea 7%. Steelmakers worry privately ab covering their labor and energy costs (ing at 10% a year) under such guideli and complain publicly that the trig prices haven't reduced import levels.

They have a point. When the T went into effect, the government talking about holding imports to 14% the total U.S. market; at year's end ports, most significantly from Eur and developing nations, were actu surpassing last year's 19.3 million to Especially hard hit is West Coast st maker Kaiser Steel, which spurted ink in 1978. Because Japanese costs (basis for figuring the TPM) are lower shipping to the West Coast than to e where in the U.S., so, too, are the trig prices. As a result, imports are captur 44% of the market there.

Yet for all their complaints about trigger price, U.S. steelmakers have f no new dumping charges against fore steel importers.

Nor have the steel companies actu been trying to wrestle market share fr the imports by lowering their pri many of which in 1978 were pegge 5% to 8% above the trigger level.

Such a strategy irritates Presid



A HALL OF FAMER TALKS ABOUT MAJOR LEAGUE COPIERS AT MINOR LEAGUE PRICES

Whitey Ford on Saxon Industries and Saxon copiers.

"An outstanding corporation, like an outstanding athlete, has an instinct for being in the right place at the right time. For instance, consider Saxon Industries.

Their smaller, smarter, less expensive copiers were produced with the small office in mind.

Today, many of America's largest corporations have chosen Saxon copiers. Because big business needs big savings. And that's what Saxon offers over other copiers. Now the Saxon sales and service offices and their independent dealers across the nation are introducing the new Saxon 302 copier. A machine with incredible new features at a value price. Saxon is in the big league to stay."

Saxon copiers aren't the only perfectly positioned Saxon product:

We're Nunsun, a space-age film that transforms ordinary glass into a heat-reflective, energy conserving system. Nunsun blocks out the suns rays in the summer to reduce air conditioning requirements and locks in heat during the winter. And it can be easily adhered to window glass or used in shade form. Truly an energy saver for all seasons.

We're Fonda, a leading manufacturer of quality consumer and foodservice disposables. Our products are appearing on more tables as people entertain more casually and eat out more often.

We're Hoyle, one of the biggest names in playing cards and games—a large part of the growing leisure market.

We're Brown & Bigelow, calendars, gifts, premiums and specialty items to give businesses that vital competitive edge.

We're a highly diverse company with thousands of products. And we'd like to tell you more about them and ourselves.

Contact Charles V. Morris, V.P. Corporate Relations, Dept. **F-1**, Saxon Industries, Inc., 1230 Avenue of the Americas, New York, New York 10020, (212) 246-9500.

SAXON INDUSTRIES, INC.

We're in the right place at the right time.

Saxon, Sphinx, Hoyle, Fonda and Nunsun are registered trademarks of the Saxon Industries group of companies

A tip on the profit motive.

Children quickly catch on to the idea that if you do something really well, and care about how it turns out, then you're probably going to get something more out of the experience than just a flat, dull sense of duty accomplished.

This satisfying process is one of the reasons why Pullman Incorporated and our operating divisions support Junior Achievement programs all across the country. As a responsible international business, deeply involved in key global battles against the energy shortage, the food shortage, pollution, mass transit problems and distribution costs, we are convinced that JA is an excellent way for young people to learn—through direct personal experience—how the profit motive and the free market system actually work.

We know it's an important lesson, because we are reminded every day that other interests in other parts of the world have other lessons to teach.

While it may be true enough that oversimplification of complex problems will not solve them, regulatory overcomplication hasn't worked either.

Pullman Incorporated

Divisions. Pullman Kellogg. Pullman Power Products. Pullman Standard. Pullman Swindell. Pullman Trailmobile For more information, simply write us. 200 South Michigan Ave., Chicago, Illinois 60604

Think of us as the direct line to America's growth cities.

We're Centel, and we operate in some of the fastest growing metro areas in the country.

Where there's a booming need for our services. And where the economy is growing faster than average. Like expanding, suburban Houston in the Lone Star State. Plus busy Las Vegas. Tallahassee, in the blossoming Sunshine State of Florida. And the bustling area next to Chicago's O'Hare Airport.

We're happy to say that these growth opportunities have helped us increase dividends for the past 15 years, with a compounded earnings growth of nearly 10%.

Why not take a look at the phone company that's in the right places at the right time— Centel. It could be just the right connection for you. For our annual report, write to: Central Telephone & Utilities, Stockholder Records Dept.A, O'Hare Plaza, 5725 East River Rd. Chicago, Illinois. 60631.

America's fifth largest telephone company (And growing fast!)

ter's anti-inflation people. Barry Bosth, head of the Wage & Price Stabil- Council, has recommended that the asury look into abolishing the trigger e system. The Treasury itself is con- ring several reforms.

Whatever happens, it isn't likely to be d for the steel companies. If Treasury ks by the 8% guideline, steelmakers be hard pressed to recover their in- ably increased costs. Should the dol- strengthen, the trigger price mecha- n could be revised downward—a sure ster for the steel industry. In any , foreign steel can find a loophole by ng into this country in the form of , appliances, machinery and other ue-added products—which would se further havoc with the U.S. bal- e-of-payments deficit.

pecialty steelmakers will be watching fully what the Carter Administration does about trigger prices. In June the import quotas governing many specialty steel products for the last three years lapse, and the steelmakers want them extended. "The outlook for 1979 is tenuous because of the quota situation," says Joseph C. Wyman, vice president at Shearson Hayden Stone. "No one is certain what Washington will do."

Whatever happens, it isn't likely to be good for steel. If Treasury sticks by the 8% guideline, steelmakers will be hard pressed to recover their increased costs. Should the dollar strengthen, the trigger price could be revised downward.

In part, specialty steelmakers benefit because the U.S. is still among the world's technological leaders in producing high-grade specialty products, but price counts, too. This is why specialty steelmen will fight hard to get the government to renew the quotas, which in 1978 helped them realize another good year. Median return on equity: 12.5%. Big winners included Athlone Industries with a return on equity of 22.4%; Carpenter Technology, 19.8%; Colt Industries, 18% and Cyclops, 13.2%. But most may have trouble matching their returns in 1979, unless the quotas are extended.

For all companies in the industry, demand will be weaker this year. Steelmakers are hoping that capital goods markets, which strengthened late in 1978, will offset a slackening in consumer goods markets, but high interest rates are now expected to dampen business in the second half. While steelmen contin-

"Life is good in Dallas/Fort Worth because we have the right attitude."

Stanley Marcus
Chairman Emeritus
Neiman-Marcus

"One of the things people always ask me about Dallas/Fort Worth is what's it like to live there? What do you do besides work? And what do you do for fun?

"In that regard, the Metroplex has a great deal to offer.

"For instance, the Kimbell, Amon Carter and Fort Worth Art Museums are three of the great museums of the country. All in a city of half a million people.

"And the Dallas Museum – it's bursting at the seams with collections and acquisitions. We have Preston Jones, Playwright-in-Residence at the Dallas Theatre Center. They're doing bold new things there.

"Audiences continue to grow at the symphonies. And there are plans for an important cultural center in Dallas that will include a major symphony hall, new museums, provisions for future development for the other arts.

"All this relates back to the communities that have been supporting these things. And to the attitude – it's positive.

"In fact, I don't know any cities of comparable size that support the arts so aggressively.

"Life is good here because we have the right attitude. That attitude has had a great deal to do with the growth of the arts and the Metroplex."

If your company is considering relocation or expansion for any of its operations, contact us now. We'll provide all the information you need on the Southwest Metroplex. Write Worth M. Blake, President, North Texas Commission, P.O. Box 61246, Dept. U, Dallas/Fort Worth Airport, Texas 75261. Or call 214-574-4430.

The right attitude.

ıe prosperity that financial institutions have ıjoyed for the past two years is going to be sted in 1979 in a variety of ways.

Finance

OOK WHERE you will in the financial field, the prospects as 1979 begins seem to range from poor to ıidding. Bank interest margins? They relatively wide for the moment, but y are sure to shrink. Property and ıalty insurers? Their still acceptable lerwriting profits are destined to get ·se, if only because of the industry's tendency to start cutting premiums ·enever reserves and margins reach ıfortable levels.

'hat may sound like a replay of the recession, but this year there are ıificant differences. "I think 1979 is ıg to be a rather rough year," con- es Robert R. Dockson, chairman and ef executive of California Federal Sav- s and Loan. "Interest rates I think will ı down some time in the second quar- If that takes place, then the savings flow will, we hope, reverse. In our ı case we are bidding for expensive ney. Yet when you have to begin to 11% and 11½% for money, you 't put it out in housing. So you come a grinding halt at that point. Not a ıding halt like we did in 1974-75, but greatly reduced level. The difference hat in 1974 we were going through ntermediation, and losing large sums money because we didn't have the rket instruments we have now."

rock Weir, chairman and CEO of vetrust Corp., also sees the problem ıarrowing spreads, but argues that dis- ermediation *is* here—in a different ·. "What's agonizing now," he says, that with thrifts and commercials ching homogenized pricing, the disin- nediation is more internal than exter- The flow is not so much from the ımercial banks to the thrifts, or the fts to other money market instru- ıts. The flow is within the organiza- ıs themselves from lower rate instru- ıts to new higher rate instruments.

A lot of the current concern on the : of the thrifts and commercial banks hat we embraced with a great deal of this six-month floating rate certifi- e, and we find that we are now clutch- a monster to our bosom."

'he Carter Administration has sound- he alarm about possible overexposure onsumer credit in commercial banks.

Inflation fighter Alfred E. Kahn
If monetary policy is the weapon, financial institutions will be the victims.

"The dramatic expansion of consumer credit could be the greatest threat to commercial banks," says John G. Heimann, comptroller of the currency, "not the tanker loans nor the foreign country exposure that have concerned market analysts and journalists." The financial sector is most vulnerable to business cutbacks that would throw second wage-earners in families out of work, he goes on. "So many are depending on two jobs to meet debt service that rising unemployment could be disastrous."

To some that will sound like so much political jawboning—scare talk meant to dampen inflationary spending. After all, history tells us that the consumer is generally far more scrupulous about paying the bills than are many corporations, large and small.

But Heimann argues that banks are more exposed to consumer credit than most people realize. There is, for example, the threat of credit duplication. A person earning $20,000 to $30,000 a year today with a reasonably stable job does not content himself (or herself) with a single Visa or Master Charge card from one bank, but will often have several, including various entertainment cards like American Express or Diners Club. In addition, an individual may have check overdraft privileges plus ready-loan credit.

Credit card use particularly has been growing like the proverbial green bay tree. At the end of last year's second quarter, the number of active domestic Master Charge and Visa accounts stood at an incredible 42 million, up from 32 million just a year earlier, while gross dollar volume billed on them in the second quarter totaled $10.5 billion, up from $7.2 billion. This increased card use (plus some slowdown in repayments) lifted total debt for the two credit card groups by 40%, to $16.8 billion from $12 billion, in the year ended last June 30. On that date about 3.5% of Master Charge and 3.1% of Visa accounts were delinquent.

Banks, however, are unimpressed by those who warn that there are too many sources of consumer credit. "The consumer is a very intelligent individual in the aggregate, in our opinion," says Richard M. Rosenberg, executive vice presi-

dent of Wells Fargo Bank. "He'll self-police his own debt." B. Paul Jones, senior vice president of Valley National Bank of Arizona agrees: "Our experience through good times and bad is that the consumer monitors his own affairs pretty closely. When he feels his debt burden is getting onerous, he begins to curtail his spending, monitor his budget more carefully and increase his savings. Our feeling is, that is what he'll probably do this year. This credit duplication business seems overblown to me."

In contrast to the banks, the fire and casualty companies are preparing to self-inflict their damage through cutthroat competition for underwriting business. The rationale is that the premium in hand, even at levels too low in the long run, can be invested at the generous 9%-to-12% yield available on taxable instruments or 7%-plus tax-free interest to be got on municipals.

For two years now the property and casualty companies have been rolling in money, after the dreadful years of the early Seventies when state commissions held their rates down as inflation drove their costs through the roof. But then the regulators relented. On the higher rates that followed, companies have been able to rebuild their reserves until now they have room to play again.

"What's agonizing now is that . . . the disintermediation is more internal than it is external. . . . The flow is within the organizations themselves from lower rate instruments to new higher rate instruments. . . . We embraced with a great deal of zeal this six-month floating rate certificate, and we find that we are now clutching a monster to our bosom."

Now they are starting to "cut e other's throats again," says Presid Robert V. Hatcher Jr. of Johnson & gins, the country's largest private in ance broker. The price war, he adds, terribly fierce." Insurance brokers, Hatcher, will not be subject to the s swings in profit as the property co nies. Their revenues are spread both graphically and by type of business, therefore they are not subject to same type of competition. They als not have the same heavy capital need the insurers do, and therefore can af more liberal dividend payout policies

The industry yardsticks show Marsh & McLennan Cos., Inc., the est insurance broker by far, tops th nancial service group in five-year a ages of both return on equity and re on capital—and this with no debt standing. Its earnings, starting from already high base, have been growing 14% annual rate over the past five y

Underwriters, by contrast, may wel

Note: Explanation of Yardstick calculations on page 40. ‡‡Three-year growth. def Deficit

Energy wasted.

ENERGY CONSERVED. BILLIONS OF CANS' WORTH A YEAR.

Since starting its program, Reynolds has recycled more than 13 billion aluminum cans.

Saving 95% of the energy needed to make the aluminum originally... and allowing that aluminum to keep on paying us dividends again and again.

In addition: Today's newest Reynolds cans contain 23% less metal than those of a few years ago. To save even more aluminum. Energy. And shipping cost.

Of course, Reynolds started the consumer recycling idea in 1967. And has paid recyclers more than $90 million for cans in that time.

That's a lot of aluminum. And a lot of energy.

REYNOLDS ALUMINUM

Conserving our resources and energy.

Update–Panhandle Eastern

WE'RE MO

A jack-up drilling rig moves ahead to a new location in the Gulf of Mexico.

VING AHEAD.

Natural Gas Supply Improves; Business Activities Enlarged.

As the nation looks to the promise of the 1980's, Panhandle Eastern is ready with a solid energy growth program that is already making an important difference to the markets we serve and to our stockholders.

1978 marked the second straight year of improvement in natural gas supply for the population/industrial centers our pipeline systems serve in Michigan, Ohio, Indiana, Illinois and Missouri. And the outlook for 1979 and the years immediately ahead is excellent, as well.

Why? Because since 1970, we've made a billion-dollar investment to locate, develop and acquire new gas production in areas ranging from the Gulf of Mexico to the Rocky Mountain region. Here is the record of accomplishment in the 1970's that looks to the future:

- A major supply system has been constructed in the Gulf of Mexico and another system was greatly expanded.
- Construction is moving ahead on our facilities to handle imported LNG (liquefied natural gas) which will add significant new supplies to the end of the century. The first deliveries are expected late in 1980.
- Three supply systems have been built in the Rocky Mountain area, an important new frontier for gas production.

Stingray City, our 50%-owned compressor station in the Gulf of Mexico, now moves one billion cubic feet of gas per day.

In addition, the recently enacted energy legislation should sustain the increased pace of domestic drilling, enhancing the long-term prospects for natural gas, to say nothing of the developing projects to transport gas from Alaska and utilize coal as another source of clean gas energy later in the 1980's.

Building on the solid base of its natural gas transmission operations, Panhandle Eastern has enlarged its business domain to include oil and gas exploration and production, contract drilling domestically and overseas and coal mining. For a detailed look at Panhandle Eastern, where $2 Billion in assets are successfully at work, send for a copy of our 1978 Annual Report, available in March. Write: Corporate Communications, P.O. Box 1642, Houston, Texas 77001. Stock symbol "PEL" — newspaper tables "PanEP."

Panhandle Eastern PIPE LINE COMPANY

approaching the downslope of the cycle. "There appears little chance that a topping out of the underwriting cycle can be averted in 1979 or 1980 at the latest," says Standard & Poor's. John R. Cox, president of INA's Property & Casualty Group, puts it more bluntly: "This business isn't going *totally* to hell this year, unless we get a major windstorm. But I'm not so sure about 1980. You see, the industry is really having its best results ever. No question about it. But we're now in a positive tax-paying position. To offset that a lot of companies went into municipal bonds, or else their bond portfolios are at price levels substantially higher than their current market value. So if they do liquidate they will have to take substantial losses. And don't forget that the dividends have been increased substantially."

Senior Vice President Richard E. Stew- of Chubb Corp., one of the most nservative property and casualty insur- ce companies, is negative about the mium concessions by some of the re aggressive companies—conces- ns he says Chubb is resisting. "The mpanies that have held the line on mium rates should ride through this period without getting hurt," he says. "We have been clobbered once and don't intend to get clobbered twice."

The lure for the premium price-cutter is the yield to be had from investing the premium money, even if the premium should prove inadequate to meet future loss experience. By putting the premium money to work at short term, yields as high as 10% and even 12% are possible. But the danger is that even a small slowdown in economic growth could unleash a flood of money and send both short- and long-term rates plunging—even without any easing of credit policy by the Federal Reserve. That would set the stage for a repeat of the financial disasters of 1974 and 1975. ■

Department stores are dumping inventories, discounters are trying for a new image and retailers are bracing for a slowdown in 1979.

Retail distribution

STEPHEN PISTNER, president of Minneapolis-based Dayton Hudson Corp., follows the Administration's line and calls 1979 "a soft landing" for retailing. J.C. Penney President Walter Neppl speaks cautiously of "more moderate" retail growth this year: 8%, *vs.* 9% last year. Sears, Roebuck economist Jay Levine predicts a less-than-7% rise for retailers which, allowing for inflation, could mean no growth at all in real dollar volume.

That's what retailers are saying about 1979. What they are *doing* is preparing for the worst—a year that may be as bad as the disastrous recession year of 1974. Merchandisers prepared for 1979 by slashing inventory in the closing months of 1978. "We want to get inventory costs in line now so we won't be preoccupied with this in 1979," a Federated Department Stores executive said last November. Appliance makers who supply durable-goods retailers like Sears have already felt the pinch. Their sales slipped badly during the second half of 1978, triggering major layoffs in that industry.

The signs of slowdown were everywhere. By the third quarter of last year, consumer installment credit was 18.4% of disposable income, higher than 1973's prerecession peak. Meanwhile, growth in real disposable income is expected to slow from 4.1% in 1978 to 3% in 1979.

The result, says Mike Horn of the American Apparel Manufacturers Association: "Everybody's scared to death to hold inventory."

Well, not quite everybody. J.C. Penney, in an intense promotion campaign to upgrade its fashion image, made the biggest sales gains (18%) among the department stores in last year's first ni months, and in the process recaptur the number two retailing spot it h lost to K mart two years earlier. But t sales gains weren't reflected on Pe ney's bottom line, as per-share earnin were up only 1.4%. And more imp tant, Penney's inventories at the end the third quarter of 1978 had balloon by 42%. A great surge in the Christm season (about which Penney was m optimistic than the competition) m have brought inventories into balan but some observers were skeptical. our inventories were up that hig says one competitor, "I'd be sweati bullets."

Penney's inventory status may not typical, but its "fashion strategy" gets least lip service everywhere in reta ing—even among the discounters. L

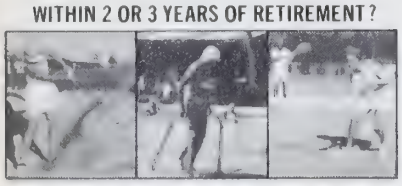
WITHIN 2 OR 3 YEARS OF RETIREMENT?



ENJOY an Arizona Vacation in a lovely apartment in

Sun City West

STANDARD OF THE WORLD IN RESORT RETIREMENT LIVING

A FABULOUS RESORT VACATION FOR ONE OR TWO PEOPLE JUST $150 *

Golf, tennis, swimming and special parties are just a few of the things you'll be invited to enjoy. Plus you'll stay in a beautiful air conditioned apartment with a completely equipped kitchen, color TV, attached carport and private patio. Just 15 miles from exciting Phoenix. Easy drive to the Grand Canyon, Mexico or Las Vegas.

INTRODUCTORY RATE:
For 1 week: Jan. 1, 1979-May 31, 1979
For 2 weeks: June 1, 1979-Oct. 16, 1979
Rates subject to change without notice

MAIL THIS COUPON TODAY!

Sun City West is not a lot sales development

last year, when Arlen Realty sold 51% of its Korvettes subsidiary to the French retailer Agache-Willot, the new partners immediately announced plans to pump $15 million into the discount operation, pegged for promoting Korvettes as a quality and fashion merchandiser. K mart is expanding the number of items it carries, and its new advertising will push quality over price. Last year K mart converted its clothing departments from displaying apparel on tables and racks to an all-hanging layout.

K mart is also moving increasingly into secondary markets. Between now and 1983, some 65% of the 700 new stores it plans to build will be smaller, many in less-populated areas. That means tougher competition for regional discounters like New England-based Caldor and the Sunbelt's Wal-Mart Stores. But just as the regional supermarket chains have held their own against the national grocers, K mart may be stood off by Caldor and Wal-Mart, which lead FORBES' retail distribution yardsticks.

Theoretically, the discounters should be the big winners in a downturn, since consumers become more price conscious. The last slowdown, however, proved otherwise, and so might this one. Why? First, because consumers seem to go for quality in a recession. And, second, because the lower-income customers who spend at a Zayres are harder hit by an economic dip than the department store's upper-middle-class matrons, who are better able to cushion the impact.

Not that the department stores are smugly content with their formulas. R.H. Macy, undertaking a major renovation program, is converting its once low-profit budget departments into a series of high-margin boutiques offering housewares, gourmet cooking items and the like. Last year Federated's Columbus, Ohio-based Lazarus division opened three Capri Shops in new locations—small, elegantly decorated apparel stores designed to increase Lazarus' total market penetration. In the next five years Dayton Hudson (FORBES, *Dec. 25*)—whose strong 1978 showing includes a $151 million gain from the mid-1978 sale of nine shopping centers—will concentrate on expanding its Target discount stores, which specialize in higher-priced merchandise.

Such shifts, however, would not insulate department stores completely from the slowdown that seems to be coming. Stores that attract higher-income customers, like Federated, and the better-diversified operations, like Dayton Hudson, will weather any downturn better than chains like Carter Hawley Hale, which serve the more economically vulnerable middle class, according to analyst Stuart Robbins at Paine Webber Mitchell Hutchins. Profit margins will also be squeezed for those merchandisers that are expanding, such as Allied St

The chains that are building got s good news in 1978 that will pay o 1979 and far beyond. Last year Cong passed legislation that for the first allows retailers to use the investmen credit. The new tax amendment li the credit to the renovation of com cial structures over 20 years old—w mainly means refurbishing older, in city stores. But more than anything, legislation is a big philosophical wi retailers, as the credit had long limited to manufacturing plants equipment. With this entrée, reta are already planning to return to gress to get an extension of the cred new construction, where the real l term impact will be felt.

For this year at least, merchandi concentrated in soft goods should out form the durable-goods sellers. The t toward wearing more fashion-orie apparel shows no sign of fading, and not limited to women's clothes. "Dr ing up has aided menswear," says l ney's Neppl, "and the boys' suit busi has never been better."

Durable-goods retailers, on the o hand, have little to crow about. S economist Levine puts the real growt durables, like the appliances in w Sears made its name, at only 1.3% 1979—less than half the gain expecte soft goods. Add to that the high sh term interest rates that Sears is curre paying to finance its slower-moving ventory, and the result promises to modest 1979 for the world's largest tailer, which seems to be struggli find a formula it can live by.

The only real winners in retailing year are likely to be the drug chains, i no other reason than that their to paste, shampoo, proprietary drugs the like are bought in good times bad. The discount drugstores, like O based Revco Drug Stores, should fare ticularly well, as should those that de a large part of sales from recession-i lated prescription drugs, such as Flor based Jack Eckerd Corp. And even th drugstores with greater exposure in m cyclical general merchandise, like V green, the nation's largest chain, wil better than most retailers, since it often undercut the department store small appliances and toys.

If retailing in 1979 promises to weak, it should not match the disast 1974. Many economists look for an swing in consumer spending by the ond half of the year. That, says Me Lynch Vice President Jeff Feiner, me some retailing stocks will be ripe buying, since their prices usually rise fore consumer spending improves. will the spending improve? Replies Pa Webber's Robbins: "Retail stocks wil a better investment in the mid-19 than they are today." ■

Nature is supportive. So are we.
Taxes are equitable and stable in Georgia. Neither individual nor corporate income taxes bear an unreasonable proportion of governmental cost. And industry is given attractive location incentives. Georgia's new freeport law, for example, allows local governments broad options of exempting property taxes on various types of inventory. Our supportive tax system encourages industrial growth, creating jobs and naturally expanding the state's economy. It could provide just the environment your company needs to yield higher profits. For more information, including confidential site selection assistance, call or write: W. Milton Folds, Commissioner, Georgia Department of Industry & Trade, 404/656-3556, P.O. Box 1776, Atlanta, Georgia 30301, Dept. FB-94.
Georgia

Itel added significantly to its aircraft fleet with its agreement to purchase seven used Boeing 747 jets.

Capital equipment. It keeps us and our customers growing strong.

In any business, capital equipment means growth. And because we specialize in innovative ways to use capital equipment dollars more effectively, our expertise has helped Itel grow as much as it's helped our customers.

Since we concentrate on two of the largest categories of capital equipment—transportation and computer equipment—we've built a large, ever-expanding asset base in order to meet our customers' growing needs.

The result has been outstanding financial performance. In the first nine months of 1978 alone, Itel's revenues reached a new high of $453 million, compared to $262.3 million for the same period last year. And our net income for the first three quarters of the year increased to a record $29.7 million.

We've designed and built our success in capital equipment leasing with innovative marketing ideas. And as we continue to grow, the same type of creative thinking will serve our customers as well as it's served us.

Itel. We're a company that will grow on you.

For further information, write or call for our annual report. Itel Corporation, One Embarcadero Center, San Francisco, California 94111, (415) 955-0000.

ITEL

Itel stock is traded on the NYSE under the symbol I.

Sea water will force oil from the desert.

This 15,000-horsepower Ingersoll-Rand pump and nine others are moving treated sea water 60 miles inland for injection into a major desert oil field. There, the sea water restores underground pressure, boosting oil and gas production.

The pump shown, which weighs 55,000 pounds, was first factory tested And severe tests they were: the desert environment in which these pumps are installed requires the utmost reliability. Since corrosive sea water is involved, special metal alloys are required.

Ingersoll-Rand's advanced technology meets that challenge and many more. As a result, some 4.2 million barrels of sea water per day are being pumped through the 60-inch pipeline and into the ground.

Around the world, many different Ingersoll-Rand machines are being used to meet a wide variety of energy needs. Such as our continuous coal miners and haulage equipment. Air and gas compressors. Centrifugal and plunger pumps. Tool and hoists. Drills Gas and steam turbines.

We're helping innovative people capture and make better use of energy resources.

In fact, that's what we do best: supply the technological leadership to make ideas work. And we do it in a big way. Our sales in 1978 exceeded $2.3 billion.

Write for our Annual Report or product literature. Ingersoll-Rand Company, Dept. 849, Woodcliff Lake, NJ 07675

ENERGETIC IN ENERGY

Ingersoll-Rand.

ome companies in this business have forgot-n what happened to Aesop's grasshopper hen the snow began to fall.

Leisure

"THIS IS A BUSINESS that has gone crazy!" says Emanuel "Manny" Gerard of Warner Communications Inc.'s Office of the President—aning crazy with prosperity. "Of all movies that have ever grossed $30 lion or more in domestic rentals, 25% e been released in the last 12 nths!" Proudly he ticks off the latest dicts from the box office, where re-ts last year increased 17% as atten-ce climbed to 1.1 billion despite stiff e hikes: *"The Goodbye Girl* has grossed rner Bros./MGM $40 million," he goes "For MCA, Inc. *National Lampoon's nal House* has already passed $49 mil-. *Hooper* isn't a blockbuster, but it's l a $30 million movie. . . ."

nd that is how Hollywood is going 1979: racing full speed ahead, cranking out costly would-be blockbusters like Battle Creek, Mich. cranks out cornflakes: *The Star Trek Movie, Lord of the Rings,* the sequel to *American Graffiti, Superman*. . . . Fantasy is hot. Space is hot in the wake of *Star Wars.* Nostalgia is hot on the dancing heels of John Travolta's *Grease.* "We used to feel you had to be really good in the movie business," Gerard says. "That isn't true anymore."

Such euphoria is universal in the leisure industry, which has just finished one of the best years on record. In terms of FORBES' profitability measurements, it ranks fourth out of 30 industries. Last year Americans spent $2.8 billion going to the movies, $3.3 billion on records (up more than 17%), $5.5 billion on books (up 19%), $6 billion on boats and almost the same on photography. Close to $9 billion in advertising poured into television (a 15% increase), and the gaming tables of Nevada and Atlantic City picked up over $1.9 billion in lost change (a record). All in all the industry grossed close to $91 billion. A bonanza.

No amount of gloomy talk of impending recession can dampen spirits in this business. Even companies most vulnerable to economic downturn see not a cloud on the horizon. "It won't last forever, but at the moment there's *no* sign of it ending," says W. Thomas York, chairman of AMF, Inc. whose $100 tennis rackets and $100,000-and-up Hatteras yachts are selling well. Bowling, where Brunswick Corp. is AMF's only competition, is enjoying steady growth; some 20% of the population still frequents the bowling alley.

The question now is which of these high spirits can survive a bad recession? Consider what happened in 1974. It was not a uniform disaster by any means. Movies and television sailed through unscathed—cheap entertainment. Motorboats, on the other hand, dropped instantly from 550,000 units sold to 440,000 units, and have yet to recover. There were fewer skis sold. Camera sales fell from 13.7 to 11.7 million units. In constant dollars, record and tape sales were slightly down. AMF got clobbered on all fronts and suffered a 62% earnings decline in 1974. At Brunswick, which also produces sporting goods, in 1975 return on equ sank from a five-year average of 13% 7%. Return on equity at both Polaro Corp. and Eastman Kodak Co. fell t years in a row. Recreational vehicles, course, bore the brunt of the oil emb go and the recession that followed a have never recovered. Champion Ho

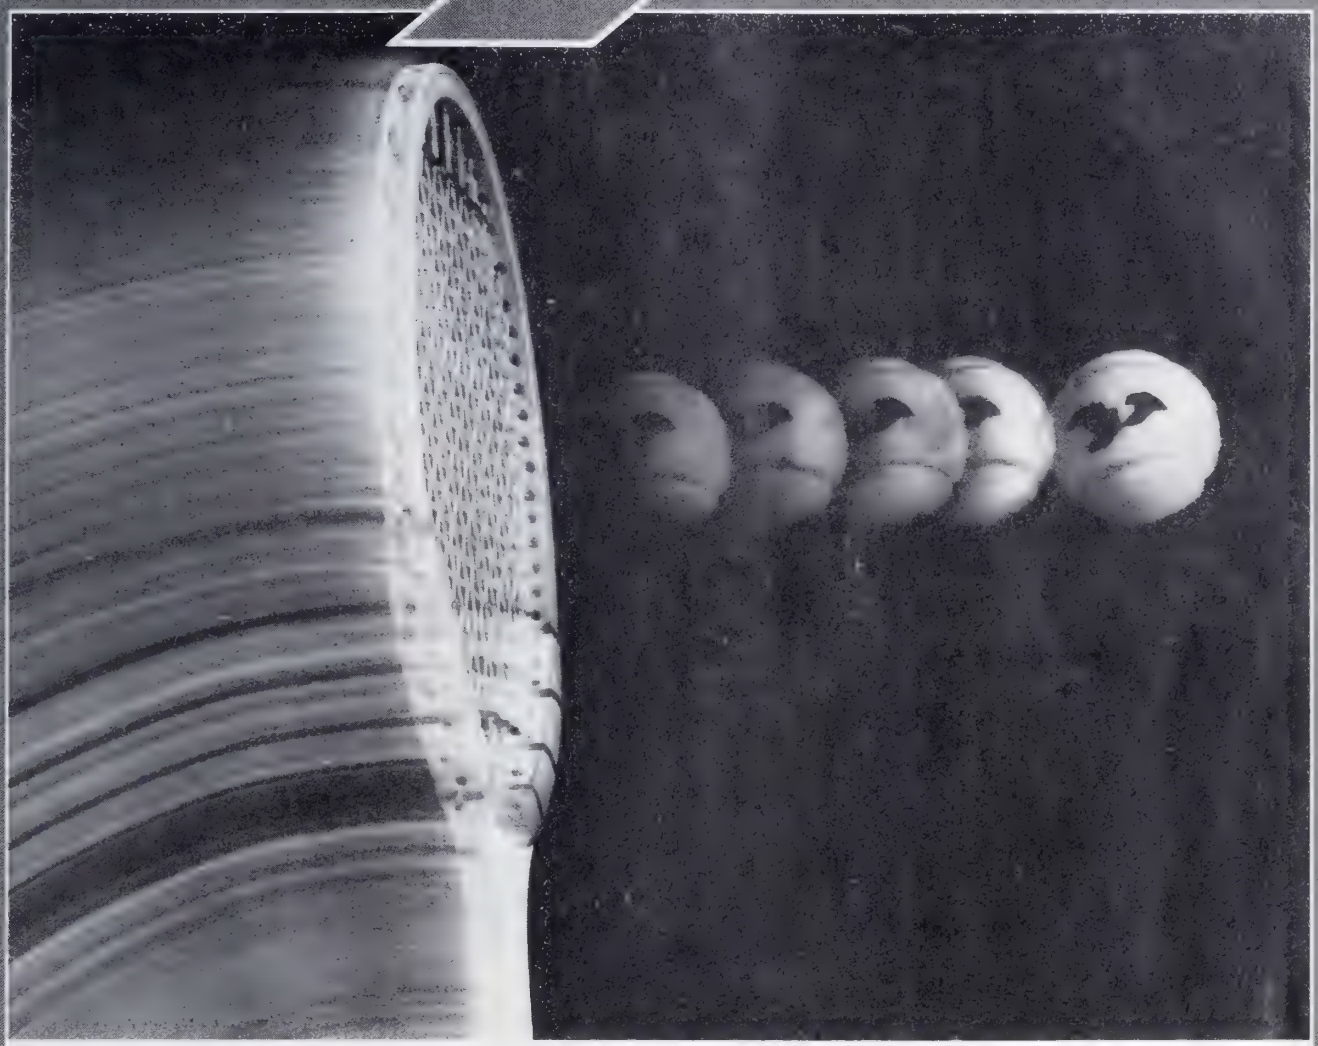
National Bank of North America

THE BANK THAT GOES OUT OF ITS WAY FOR YOU



SERVE US YOUR TOUGHEST BANKING PROBLEM!

At North America, solving your toughest banking problem is the name of the game. Our team of banking professionals works closely with you to find solutions to your company's needs.

But in banking, talent has to be backed by muscle, just as in sports. Our team is backed by a Money Center Bank headquartered at 44 Wall Street. As of June 30, 1978, North America became the 35th largest bank in the U.S., with assets of over $3.9 billion. Add that to our financing and service capabilities nationwide and around the world, and you have a bank that can give your company the full credit it deserves.

So when you have a tough banking problem let North America show you how we can provide the winning solution.

CIT **National Bank of North America**

Pfister Tradition

Tradition is a treasured custom handed down through time. At the Pfister Hotel and Tower, "Salve" is our philosophy. Simply stated, "Salve" hails a warm welcome to those who enter. It assures you that the Old World charm and grace that greeted guests and dignitaries in the 19th Century is unchanged. We continue to display the same consideration and courtesy that was thought to be lost; nothing is more important to us than knowing you are well taken care of.

Tradition is a time honored practice, borne out of dedication and, above all, service.

Christopher Reeve as Warner Communications' latest Superman
A mini-industry packaged and delivered full-blown from the head of Hollywo

Builders Co., with 45% of sales in RVs, was still in the red last year.

Harold L. Vogel of Merrill Lynch offers a sensible but overly simplistic rule of thumb for trying to determine who will be hurt in a recession in this industry. The big ticket durable items are the most vulnerable. "The absolute dollars are important," he says. "If there is a recession they won't be buying motorcycles, boats and perhaps ski equipment with the same intensity as they were last year."

Bad news for hotels? In the last recession suddenly empty beds dragged earnings down 12.6% in 1975 at Marriott Corp. Chairman J. Willard Marriott doesn't think that will happen again. He points to the 15% increase in air travel caused by cheaper fares, which has helped keep occupancy rates above 80% in his chain. "The hotel business looks very strong," he says confidently. Analysts like Vogel doubt that the travel boom can last. "People had a last-fling kind of approach to last summer's low air fares," he figures. So while increased travel caused amusement park operators like publisher Harcourt Brace Jovanovich, Inc.'s Sea World, Inc. to show record attendance last year in Florida and California, the market may be near saturation and that consumer price resistance may be a problem this year.

Notice, too, that fancy price increases have hidden signs of stagnating or deteriorating markets in some areas of the leisure industry. Take television. Americans spend a dizzying six hours and ten minutes a day per household watching the box, and—perhaps not surprisingly—that appears to be the limit. "The viewing public isn't growing," notes analyst Robert M. Howitt of First Manhattan Co. Where, then, are the gains con from? Last year advertisers were picl up the tab for soaring production c But will cost-conscious advertisers tinue paying higher and higher charges in a period when both infla and recession will be squeezing own profits? And if they won't, how TV continue to produce gains in an i tionary era? In short, TV broadcas may be becoming mature.

Book publishing is another examp a boom that may be peaking. Stiff hikes are covering up a decline in sales in textbooks for companies MacMillan, Inc., McGraw-Hill, Inc. Harcourt Brace Jovanovich as post-b boom classrooms shrink. Hardc trade books, which now easily sta $8.95 and run as high as $24.95, already priced themselves out of muc their old markets. True, *Gnomes*, a seller at $17.50, has grossed over million and will bring an estimate million to the bottom line of Times ror Co.'s Harry N. Abrams, Inc. But is an exception.

Of course there are leisure compa that will have a relatively easy weathering a downturn. The ever-ch ing fortunes of film producers de more on the popularity of the movie on swings in the economy. (*The Exo* grossed $91.4 million in 1974.) Or sider the gambling stocks, which di amazing number on the stock ma this year: rising 50% in a few weeks falling almost as fast. After the succe Resorts International, Inc. in Atla City (revenues averaged $630,000 a for the first six months), everyone w ed a piece of the take. For the first in years, Wall Street saw the small in

come back to bet on the market. Del Webb Corp., Ramada Inns, Inc. and tt Corp. all rose on speculation that would enter the gaming fray. Most ysts think that it's just a matter of e before there are casinos in New k and gambling turns into the entertainment industry's biggest jackpot. Old- operations like Metro-Goldwyn-er, Inc. and Hilton Hotels Corp., ch make 60% and 40%, respectively, heir income from casino operations Nevada, stand to benefit.

he restaurant business also may have e going for it in a downturn than ts the eye. Restaurants now take of all the money spent on food in country. True, you don't go out to

t year Americans spent 8 billion going to movies, 3 billion on records, $5.5 ion on books, $6 billion on ts and almost the same on otography. About $9 billion dvertising poured into television, and the gaming tables Nevada and Atlantic City ked up almost $2 billion. industry grossed close to l billion. A bonanza.

lobster if you're worried about the ly budget. But today only 12% of the g-out trade goes to restaurants that customers with checks of over $5. t restaurants are inexpensive fast- establishments. While the projected in beef prices may cause McDonald's all problem, fast food probably isn't itive to overall economic conditions. nalyst Robert L. Emerson of Salo- Brothers puts it: "You don't take a to McDonald's. It's more of an ad- t to a shopping trip or your job." Donald's has slowed from its 30% th rate of a few years ago, but not far. After all, 500 new sets of golden es are slated to rise in 1979 alone.

rtually every leisure executive scoffs he mere prospect of a downturn. at you are seeing are sociological ages," argues Warner Communica- s' Gerard, by way of denying that agers may find it hard to shell out 8 for new disco albums if the family get starts feeling a pinch. He points to w study that shows most record buy- re a mature 25 years old and up. "The th in this business has been *explosive* e 1976," he says. "My *mother* can ond to Fleetwood Mac [a rock group, hose who haven't yet responded]."

ertainly some of these optimists are g to be wrong. Traditionally the for- s of this industry dance to the music ersonal disposable income. If that s down in a recession, it becomes a e of musical chairs. ■

Well planned growth is essential to Phoenix. So it's a major priority. And you'll sense that the minute you contact us.

Mayor Margaret Hance, and Jim Haynes, Executive Vice President of the Phoenix Metro Chamber of Commerce, will personally and enthusiastically help you avoid the little hassles, and make your move as smooth and effortless as possible.

You'll want to avoid costly delays. So we'll see to it that you have all the inside info on site selection, zoning, city ordinances and environmental goals and the like.

There are some other "moving" reasons to relocate in Metro Phoenix too: like year round sunshine and a resort climate, a friendly tax structure, right-to-work laws, a growing skilled work force, and easy access to all major markets.

We think it's a smart move.

And we want Phoenix to be your forwarding address!

TOMORROW

WHERE WE STARTED IS NOT WHERE WE'RE GOING

Seventeen years ago AMI pioneered an industry: professional hospital management. We emphasized the business-like control of quality health care delivery. And we still do.

But today we do more than own and manage hospitals. AMI delivers 50 different kinds of health care services to 400 communities in the U.S., Europe, Latin America, the Middle East and Africa.

For example, AMI shared medical services help many hospitals provide the latest in medical technology without investing in expensive equipment and personnel. Our mobile CAT Scanner service, the first of its kind in the world, is the newest of these shared programs.

To give hospital managers control of health care costs, AMI has created computerized systems for budgeting, labor and financial analysis. These systems are in use now in hospitals in the United States, Ecuador, England, France and Switzerland.

To help communities put modern hospitals where they are really needed, AMI has created a pre-engineered modular design specifically for hospitals, which greatly reduces construction time and cost.

That's where AMI is going: toward carefully planned, cost-effective, quality health care services of all kinds, wherever they are needed. It is a worthwhile direction to take.

AMI

This road was built with 2000 tons of scrubber sludge from Duquesne Light.

And a little alchemy from IU Conversion Systems.

Like a lot of coal-burning utilities, Duquesne Light has installed smokestack scrubbers to keep sulfur dioxides and fly ash from polluting the air. But because scrubbers turn those contaminants to sludge, a way must also be found to dispose of this waste material without polluting the land. Especially since it's estimated that enough sludge is produced each year to cover a city of 100,000 people to a depth of three feet.

Today, the Poz-O-Tec® method developed by IU Conversion Systems provides a creative answer by turning this sludge into a structurally sound and environmentally acceptable material that can be used for landfill, embankments and other applications. In the case of the Poz-O-Tec installation at Duquesne Light, some of the chemically stabilized waste has been used as base material for a road in Indiana Township, PA. For a parking lot in Uniontown, PA. And for landfill at the utility.

With contracts from power plants in Illinois, Indiana, Ohio, Pennsylvania, Kentucky and Texas that produce more than 13 million tons of sludge per year, IU Conversion Systems has twice the business of its two major competitors combined. And some of these contracts extend for 10-20 years. In each case, the Poz-O-Tec system is providing economical waste management. And the treated material safeguards the environment, while serving a practical purpose.

IU Conversion Systems is more than the leader in its field. It's an important subsidiary of IU International, whose interests in industrial products and services, utilities, land transportation, ocean shipping, distribution and agribusiness add up to $2.3 billion in annual revenues.

For further information on the Poz-O-Tec system, write B. Lawrence Seabrook, Jr., President, IU Conversion Systems, Inc., 115 Gibraltar Road, Horsham, PA 19044. To learn more about IU International, write Corporate Affairs, IU International, 1500 Walnut Street, Philadelphia, PA 19102.

eople buy groceries in good times and bad, ut take your eye off the basics for one minute this business and you're in trouble.

Supermarkets and wholesalers

N Oct. 2, Food Fair, Inc., the nation's eighth largest supermarket chain (sales, $2.5 billion) anınced it was seeking court protection m its creditors under Chapter XI of Federal Bankruptcy Act. Two days er, Great Atlantic & Pacific Tea Co., second largest chain, reported its secd consecutive quarterly loss, $6.9 mil-n. A month after *that* came the anıncement by $759 million (sales) Al-d Supermarkets that it, too, was filing under Chapter XI, in part because of "repercussions" from the Food Fair debacle.

What's going on here? With grocery prices rising steadily, aren't the grocers minting money? After all, the farmers keep telling us that high food prices aren't *their* fault. Well, forget it. This industry is not getting rich. It is so competitive that it is actually squeezed between the rising costs of growing and moving food and all those budget-conscious consumers. The median return on capital over the past five years was a barely respectable 8.8% for the industry as compared with 13.6% for the health-care industry.

The simple fact is that consumers worried about rising prices shouldn't be picketing supermarkets; they should have picketed the farmers driving tractors around the White House last year.

Not that mismanagement didn't play a role in the Food Fair and Allied Supermarket downfall; it did. But the point is that

this industry is so competitive that managements have little margin for error.

By midautumn, food suppliers and distributors in the eastern half of the country, where the three troubled chains operate, began to worry. Dozens of them had been hit badly by Food Fair's insolvency. That was not surprising, given the Philadelphia-based chain's reputation for cozy dealings with relatives and friends of management (FORBES, *Aug. 21 and Oct. 30*). But what about the Allied Supermarkets bust? Was the domino effect at work? "We'll have a disaster on our hands," said a frightened supplier.

But in this business as in most businesses, good management still makes a big difference. In spite of the fact that few stores net more than 20 cents bag of groceries, a number of super ket chains are managing to flourish.

The companies that have long ra high on the FORBES' yardsticks— Albertson's, Supermarkets General, way Stores—are all doing very those three chains averaged 20.1% turn on equity in the past 12 month

"Perhaps you gentlemen may find your current copying costs a little high. I would like to remind you that the original figures did not include such items as sending out for suppers, extra heat after five o'clock, or Miss Hansen, our best stapler, who has developed 'copier elbow'."

Even without the problem of "copier elbow," figuring out all the costs of high-volume copying is complicated. The best deal is the sum of many things. We have taken every known variable—except Miss Hansen—and programmed them all into a computer analysis that is very thorough and completely impartial. We would like to discuss how the analysis can give you a better picture of your costs.

As a bonus, we offer what people are calling the best copy quality in the business. Service is also of Kodak quality. You probably can't get a better deal. We'd like to demonstrate.

Write: A. Angert, Eastman Kodak Company, CD9303, Rochester, NY 14650.

Kodak can cure copier-cost confusion —fast, fast, fast.

FLORIDA
THE PLACE TO BE

Will recession darken the industry's prospects substantially? No. People buy groceries in good times and bad, after all. In the 1974-75 recession, supermarkets did surprisingly well. In this low margin business (a profit of 1% on sales is considered sizable, even in good times) the main threat is always losing touch with the market. Slipping up in just one area, a western supermarket executive, points out, can spell the difference between survival and failure: "If the consumer can't depend on the quality of your meats, for instance, she's going to find herself a new store." As Giant Food Chairman Joseph Danzansky puts it, "You've simply got to take care of the basics." Especially so in a recession year.

You've also got to face the fact that groceries *per se* will never be terribly profitable. A great deal of the supermarket industry's creativity is now going into building 40,000 square foot-plus "superstores"—big units containing plenty of nonfood items like prescription drugs, cosmetics, motor oil, housewares. "These are not major purchases; they're routine purchases," explains Lou Lowenstein, president of New Jersey's Supermarkets General, parent company for the successful east coast chain of Pathmark supermarkets. "We have black and white TVs, but these are little ones, the ones that sell for $70 or $80. We'll take you up to Farberware, but we are not going to take you into Cuisinart. It's a series of things—paint, automotive supplies—that are day-to-day shopping items and can be obtained in one place."

The addition of these lines does two things for the chains: increases the size of the average sale—and hence the profit per customer—and broadens profit margins because these items, while not hugely profitable, are more so than groceries. It suits the customers' convenience, too. First of all, there's the "women's liberation factor." Today's housewife is often a busy, working woman, and she doesn't like to run around to three different stores every week to pick up all the different items she needs.

Second, there's the "eating out factor." Dollars spent in restaurants and fast-food establishments are continuing to cut into dollars spent on meals prepared at home. (A new Conference Board study recently put the away-from-home figure at 27%, up from 20% 15 years ago.) That pinches already-thin food profits in supermarkets, forcing grocers to rely on higher-margined nonfood items.

The predictable result: Superstore operators like Pathmark and Giant Food, who have exploited these developments, are battering the A&Ps and Food Fairs, who still have plenty of old, smallish grocery stores in decaying urban areas. "The A&P people just forgot all about what the trends were in the country," says one supermarket executive. Under Chief Executive Jonathan Scott, a brig 48-year-old ex-Albertson's star, A&P building supermarket-pharmacy com nation stores called Family Centers. I it's a belated move.

It would be a serious mistake, course, to assume that the "superstor strategy by itself guarantees success the food retailing business. Woe to t supermarket chain that underestima the consumer's value-consciousne which continues unabated in the stagf tion hangover from the mid-1970s. T most recent fad is "generic" produ that are austerely wrapped and are pric well below private-label items.

And woe to the supermarket that lo touch with its local market. Independe grocers, with their strong neighborho orientations, are flourishing these da frequently in stores discarded by t likes of A&P. The supposedly greater

Superstores like Pathma and Giant Food are batteri the A&Ps and Food Fairs wl still have plenty of old sma ish stores in urban areas.

ficiencies that big chains can use to m cle the little guys are readily offset by t efforts of giant wholesalers like Su Valu, Malone & Hyde and Fleming C These firms continue to earn solid pr its by providing the independents w lower-cost warehousing, accounti promotion and so forth than small bu nessmen could manage themselves. (S per Valu, Malone & Hyde and Flemi Cos. have attained sparkling returns equity for the past five years, rangi from the high teens for Fleming to t mid-20s for Super Valu.)

Step back for a minute and take a lo at what's going on here: Independe grocery stores are thriving. Huge chai like Food Fair and A&P are fighting survival. That's not to say there are advantages to bigness in food retaili there are—in advertising, for instan But this is not an industry that shou attract much federal trust-busting.

Progressive Grocer thinks it has spott a "new structural pattern" in the fo retailing industry emerging as a result these trends: Supermarket chains tend concentrate on urban-suburban are where they can build huge superstor independents are winning business less populated areas with smaller b market-sensitive supermarkets. "Co ceivably," *Progressive Grocer* opined i recent issue, "there could be less dir competition between chains and in pendents in times to come. Chains m be pitted primarily against other chai in the major metro areas, with indepe dents battling mainly among themselv in the outlying territories." ■

We're the oil company you don't buy gasoline from.

But maybe your gasoline company buys its crude oil from us. And maybe we're the people your utility company gets its coal from, and maybe the paint finish and chrome plating on your car comes from us along with the shiny finish on those golf clubs. Not to mention the fertilizer for the garden and Fido's flea collar.

We're Occidental Petroleum Corporation, a natural resource company involved in oil and gas production here and abroad, in the development of new energy sources like oil shale and geothermal, in a broad range of chemical products through our Hooker Chemical Company and in the production of coal by the Island Creek Coal Company.

You may not see the Oxy symbol on the neighborhood gas station, but that doesn't mean we're not there.

Occidental Oil and Gas Company • oil and gas exploration and production • crude oil sales and transportation • oil shale development • geothermal energy • minerals

Island Creek Coal Company • high-quality metallurgical and steam coals for domestic sale and export

Hooker Chemical Company • chlor-alkali products • industrial chemicals • metal finishing • agricultural chemicals • fertilizers • plastics • pet products

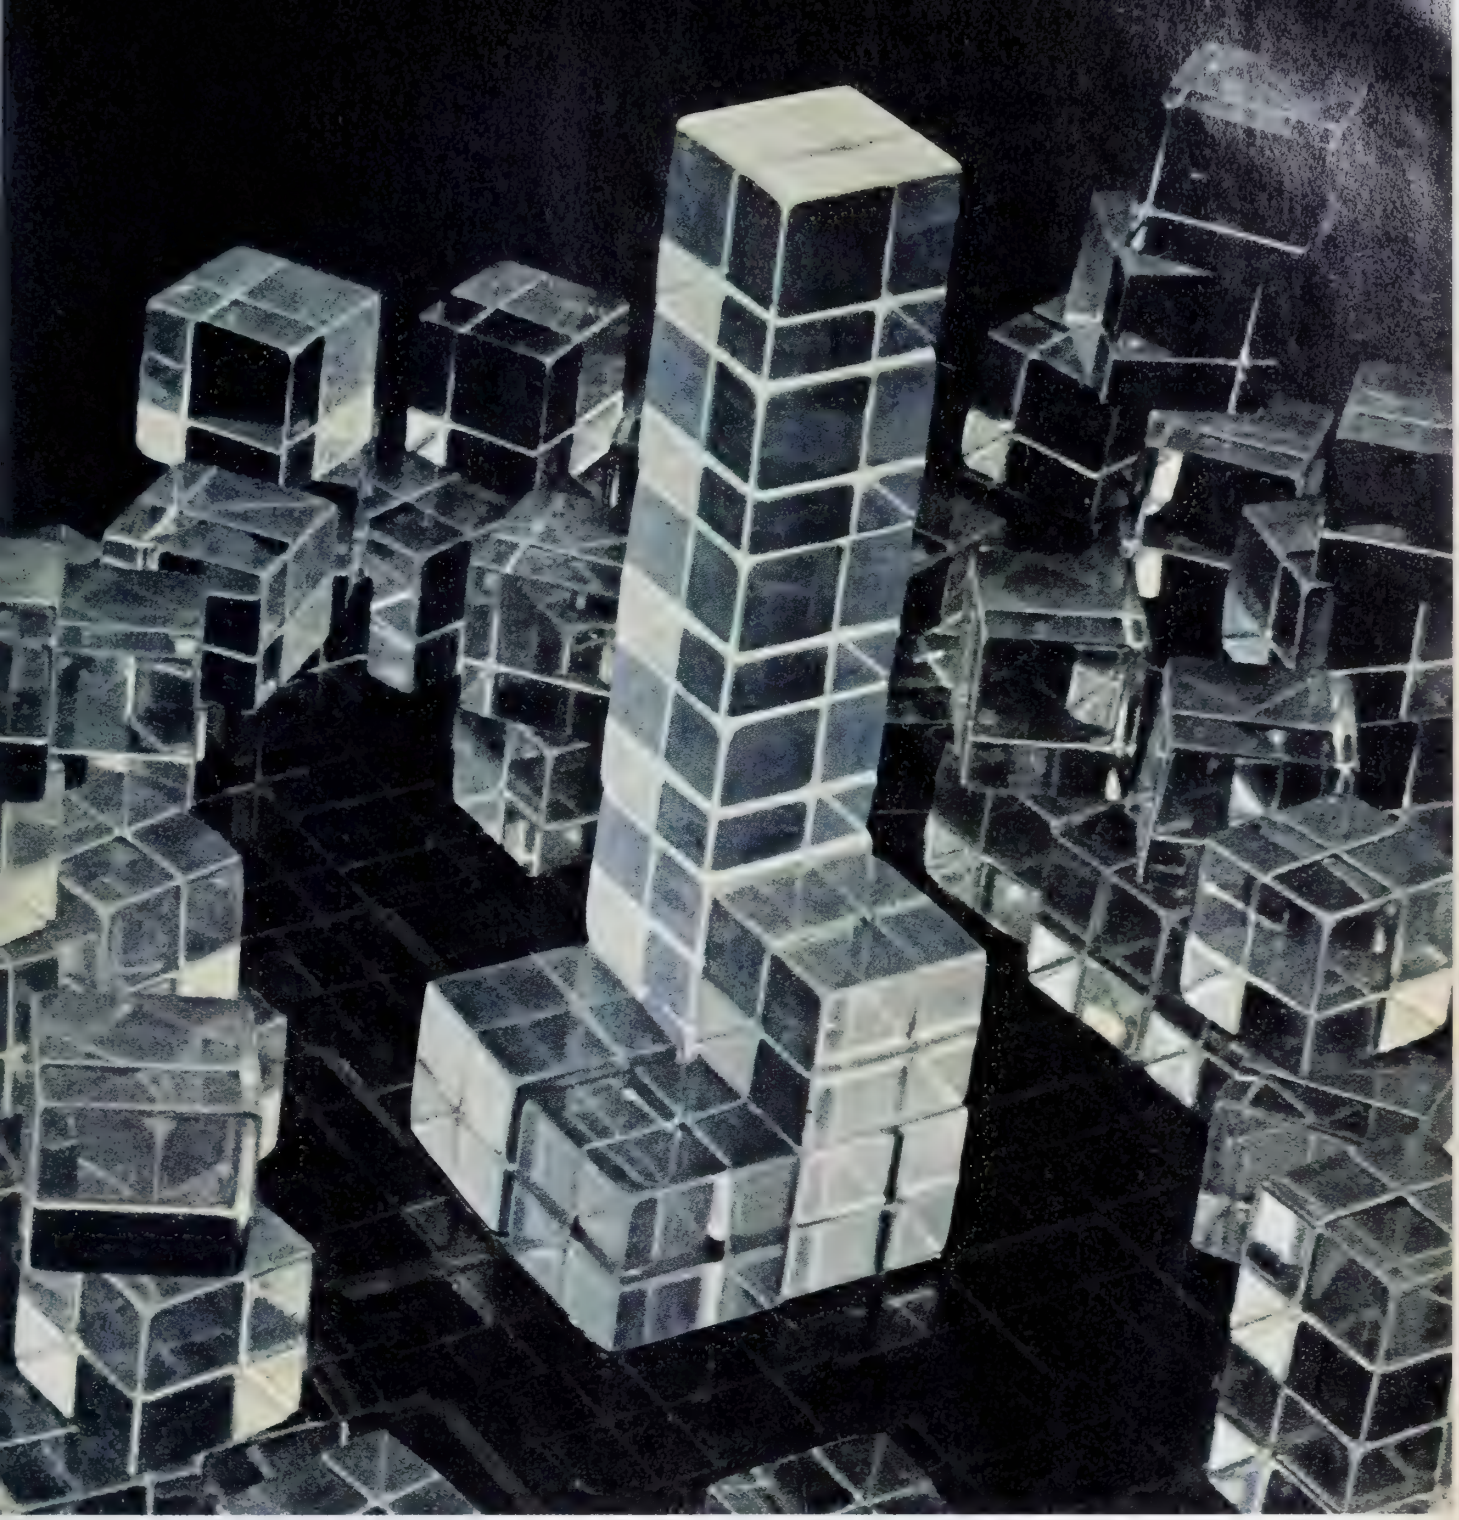
The way we put it all tog

Today's executive knows information is an asset as significant as plant and equipment, as valuable as the capital resources that can sustain and build a business.

In the IBM Data Processing Division, we're working with organizations large and small, shaping systems that make information a more productive asset – capturing it, managing it, distributing it to the people who can use it most effectively.

Because no two businesses are exactly alike their information needs, we offer a wider range choices in products and programming than ever befo – and the skills to apply them. An information syst should enlarge management options, not foreclo them; that's why we've developed a network archite ture that can be as open-ended as your own plans f change and growth. And since the bottom line for a



er is what sets us apart.

tem is its ability to keep information available, we r the support and the service you've come to expect m a leader.

We add something else – something that comes h time. The perspective to see that it's not just what a processing can offer, but what your business objec- es require. The experience to understand that ay's decisions in building an information system must also be judged in the light of tomorrow's needs.

In short, the sum of all we offer is something greater than its parts. That's why the way we put it all together is what sets us apart.

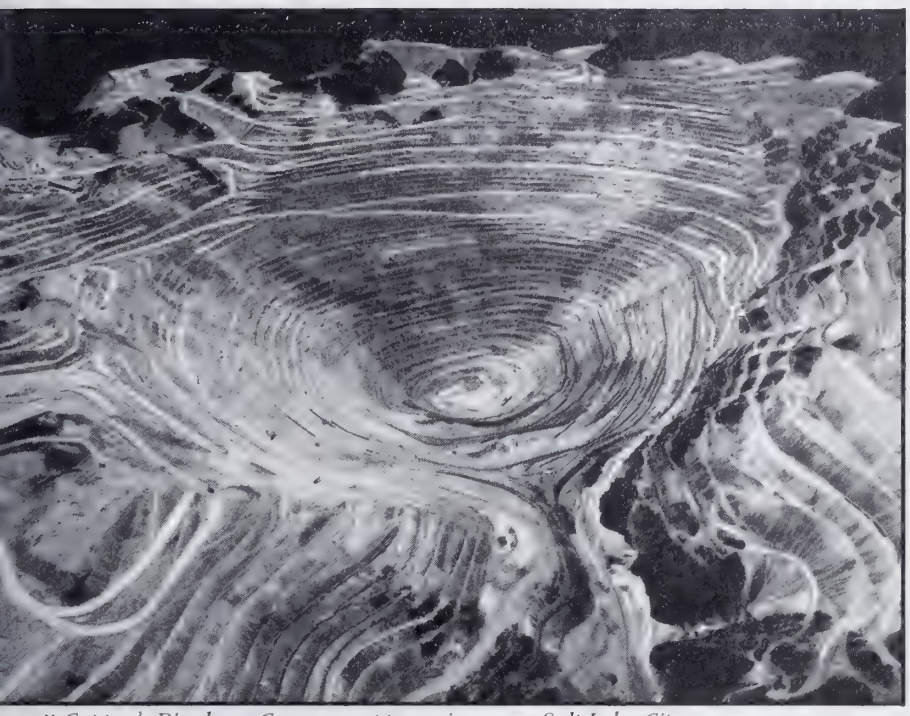
is year's recession isn't going to hurt the uminum industry. Nothing in sight prom-s much help for the ailing copper industry.

Metals



ecott Copper's Bingham Canyon copper mine near Salt Lake City
e overseas copper stockpiles continue to prevent adequate price increases.

ISTORICALLY, copper producers have carried drama's two masks: When industrial activity is high, ything is all smiles; when activity is the producers weep. To survive the ngs in this manic-depressive busi-, companies must earn enough in the ears to carry them through the lean . Smile, wail, smile, wail—this has the established pattern.

ast year should have been a fat one, a for smiles. The Federal Reserve d's Index of Industrial Production ntly hit a record 148.4, light-years ve the 1974-75 recession mark of 7. Worldwide copper shipments, at t 6.5 million tons, were back to their 3 boom level. And copper prices re-nded from 51 cents per pound in 1975 ver 70 cents late in the year.

far so good. The normal pattern ns to be repeating.

las, those price increases were virtu- meaningless. "We hurt," winced ard R. Grantham, treasurer of Cy- Mines, as 1978 was ending. "We are not in a position to be anywhere a good year. And the odds are that 1979 will be the same as 1978." The problem: A worldwide copper glut—caused primarily by less developed nations' uneconomic mining and stockpiling—has precluded U.S. producers from raising prices enough to provide an adequate return.

As a result the producers continued to lose money on copper. Kennecott Copper, whose 400,000-ton-per-year capacity makes it the nation's leading domestic producer, sold 96,300 tons of copper at an average 63.7 cents per pound in 1978's third quarter. The price was fully 10.5% above 1977's price, and the volume was almost double. But despite the rising price and volume, Kennecott *lost* $10 million. As the yardstick figures below show, Kennecott's latest 12-month return on equity is a sickly 0.7%. Kennecott management is once again fighting a takeover from Curtiss-Wright; shareholders can only hope that newly hired chief executive Thomas D. Barrow, formerly of Exxon, can turn the giant around. And this in a year when Kennecott should have been coining money for the downturn!

Kennecott was not alone. Cyprus Mines reported a loss on its copper operations for last year's first nine months. Even Phelps Dodge, whose copper business is now marginally profitable, complains of skimpy copper margins.

General Cable and Revere Copper managed to turn in decent equity returns (12.7% and 11.5%, respectively), and boost the copper producers' median equity return because they aren't really copper companies. Over half of Revere's revenues and earnings derive from aluminum; the remainder comes from fabricating copper it buys (at distressed prices) from such major producers as Kennecott. And General Cable manufactures wire and cables as well as electrical circuit components for the communications and electrical utilities industries, both of which are booming.

Where the copper producers have been *able* to act, they have acted. Cyprus Mines has closed its big Pima, Ariz. mine. El Paso Co. and Hecla Mining closed their mine near Casa Grande, Ariz., and Anaconda—purchased in January 1977 by Atlantic Richfield for about $600 million—closed its enormous Yerington, Nev. pits. But these moves were counterbalanced by cheap foreign imports, which soared from 391,000 tons for *all* of 1977 to 410,000 tons for the first nine months of 1978 alone. The domestic producers scampered to Washington to demand an annual 300,000 ton import quota. But the Administration, concerned about the inflationary impact of such a quota, refused.

One positive step Kennecott took was abandoning, last spring, the old U.S. producer price system. For nearly a century there have been, in effect, at least two copper prices: the London Metal Exchange price and the U.S. producers' price. With the enormous worldwide copper stockpiles accumulated since 1974, the London price sank so far below the U.S. producer price that U.S. producers saw their already-thin demand greatly reduced; hence that flood of imports. Kennecott finally abandoned the producer price system and now takes its quotes from the New York-based Commodities Exchange (COMEX). This will help the U.S. producers in the distant future, but

not right away. The sad fact is there is not much the copper producers can do this year and perhaps next to improve their scant investment returns. Prices cannot be expected to increase enough for major profit gains (or even to the break-even level) simply because there is and will be too much copper stockpiled around the world.

But aren't copper stockpiles falling? They are—but here again appearances are deceiving.

According to the American Bureau of Metal Statistics, worldwide copper inventories fell from 1.7 million tons a year ago to around 1.4 million tons now—a two-and-a-half months' supply. But as George Cleaver, Merrill Lynch's widely respected nonferrous metals analyst, explains: "Sure, it's nice to see the surplus coming down. The trouble is *normal* inventories are 500,000 or so tons, and here we are at the peak of a cycle with well over 1 million tons. Even at current [*i.e.*, 1978] rates of decline in the inventory it'll take two and a half, three years to work the inventory down to the normal level." Cleaver hesitates, then adds darkly: "And if we have a recession this year. . . ."

Even if demand picks up to where prices could rise, will Jimmy Carter and his council on wages and prices allow them to rise? The voluntary guidelines set a maximum 9.5% ceiling. So in theory copper could rise to maybe 75 cents a pound. Big deal: Experts say it takes over 80-cent copper to break even on about half the world's production.

"Normal [copper] inventories are 500,000 or so tons, and here we are at the peak of a cycle with well over 1 million tons. Even at the current rates of decline it'll take two and a half, three years to get to the normal level."

As usual, the diversified metals firms were a mixed bag, but with a clear message: better to be a metals merchant or fabricator than a miner. While zinc's current 34-cents-a-pound price is comfortably above its mid-1978 29-cent level, it remains *un*comfortably *below* its l price of 39 cents. This is a major re that the latest 12-month equity retu Gulf Resources and Chemicals, hea leveraged by zinc, fell to less than fourth its five-year average. Multinat al multi-ore miner St. Joe Minerals squeezed mercilessly, not only in but in coal, too. Coal, which was posed to save us all from OPEC and winters, suffered a 111-day strike la 1977 and early last year. Despite ro earnings from its mammoth Colo molybdenum mines, AMAX was bered by the coal strike—and co zinc, nickel and potash. The suppl each of these mined products, AMAX, is outstripping demand.

But the metals merchants and fab tors made out. They usually do. Er hard Minerals & Chemicals is mi man between miner and refiner for 100 different industrial raw materials profits do hurt when demand is sla hence its 4.5% operating income dr 1978's first nine months—but at lea doesn't bleed to death on a mining c pany's enormous fixed costs. man? It is primarily a manufacturer refiner of precious metals for indus- With customers such as auto- iles, household appliances and com- cial aircraft running at fever pitch, H had no trouble selling metal for hard to see but strongly demanded lucts as high-strength, leak-proof ts and sterling silver. H&H's 18.1% ty return was best bar none among rsified metals concerns.

it the real standout industry last year aluminum. The Big Four producers' ian equity return exceeded 15%, ble its median just three years ago. t happened? The industry has ged fundamentally.

ior to 1972 aluminum was every bit east-to-famine a business as copper. minute the business cycle climbed— m! bang!—producers added capacity, ch then sent profits reeling even fast- hen the cycle headed down. Between) and 1972, for example, worldwide city expanded by nearly 40%—only nash producers in 1973, and again in 1974-75 recession.

ith the help of poor cash flow, the on sank in: no more expansion es, at least for a while. Result: U.S. city today is just 5.2 million tons. e 1972 it has grown almost exactly ine with the growth in demand BES, *Nov. 27, 1978*). Thus in 1977 and last year, with the housing and domestic automobile industries booming, the industry's refineries were working at about 92% of capacity. A number of flat-roll products—flat-roll plants are operating at nearly 100% of capacity—are now on allocation, and will be until late this year, when Alcoa's flat-roll plant expansions come into production .

So different has aluminum become that the firms' executives hardly flinch when you whisper "1979 recession."

"For 1979, we believe housing starts will fall 9% and domestic automobile production 5%." Pretty scary, right? Wrong. "So we figure aluminum shipments will be up 4%." One reason: 1979 automobiles will carry an average 126 pounds of aluminum vs. 114 pounds for last year's models.

"For 1979," says a Kaiser Aluminum spokesman, "we believe housing starts will fall 9% and domestic automobile producton 5%." Pretty scary, right? Wrong. "So we figure aluminum shipments will be *up* 4%." The principal reason, he continues, is that 1979 automobiles will carry an average 126 pounds of aluminum, as against 114 pounds for last year's models. Add to this strong truck and bus markets, huge backlogs in commercial aircraft (two and a half years for Boeing alone) and modest upward thrusts in the packaging (*i.e.*, metal can), commercial construction and electrical cables markets, and 1979 should be yet another banner year for the once-whipsawed aluminum makers. In the decade to come they may not be able consistently to top last year's 15%-plus median equity returns. But with the old smiles-to-tears pattern broken, it is virtually certain that the 1960s-style and early 1970s-style returns of 5% and less are gone for good.

Of course if you're buying for the long term, you buy when things look the worst. Early last year Exxon (one of several oil companies now interested in copper mining) paid the Chilean government $112 million for the rich La Disputada mines high in the Andes (FORBES, *Oct. 30, 1978*); Exxon may spend another $1 billion to develop the properties. Why does Exxon want in on such a troubled business as copper? Investigators for the U.S. International Trade Commission were granted access to internal documents. The investigators report that Exxon has "predicted a substantial rise for copper prices by 1982-83, and further forecast a long-term rise of copper prices at slightly more than the trend line of production costs." But forget 1979. It'll be another rotten year for copper. ■

"That's a Butler building?"

Yes, that is a Butler building. In fact, you probably see beautiful Butler buildings all the time and don't know it.

Because Butler buildings offer total design flexibility and can be as tasteful and dramatic as any building.

Yet, they also give you all the important time and money savings of systems construction.

To learn more, call the local independent contractor who can build one for you. See "Butler Mfg. Co. Builder" in the White Pages. Or write Butler Mfg. Co., Dept. B-397, BMA Tower, Kansas City, Mo. 64141. 71633

BUTLER

We're down to earth.

When the Space Shuttle eased back to earth, automatic anti-skid brake controls manufactured by Crane's Hydro-Aire Division brought the historic test flight to a safe and successful conclusion. Just as they do on almost all commercial and military aircraft in service today. And have for 30 years.

Hydro-Aire. A division of Crane Co., where down-to-earth concentration on essential products for essential industries helps build a strong and growing business. In steel. In building products. In fluid and pollution control. And, of course, in aerospace and aircraft.

CRANE®

With seriously overextended consumers and the prospect of a housing slump, there's little question that the boom is over for many.

Household products and apparel

Grace Kelly designing a Springs Mills sheet
With foreign competition stiffening, U.S. textile producers are forced to trade up.

WE'VE JUST HAD a 48-month boom, but like it or not that's ending now," says John F. Welch Jr., General Electric's senior vice president in charge of its consumer products and services. A slump in sales volume of appliances has forced GE to throttle production and lay off some 1,000 workers at its Louisville, Ky. Appliance Park. Whirlpool, too, has cut its work force by about 1,500 and its output by 8%. Inventory control at both GE and Whirlpool has been tightened as well.

Under the pressures of thin margins and a poor five-year earnings growth record, many other appliance makers will be forced to follow the examples of GE and Whirlpool. If they do not, they risk getting clobbered this year as they were in 1974, when many were caught with huge inventories; most suffered declines in earnings and a few sank into the red.

Sales of white goods—including everything from refrigerators and electric ranges to air conditioners and garbage disposals—started falling off in last year's second half and are likely this year to drop further behind 1978's 33 million units. The most obvious reason is home building. Some household products executives are bracing for a housing slump of as much as 25% this year. Hardest hit in such a slump would, of course, be appliance operations at companies like Maytag, Whirlpool, GE, Sunbeam and Westinghouse.

What makes these companies particularly vulnerable is the likelihood that a good many consumers have reached the limits of their borrowing capacity. With consumer debt last year up almost 50% over 1975, and mortgage debt up over 50%, economists are predicting a major credit retrenchment. The ratio of household debt payments to cash disposable income, for example, has reached 25%, the highest level ever. Some, still more optimistic, point to the changing population mix as evidence that consumers will leverage themselves even further. Over the next decade, the 25-to-44 age group will increase 33%, from 58 million to over 75 million. This child-rearing age group is always the heaviest user of installment debt—and biggest purchaser of big-ticket durables.

In any case, most white-goods prod ers are preparing for the worst. Gen Electric thinks it can make its consur products and services—which acco for 23% of GE's $1.1 billion net profi less vulnerable to economic recessi Says Welch, "Even though there may fewer units made, we want increa productivity. There's no sense in wait around until the orders fall off." Welc achieving that increased productivity course, mainly by laying off workers in advance of the downturn in the e nomic cycle. To lessen GE's vulnera ity to recession longer-term, Welch pinning his hopes in part on the mic wave range (larger than the more fami counter-top oven) into which the co pany has plowed millions. The en microwave oven market—GE has a 1 share—has grown sixfold to nearly a billion business in the last five ye Microwave oven sales have run contr to the rest of the appliance group, ris 16% last year to about 2.5 million un Microwave oven sales held up well d ing the 1974-75 downturn because it v and still is a fledgling, low-saturat market and a novelty to the consume

In contrast, producers of more m dane housekeeping products hope moderate earnings growth this year cause they mostly produce low-pri necessities: soap, detergent and toc paste. "The housewife can cut back buying a car or furniture, but nondurab are less postponable and more nec sary," says Hercules Segalas, analyst Drexel Burnham Lambert. "If there going to be belt-tightening and the fa ily is not going to eat out, then peo will be washing more dishes at home

Among this group, giant Procter Gamble continues to outshine its co petitors. But it's having to work har to maintain the pace: P&G rolled more new products last year—Folg coffee (nationwide), Puritan salad cooking oil and Boundary hospital gov among them—than in any of the last t Segalas predicts the company's earni will grow at a compound 13% over next five years compared with 10% the last five. And despite the 20% crease in marketing expenditures an $600 million capital outlay—25% m

an last year—P&G's profits still are pected to climb well over 10% in 1979. ke P&G, Economics Laboratory ould make a strong showing this year spite the dubious economic outlook. e company, a manufacturer of deter- nts and cleansers such as Finish and ardian for both consumer and indus- al uses, has had earnings increases for consecutive years; sales increases, for consecutive years.

Another group relatively "insensitive" the economic cycle are the power tool nufacturers. Though power tool prod- s are expensive, they are something of anomaly: People buy them to save ney. Making one's own coffee table or tch with a power handsaw, for exam- , is likely to cost less than buying one right. Says G. Douglas Hale, president of Black & Decker Mfg.'s U.S. operations, "We would be remiss if we didn't recognize that an economic slowdown is imminent. But we feel sales and earnings will be up over 10% this year."

Hale attributes Black & Decker's drop in earnings in the last recession to a major expansion program launched in the early Seventies which nearly doubled the company's production capacity. This time around, Hale says, things are different. True, he expects industrial power tool products—a third of sales—to fall off this year. But with tighter inventory controls and plants running at about 80% of capacity, the company hopes to ride out, without stress, any rough moments.

Many of the textile manufacturers are having to use more aggressive merchandising to woo the consumer. In part that's because they've been forced to trade up their product line to higher-margined fashion items. Says David M. Tracy, senior vice president for Fieldcrest Mills, "We've become more of a consumer products company than a textile producer. We're picking up on marketing techniques that were developed by the cosmetics industry." Tracy points to the higher-priced, brand-name items such as the $15 Charisma towel and $35 Touch of Class blanket. Products like these sold briskly during the last recession while the middle-range products suffered.

Fieldcrest's 18% return on equity for the last 12 months is more than double the group's median 8.3%, and its 4.6% profit margin is the second best for the group. Springs Mills, Inc., too, is getting

more fashion-oriented. This winter customers will be able to buy Springs' floral bedsheets based on a design by Monaco's Princess Grace, and even bedsheets with a Dracula motif.

Though earnings for textile manufacturers reached about $900 million last year—an 8% rise over 1977—margins for this group have remained thin, averaging about 3.3% over the last two years, a third less than the return averaged by most manufacturers. The problem is stiff overseas competition. Textile imports have nearly doubled over the last decade. Fierce competition in the industry has kept price hikes barely abreast of inflation. Add a decline in consumer spending and textile producers could be in for a lean 1979. Import competition is even more severe for apparel and footwear companies, where it already accounts for over 20% of the apparel and nearly 50% of the footwear market.

Not everyone, however, is predicting a downturn. Giant Burlington Industries, with $2.4 billion in sales, the nation's largest manufacturer of textile produ expects another strong upswing in maturing denim market. It had be happen. The company suffered "subst tial" losses there last year. The der fiasco's contribution to a 22% decline overall earnings looked even worse cause in 1978 Burlington opened a $30 million denim plant in Stonew Miss. as part of a capital expansion modernization program that has cost company $425 million worldwide the last two years. That's about 10%

nbined 1977-78 sales, and well above industry average. "We felt that unless money was spent for the future," s Burlington President Frank S. enberg, "we wouldn't *be* in the fu-. People asked how we could let newall come on stream right as every-g hit the fan. Well, we're not in den- just for one year. It's going to be nd a long time."

those denim operations turn around, hould offset a decline produced by er housing starts that looks likely for ington's home furnishings group. ounting for 36% of volume, this divi-—carpets, rugs, draperies, furniture the like—has grown faster than any er part of the company over the last e years, and it's here that Burlington s to expand in the early 1980s *via* the uisition route. Says Greenberg: 're getting ourselves into a position hat if a downturn ever comes in any ur markets, we're still going to be competitive."

eague-leading Levi Strauss & Co., ch rang up an 8.4% margin for the 12 months compared with the appar-ndustry median of 2.9%, and a five- average return on equity of 31%, *vs.* group's median of 7.3%, is no less mistic. Says George J. Daily, vice ident: "In recessionary periods we *ease* our share of the market because consumer tends to trade down in e. Moreover, our inventory has been er very tight control." But in the face a maturing jeans market—which y say has reached saturation—and us price-cutting by its competitors, ill be difficult for Levi Strauss to ain those fat margins.

n the middle- and higher-priced end he apparel rack hang the men's hes sold at most of Hart Schaffner & x' 275 retail stores. "That's just the ket we want to be in," says HS&M's ish CEO Jerome S. Gore. Bucked up record year (1978 sales topped $600 ion and earnings were up 15% to ly $18 million), Gore says: "Con-ers will continue to be fashion-con-us. There's a greater interest than before in quality because nowadays ity means *value*. Value no longer ns buying something at a low price will last one season and then you w it away."

arring a major recession, which Gore sn't expect, HS&M thinks 1979 will spiffy. Says Gore, who plans to open ew stores: "If we had the chance to 15 new stores, or at least commit to many good new locations next year, wouldn't hesitate."

nonetheless remains to be seen ther manufacturers and retailers will ct be able to coax the consumer into ening his purse strings at a time n his disposable income seems to be tched to the limit. ■

Habit-forming.

Which may be why more and more businessmen who take our Concorde once take it again and again. For only $144 more than First Class it will take you from New York to London in 3½ hours. You will arrive feeling as if you hadn't flown at all—refreshed, invigorated, and ready to do the competition in.

If you take our 10 a.m. flight (every day but Wednesday), you'll have—for the first time—same-day daylight connections to 47 cities in Britain, Europe, and the Middle East.

Even better, you can now fly to Europe the same day from more than 120 cities in the U.S. by connecting with the midday Concorde in either New York (12:15 p.m. daily) or Washington, D.C. (12:30 p.m., Sunday, Wednesday, Friday).

Newest of all, you can even fly Concorde direct between Dallas/Ft. Worth and London via Washington.

Call your Travel Agent, Transportation Department, or British Airways, and make your next flight to London on Concorde.

Tell them Robert Morley says it's never too soon to start a good habit.

British airways

We'll take more care of you.

With major markets booming, costs generally under control, most electronics companies should show modest earnings gains this year.

Electronics

Consumer zeroing in on one of the many new electronic games
Will he shoot down the industry's profitability in 1979?

WHO HAS FORGOTTEN what happened to this major growth industry in the 1974-75 recession? Tens of thousands were laid off and earnings declined more than 20% for companies like Texas Instruments, AMP and Motorola. Zenith, Fairchild Camera and Westinghouse fared worse.

But don't expect history to repeat. Four years ago the key aerospace market was weak. Today it's soaring on the wings of Boeing. Four years ago defense was flat. Today military electronics business is brisk. The oil boycott threw Europe into a tailspin back then. European business is generally in better shape today. Even the prospects for the construction industry are better—at least in the industrial end. Finally, since 1974 two key electronics markets have been swept by technological breakthroughs triggering major long-term spending: telecommunications and data processing.

That isn't to say that some companies in the electronics industry won't get caught in the rain if those recession clouds on the horizon burst. Companies that are still heavily dependent on consumer dollars like television producers Zenith, Sony and RCA are bound to. To a lesser extent, that goes also for those portions of the semiconductor industry (Motorola, TI, Fairchild) that sell to the same consumers. Still, there will be more electronics companies showing earnings gains in this year than those not.

Automation equipment, for example, can't be expected to increase another 12% in unit volume as it did last year. But a further 5% to 6% increase seems entirely possible. Installation of such equipment tends to accompany longer-term capital spending that does not fluctuate with every downturn in the economy—at least not right away. And such equipment does help customers cut costs through improved technology. For similar reasons, sales of electrical distribution equipment that controls the flow of electricity in industrial and residential buildings is likely to be up, despite the likely downturn in new home building. Completions of new housing already started should carry well into midyear. With energy conservation high on everyone's agenda, replacement sales will also continue high. Those two conditions
well for the likes of Square D, Cr
Hinds, Emerson Electric, Reliance
tric, General Electric and UV I
tries—all of which have imp
stakes in this market.

By contrast, there doesn't seem
any recovery in sight for the large el
cal turbine generator business. Uti
still have slack demand and the
much uncertainty as to what ty
plant to build. At least for GE and

in the economy, especially when i
tion obscures the signals, is more th
science.

No one is more conscious of that
Emerson Electric's chairman and C
Charles F. Knight. Last fall Knight f
selling, general and administrative
penses—long before that was nee
Emerson's products—including comm
cial electrical switches and motors,
table tools, smoke detectors and o
electrical products—seemed to be h
ing for another record earnings yea
fiscal 1979. Chuck Knight also

inced he was raising Emerson's divi-nd. Why? Says Knight: "We foresaw a xed bag of an economy in 1979, with nsumer markets softening, but indus-l and defense markets still strong. ose markets, which account for two-rds of our business, will more than ke up for consumer weakness." If siness gets worse as 1979 wears on, ight will use employment cuts. The t-cutting effort so far, however, has pped short of layoffs. In fiscal 1978 pt. 30), says Knight, "we reduced total ts, which include substantial materi-and manufacturing costs, by $76 mil-n, *vs.* a $72 million target." His goal for 79: $85 million.

ike GE, Emerson also sees acquisi-n as a fail-safe: "It's easier to make an uisition in a weaker economy," says ght. "Prices become more realistic as ability to go it alone weakens."

Other electronics companies, having rned from past mistakes, are being as cautious this year. Take $800 mil-n (sales) AMP of Harrisburg, Pa. as an mple. Four years ago this leading pro-er of connection devices for electrical ing was caught with far too much inventory and far too many employees, mainly overseas. This year, although there has been an explosion in the use of AMP connectors in markets like data processing, telecommunications, aerospace and consumer appliances, AMP is watching inventory and employment levels closely. At the moment it's operating at over 90% of capacity. That's large-

The industry sold an estimated record 10 million color TV sets last year. That should have meant much more robust profits. Unfortunately, the Japanese didn't immediately raise prices when the yen fell.

ly because AMP CEO and President James D. Brenner hired only a few hundred full-time employees abroad since 1974 even though AMP's growing foreign business now accounts for nearly half of sales. "We're trying to save labor dollars for our customers," he says. The fact that AMP's biggest single customer is the booming and apparently recession-proof data processing industry (now 25% of domestic sales) also provides some protection should a mild economic downturn materialize this year.

Like AMP, testing and measurement equipment companies like Hewlett-Packard, Beckman Instruments, Tektronix and Perkin-Elmer typically spend 7% to 9% of sales on research to produce oscilloscopes, counters, voltmeters, signal analyzers, logic analyzers and spectrum analyzers. "The market for these devices is growing geometrically, spurred by the explosion of memory devices and microprocessors," says instruments analyst Dan C. Book of F. Eberstadt & Co. "People who make electronics products or use them heavily must have these products or they would lose control of their product reliability. I think their growth will merely slow slightly from the feverish 20% gains in 1978."

President and CEO John A. Young of booming Hewlett-Packard, which makes both popular desk-top computers and testing equipment, adds that he's particularly confident "because about half our orders come from abroad and they are very strong. Europe's economy is

Working to foil energy shortages

"In a full year's operation of the 10-Pack fuel foiler train between Chicago and Los Angeles, we expect to save almost 300,000 gallons of fuel."

LARRY CENA
President, The Atchison, Topeka and Santa Fe Railway

Photo shows Mr. Cena introducing the new train at Los Angeles during September, 1978.

Santa Fe's new 10-PACK *fuel foiler*

Energy shortages can be a villain for freight transportation. It takes about one million gallons of fuel a day to keep the Santa Fe rolling, which is why we work constantly on ideas to foil the problem of energy shortages.

We are not content with tests that show a trailer on a train is four times more efficient from an energy standpoint than a truck on the highway. Santa Fe strives to do even better.

A better idea is our new 10-Pack fuel foiler car. A train of these cars can carry 100 trailers and on a Chicago-Los Angeles round trip, this train saves almost 6,000 gallons of fuel compared to conventional rail equipment.

To overcome a problem it takes teamwork and new ideas. That's how we strive to overcome the energy shortage villain to make sure that each time he creates problems for Santa Fe, he will be *foiled again... and again.*

For a folder describing the 10-PACK fuel foiler call your Santa Fe Sales Office, or write Dept. 333, 80 East Jackson Blvd., Chicago, Illinois 60604

A Santa Fe Industries Company

about nine months behind ours."

The weak dollar helped the electronics industry boost exports or foreign-based sales. Companies like Fairchild Camera and Texas Instruments were even licensing semiconductor technology to the hungry Japanese, who suffer the most from the decline of the dollar.

Such licensing agreements added $2.5 million to Fairchild's third-quarter earnings last year and next year will add millions to TI's income statement. A weak dollar was also supposed to make things easier for U.S. television producers Zenith, RCA, GE and Sylvania. The industry sold an estimated record 10 million color TV sets last year. That should have meant much more robust profits. Unfortunately, the Japanese didn't oblige by immediately raising prices when the yen fell. So, for the first half of 1978 Zenith and RCA had to continue to sell at low prices.

That slightly slowed the Japanese, who now have a combined 25% to 30% market share. But 1978's chief victim was Rockwell International's Admiral, which called it quits in color TV after years of wallowing in red ink. Ironically, thereafter Zenith and RCA posted the first of two modest price increases.

But just as the industry is raising prices for the first time in five years, there comes a likely downturn in the economy. That, says James I. Magid, TV and appliance analyst at Shearson, Hayden Stone, Inc., "will probably reduce color TV sales by as much as 15% to 20%. That decline will be partially offset by increased sales of higher-margined sets. Let's face it, color TV is a mature market. It moves with the economy."

The consumer products segment of the electronics industry is likely to be the main trouble spot this year. Semiconductor companies like Fairchild Camera and General Instrument have, at one time or another, lost money in the consumer area. Even industry leader TI found portions of the consumer market—like digital watches, electronic games and calculators—to be among its least profitable markets. Says J. Fred Bucy, TI president and chief operating officer, "The prospects for semiconductor products in TV and VTRs in 1979 don't look favorable."

Bucy says what worries him, after a record-busting 25% earnings gain in 1978, is "double ordering in the next four months with capacity now short. You remember what happened in 1974."

But Bucy says he isn't too concerned. The more sophisticated integrated circuit devices in which TI is a lea should grow by more than 20% again, by demand from computer compan communications and the aerospace dustry for memories and microproce ors and could well offset price weakn in the consumer sector, he feels.

Bucy says what worries him, afte record-busting 25% earnings gain 1978, is "double ordering in the next f months with capacity now short. Y remember what happened in 1974."

"What happened in 1974," says V cent J. Glinski, semiconductor analys New York brokerage firm Drexel Bu ham Lambert Inc., "was that the ind try's big backlog evaporated overni when the market collapsed. Custom were double and triple sourcing wh demand was strong. But when a lot capacity came on stream just as economy weakened, companies cance orders without penalty."

Result: Semiconductor companies l off workers by the tens of thousar wrote down unsold inventory and s sank badly into the red for several qu ters. That could happen again in 19 says Glinski, who was one of the f analysts to predict the 1974 debacle don't think the panic of price-cutt will be quite as severe as in 1974, bu will be substantial." He adds, "Of cou when the layoffs occur, that's just time to invest in these companies." ■

LOS ANGELES:

The New Look

Want to be well-connected in the West?

Then connect with one of the 22 banks that make up Western Bancorporation.

This is the largest multi-state banking system in the nation. Western Bancorporation's 22 banks operate throughout the 11 Western states, serving 405 communities with nearly 800 banking offices.

And, we're in the final stages of installing our new on-line teller terminal system that will usher in a new era in convenience for the banking customer.

Simply put, this computer network links nearly 5,000 tellers in our banking locations throughout the West. A computer terminal—with display screen—will be at each teller's fingertips. A customer's account information can be called to the screen in seconds. And not just at the customer's home branch—but anywhere in the system!

In geographic terms, it's the largest system of its kind in the nation and covers 41,000 miles of leased telephone lines.

What does this mean to you?

First, swifter service at the teller window. (No more waiting while the teller leaves to look up customer information.)

Secondly, as you travel throughout the 11 Western states, you can be readily identified at any banking office of any affiliate just as easily as you are at your "home" bank.

This is just one of the innovative ways that our banks serve the customer. Come to a Western Bancorporation bank. We'll connect you to the West.

LOS ANGELES: The New Look

By Paul Ditzel

e is a new look in the old City of the s which soon celebrates its 200th anni- ry. This new look manifests itself ghout the Los Angeles area which con- to solidify its position as the West's g hub for business, finance, commerce versified industry, as well as the West's al center. Los Angeles, meanwhile, is rooting itself as the Gateway to the c marketplace.

where is this new look more apparent n the downtown business district. most other cities are groping for cures e cancers gnawing at their central downtown Los Angeles is undergoing sformation that is unparalleled in the ss history of the United States.

e new downtown provides the city at focal point of identity to shatter the of Los Angeles as a suburban sprawl ing for a central core. That identity is olized by the skyline of towering busi- nd financial centers. These include:

e 40-story Union Bank Building.

e 42-story Crocker National Bank ng.

e 52-story twin-towers of the Atlantic eld (ARCO) headquarters which moved here from New York.

The 55-story world headquarters of Security Pacific National Bank with its elegant stabile by sculptor Alexander Calder gracing the main entrance.

The 16-story Pacific Telephone Building.

The 750,000 square-foot Bank of America Computer Center.

The 300,000 square-foot World Trade Center, focus of international business activity in the financial district.

The 712-residential unit Bunker Hill Towers financed by the Prudential Insurance Co.

One of the newest and brightest stars in the downtown galaxy is the Bonaventure Hotel, a $110 million, 1500-room hotel with five cylindrical towers sheathed in mirrored glass and eight retail shopping levels. The Bonaventure is being acclaimed as a masterpiece of architectural design.

Towering over this new downtown is the majestic 62-story United California Bank, the tallest building west of Chicago. Total floorspace in the new downtown buildings is more than that of eight Empire State Buildings as Los Angeles leads all other western cities as the preferred choice by executives for their corporate headquarters.

Among them are: 30 industrials, four transportation systems, three merchandising firms, four banks, four savings and loan associations, eight financial holding corporations and mortgage firms and five insurance companies.

Atlantic Richfield's President Thornton F. Bradshaw explains his company's decision to move its corporate headquarters from New York to Los Angeles. "A major reason was the quality of life offered to our employees, plus an educational system unsurpassed in the country. The agreeable climate provides year-round recreational opportunities in the nearby coastal, desert and mountain areas."

Bradshaw says these factors "greatly enhanced our recruitment of high calibre employees. We have discovered that Los Angeles is the pacesetter and style-setter for the entire country."

Another reason cited by the ARCO President is, "The quality of municipal government in Los Angeles. The city is well-managed, fiscally sound and without city income or payroll taxes. Los Angeles has high standards of law enforcement that is free from graft and corruption. There are,

geles City Hall

The new Bonaventure Hotel

In 1848, the cry of gold rang out from Sutter's Mill. So began the Great California Gold Rush.
From that moment on, California became the place of new life and visions for America's future. A life where hopes and dreams soon become realities.
We've shared this vision since 1911. And we're just as optimistic about tomorrow as we were then.

reover, peaceful and harmonious rela-
ships among the many ethnic groups."
Among other CEO's making long-term
mitments to the new downtown is Tyler
donald, west coast head of N W Ayer
H International, Inc., one of the world's
est advertising agencies. Macdonald,
o was also chairman of Mayor Tom
dley's City Economic Advisory Council,
ved his west coast headquarters to the
ted California Bank Building.
From his suite overlooking the new
ntown, Macdonald describes the con-
rations which led him to make the move.
rs is an agency which specializes in blue
accounts. We've got to be near our cli-
. This is where they are and where they
be locating in the future."
Macdonald explains his decision. "Many
ple forget that business executives have
stituencies just like elected officials.
cutives must answer to the judgment of
r peers, their directors, their shareholders
their employees. An executive cannot
aterally—and without grave risks—
e a business move that goes against the
n of the people he works for and those
work for him."
Corporate decisions to move a business
n one city to another must satisfy various
eria, says Macdonald. "Where do you
a good business climate—an attitude at
state and local levels that is not anti-busi-
s? Where do you find an abundant sup-
of skilled and unskilled labor? In what
of the country will you find a reasonable
ude on the part of organized labor? Land
build? Or an unexcelled distribution
work?
You must also choose an environment in
ch the people who will be working for
will want to live and to raise and educate
r children in an area offering excellent
ools, colleges, universities, theater, art
eries, museums—all the cultural advan-
es we want to make available to our
dren.
You don't want to fight government or
weather in addition to the normal prob-
s of dealing with your competitors.
ere else, but in Los Angeles, do you find
ne criteria which would make a business
ve here economically and socially
rable?"
The new downtown is far from complete.
rk is due to start this year on the 40-story
ls Fargo Bank Building and a $45 mil-
, 15-story luxury hotel to be built by the
ld's largest hotel chain, Trust Forte of
don. The hotel and its entertainment
ter will feature four theaters, the first built
owntown Los Angeles in more than 40
rs.
The magnetism of these prestigious
ntown locations is shown by the report
tenants leased more than 50% of the
ls Fargo Building before ground was bro-
. Leases for office space in the new
ntown range from around $7.50 to $18
square foot. The vacancy factor is excep-
ally low by comparison with other cities.

Plenty of space is available along Spring Street, once the Wall Street of the West, where leasing rates are substantially lower. The city looks for and is planning a renaissance along Spring and adjacent streets.

Revitalization of the downtown area—the Bunker Hill urban renewal project as it is known locally—stands as testimony to the infusion of public funds and private investment.

"More than $420 million of private investment has occurred within the Bunker Hill project; a ratio of 6.5 private dollars to each public dollar spent," says Edward Helfeld, administrator of the city's Community Redevelopment Agency. "The assessed value of the land is now close to $87 million in sharp contrast to the $6 million value in 1959.

"When completed, the project will represent a private investment of more than $1 billion," says Helfeld. "The project is planned to contain approximately 9 million square feet of office space, more than half a million square feet of retail space, close to 3000 residential units and 2500 hotel rooms. It will have a residential population of approximately 5000 persons and a daytime population in excess of 40,000."

Downtown's new growth has not been without its problems, notably traffic congestion. The city's Traffic Department reports that 633,000 vehicles enter the central city during daily peak hours, an increase of 30,500 in two years. One proposed solution is a 2.67-mile automated People Mover serving commuters and visitors while it weaves through the central business and hotel districts and terminates at the Convention Center.

Transit authorities expect the People Mover to carry 81,000 riders daily and eliminate 33,000 daily automobile trips into downtown. The People Mover also would connect with major transit and parking facilities. The federal government has committed $167 million to this electric transportation system.

The Bunker Hill project, along with the city's $45 million Convention Center which can accommodate nearly every convention and at least 90% of all trade shows in the United States, has spurred additional private investment downtown, especially by hotels. The 500-room Hyatt Regency Hotel opened in 1973. Notable, too, is the $24.4 million renovation and restoration of the venerable Biltmore, long a downtown landmark hotel.

Downtown means many other things to Los Angelenos. For those interested in the arts there is the $34.5 million performing arts complex: the Dorothy Chandler Pavilion, home of the Los Angeles Philharmonic Orchestra and its new resident conductor, Carlo Maria Giulini; the Mark Taper Forum and the Howard Ahmanson Theater.

Downtown also means weekend shopping along Broadway, especially to Los Angeles' large Hispanic population. A recent State Board of Equalization report "conservatively estimates" ground floor retail sales along Broadway between Second and Eighth Streets to exceed $135 million annually.

For the city's Japanese community, largest in the nation, downtown means their cultural center in and around Little Tokyo, site of the $30 million New Otani Garden Hotel and the Japanese Village Plaza.

Ground was broken in November for an $8 million three-level, 88,000 square-foot shopping mall adjacent to the New Otani. The commercial levels of the mall will surround Weller Court, which was planned to emulate a palace courtyard and to be a community gathering spot, says Nagahisa Ono, vice president of East West Development

The New Look of downtown Los Angeles

Corp. The project is due for completion this year.

But the city offers more than a new downtown while answering questions from executives who are considering Los Angeles as the site for their new corporate headquarters or a satellite business, distribution, commercial, or industrial facility. Some of the most frequently asked questions:

What are Los Angeles' population resources from which we can draw top and middle-management talent as well as a reliable, productive workforce?

A report last November by the Los Angeles County Regional Planning Commission puts the county's population at 7,124,000, probably the highest in history. The city's population of 2,800,000 is closing fast on the nation's second largest city, Chicago.

"After a period of population declines, then leveling, the county is back in a growth mode, which social and economic pressures will reinforce," says a United California Bank report. "Reasons for this turnaround include a pickup in the natural population increase, a gain in immigration from outside of California, sparked by the availability of a wide variety of job opportunities and a slowing of the outflow of Los Angeles' residents to adjacent counties.

"Los Angeles County still has considerable attraction for newcomers. This is based on a combination of climate, job availability, not only in numbers but variety, and mystique generated in part by the entertainment industry," says the report.

State and banking data centers put employment at 4,041,200, with the area's broad base of manufacturing industries accounting for around 24% of that figure. The U.S. Labor Department reports 530,000 new jobs were created during 1978 in California, most of them in the Los Angeles metropolitan area.

Los Angeles' pool of talent is similarly broad-based and ranges from those in highly-skilled disciplines to blue collar. One report shows more than 100,000 engineers in the area, 24,000 business consultants, 4700 physicists and 1000 geologists.

Availability of high-level talent has caused many corporations to move their headquarters to Los Angeles. Among them are Union Oil, Litton Industries, Lockheed California Corp., and AM International, Inc. (formerly Addressograph Multigraph Corp.). AM International recently moved to Los Angeles' prestigious Century City.

Chairman Roy L. Ash says, "We moved AM International's corporate headquarters from Cleveland to Los Angeles last year to place ourselves in the center of advanced technology. We're becoming a leader in the business of information management, one of the most rapidly-growing industries of the future and one totally dependent upon continual innovation.

"If we're going to keep the company positioned at the forefront of technology, it is important that we, its managers, locate in an environment that is innovative and growth-oriented—where we're surrounded by new ideas.

"We considered other high technology centers, but none seemed so dynamic or eager to face the future as Los Angeles."

The city's longstanding reputation as a major source of upper and middle-level management has perpetuated the belief that high-paying aerospace and electronic industries, moreover, have driven wage rates proportionately upward throughout employment spectrum.

A recent Wells Fargo Bank report refi that notion. Although speaking of Califo in general, the report's observations are pecially pertinent to Los Angeles beca that's where most of the state's employm is centered.

"Wage rates are generally above natio averages—which is the main reason why state's personal income is above the natio average," says Wells Fargo. "This, howe is significant only if the higher pay scale is offset by greater productivity.

"The record indicates that Californ workers are in fact more productive, at l in the manufacturing sector, where meas ment is possible. When California's rec record is compared with the other nine le ing manufacturing states these facts eme

"1. Four of the nine states have hig average hourly wages in manufacturing.

"2. Eight states lost more time du work stoppages.

"3. California has led all states in aver hourly value added by manufacturing basic measure of productivity.

"Taken together, these factors stron suggest that California's relatively h wages simply reflect high productivity."

That Los Angeles has harmoniou assimilated a wide range of peoples, inter and talents—not only among native An icans, but from throughout the world seen as a strong contribut factor to the quality of the workforce.

"We have a unique blend of people," s Mrs. Howard Ahmanson, a commun cultural and business leader. "Los Ange population includes a greater representa of people from every state in the union t any other city. This gives us a highly des ble blend of many talents and outlooks."

Mrs. Ahmanson recalls that foreign-b immigrants were largely responsible for growth and importance of Chicago and N York. "The native-born Americans who coming to Los Angeles to better the selves in every way are the new wav immigrants.

"Los Angeles also is benefitting from profound influence of the large Hispanic Japanese populations. There has, moreo been a great influx of workers from Ko and other nations in the Pacific Basin. Wh you see all these people working togethe harmony and as hard as they do, you kn Los Angeles has an unexcelled poo labor."

Latest available California Employm Development Department figures show workforce includes more than 318,0 Blacks, 533,000 Hispanics, 55,400 J anese, 20,400 Chinese, 16,400 Philippi and 4200 Koreans.

How can Los Angeles assure my co pany of adequate energy, water a utilities?

Reliable and reasonably priced electr

Paul Ditzel, *author of "Los Angeles: The New Look," has written seven books and more than 400 magazine articles which have appeared in most national publications. Ditzel has lived in and written about Los Angeles for more than 25 years. He is President of the American Society of Journalists and Authors, Southern California Chapter.*

Our heart is the West, but our home is Los Angeles.

With over 250 branches in California, UCB is the lead bank in the largest multi-state bank holding company in the U.S.

Working with us means you plug right into the capabilities of 22 member banks in 11 Western states with 22.5 billion dollars in assets.

So if you're looking to grow in the West, you couldn't ask for a better combination than Los Angeles and UCB.

For the first time in several years, 75,000 contiguous square feet is available for lease.

Most people think Occidental Life completely occupies the Occidental Center. This isn't true; space is rented to other tenants. Now, units of 3,000 to 75,000 square feet are available including two connecting floors of 37,500 square feet each, which together provide 75,000 square feet contiguously.

To find out how you can locate your company in the Occidental Center, contact Arch Robinson, 213/742-2701.

Occidental Life
A Transamerica Company

and water service have historically been major factors in attracting large industrial and commercial users to Los Angeles. The city's Department of Water and Power (DWP) is the largest municipally-owned utility in the United States.

DWP is widely recognized in the business and financial community for its superior management with foresight in planning future requirements. The utility's $40 million revenue bond issue last October was well-received. Proceeds will help to finance a capital improvement program aggregating $193 million, including the purchase of a 30% interest in a coal-fired generating station in Arizona.

The DWP's system capability of 6,300,000 kilowatts will be increased to 6,800,000 by next year. There has never been a disastrous power outage in any area served by DWP.

Through various agreements, the utility insures a water supply for present and future requirements by drawing from an area roughly encompassing the southwestern United States. Despite a recent drought, one of the worst in California's history, DWP customers reported only minor inconveniences by the time the drought was over.

Natural gas is the primary energy source for heating homes, offices, stores and commercial buildings in Los Angeles. The state has reserves to supply nearly all of the area's requirements. Providers are continuing a successful conservation program while opening up new sources. Among these are a coal-gasification plant in New Mexico and a six-year contract which was recently signed for a daily flow of 240 million cubic feet of gas from Alberta, Canada.

Environmental constraints have been major inhibiting factors to the construction of new power plants in the Los Angeles area. What could be a major breakthrough was a recent California Air Resources Board (CARB) announcement that available emissions controls can now make coal an attractive alternative to the oil and gas that have been used.

The special significance of this announcement is that extensive coal deposits are in nearby states.

"Coal can be burned with less emissions than from the use of oil or natural gas," says Thomas C. Austin, CARB's executive officer. Using fabric filtration (baghouse) and scrubber control systems, coal's particulate matter and emissions of sulfur oxides and nitrogen oxides are able to meet all state and federal air pollution control requirements, says Austin..

Resulting lower costs of power to business and industry would be a welcome bonus. Austin said studies show that electricity produced by a coal-fired plant with the new emissions controls would cost rate payers 13% less than power produced from either oil or gas. Coal is cheaper, he explained.

Telephone and other communications companies serving Los Angeles business are

Our word made history.

1769 Citrus introduced to California by Spanish Missionaries.

1873 Two "parent" California navel trees arrived from Brazil. (All navel oranges are decendants of these trees.)

1875 First navel oranges picked in California for marketing.

1885 Earliest California growers organization to market fruit failed due to lack of cooperation.

1890-93 Succession of disastrous "Red Ink" marketing years for growers due to unreliable train service, low prices, oversupply of oranges, poor distribution.

1893 April 4. Sixty orange growers met in Los Angeles and organized a marketing cooperative to give small growers marketing equality with large growers, and coordinate distribution.

1894 March 1. Executive Board of California Fruit Growers Exchange formally opened in Los Angeles.

1900 First export of oranges began with gift to Queen Victoria.

1905 California Fruit Growers Exchange incorporated as a cooperative.

1907 First use of the Sunkist trademark for citrus fruit.

1908 First formal produce advertising launched by the Exchange in the *Des Moines Register and Leader.* Sales increased by 50% in Des Moines.

1909 Sunkist trademark registered.

1910 First inspector employed to check quality of fruit.

1914 Sunkist products division began with a small marmalade factory.

1916 Sunkist created new use for fresh oranges with "Drink an Orange" ad. Orange usage increased from ½ orange per serving to two.

1920 The Exchange was first national advertiser to mention vitamins in copy, with emphasis on vitamin C.

1923 Exchange prepared and distributed 100 million educational pamphlets to teachers, doctors, dentists, and public health officials regarding healthfulness of citrus.

1926 Sunkist trademark first successfully stamped on fresh oranges.

1927 First commercial radio broadcast from California to East Coast sponsored by the Exchange. First advertiser to use motion picture stars on radio.

1940s Concentrated citrus juice furnished for U.S. school lunch program.

1952 California Fruit Grower Exchange renamed Sunkist Growers, Inc.

1977 Annual sales topped $500,000,000.

1978 New Sunkist fruit stamp introduced.

1979 Sunkist Growers, Inc. now comprised of about 6800 growers in California and Arizona with an average grove of under 40 acres and sales of 3 billion pounds of fresh fruit annually throughout the world. And, on the average, every ten minutes around the clock, every working day of the year, a 25 ton load of citrus is delivered to a Sunkist products facility.

1980 A bullish look towards the future.

Sunkist, and Sunkist are trademarks of Sunkist Growers, Inc. ©1979

offering steadily expanding capabilities marked by a high degree of sophistication. Pacific Telephone recently built a 16-story, 350,000 square-foot facility with a microwave tower on the roof to serve customers in the new downtown and surrounding areas.

Los Angeles' first Video Phone Conference Center was recently opened. It permits business conference audio-visual hookups with other firms in major cities throughout the United States. Electronic switching and international direct-distance-dialing are other services that more businesses are using.

Southern Pacific Communications Co., a subsidiary of the railroad, operates a coast-to-coast microwave telecommunications network serving 45 metropolitan areas in 17 states and the District of Columbia with voice, data and facsimile transmission service to industrial, commercial and government customers.

In direct competition with the Bell System, SPC's service "utilizes computer-controlled switching equipment that is usage sensitive and will therefore produce substantial cost savings for large and small businesses," says C. Gus Grant, SPC President.

How efficient is Los Angeles' transportation system in providing my company with fast access to local, national and foreign markets?

The area's interlocking system of trucks, railroads, port facilities and air transportation operates the year round. Traffic managers do not have to worry about snowbound rail yards, streets and freeways, ice-clogged ports or cargo planes grounded by weather.

The California Trucking Association's Jack Register says there are 10,000 commercial trucking companies operating in the Los Angeles area. With more than 626,000 registered trucks in the county alone, Lo Angeles probably has the heaviest and mo diversified concentration of truckin capabilities in the world.

Los Angeles County's 480-mile freewa system provides an unexcelled distributio network for local pickups and deliveries a well as quick access to the interstate syste Trucking in the Los Angeles area is a high competitive market with attractive rates an fast schedules to local, regional and easter

Santa Fe's computerized classification yard

markets.

The three railroads serving Los An geles—the Santa Fe, Southern Pacific ar Union Pacific—are among the nation financially-healthy carriers. Facilities, mai tenance of equipment and right-of-wa therefore, are among the best in the industr

These carriers have set standards f faster, more efficient and safer handling ladings that are being adopted by the rest the industry. The SP's recently-complete West Colton Yard, largest in the Unite States, handles around 3000 cars a day wi up to 30 daily trains in and out of the L Angeles area. The Santa Fe's newer Barstc Yard handles around 138,000 cars and 34(Santa Fe and 480 Union Pacific trains month.

Rail yards are traditionally traffic bc tlenecks. Cars in older yards sometimes for days. Normal in-and-out traffic at We Colton and Barstow is measured in hou The yards are completely automated a computer-controlled to expedite the flow traffic.

The three carriers also operate spec freights which greatly shorten delivery tim to eastern markets. Many are unit trains containers and truck trailers on flat cars de tined for eastern, southern and Paci northwest markets.

SP Vice President Larry E. Hoyt sa they handle as many as five container/trai trains in and out of Los Angeles a day. The expedited movements are on runni

We look to L.A.'s future with growing interest.

We are proud to have been a part of this growing city, and we know that the future of L.A. is going to be even brighter. If you think there's a place for your business in L.A.'s future, come talk to us. We've been here for over 40 years.

INFORMATION MANAGEMENT. DOES IT THREATEN THE WORK ETHIC?

The American work ethic has always assumed that if you worked hard, your efforts would be rewarded.

We wouldn't argue with that. But we would like to amend it a little.

The way we see it, working hard isn't nearly as important as working well.

Information Management isn't a way of sidestepping hard work. It's a way of making it more productive.

For example, there's no virtue in having to spend hours typing, retyping and re-retyping documents. So we make electronic typing systems that let you type, revise and retrieve information in a lot less time. Which gives you a lot more time to create and perfect it.

To make information easier to work with, we make a full range of copiers, duplicators and computer printers. Ones that not only reproduce, but can reduce, collate or even print in color.

To make information more accessible, we have Telecopier transceivers and communicating typewriters that transmit information crosstown or cross-country in minutes.

We even offer computer services that let you manage information without having to manage a computer.

So you see, Xerox information management systems are actually the epitome of the work ethic.

They work harder. So you can work better.

Many decades ago the cultural growth of El Pueblo de Nuestra Senora La Reina de Los Angeles began to flourish.

Now America's third largest city is a world leader in providing artistic nourishment that enriches the lives of millions.

Now because thousands in this city are dedicated to cultural growth, artistic substance is available to us all—and all who follow us.

TRW

Things grow bigger in California.

If you're looking for a new climate for growth, come to California.

We're proof of what can happen when a well-managed organization puts its roots down in the right place.

It took us less than four decades to become the nation's largest federal savings and loan association.

In a half-century we've expanded from a single Los Angeles office to more than eighty offices statewide.

Over half a million Americans and businesses entrust their savings to us.

And we're still growing.

You're better off in California...

CALIFORNIA FEDERAL

Nation's Largest Federal

California Federal Savings and Loan Association • Assets over $5 billion • More than 80 offices statewide.

Head Office: 5670 Wilshire Blvd., Los Angeles, CA 90036.

schedules of around four days between Los Angeles and the SP's East St. Louis gateway to midwestern and eastern destinations. SP schedules call for around three-day delivery to the Memphis and New Orleans gateways leading to eastern and southern markets.

Santa Fe symbol freights run on 49-hour schedules between Los Angeles and Chicago. The Santa Fe recently innovated an articulated flat car system for expedited handling of truck trailers between Los Angeles and Chicago. Each "Ten-Pack" car piggybacks 10 trailers. The UP similarly operates its SSS expedited hotshots to Pacific northwest markets and the LAX trailer/container trains to Chicago.

Much of this traffic begins and ends at intermodal terminals operated by the carriers in the side-by-side ports of Los Angeles and Long Beach or close to industrial and commercial districts.

The SP's intermodal center near downtown Los Angeles, for instance, is strategically close to several industrial areas, notably the thriving apparel district. Trucks have close access to the freeway system. Tracks in the terminal are capable of handling nearly 200 piggyback flats and there is space for more than 650 trailers. Piggy-Packers load and unload trailers and containers in only 90 seconds each. Several major freight forwarders are located in this center.

The Ports of Los Angeles and Long Beach set new tonnage handling records in 1978 as nearly 9000 ships entered the harbors. Los Angeles, the leading Pacific Coast port in the amount of cargo handled, registered 38.6 million tons, an increase of 3.5 million over fiscal 1977. Long Beach, meanwhile, handled more than 33 million tons.

Both ports are city-operated and self-supporting. They are ideally situated with berthing facilities located between one and three miles from the Pacific. The ports are probably the nation's busiest container handlers. Facilities are constantly being upgraded to expedite the flow of cargo and to meet future requirements. Long Beach projects it will be handling 110 million tons of cargo by the year 2000.

Highly specialized equipment has reduced the average stay of ships in port to less than 48 hours. Bulk-carriers require less than half that time at dock. Container ships often are sped on their way with an eight-hour turnaround time.

Berths have quick, no-stop light access to freeways to further expedite cargo off-loaded onto trucks. Unit trains of containers and trailers quickly start on their land brid movement. A typical land bridge involv cargo from Japan to Los Angeles via co tainer ship. Containers are loaded onto u trains of flat cars and sped across country an eastern port for loading onto a sh bound for Europe.

Major capital improvement programs a progressing in both ports. The Port of L Angeles has begun a $21 million Seasi Container Terminal complex which is d for completion within two years. Seaside w be the largest single contiguous contain terminal on the Pacific Coast. As many five container vessels will be handled simu taneously at a 4000-foot-long wharf. S container cranes, plus other features, will e able the facility to handle an average of 4 million tons of cargo a year.

Long Beach's largest single revitalizati project in the port's history was this yea completion of the new Omni-Terminal. Th 2000-foot-long pier provides 45 acres dockside land and 40 acres of service ar for container and break-bulk in cargo oper tions. Two 40-ton Paceco gantry cranes a located berthside.

Recently completed, too, was the Kopp export grain terminal expansion, an inve ment of nearly $10 million. Capacity w

"MOST BANKS LIKE TO COME UP WITH CREATIVE NAMES FOR THEIR SERVICES. WE LIKE TO COME UP WITH CREATIVE ACTION."

John Miner, Senior Vice-President & Manager, Corporate Banking Division, Southern California Headquarters.

How does your creative action affect your position in the Southern California marketplace?

Southern California is very big, very open, and very upfront. In terms of business, it's much more freewheeling. Many of our customers are relatively young companies. But old or young, in our marketplace they're aggressive, innovative and evolving. They expect a different kind of bank. A more creative bank. And, I think that's where Crocker fits in.

How is Crocker a more creative bank?

By having the flexibility required. The promptness of response and the willingness to entertain something that may be off the beaten track. Something that may not necessarily be the norm.

It's been said that Crocker is an old-line San Francisco bank. Is that true?

It is neither old-line, nor is it a San Francisco bank.

It's a California bank—long established, yet vigorous. We have developed a thoroughly capable, seasoned corporate banking staff right here in Southern California, including groups specializing in the Natural Resources and Entertainment industries. Those are in addition to our international, merchant and investment banking, trust and outstanding funds and cash management capabilities.

What's more, we have more branches in Southern California than in Northern California. So, as you can see, there's no need to look to the north, or to any other direction to accommodate the needs of our community here.

At Crocker Bank we believe we should earn your business. So we'd like you to contact John Miner, Senior Vice-President and Manager, and really give him the business about Crocker's corporate services. To start the dialogue, call him at (213) 612-8572.

Give us the business, then give us the business.™

Why the Far East is closer by land.

Mini-landbridge the L.A. Way and shorten your shipping schedule. As an originating or second leg port, Los Angeles puts you days closer to the Far East and other parts of the world.

Recent studies conducted by the Port of Los Angeles confirm that intermodal growth is the biggest change in shipping since containerization. Compared with traditional routes and methods, more shippers will soon be able to move the same amount of cargo faster and with fewer ships. And point-to-point mini-landbridge costs are already competitive as elements of the intermodal system mature.

To prepare for the projected shift in shipping trends, Port of Los Angeles will be investing $250 million over the next 5 years on improved and expanded facilities and services.

Much of this will be spent on major container terminal expansion. For example, the Seaside Container Terminal complex now being developed will have a 5,000-ft., all-concrete wharf, six cranes and 130 acres of backland. One of the largest and most efficient terminals in the world, it will easily handle six containerships at berth.

Find out why shippers already mini-landbridge the L.A. Way.

For our new brochure, write Robert D. Kleist, Director of Trade Development, Port of Los Angeles, P.O. Box 151, San Pedro, CA 90733

eliable power for 14 business jets

doubled to 65,000 bushels an hour. Modernization of Long Beach's Pier G petroleum coke terminal permits more efficient handling of this port's second largest export.

The phenomenal growth in tonnage handled by the Los Angeles-Long Beach ports points up their ascendancy to major world status as well as their superior positioning as the gateway to and from the Pacific.

Commerce between Los Angeles and more than 163 nations augurs a steady growth pattern. "Foreign trade is growing and will continue to stimulate overall business activity in the Los Angeles area as the ports handle a rising volume of commerce," says a Wells Fargo report.

Much of this export-import traffic is with Pacific Rim nations where trade has increased to $13.6 billion in fiscal 1977, compared to the previous year's record high of $11.6 billion. Export trade with Asian nations (excluding Japan) accounted for 32.6% of the total $6,255,910,000 exports; followed by Japan, 24.6%; Europe, 22.9%; Latin America, 4.4%; the Middle East, 4.3% and 11.2% with the balance of the world.

Leading export commodities were aircraft and parts, non-electrical machinery, electronic and electrical machinery, raw cotton, and scientific optical equipment.

Import trade totaling $12,480,981,000 was mainly with Japan, 39.7%; Asia, 32.6%; Europe, 13.5%; the Middle East, 6.1%; Latin America, 2.6% and 5.5% from other nations. Imports were led by petroleum products, motor vehicles, radio-TV equipment, non-electrical machinery and apparel.

Air cargo is enjoying a similar growth pattern in Los Angeles. Officials at Los Angeles International Airport, the third busiest commercial air travel center in the world, say that in addition to 32.5 million passengers—a figure which increases yearly—air cargo also shows gains. More than 1.5 million pounds were carried during fiscal 1976-77; a 5.3% increase over the previous period. This was the largest increase in five years.

Cargo volume forecasts indicate the airport will require between 107 and 137 more acres of cargo-handling space by 1985 and up to 221 acres by 1990. The Cargo City portion of the airport is rapidly outgrowing its facilities. A master plan calls for a se Cargo City to be built on the opposite si the field.

Do I have a supply of raw mater near Los Angeles?

Los Angeles is situated near the cent one of the world's greatest concentratio minerals and other raw materials, ma them scarcely tapped.

The state ranks third nationally i value of its mineral production. Califor the country's chief producer of asp boron minerals, chromite, diatomite, cury, sand and gravel, sodium carbonat sodium sulphate. Near Los Angeles are plies of bromine, cement, gypsum, pumice, lime and asbestos. Most of the iodine and potash produced in the U States comes from areas around Los An To the north of the city is the world's l reserve of borate minerals.

Coal, which many authorities believ return to its primary role as an energy sc is in abundant supply in nearby Ari Utah, Colorado, Wyoming, Montana

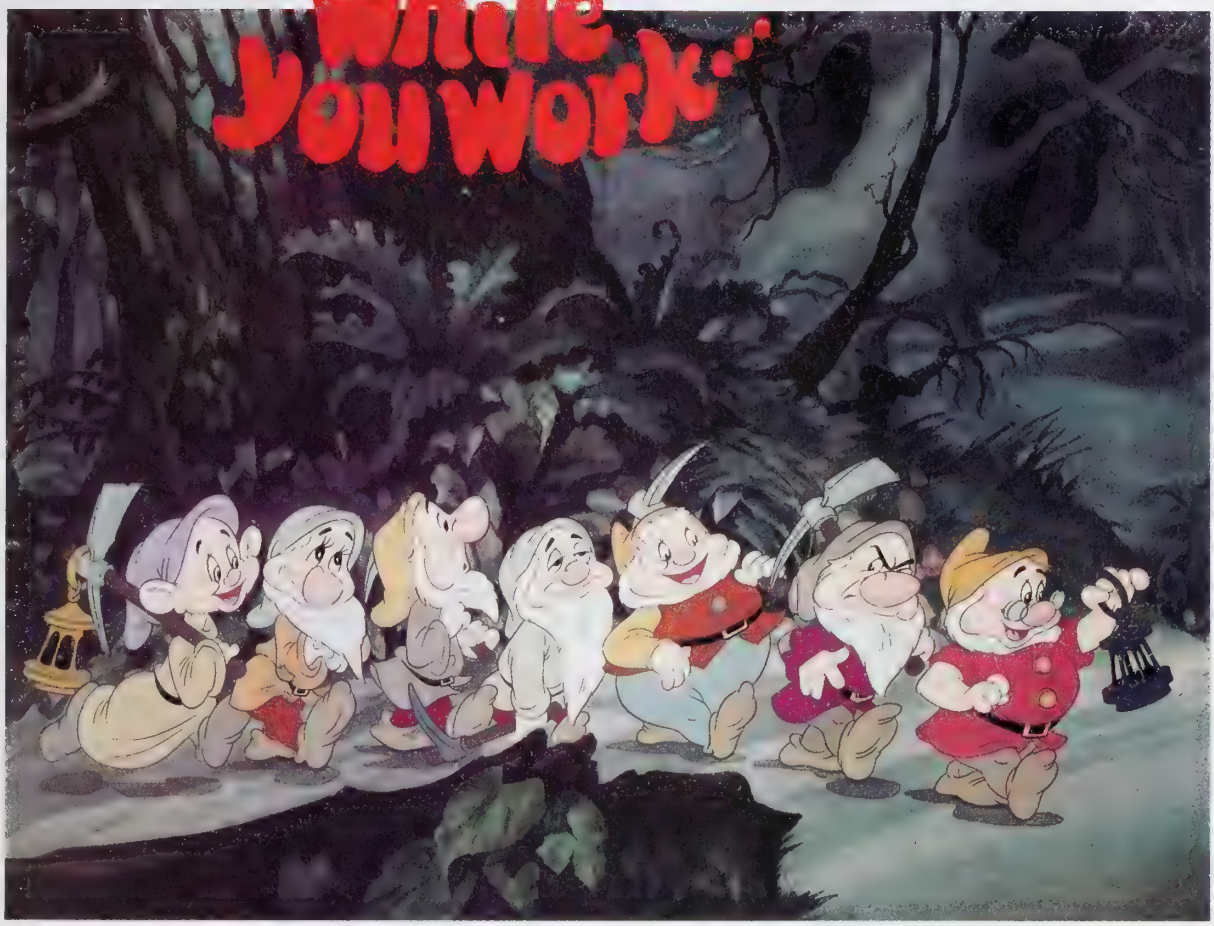
Whistle While You Work...



In 1923, Walt Disney described Los Angeles to a fellow artist as "...the place for you—a real country to work and play in." And that holds true today.

As a creative center, Los Angeles has provided us with our family of designers, artists, film crews, skilled technicians and "imagineers." We have fun on the job and off the job. We can take advantage of a recreational climate, and working and living conditions that are unmatched. All year long.

Southern California and Los Angeles have been good to us. And that's one of the major reasons why we can whistle while we work. And why you should consider it.

Sears chose an Upland site for their Los Angeles warehouse.

(Now they've got the goods on us!)

In recent years, West Bend Electric, Sears, Kraft Cheese, Honda, Boise Cascade, and many other major manufacturing concerns have looked to Upland for new industrial sites. And for good reasons —like abundant raw materials, proximity to growth markets, and labor availability. ▫ Since Upland is the real estate company for Union Pacific Corporation, each site is served by the Union Pacific Railroad —providing efficient transportation with access to air and highway systems. ▫ Upland sites are available for sale or lease in thirteen central and western states: California, Colorado, Idaho, Iowa, Kansas, Missouri, Montana, Nebraska, Nevada, Oregon, Utah, Washington, and Wyoming. ▫ For specific site information including environment, taxes, labor, transportation, and energy sources, write in confidence to: Howard F. Hansen, Executive Vice President, Upland Industries Corporation, 110 North 14th Street, Suite 1000, Omaha, NE 68102.

Upland Sites of America

Upland Industries is a wholly-owned subsidiary of Union Pacific Corp.

ew Mexico.

The Santa Fe operates a 90-car unit coal ain from New Mexico to the Kaiser Steel ant outside of Los Angeles. The round trip om mine to Kaiser and back again takes only 5 hours. Iron ore for Kaiser's furnaces ickly comes from nearby Eagle Mountain in verside County.

Immediately north of Los Angeles is one of e world's major sources of cotton. Around % of the nation's timber is milled in North- n California and Oregon forests—but a few ys delivery time to Los Angeles by truck or in.

hat is the growth potential for my siness in Los Angeles?

The diversification of industry in and ound Los Angeles is one of the city's major engths. More than 50 of the nation's top 0 industries are located in Los Angeles unty, says the Los Angeles Area Chamber Commerce.

Gone is the era when aircraft, entertain- ent and tourism dominated the economy th resulting peaks and valleys. Although ese industries remain important to the Los ngeles mix, it's pertinent to note what ppened during the recent period when rospace cutbacks resulted in some 7,000 layoffs.

"Growth in other manufacturing indus- es was sufficient to offset these heavy sses," reports Wells Fargo Bank. "The oadening of the region's base will continue provide opportunities for other types of nufacturing activities."

United California Bank economists ncur.

A UCB report on Los Angeles County ys, "Out of 21 major industries—those that ploy more than 50,000 workers—seven uld be considered basic industries. These e industries whose sales of goods and/or rvices could generate 'new' dollars for the unty's economy."

Five of these industries have "above erage" growth potential through 1985 nd most have the added advantage of not ing major sources of pollution."

The report lists them as wholesale trade, siness services, electric equipment nufacturing (the major component is mmunications equipment), aircraft man- acturing, non-electrical machinery man- acturing (major component is computers) d apparel manufacturing. Tourism also ows high growth potential. Southern Cal- rnia visitors spend an estimated $2.4 bil- n a year.

The distribution of employment in the s Angeles area gives further evidence of e broad-based economy. Among durable ods manufacturing, transportation equip- nt leads with 15.7% of the area's total em- yment of 4,401,200, followed closely by ctric and electronic equipment, 14.9%. so among the top 10 employers: machin- , except electrical; fabricated metal prod- ts, instruments and related products, niture and fixtures.

Non-durable goods employment is led by apparel and other textile products, 7.8%; food and kindred products, 6.3%; printing and publishing, 5.6%; rubber and miscellaneous plastic products, 3.8% and chemicals and allied products, 3.4%.

It is slight wonder that the Los Angeles area is a major retail and wholesale area when effective buying income is $72,188,740,000—more than half of which is in Los Angeles itself—according to the Los Angeles Area Chamber of Commerce.

Retail sales in 1978 will top $29,875,000, up 12.5% over the previous year and comparing favorably with the national average increase of 10.9%.

Indicative of the growth potential in this segment of the county's economy was the November announcement by K Mart Corp., operator of the nation's largest chain of discount stores, that they have purchased a site near Los Angeles for a 1 million-square-foot distribution center with expansion possibilities to nearly 2 million square feet. The structure will be among the largest of its kind in the world.

Three of the area's foremost wholesaling hubs are the California Mart and the Home Furnishings Mart, both in the downtown district, and the Pacific Design Center on the city's west side.

The 14-story California Mart is a bustling international showcase for 1500 tenants who offer more than 10,000 lines of apparel that set style and fashion trends throughout the world. During special market weeks during the year, some 10,000 buyers are attracted to the showings. Mart sales in 1978 came to $3 billion—a 200% increase over those of 1973.

Plans for a $36 million Mart expansion include a 13-story addition scheduled for completion late this summer. The annex is 55% booked. An 8½-story parking facility will also be built and connect with the Mart via pedestrian bridges.

Nearby is the Home Furnishings Mart, largest in the West, with 13 floors and 400 tenants offering a wide range of furniture and giftware. About half an hour's drive from downtown is the elegant Pacific Design Center, winner of many architectural awards for elegance.

The center has 750,000 square feet of showroom and exhibit space for its 200 tenants which include residential and contract furniture suppliers, interior design specialists, floor and wall coverings suppliers, fabrics, lighting and accessories firms.

Executive Director Murray Feldman says Pacific Design tenants did $100 million in direct sales last year, compared to $81 million in 1977.

The aircraft and entertainment industries have, meanwhile, been enjoying an economic upswing. The world's air carriers are upgrading their fleets with new purchases. Much of that business, either prime or subcontract, is falling into Los Angeles' lap. The

Los Angeles is a great place to do business. We ought to know— we've been here 100 years.
Bob

trend toward overseas production of movies has reversed and Hollywood has been enjoying good times as film-makers return to local production. Even before Mickey Mouse went on his cross-country 50th birthday celebration tour, Walt Disney Productions reported in November that fourth quarter earnings set a record.

Earnings increased to $37.5 million, or $1.16 per share on revenues of $241.8 million, up from the $32 million or 99 cents per share on revenues of $205.2 million reported a year ago. Full year profits rose to $98.4 million, compared to $81.9 million a year ago. Net income per share increased to $3.04 from 1977's per share net of $2.53. Twelve month revenues increased 18% to $741.1 million from $629.8 million reported a year ago.

Metro-Goldwyn-Mayer, Inc. similarly reported record revenues and profit for the year ending last Aug. 31. A 5% stock dividend was declared, along with a recommendation that shareholders approve a two-for-one stock split. Net income for the year came to $49.3 million, or $3.39 per share on revenues of $401.4 million. This was a 49% increase in profits and a 37% jump from a year ago.

But the impact of Los Angeles' entertainment industry is much more than financial. Employment is relatively small: some 20,000 craft workers, 29,000 actors and 16,000 musicians. Hollywood, as the world's

center of communications and entertainment exerts a worldwide influence, a fact which is especially remarkable considering that more than 90% of this world's recorded entertainment is produced within a five-mile radius of Hollywood.

That's one of the reasons why David Salzman, chairman and chief executive officer of Group W Productions (The Mike Douglas Show, EveryDay and others) opted last summer to move the Westinghouse affiliate's corporate headquarters from New York and Philadelphia to Los Angeles.

"If you want to be an important force TV production today—and probably fo long time to come—you have to be in entertainment capital," says Salzm "Here's where you have the most person ties and stars, today and tomorrow. Wh more, you have a resource pool of creat talent that runs the whole panoply from i people to the actual executors: the writ the directors, the producers.

"Los Angeles is where you have the b and most facilities. The state of the art te nology and production techniques are here," says Salzman.

"There is an extensive cultural menu Los Angeles that did not exist as recently 10 years ago. I think that indirectly helps, cause you don't have just movie stars, but kinds of interesting people. Those in the dustry who have said they would ne leave New York and other cities are now Los Angeles. It's fascinating, particularly doing reality TV shows which have tended be our stock in trade.

"Los Angeles is an ideal locale to do shows because the people who mount a shape the shows are influenced by the v ues, mores, lifestyle and environment which they live. I think that New York has l come atypical. Los Angeles today is not o representative of the country, but is in so key areas what America will be like tom row. People everywhere like to see and identify with that," says Salzman.

Manageable growth.

Demand for electricity is growing. Southern California Edison Company expects to add half a million customers over the next decade.

At the same time, fuel costs and new plant construction costs are rising.

How does a utility stay healthy in such a crunch? By managing its growth.

Edison is a leader in conservation. And effective load management programs are designed to shift electric usage from periods of peak demand. Homeowners are responding, and so are business customers. Since 1973, Edison representatives have contacted more than 40,000 commercial/industrial facilities to help stimulate and develop individual energy conservation plans.

Results? In 1977 the average annual kilowatt-hour consumption—industrial, commercial and residential—was below the levels recorded in 1973, reflecting in part the effectiveness of our conservation efforts. We have deferred some long-term new capacity needs as well.

The financial benefits will be shared by our 180,000 shareholders through growth in earnings, and by our 3 million customers through keeping rate increases at a minimum.

Even with these belt-tightening successes we project annual growth in peak demand of 3½%. Our reserve margins, fuel supplies under contract and generating capacity already under construction place Southern California Edison in good position to meet these future electric needs.

Some people are better equipped to train than others. So are some machines.

Why you need MCA's Industrial Videodisc System.

It's the most versatile tool of its kind: a training system that can bring the new employee to immediate productivity, improve the performance of the skilled artisan, orient workers, some of whom do not speak fluent English, or offer one-on-one assistance to ambitious middle managers.

Why it has the edge.

It offers capabilities never before available in one system.

Most important, this system (we call it "DiscoVision") is *user-paced.* We don't all learn at the same speed and with DiscoVision, the learner sets the pace.

DiscoVision features picture quality better than film and high quality stereo sound—to detect engine defects from noise characteristics, to diagnose heart-beats, or to train simultaneously in a second language.

The Disc.

The heart of the stand-alone low cost unit is a lightweight plastic disc from which information is read by laser.

There are 54,000 separate frames on each side of the disc, which in straight-ahead play gives 30 minutes of full color, full stereo sound information. And because there is no surface contact, repeated use will not degrade the quality.

Information at your fingertips.

A hand-held remote control keyboard lets you run the DiscoVision program at your own rate. You can hold an image on the screen for as long as the user wants to study the picture; run sections slow motion, backwards or forwards; and you can access specific frames in, at most, 5 seconds.

Interaction between you and the machine is feasible. If you do not give the proper answers, the machine can ask you to review the material.

Economy.

The costs of both the discs and the player units are less than other systems which do less. What's more, your existing training systems can be easily replicated for DiscoVision—or very simply adapted for increased effectiveness.

A better way to learn.

That's the whole point of DiscoVision. To enhance your skills you need a skillful machine. And we think MCA's videodisc player is simply a more skillful machine.

MCA DISCOVISION®

The Industrial Videodisc System.

How much will land cost me and will there be room for expansion?

The U.S. Department of Commerce's Standard Metropolitan Statistical Area (SMSA) rating shows that Los Angeles has by far the largest industrial area in the nation. It is nearly twice as large in square miles as the combined total of the other five leading metropolitan areas.

"Pricing of improved industrial land over the five-county area varies greatly, ranging from 25 cents to $6 a square foot," says the Los Angeles Area Chamber of Commerce.

Coldwell Banker, a Southern California-based real estate firm, says the per-square-foot average of industrial property in all five counties for 1977 was $1.97, based upon 225 of their industrial transactions. This compares with a 1973 average of $1.43, which reflects a 7.4% annual increase. A 12% annual increase occurred in parcels of 10 or more acres during the same four-year period, with square-foot pricing climbing from 95 cents in 1973 to $1.52.

"In purchasing industrial properties today, there is a trend to overbuying," says the Chamber. "This is considered good business, because the excess sell-off at some future time is expected to pay for or offset the buyer's initial investment. That obviously indicates great confidence in the future market and growth potential by both the new and existing business communities."

What banking capabilities does Los Angeles offer me?

Executives considering a new headquarters or satellite business, commercial or industrial facility in Los Angeles have access to financing that cannot be equalled anywhere in the world. There is, moreover, keen competition among banks.

Los Angeles County has more than 800 banks and branches, including 28 foreign banking institutions which are proliferating because of the area's increasing world trade. These foreign houses represent every continent and most countries.

Latest available figures show Los Angeles commercial bank deposits of $38,898,646,000 and savings and loan institution balances of $38,653,457,000. Savings and loan organizations specialize in the residential real estate market.

Banking is a major growth industry in Los Angeles. An August, 1978, report by United California Bank shows a 56.9% increase in commercial bank deposits and a 59.6% increase in savings and loan balances in only six years.

Bank debits constitute the best measure of overall banking activity because they reflect the gross volume of banking transactions, including those not handled by the clearing houses. Bank debits of the Los Angeles SMSA totaled $1.1 trillion by mid-1977; up 39% over 1973.

Further evidence of Los Angeles' pr nent position as a world financial cent figures showing that the Los Angeles B of the Federal Reserve Bank of San cisco is the largest in the federal syste

What environmental constraints other considerations must I be a of before I make the decision to to Los Angeles?

Another environmentally favorab tor to be considered before moving ness or industry to Los Angeles

Valencia

THE NEW TOWN NEXT DOOR

WITHIN YOUR PEOPLE'S REACH

Both people and business are welcome in our 12-year-old planned community less than 45 minutes north of downtown Los Angeles. Unlike many new towns, Valencia offers affordable housing for employees and management.

Your plant, store or office will be less than a mile from uncrowded, 8-lane Interstate 5, with freeway visibility available. After hours, enjoy golf, tennis, 2 colleges and Magic Mountain.

To find your site or building, call Rick Stephens at (213) 362-1515

Valencia Corporation—
a subsidiary of the Newhall Land and Farming Company.

Tiger International.
It took more than airfreight to double our earnings.

Earnings per share for the first nine months of 1978 were $2.48, up 105% from $1.21 in the same period last year.

Each of our three business areas showed improvements year-to-date and record results for the third quarter. For the quarter, compared with last year's third quarter, pre-tax profits in airfreight (Flying Tigers) were up 136%, in leasing (Tiger Leasing) up 28%, and in mortgage insurance (Tiger Insurance) up 48%.

FLYING TIGERS

Flying Tigers had record nine month revenue of $294,976,000, up 41% from 1977. The world's leading airfreight airline achieved significant third quarter revenue and earnings gains over strong third quarter results in 1977. Both domestic and international airfreight revenues were at record levels.

TIGER LEASING

Tiger Leasing revenue was a record $194,803,000, up 30% compared with the first nine months of 1977. Earnings from railcar leasing and repairs (North American Car) and sales of aircraft by the aircraft sales, service and leasing division (TigerAir) were well ahead of the 1977 period. Lease underwriting and computer leasing also reported improved earnings.

TIGER INSURANCE

Tiger Investors Mortgage Insurance Company revenue reached $15,913,000 during the first nine months, up 26% from the same period last year.

The demand for housing continues strong, home ownership has proven to be an excellent investment, and private mortgage insurance is being used increasingly to permit reduced down-payments and thus make housing more affordable.

Ready and waiting - an industrial site for you on Southern Pacific.

virtually all important markets of
e West and Southwest, Southern
cific Industrial Development
ompany has top grade industrial
rk sites ready to meet your needs—
ght now.

r example, above: the 320-acre
rritos-West Industrial Park, just 16
les southeast of Los Angeles,
tween the Santa Ana and Artesia
eeways. One of 20 major industrial
rks owned and established by
uthern Pacific for industry in the
uthern California area.

If you're planning a manufacturing plant or an office/distribution center anywhere in the West, you'll save time and money by looking first at our large inventory of industrial sites, or sites served by SP which were developed by other owners.

In many locations, completed buildings are already available for occupancy. In virtually all locations, like Cerritos-West, environmental impact reports are approved, access roads and utilities are in—ready for you to start planning and construction. For further information, write to W. J. Kiningham, Assistant Vice President & Regional Manager, Southern Pacific Industrial Development Co., 610 So. Main Street, Los Angeles, CA 90014. Or phone (213) 629-6613.

Southern Pacific.
We're making tracks for the future.

Go First Class for only 20% more than Coach.

United means business.

Now 20% more than the price of Coach brings you the room and comfort of First Class on United.

It begins prior to boarding your flight. At special First Class check-in counters that shorten lines and speed you on your way.

In our First Class cabins, you'll have 40% more room than Coach passengers. More room to catch up on important work—or an overdue time out.

The difference in price between First Class and Coach is not that great. But the difference in comfort is extraordinary. United means business.

For reservations, call your Travel Agent. Or call United. Partners in Travel with Western International Hotels.

Fare differential between Coach and First Class varies on flights to Hawaii and within the state of California.

"Best seat in the house."

Fly the friendly skies of United.®

ities and other environmentally-impact- services are already installed. This is es- cially true among the more than 220 ustrial/business parks in the area.

Vice President Larry Hoyt of the South- Pacific, one of the region's major holders available industrial land, says, "Com- nies don't like to have to put in utilities, cause of the environmental problems t might arise. Such problems are non- stent because the services are already talled. We find this a big plus when we call on eastern business and industrial leaders o are considering Los Angeles."

hat is government's and organized oor's attitude toward business?

There is no more responsible local gov- ment than that of Los Angeles which en- s a tradition of working closely with labor d business to further mutual goals.

Testimony to the fiscal soundness of Los geles is that Moody's Investors Service es the city, county and state the highest ssible rating: AAA.

Moody's says, "Los Angeles and all its erlapping taxing units have never de- lted in the payment of principal and inter- on their bonds." Total general obligation nds outstanding as of June 30, 1978, were y $121,660,000, the smallest for any city comparable size.

The debt burden as a percent of full valu- on of real property over the last 40 years in s Angeles has gone from 14% (in 1935) to s than 1% today. This, too, is an un- alleled record.

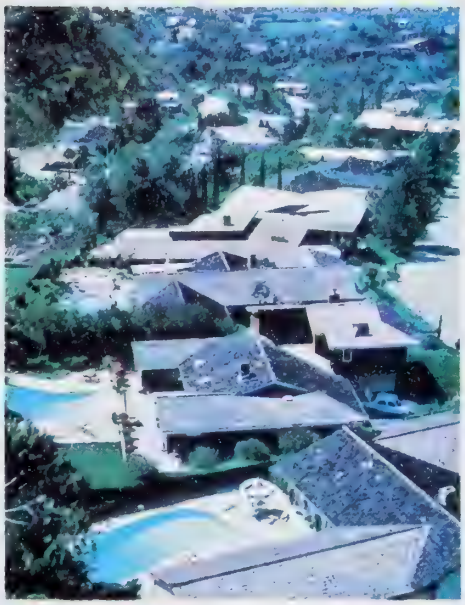
Los Angeles has been free of municipal ndals. Payoffs to building and safety in- ectors, fire inspectors and others are un- ard of in Los Angeles. The city's services, tably police and fire, are among the most cient in the nation. The grading system ed by impartial organizations gives the fire partment a Class 1 rating. The LAFD is the ly large city department in the United ates to hold this rating.

Los Angeles, moreover, has never been ralyzed by a major strike of either city em- yees or those belonging to industrial and ft unions.

The tax structure is somewhat clouded by recent passage of Proposition 13 which duced statewide property taxes and lim- d assessments. The law has been ruled nstitutional, but most economists say the impact will not be known for around a ar.

One opinion was ventured by economics fessors Douglas H. Joines and Arthur B. ffer of the University of Southern Califor- . Among the points they made in the Sep- mber issue of *The Executive* was that, ales and profits of corporations depen- nt on the California market or with large erations in the state (e.g., construction mpanies, banks, retail, wholesale and in- strial goods suppliers) will improve, on erage, relative to all other companies."

Unlike many other major metropolitan



areas, Los Angeles has no city income tax.

Local government and business leaders are increasingly cooperating to solve problems. Success was especially notable when the city's wholesale produce, flower and jewelry markets faced an almost certain move from Los Angeles because they had outgrown existing facilities.

Mayor Tom Bradley and his City Economic Development Office teamed with industry leaders and Washington officials to obtain $12 million in federal grants to revitalize the existing produce market. With $40 million private investment, the market will remain in Los Angeles, along with more than 5,500 jobs. The new produce center southeast of the downtown district will be the largest facility of its kind in the world. It is expected to generate around 1100 new jobs.

Similar cooperative success was achieved in saving the wholesale flower market located near the produce district. The flower market will not be forced to move elsewhere, thanks to $3 million seed money provided for rejuvenation by a federal grant. The balance will come from private investment.

Mayor Bradley was similarly exultant when he announced joint government-private sector teamwork resulted in a $4.7 million grant for a wholesale jewelry mart in downtown Los Angeles. The grant, plus a $25 million loan from the Bank of America, will be among the funds used to build the 20-story building.

The mayor said more than 3100 jobs would be created or retained with the development of the mart which will house 350 to 400 jewelry whoiesaling and manufacturing firms. Los Angeles' downtown jewelry industry has traditionally accounted for direct and indirect employment of 5000 people.

Half a block from the new mart is the just-opened Los Angeles Jewelry Center, the largest retail jewelry exchange in the world. The exchange represents a $2 million privately-financed renovation of the old American Banking Association Building.

Why would I or my employees want to live, work and raise our families in Los Angeles?

Los Angeles offers more of everything for those who are seeking a better way of life. There's more to Los Angeles than the area's balmy weather: the mean winter temperature is 55 degrees. And almost everybody knows that Los Angeles is the home of the Dodgers and the place where you go to Disneyland, Universal Studios and Magic Mountain.

Nor is Los Angeles altogether shy about describing the great freedom of choice in recreation: Mountain skiing in the morning. Surfboarding in the afternoon. Carlo Maria Giulini and the Los Angeles Philharmonic at night. Or concerts under the summer time stars in the Hollywood Bowl. Or sports: College football in the Coliseum, home of the 1984 Olympic Games; ice hockey in the Forum; hundreds of tennis courts and mile upon mile of jogging paths and bikeways.

There is, however, more to choosing Los Angeles as a place to sink roots. Mrs. Howard Ahmanson sums it up best by describing Los Angeles:

"Los Angeles offers a different kind of freedom. There is a variety of climates within our area: from snow to desert to the shore. So, too, do we have the freedom of choice to live where we want to and in the kinds of homes we choose."

Mrs. Ahmanson says, "There's beach-house living. Or in a suburban home with a patio, pool, courtyard and gardens, lawns and trees. Or you can keep horses on your suburban ranch. Or live in a mountaintop home overlooking the city and ocean.

"If we choose the city life we have high-rise apartment living, condominiums or town houses or all the other innovative types of residential architecture that mostly originated in Los Angeles. In Los Angeles we're not destined to live our lives in rowhouses that look like every other building on the block."

There is no lack of housing in Los Angeles, but like all other cities the problem is price. Cost of executive-type housing does not seem to deter senior officials of business or industry who have moved to Los Angeles. But for the middle and lower income families, the outlook is becoming increasingly optimistic, too. The Real Estate Council of Southern California reported in November that prices of single family homes were rising, but not nearly as fast as they have been. Some real estate officials look for a plateauing and then a downward turn.

The Los Angeles area offers unexcelled educational opportunities for children as

well as adults seeking better jobs. The educational resources of the area include 157 institutions of higher learning, 114 private schools at all grade levels and the largest private university in the state: The University of Southern California.

Bulwark of education in the area includes the 31 community colleges and the multi-campus system of the state-operated University of California. And that doesn't include the California Institute of Technology, worldwide scientific research center, or the Jet Propulsion Laboratory, focal point of the United States space program.

Much of the business and research consulting expertise so urgently needed in today's highly technological business and industrial community comes from these institutions. Too, the educational resources of Los Angeles provide a stimulating intellectual climate that itself attracts high-level talent to the area. "There are more Nobel Prize winners living in Los Angeles than anywhere in the world," says Tyler Macdonald.

Concurrent with the area's superb educational resources are others that appeal to the mind. Los Angeles has the world's largest free-circulating library system. The area is the nation's second most active book-buying market.

The manifold cultural attractions of Los Angeles—museums, galleries, zoos, botanical gardens, theaters, concert centers—provide a compelling magnet.

Culture is a public participation activity in Los Angeles. More than 25 million people visit the area's cultural resources every year. They found enrichment in the operating displays of the California Museum of Science and Industry and in the treasures of art and literature at the Henry E. Huntington Library and Art Gallery, as well as the Norton Simon Museum with its exquisite collection of the great Masters of European and Asian art, tapestry and sculpture.

On famous Wilshire Boulevard is the George Page Museum, repository of fossils unearthed from the nearby world-renowned La Brea Tar Pits. Artifacts, an anthropological library and other material representing the culture of Indians of the Western Hemisphere are housed in the Southwest Museum.

Nor is culture entirely supported by government or philanthropic grants. "Culture belongs to the people of Los Angeles because they are the ones who pay for it and they are the ones who work to keep it alive and healthy," says Mrs. Ahmanson.

Nearly 13,000 volunteers work in cultural activities to sustain everything from classical music to art galleries.

"Our cultural resources are largely built and sustained by the generosity of the citizens of Los Angeles," says Mrs. Ahmanson. "The Los Angeles County Museum of Art has a membership of 60,000 people who, through their own sheer generosity, support the museum. That's a record no other museum in the United States can match.

"The Music Center, moreover, has a yearly goal of raising $3.5 million from among the citizens of the area. They subsidize the tickets so that everybody can see and hear music, opera, ballet and other arts. There has never been a city in the history of mankind that has built two facilities like the Museum of Art and the Music Center with private money and supported them as we do in Los Angeles," says Mrs. Ahmanson.

The executive considering a move to Los Angeles is apt to recall the cliches about smog and congested freeways. The fa that motor vehicle emissions have b by 50% during the past 10 years and t being reduced even more despite creasing number of automobiles.

As for those stories about congest ways and how long it takes to drive to the morning: Surveys show freeway speeds are higher in Los Angeles and times shorter for the same length trip any other city in the world.

A recent Caltrans study of the five- Los Angeles area, moreover, shows t average trip length from home to 10¼ miles. The average time require rive at work was 22 minutes.

From every viewpoint—business or whatever—why has Los Angeles b a compelling attraction for new busin

Conrad C. Jamison, vice preside urban economist for Security Paci tional Bank, put it best when he recé scribed Los Angeles this way: If Los A were a sovereign nation, its output, t with that within a 60-mile radius, wo Los Angeles among the world's top in Gross National Product.

What better reason could anybo for moving to Los Angeles—a onc world opportunity.

Mitchell H. Feigenberg *of the Ci nomic Development Office provided cal and economic research and anal this article. Inquiries about Los A should be directed to the City Econo velopment Office, Executive Depart the Mayor, Room 2008, City Hall, L geles, CA., 90012. (213) 485-6154.*

A prominent New York banker *and economist has analyzed the long-term growth outlook for Los Angeles and sees nothing but blue skies and clear sailing.*

William W. Garretson, vice president and a senior economist for Citibank, the nation's second largest bank, says he sees more absolute growth in Los Angeles during the next decade than anywhere else.

"Los Angeles' economy is headed up on a new, higher growth trend in a turnaround from the slowdown that marked the end of the 1950s-1960s California boom.

Garretson said if a "moderately severe" national recession occurs next year, as some expect, the Los Angeles area's economy would resist most of the impact.

"The present industry mix emphasizes finance, services and manufacturing. The resulting balance has created a more solid economic base for long-term growth. This includes a significant reduction in reliance upon defense industries."

Garretson said that direct aerospace industry employment, which comprised about 4% of the area's economy in the early 1970's, is now only about 2.5% of the total.

"We think this balance, coupled with renewed strong population growth, means real growth for the whole Southern California region, with Los Angeles as the focal point," Garretson told a regional ec seminar in Los Angeles sponsored b subsidiaries of New York City-base corp, parent of Citibank.

Garretson says non-residential co tion in Los Angeles will continue throughout this year and ease only ately during 1980.

"Commercial reconstruction downtown and in some outlying area increasing, creating more efficient hig sity centers such as the Los Angeles Business District and Century City."

Garretson says, "A key to Southe ifornia's strength is its major role in t geoning Western economy.

"The West Coast stands relative from the rest of the nation with treme internal growth potential as well as a export business to the rest of the U States market. In particular, the con growth of the leisure industry natio including entertainment, will be a lon plus for the Los Angeles economy."

Over $250 Million invested in growth in the past five years.

Since 1973, net income is up 382% and return on equity has risen from 13.9% to 22.3%. Revenues have risen 218%, shareholders' equity 216%, and working capital from operations 232%.

ood- and papermakers escaped a downturn st year. This year many of them are not ely to be so lucky.

Forest products and packaging

BUSINESS WAS surprisingly good for the wood and paper producers last year. On average, earnings for pacompanies were up 8% and for wood ucts producers, up 16%. Companies Westvaco Corp., Boise Cascade, rgia-Pacific Corp. and Louisiana-Pa- have never done better than their nine months of last year. The excepts proved the rule: Crown Zellerbach hardest hit by a West Coast strike dragged on for much of the second Potlatch's third-quarter earnings e hit with a $6.2 million antitrust ement; and Scott Paper took a writefter closing its Detroit tissue mill.

his year, however, it will be a differstory. With the exception of the paper companies, especially those making white papers (Great Northern Nekoosa and Consolidated Paper), where earnings may rise another 15% to 20%, there's nowhere to go but down. Reason: the likely nose dive in housing.

What seemed to be fueling the boom in housing last year was investment demand. Says Robert Dockson, chairman and chief executive officer of California Federal Savings, "A mortgage today at 10% to 10.5% still remains a bargain with inflation running at 8% to 10%." With housing prices accelerating at 15% to 20%, buying a house became the common man's hedge against inflation.

After four years in the doldrums, prices for particle board (paneling material made from wood wastes) shot up early in the year. Major producers like Weyerhaeuser and Georgia-Pacific found themselves putting customers on allocation, though prices cooled down a bit by August. Lumber and plywood prices stayed close to 1977 record levels, and whole log sales (primarily to Japan) were strong earners for Weyerhaeuser and Crown. Aided by a strong yen, log prices soared 35% to 40%, 18% in the fourth quarter.

This year housing starts may decline to around 1.6 million or 1.7 million. Penn Siegel, forest products analyst with Drexel Burnham Lambert, thinks they may even go as low as 1.4 million. "I think it will be terrible," argues Siegel. "Profits on the wood side could drop

What Sears is and what it isn't

From a talk by Edward R. Telling, Chairman, to security analysts in New York on November 8, 1978

THERE ARE A LOT of changes taking place at Sears, Roebuck and Co. In his recent talk to security analysts, Sears chairman outlined these changes and described what he expects them to accomplish as the world's largest retailer looks to the 1980's.

Edward R. Telling
Chairman

I know one question is uppermost in your minds: What's going on at Sears and how do we account for the current lag in our monthly sales?

We are in the process of implementing a new merchandising strategy which will reaffirm Sears promotional position while emphasizing the basic merchandising techniques that will improve our profits.

Change is always painful. And because it is, many people have suggested we are changing too fast, that we should slow down for a while until the first of our recent changes has taken hold and sunk in. That would be fine if *conditions* didn't keep changing, or if we had the luxury of ignoring these changing conditions without any harm to our performance.

But change is always with us in the retail business, and we must continue to adapt to it.

The merchandising strategy we are implementing starts with a clear recognition of what Sears is and what it isn't.

What Sears is. We are the premier distributor of durable goods—and we intend to keep it that way. We are valued by our customers for our integrity, for a reputation for fair dealing, for service and for our guarantee.

We also are a premier distributor of non-durable goods—but non-durable goods which are purchased primarily for their *uses* rather than for their fashions.

Sears balance of sales between durable and non-durable goods is nearly identical to the way a vast majority of Americans allocate their purchases.

What Sears isn't. We are *not* a high-fashion store; we are *not* a specialty store, or a discounter, or an avant-garde department store.

> "If there is any single lesson to be learned from our experiences in 1977—it is that very disciplined planning, merchandising and monitoring are required to convert dramatic sales increases into satisfactory profit growth.
>
> No retailer can long accept price promotion or sales growth as ends in themselves. The measurement of promotional success must ultimately be the profit it produces."

A Commitment to Quality

Sears is committed to substantial and consistent increases in the quality of our goods in the belief that the best way to achieve increased profits is through a commitment to quality merchandise. We plan to

achieve this by committing our buying strength to sources who share our concern for intrinsic quality and rigid product specifications.

This strategy calls for a more highly disciplined line structure than we've had in the recent past. Many of our merchandise lines today have more items than they should, distorting quality distinctions between good, better and best. We intend to change so that all our retail store items are consolidated into lines with fewer total items. More of the items, however, will be focused on the most important price points.

Competitive Everyday Prices

Of absolutely fundamental importance to our merchandising strategy is a pricing policy now being implemented. We will establish and maintain *a competitive level of regular, everyday prices* together with a lower level of markdowns. This pricing policy applies across the board.

We plan to be very competitive on price-sensitive merchandise and on opening price points.

With competitive everyday prices, supplemented by intelligently planned and executed promotions, Sears reputation as a promotional retailer will be reinforced. In fulfilling customers' expectations of us we will do a better job of fulfilling shareholders' expectations also.

Other Changes

Starting next year, we will set an annual corporate dollar total for advertising, both national and local, and will adhere faithfully to it.

In the years that follow, we will set a lower advertising-to-sales ratio each year, and we will adhere faithfully to that too—in anticipation of sales increases which will enable us to spend more dollars on advertising each year.

We have simplified our field organization, reducing it from 125 to 50 administrative units to provide better control and greater adherence to corporate policy.

We have streamlined our Headquarters buying organization into nine merchandise groups, creating better communications with our field organization.

> *In yet another move to improve profits, we have established a new logistics function to get better control over distribution costs, improve our system of supply and make more efficient use of our inventory and facilities.*

For example, we are changing our catalog merchandise distribution centers from profit centers to cost centers. This will give us better control over their very considerable costs. It will improve their efficiency as merchandise distribution points for our retail stores and catalog customers.

We are moving into centralized store planning, and are locating our new stores in markets based solely on hard-headed appraisals of their profit potential.

An End to Overbilling

Yet another important change is the elimination of a complex procedure we call our "overbilling account."

Our buyers can now concentrate on product development and better buying without doubling as bookkeepers. Resources can be allocated based on total corporate need. Merchandising expenses can be budgeted and controlled better.

> *The chief results are that the stores will work with manufacturers' invoice prices on every item, and all concerned will operate from the same set of figures.*

This should enable us to plan better—both in the long and the short run—and to manage our company better toward our profit objective.

LATEST RESULTS

Sears net income for the third quarter of 1978 was a record $235,487,000 or 73 cents per share vs. $225,283,000 or 71 cents per share in 1977. Net sales were $4.46 billion—1.9 percent below the record set in 1977. Operating income before pension costs rose to 8.46 percent of sales from 7.43 percent in the third quarter of 1977.

(Sears fiscal year ends January 31, 1979.)

40% to 50%." The question, of course, is how strongly the Federal Reserve will tighten the money supply.

The papermakers face no such threat. Last year, after three years of a pulp glut that severely depressed prices, the bloodletting stopped. Bleached kraft prices jumped 45% in the second half and discounts dried up as a fairly strong domestic market, a resurgent export market and decreased production from the Scandinavian countries shrank inventories to near normal levels. That's good news for companies like Louisiana-Pacific (which probably lost money in its pulp business last year), G-P and Weyerhaeuser. Prospects for 1979? Liner board (used primarily in making boxes), which had been lagging around $185 a ton early in the year, jumped to $220 in the third quarter, and with supplies tight, indications are that the price increase may now stick.

But the bonanza came in white papers, particularly the coated papers used by magazine publishers. And it's likely to continue. Consolidated Papers, Inc., the world's largest producer, jumped from 15th to 9th in FORBES' return-on-equity yardsticks. With a ROE of 16.2%, Consolidated had a five-year return as fat as Weyerhaeuser's. Strong demand for coated papers, plus a turnaround, helped boost Mead Corp. to 4th in FORBES' lists.

This year white paper could experience the tightest supply situation based on supply and demand in 20 years (t excludes 1974, which was tight beca of inventory building). A lot depends what effect the West Coast strike, wh idled 6% of total capacity, has had supply. In paper, a 2% swing in capa can change the market from a buyer' a seller's market. So downturn or i best estimates are that paper earnings worst, will be flat to down 5% on a age, a surprisingly small decline for industry that often drops a steep 15% 20% during a recession.

Merger fever is running high in industry again. But the reason for i not the same as it was in the late 19 when forest products companies dive fied into unrelated businesses to ge better short-term return on their ass Now forest products companies buying up competitors because it's cheapest way of adding or replacing pl and raw materials. In the last two y Hoerner Waldorf and Fiberboard h both been acquired by companies their own industry. Georgia-Pacific negotiating to acquire Hudson Pulp Paper, Occidental Petroleum is maki heated bid for Mead, and Johns-Manv Corp. plans to acquire Olinkraft. trend's likely to continue this year. Si 1974 the industry has been able to dou its basic earning power in the face declining profit margins by not spend money for new plant construction.

White paper inventories
Almost as low as in 1974.

THE ADVANTAGES OF LOCATING YOUR COMPANY AMIDST THE GREATEST CONCENTRATION OF POWER AND INFLUENCE IN THE WORLD.

Not only is Washington, D.C. the capital of America, it's also fast becoming the capital of business in America.

This is where they make the rules of the game that businessmen have to play by.

This is where the factory is that makes the red tape.

Yet, this is also where the greatest opportunity exists for business today. Simply because there are enormous benefits to having the federal government for a neighbor.

Notice we said neighbor. Because when you look at Washington, the view is better from Fairfax County, Virginia.

Fairfax County is 410 square miles located just thirty minutes from Capitol Hill. It offers all the advantages of proximity to Washington combined with a comfortable suburban environment. And importantly, Fairfax County offers a lifestyle that's more than tolerable; it's desirable.

The ideal choice for a Washington location is not Washington. It's Fairfax County, Virginia.

That's actually the bottom line of a report issued by the Fantus Company, a subsidiary of Dun and Bradstreet, and a leader in the field of location consultation.

The study thoroughly examined locational possibilities all over America and concluded, "Fairfax County may well be the optimum location selection for the headquarters function of a national association or the regional office of a major corporation."

The fact is that over 1200 major corporations, associations and businesses have already located here.

Companies like Mobil Oil, TRW, Honeywell and Computer Sciences Corporation are typical examples.

By locating in Fairfax County, any business influenced by government is in a good position to influence back. Company executives can establish personal contacts with key legislators and staffs on Capitol Hill, contacts that are difficult to maintain at long distance.

You don't have to be intimately involved with the Federal government to take advantage of it.

Since Washington attracts the best and the brightest, companies that locate in the area can, too. Fairfax County firms have the opportunity to tap an executive, managerial and clerical pool that is perhaps unequalled anywhere in the nation.

Transportation systems are excellent for regional, national or international corporations. Washington National and Dulles International airports have direct flights to major cities all over America and to major capitals of Europe and South America.

And a move to Fairfax County won't prove as taxing on your company. Or your people. The overall tax situation in Virginia is favorably competitive with other states.

Now that you know what power and influence will get you, look what you get for 15¢.

If you'd like to know more, The Fairfax County Economic Development Authority will be happy to send you a complete brochure with details on taxes, transportation, cultural attractions, lifestyle, costs of doing business, educational resources and other subjects critical to a locational decision.

Once you discover the advantages of locating your company in Fairfax County, right in the middle of the greatest concentration of power and influence in the world, you may reach the same conclusion that Mobil Oil and the others reached.

This may just be the best place in America for business to work.

FAIRFAX COUNTY, VIRGINIA.

Please send me complete information on all the advantages of a Fairfax County, Virginia location for my company.

NOW AVAILABLE IN NEW SMALL ECONOMY SIZE!

Introducing the Xerox 2600 compact copier.

It fits snugly on office tables and into office budgets. (The 2600 is the least expensive new Xerox copier you can buy.)

Still, it's every inch a Xerox copier.

It delivers Xerox-quality copies in seconds. It copies from bound volumes. It not only copies on regular paper, but also on colored paper, transparencies, even your own letterhead.

And it's backed by the Xerox service network coast to coast.

All of which means that if you're in the market for an inexpensive copier, the 2600 offers something others don't.

The quality and reliability of a big Xerox copier. In a convenient, new, money-saving package.

XEROX® and 2600 are trademarks of XEROX CORPORATION

While inflation steams along at 9%, the chemical industry finds it tough going to eke out price increases of 1% and 2%.

Chemicals

Disco dancer shimmers in synthetic threads
The industry hopes that the pickup in polyesters is less flimsy than the fabric.

PRICE CONTROLS?" chuckles Paul Oreffice, chief executive officer of Dow Chemical. "We don't have to worry about them." Says Richard Ashley, vice president in charge of chemicals for Allied Chemical: "We frankly don't see the marketplace as healthy enough for there to be any problem with price controls in our industry."

The chemical companies have become unwilling leaders in the battle against inflation. Since 1975, prices on many bulk chemicals (like chlorine, caustic soda and titanium) have been slipping or stagnant. But production costs have been rising like everyone else's. Result: Return on equity for the diversified chemicals fell to 11.7% in 1978 from 12.3% in 1977. That's down a full 57% from the heady 1974, when the industry average was 19.8% led by Dow with 34%.

According to Oreffice, who came in as Dow's chief executive last May, the company was able to raise its prices an average of only 1% domestically in 1978. Earnings will be up slightly over 1977's $3 per share—primarily because of an 8% increase in sales, which came from overseas. The falling dollar helped Dow, along with Monsanto and Du Pont, push up exports to Europe and the Pacific Basin in the latter part of the year. International operations also picked up, mostly due to shakeouts in 1977.

The low prices in 1979 are the lingering aftermath of the spending spree the chemical companies went on beginning in 1974. Egged on by shortages and the skyrocketing prices of petrochemicals, the companies doubled their investments in new capacity between 1973 and 1975 to $5.3 billion.

But not all of that investment made economic sense. Explains Anantha Raman, chemical analyst with First Boston Corp., "Say you wanted to build a billion-pound ethylene plant. Because of inflation you figure you might as well build a 1.2 billion-pound plant. You figure that it will only cost more to build tomorrow—so you end up building plant capacity pretty much to hedge against inflation."

Since 1975 the rate of investment has been declining in real dollar terms. And no wonder. New plants planned back in 1974 and 1975 were still coming on

stream in 1978. By the end of the
the gap between the increased capa
and increased demand had finally b
to close; both were running at about
But for the year overall, operating r
for the industry were below 80%.

In petrochemicals, where three-q
ters of the capital investment took p
in the last four years, things are t
grim (FORBES, *Oct. 2, 1978*). Petroch
cal plants are operating at only 76%
pacity in the U.S., and in Europe
Japan even more capacity stands
The culprits are again the oil ma
which accounted for one-third of th
vestment in new capacity since 1975
in fertilizer in the Sixties, the resu
ruinous price-cutting. "During the
six months of the year," accordin
Leonard Bogner, an analyst with B
Halsey Stuart Shields, "a lot of
chemical companies—for insta
Dow, Union Carbide and Du Pont—
counted their prices to reestablish
market shares that had been lost to
petroleum companies."

Because of the weakness in pric
and the likelihood of a slowdown in
economy, chemical stocks remain in
doghouse. In December Dow was sel
for $25 a share, less than one-hal
price in 1976. Union Carbide, whic
expected to post a slight earnings dec
for 1978, was at $35 a share—almost
less than book value. Monsanto, wh
earnings picked up from $7.46 per s
in 1977 to about $8.25 per share
1978—but only because they took a
cent writeoff in 1977—was selling
$15 less than book value at the appr
of the new year.

Even among more fortunate U.S. c
panies, the urge to merge has begu
stir. Celanese Corp. spent the latter
of the year trying for a merger with
billion Olin Corp., but the agreement
through at the last moment.

Celanese has finally been helped ou
a modest recovery in the synthetic f
business. Shipments for synthetic
bers—which go into everything f
polyester shirts to nylon carpets—v
up 7% in 1978. One reason, given
John D. Macomber, chief executiv
Celanese: "The disco look. A *terribly*
tractive look, by the way." Macon

The corporate objective of Corning Glass Works is to pursue excellence in glass worldwide, making this family of materials, its related products, and its corollary technologies the most unusual and useful in our civilization.

CORNING

has good reason to gush. Celanese was able to post a 5% increase in the price of acetates this summer.

The synthetic fiber business would still face an uncertain future if it had only fashion to pin its figures on. Fortunately, the prolonged bloodbath in that area of the chemical industry has shaken out many marginal operations. Rohm & Haas has gotten out of the fiber business, and those that remain kept spending to a minimum. Du Pont, which stopped production of acetate in 1977, is responsible for that fiber's strong showing in 1978 as much as the trend in fashion. Now, according to Harry Flavin, an analyst with Rotan Mosle in Houston, the top three fibermakers produce 60% of all synthetic fibers. The strength in the market led Du Pont, Celanese and others to post price increases in polyester fibers at the end of the year.

Specialty chemical producers, which account for maybe one-third of all chemical industry sales, have been more fortunate. Says R.E. Davis, president of $550 million (sales) Thiokol Corp.: "We haven't had any difficulty at all in raising prices to cover cost increases in materials and labor." The company, which gets almost half of its profit from specialty chemicals (only 26% of sales) returned 16% on stockholders' equity in 1978.

The incentive to reinvest in specialty chemicals is far stronger. For every dollar it has invested in capacity, a specialty company can expect annual sales of $3 and $4—compared to, at most, $1 in the more capital-intensive commodity chemicals.

With money costing 10% and more, the profitability gap between the groups can only widen this year.

The profitability of the specialty chemical companies, along with the

"Say you wanted to build a billion-pound ethylene plant. Because of inflation you figure you might as well build a 1.2 billion-pound plant. You figure that it will only cost more to build tomorrow—so you end up building plant capacity pretty much to hedge against inflation."

cheap dollar, proved attractive to the European investor. Rhine-Chem Laboratories, a subsidiary of Bayer Laboratories AG of West Germany, paid $47 per share for Miles Laboratories, Inc.—$17 over book value—while Unilever N.V. paid almost three times book value for National Starch Chemical Corp. over the summer.

But government regulations affect all segments of the chemical industry. year under the Toxic Substances Co Act, first passed in October 1976, company was required to make an in tory list of all chemicals it produce 1977. The list grew to a stagge 70,000 compounds in all, and the E ronmental Protection Agency is no work on the list to develop future sa regulations. To avoid future bans on products, companies are forced to sig off an increasing percentage of thei search budgets trying to make pro tion lines safer. Allied Chemical mates that it will have to spend s $50 million next year—on chemical s of $1.4 billion—just to keep up with ty standards enacted thus far.

So there's not much cheer in the look for next year. Still plagued by t own overexpansion, and threatened an increasingly expensive social den to make the industry accident- chemical executives are chewing t nails at the prospect of recession. were just beginning to see an uptur our cycle," complains H. Barclay Mo chief executive officer of Stauffer Ch cal, one of the most consistently pr able companies in the industry. "E he adds wistfully, "I'm afraid 197 going to be another nervous year."

That may be putting it mildly in industry. ■

Announcing the all-new 1979 Toronado...

More headroom and legroom, front and rear, than last year.

New automatic level control—helps provide a remarkably smooth, even ride.

A choice of standard 5.7-litre gasoline or available diesel V8.

Independent 4-wheel suspension—each wheel adjusts to the road without affecting other wheels.

More new standard features than you'd expect—including new side window defrosters.

Refined torsion bar front suspension—you'll love its feel of the road.

Front-wheel drive for impressive road-gripping traction and stability.

Oldsmobile engineering excellence contributes to a new state-of-the-art personal luxury car design.

A new state of the art in personal luxury car design—so beautifully engineered, so lavishly appointed, so responsive to your driving command, Toronado becomes a new experience on the road. One you owe to yourself to discover at your earliest opportunity. Come explore the magnificent inner world of Toronado. Examine the meticulous details, check out the uncommon array of standard equipment. Here is a setting of rare comfort and luxury, wonderfully sheltered from the noises of the outer world. And it is available with leather in the seating areas, if you wish. Many Oldsmobile dealers offer the option to buy or lease a Toronado. Either way, Toronado will introduce you to new dimensions in driving enjoyment. Come make a test-drive appointment to experience the pure pleasure of the new state of the art in personal luxury cars: the legendary front-wheel drive Toronado.

Oldsmobile

Toronado

Have one built for you.

GM

Wall Street asks Ohio Edison about controlling costs.

The following is from conversations between Goldman Sachs and Ohio Edison in New York City.

Liu: What is Ohio Edison doing to control non-fuel expenses?

White: For three years we have been controlling operating costs through such management procedures as consolidating divisions, employee attrition and other such methods. I don't know of any area in which we haven't cut back to some degree. We even went so far as to temporarily halt our tree trimming program. But we've reinstated that because reliability of our service is still our most important asset.

Liu: With construction costs rising so quickly, have you been able to adopt any consumer programs that help reduce costs?

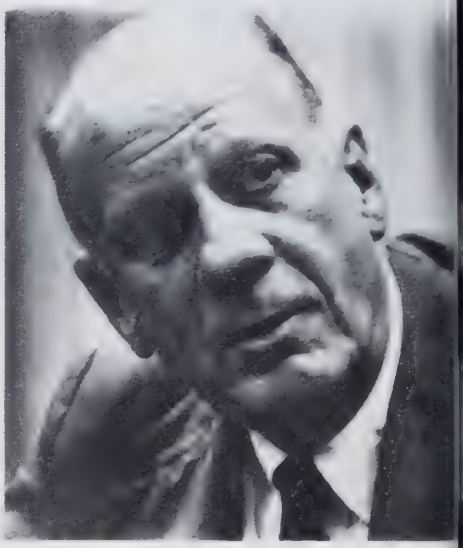
White: In addition to using our regular advertising messages, we've had great success with a booklet called "The Electric Decision Maker." It lists appliances found in the home, and gives the cost per use. We've distributed more than 400,000 copies of the booklet. But the most important aspect of our cost/conservation program is our use of meters with two part rates.

Liu: Exactly how do they work?

White: The rate actually provides an economic incentive to residence customers to improve their load factors, either by using more energy or reducing their peaks. As they reduce their peaks, we can reduce ours. That, in turn, means less expenditure for increasing generating facilities.

Liu: What's the attitude of customers toward having this control?

Ernest S. Liu is a Vice President of Investment Research at Goldman Sach

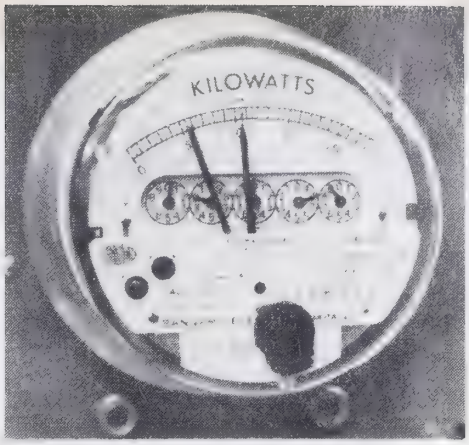


J. R. White is President of Ohio Edison.

V. A. Owoc is Senior Vice President, Chief Financial Officer of Ohio Edison.

hite: Initially it was very negative. People felt the eter would control them. Before this past winter's ıortages, people were not in a controlling mood. ow they are changing their attitude, and realize me control of their energy use can be of benefit. lost important, they see an economic payoff with e load meter. So do we.

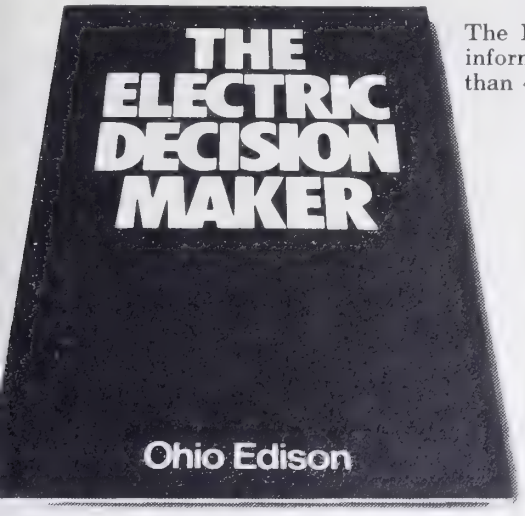
woc: I guess in summary, I think we have been ry good operators in the past. We have taken steps get through an emergency period. Now we've ened up a little bit and gone back to recognize liability as No. 1, and we still have the austerity ogram, so that we can monitor what goes on as sely as we have in the past.



Load meters, which help customers practice load management, are already in use on a majority of customers' homes.

Edison Home Economists show customers better ways t the most from their electric dollars, with wise-use rams on appliances and electric use at home.

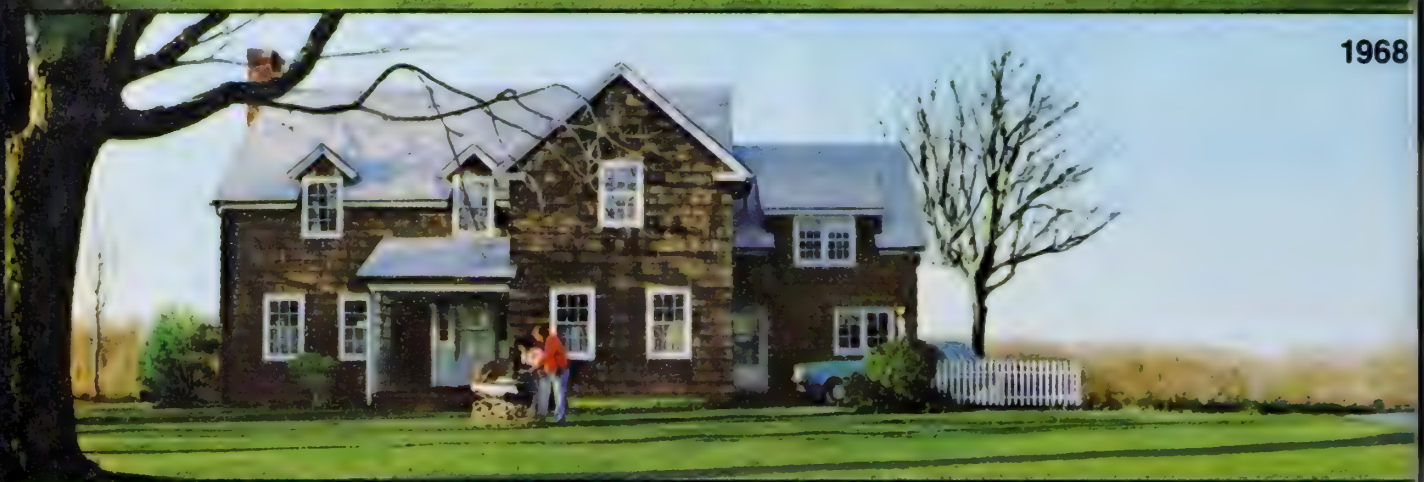
Ohio Edison's System Dispatch Center assures lowest-cost operation at all times. From here, electricity is sold to neighboring utilities, or purchased from them, to reduce costs whenever possible.



The Electric Decision Maker Booklet gives customers information they need to control their electric costs. More than 415,000 copies have been distributed.

"Reliability of our service is still our most important asset."

Diamond International is expanding because you are.



Homeowners last year invested about $40 billion in home expansion and modernization. To keep up with them we've added over 50 home centers. That makes 117. So far.

These 117 Diamond home centers sell everything from lumber to lighting fixtures. For new homes as well as old. Do-it-yourself and professional. This helps make us non-cyclical. For when new home construction declines in the U.S., renovation and home remodeling usually booms.

In the last six years we've nearly doubled total sales to over $1 billion. Among the biggest contributors to our growth has been lumber and other building products.

How much will you spend next weekend?

DIAMOND INTERNATIONAL

ith military and commercial orders boom-g, ask not what recession will do to this dustry. Ask which company will bloom late.

Aerospace and defense

norning rush hour at the airport
aging, narrow-bodied, noisy gas guzzlers have to go.

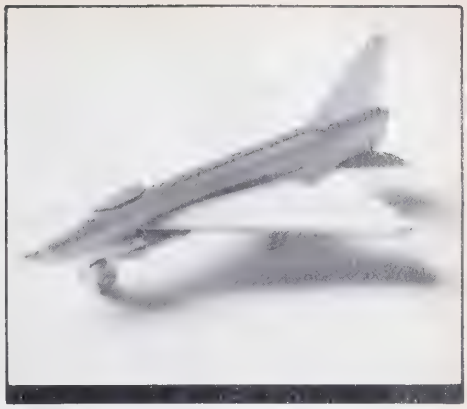
OR THE FIRST TIME in a decade the big news in the aerospace industry isn't military production, but rath-ne commercial jet business. The d's airlines can't delay major pur-es any longer: They have fuel-guz-, aging fleets too small and too noisy eet demands for quiet, efficient air-with increased seating capacity.

e big winner, of course, has been ng, which 20 years ago ushered in ommercial jet age with its 707 mod-weeping Douglas away as the indus-eader. Boeing hasn't slowed since, ng out four models, all very success-Now Boeing is developing two new aft, the 757 and 767, which already outselling the competition for the generation of airplanes.

eing's older 727s, 737s and 747s are ng extremely well, while its new es are getting a promising takeoff orders such as United's for 30 767s. ed has the largest and one of the oldest estic fleets and thus may order scores Boeing aircraft. The United order followed by substantial 757 orders British Airways and Eastern.

Boeing Chairman T.A. Wilson predicts 1978 sales will reach $5.5 billion, up from 1977's $4 billion. During the first nine months of 1978 the company's backlog grew 29%, to $7.6 billion, *not including* $4.6 billion in recent orders from United, Delta, American, British Airways and Eastern. Analysts estimate per-share earnings may reach $9 for 1979, up from an estimated $7.25 last year.

Boeing's competition in the commercial market is dwindling. McDonnell Douglas currently has two aircraft models, the DC-9 and DC-10, but has chosen not to develop any new models to compete with Boeing's 757 and 767. "The market for the DC-X200 [McDonnell's proposed competitor] wasn't certain enough to justify the tremendous investment it would have required," said Sanford N. McDonnell, president and chief executive officer of McDonnell Douglas. "However, we are looking into the possibility of launching a stretched and otherwise modified version of the DC-10." Developing a stretched DC-10 may cost several hundred million dollars, which would force McDonnell Douglas to continue reporting losses in its commercial aircraft business until the early 1980s, when all the DC-10 development costs would be written off.



The third major commercial jet manufacturer, Lockheed, continues to have problems with its TriStar (L1011-500) program. One analyst estimates Lockheed must produce at least 30 a year to have a chance at recovering the program's investment. Currently, TriStar production is approaching only 21 a year.

Says Lockheed Chairman Roy A. Anderson, "When we get to the level of TriStar production where we hope to be in 1982 or 1983, then we think we will be able to just about offset both the TriStar's production costs and its $50 million annual amortization charge."

Although technically the TriStar is a fine aircraft, its production was delayed by financial problems at Lockheed and at Rolls-Royce Ltd., principal manufacturer of the TriStar's engines. Until recently the TriStar's sales have been poor. The program lost $120 million in 1977 and may lose even more when the 1978 books are closed, dragging down Lockheed's very successful military business. Lockheed's 56% five-year average return on equity appears impressive, but the statistic is misleading. Lockheed's equity was nearly wiped out several years ago, and today the company remains heavily leveraged by $400 million in long-term debt. Anderson says, "We think the 1980s will see a significant improvement in Lockheed's fortunes."

There is one threat facing American jet manufacturers—Airbus Industrie. Although the European joint venture, owned principally by the West Germans, French and British, isn't hurting American aerospace companies now, one day it may. Consider the case of state-owned Air France, which has purchased many aircraft from Boeing. Will Air France order 757s or 767s from Boeing when Airbus Industrie, 40% owned by the French government, offers competing models?

Sharing in the bounty of the aircraft production boom are two prominent aerospace companies, Rohr Industries, Inc. and Wyman-Gordon Co. Rohr produces many of the jet engine parts for today's commercial aircraft, and if it

ages to land contracts for 757 and engine parts, Rohr should be well ioned for at least several years. The is true for Wyman-Gordon, which s aircraft frame and engine parts for ically every commercial airplane in ky today.

mpetition is becoming cutthroat in igh-ticket jet engine business, once nated by United Technologies' & Whitney Aircraft division. Gen- Electric, a major supplier of military ngines, is offering all sorts of conces-, hoping to grab a larger share of the rican commercial market. (GE has most of the Airbus engine con-s.) In November, both Delta and rican ordered GE engines for their a setback for Pratt & Whitney. in's state-owned Rolls-Royce Ltd. is cutting prices. "Rolls-Royce," says h Barney's Wolfgang Demisch, "is interested in jobs than in profits."

ss than a year ago the British gov-ent agreed to guarantee any bank Pan American might take out to ce the purchase of 12 new TriStars their Rolls-Royce engines, simply use Pan American agreed to order Rolls engines. The British loan guar-e alarmed many American aerospace utives, including United Technol- Chairman Harry J. Gray. "More more we find ourselves competing commercial business, not only against other engine manufacturers, but also against foreign governments. If our government doesn't act to correct this trend or to provide similar assistance, our nation could face erosion of its long-term leadership in the commercial aircraft market, with a resultant loss of jobs here at home."

United Technologies' other aerospace division, Sikorsky Aircraft, is scoring huge gains. In the last three years it has landed major helicopter contracts from the Army, Navy and Marines Corps, projecting at least $4 billion in revenues over the next five years or so.

The military business appears secure for at least a year, now that President Carter is talking about cutting income transfer programs and increasing defense spending for fiscal 1980. The Carter philosophy seems to favor jet fighters and missiles, which bodes well for producers of those sorts of military hardware.

One such company is Northrop, which is pushing a proposed $10 million fighter, the F-18L. Northrop is trying to sell the fighter to a few foreign nations so it can begin production, which could turn into a bonanza. But recently the F-18L failed to make the finals for an anticipated $2 billion Canadian Armed Forces order, a significant setback for the program. Meanwhile, Northrop will be the principal subcontractor for one of the two finalists, McDonnell Douglas' F-18A. Northrop will build 40% of the aircraft.

Northrop also has a string of mammoth Saudi Arabian service and support contracts. Just as Northrop was whittling down a $1.2 billion Saudi contract from 1976, it landed another for $800 million, beginning in 1979. "The Saudi contracts, which generated 25% of Northrop's 1978 revenues, may open up many opportunities for Northrop," says John Simon, a Crowell Weedon aerospace analyst. "Northrop could get a nice long-term meal ticket by helping industrialize all of the Middle East." Northrop's other booming businesses are F-5 fighter production and 747 fuselage production. Simon estimates $6.70 a share for Northrop in 1979.

The other big winner in defense is McDonnell Douglas. The company has two very popular older aircraft still in production, the F-4 and A-4, just as the F-15 is hitting its stride and the very promising F-18A is entering the testing stage. The Air Force anticipates ordering 749 F-15s, and the McDonnell Douglas F-18A looks like a big revenue producer if the Navy and Marine Corps order as many planes as expected.

Fairchild has a strong near-term outlook based upon the big-selling A-10 aircraft. The U.S. Air Force should complete its 733-plane acquisition by 1983, and Fairchild may market the A-10 overseas. About half of Fairchild's 1978 sales

Old Penncoyd Steel Mills by Francis Speight Oil on canvas, 30 x 36 ins. (detail)

The best place for your business. And your family. Boca Raton.

Boca Raton, Florida has long been noted as one of the finest places to live in all of America, with an exceptional quality of life, beautiful residences and extraordinary community and cultural facilities.

Now it is fast emerging as the new home for business in South Florida. With quality companies moving to this Palm Beach County community from all over the country.

The reasons.

An excellent labor force, good transportation, abundant energy and a good educational system. Plus an enlightened and aggressive financial community. But, most of all, the new 850-acre Arvida Park of Commerce, directly adjacent to I-95, and zoned for research, development, light industry and offices. A totally planned business center in a park-like setting.

For information, call Scott Martens at (305) 395-2000. Or send us the coupon.

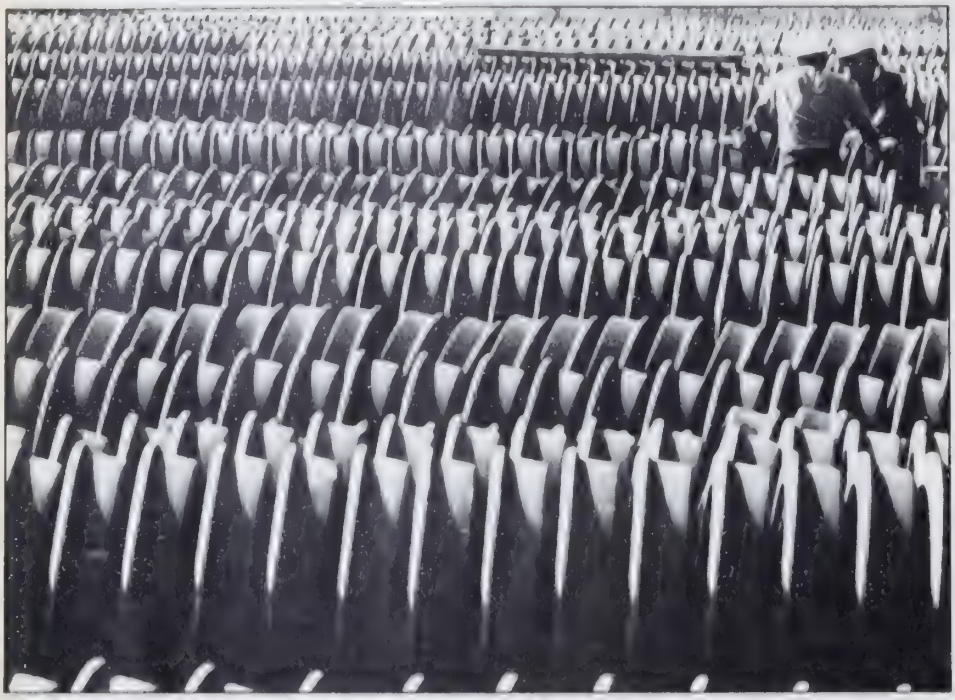
The U.S. is the antique shop of the industrial world, but that may be the best thing that could happen to capital equipment makers.

Industrial equipment



Steel railroad wheels awaiting shipment at Amsted Industries' Bensenville plant
Most industrial equipment makers hope to roll right through on their backlogs.

"The U.S. has underinvested in capital equipment for years," says William I. Wearly, chairman of $2.1 billion (sales) Ingersoll-Rand. That, of course, is a sales pitch, but Wearly does know what he's talking about. Nearly 60% of U.S. manufacturing plants are 28 years old or more. At the end of 1977, the average age of all plants and equipment in the U.S. was 10.3 years, according to the Department of Commerce. In a critical particular—machine tools—Japan and West Germany are in far better shape than the U.S. In Japan, 60% of machine tools are less than ten years old, in West Germany the figure comes to nearly 40%. In the U.S., just over 30% of machine tools are less than ten years old.

For at least a decade the U.S. has spent less on plant and equipment as a percentage of gross national product than any other industrialized nation. Even British factories are newer on average. Over the past 10 years, Britain has spent an average of nearly 13% of its GNP annually on new plant and equipment; France, about 15.4%; and West Germany, a whopping 18.5%. Over the same period the U.S. has spent a mere 8%.

As ever, U.S. industrial equipment producers see this as a golden opportunity—even in a recession.

"Increased capital investment improves employee efficiency," continues Wearly, "and is one means of fighting inflation. We think that the emphasis on bettering the country's poor productivity improvement record might well offset the temporary effect of a mild recession."

This time Wearly and his colleagues may just be right. Orders for machine tools are at an alltime high. That spells good things for the likes of Warner & Swasey, Cincinnati Milacron, Chicago Pneumatic Tool, Houdaille Industries and Wallace Murray. Through the first ten months of 1978, these companies, and others like them, reported orders of $3.5 billion, up 47% over the same period in 1977. Shipments, the products actually finished by the plants, were up 35% to about $2.4 billion during that same period, leaving a backlog of some $3.3 billion—about 59% higher.

Given a mild recession, those bac
may be enough to carry the comp
over the rough spots. There are risk
course. As backlogs increase, foreign
ducers of machine tools, electronic
drilling equipment and other backl
items may be able to gain market
again. The opportunity is certainly
Companies like Wheelabrator-
Combustion Engineering and Dress
dustries are now operating with bac
of from one-half to a year's sales
sometimes more.

Some of those backlog figures are
firm, like those in the steam-gener
business, railway equipment, ma
tools and drilling equipment. Son
those industries require cash up
But for a few industries, including
struction equipment, backlogs may
away because they are merely dealer
mates of potential sales.

"We're just about sold out thr
1980," says Gene M. Woodfin, chai
and CEO at Marathon Manufactu
the leading producer of "jack-up"* o
for offshore drilling. "The scientists
ty well agree that more than 95% o
future reserves of oil and gas probab
within 300 feet of water. And that'
depth."

Looking for oil and gas in new p
has helped other similar equipment
ers, too. "The producers are drilling
and drilling deeper," says Charles
Moody, director of market researc
Baker International. "And drilling d
is a good thing for the people who m
facture oil equipment. The deeper
drill, the harder it is and the more
nology and equipment you need."

It may be some time before a si
boom hits the mining equipment
ers, however. "The laws and regula
are too gray for people to make the
investment they have to make in
verting to coal," complains Dresse
dustries Executive Vice President J
R. Brown Jr. "Strip-mining bills
from state to state on what you ha
do to reclaim the land, and some s

*Jack-up rigs have legs which extend to and rest
sea floor. They are used in water between 150 a
feet deep such as the Gulf of Mexico. Other offshore
called semisubmersibles are floating devices
much deeper water and in harsh environments
North Sea.

SIGNS OF LIFE.

Coca-Cola" and "Coke" are registered trade-marks which identify the same product of The Coca-Cola Company

and the federal government leave a lot up in the air."

Baker's Moody agrees. "Coal is constrained right now by red tape," he says. "Somebody's going to have to make up his mind."

Increased use of coal would help some specialty companies, too—especially companies like Envirotech and Peabody International, which make air and water pollution equipment. "More shifting to coal would make things better still," says Peabody Chairman and CEO John E. McConnaughy Jr., "but business is going to be good anyway because the government hasn't backed off on the environmental pressure."

Ironically, even if the regulatory climate cleared and coal demand shot up, there's some question as to when deliveries would take place. That's because there's a railcar shortage these days.

That's good news for Amsted Industries, which makes railroad car wheels. Last year, Amsted's order backlog rose from about $170 million to nearly $355 million, and is steadily increasing.

Industrywide, railroad car manufacturers last year received orders for 125,000 new cars, more than twice the number shipped. This year, the industry will be lucky to ship 75,000 cars. The shortage is caused by tight supplies in some of the heavy castings used to manufacture railroad cars.

Even so, Pullman Inc., Amsted and others tied to the ups and downs of railroad demand are looking beyond the present. If their order books are bulging right now, what better time to diversify? Pullman Inc., which now gets 63% of sales from its nontransport business, is on the prowl for further acquisitions but, of course, the company refuses to discuss specifics.

Even if the regulatory climate cleared and coal demand shot up, there's some question when deliveries would take place. That's because there's a railroad car shortage. Industrywide, manufacturers last year received orders for 125,000 new cars, more than twice the number shipped. This year, the industry will be lucky if it were to ship more than 75,000 cars.

But diversification can't always solve problems created by cyclical demand. GATX, the country's largest lessor of railroad tank cars, finds its main business has been booming, but its earnings have dragged largely because of its 1970 move into oceangoing ships—a weak industry these days.

Companies, like Browning-Ferris Industries, that handle sewage and solid waste should benefit in the long run from the 1976 passage of the Resource Conservation & Recovery Act which co hazardous waste disposal and conti to keep the outlook fairly bright.

Foster Wheeler and Combustion E neering, both of which build steam- erating equipment used for electric p er production, continue to have back of more than a year's sales, despite recent slowdown in new power p construction.

Specialty equipment makers Stewart-Warner, Dennison Manufa ing and Amerace Corp., which broad product lines serving many in tries, tend to follow more closely index of industrial production—espe ly on less capital intensive equipm Illinois Tool Works (despite the nam does not make machine tools but a variety of packaging and fastening m rials) Chairman and CEO Silas S. C cart sees an advantage in diversit industries served.

"A slight recession will affect diffe industries at different times," says C cart. "A broad range of industries sh dampen that to a large extent. I d think we see the growth impetus we earlier this year, but we don't see cutbacks and we don't see any inven accumulating with our customers."

Says J. Thomas Schanck, president CEO of Signode, the packaging mate maker: "Right now, our order patte firm and better than we expect Schanck, like his counterpart at De son Manufacturing, Nelson S. Gif

"With any equipment, I rate service #1. That's why we're happy with our Kodak copiers."

d Maskow
entral National Bank
f Cleveland

Vith more than twenty-
ve years of experience
r. Maskow, reprographics
nanager at Central
lational Bank of Cleveland,
as seen a lot of copying
quipment come and go.
e can't speak too strongly
bout service. In fact, he
ates it as the number-one
actor. It doesn't matter
vhat the equipment is. If
e can't get service, he'd
ather not have it.

Yours was one of the first banks in Cleveland to get a Kodak Ektaprint copier-duplicator.

I believe so. And now I've got four of them going full-blast. Both for walk-up and for duplicating jobs that used to have to go offset. As a matter of fact, the copy quality is so well received, someday we may even forget about some of our offset capacity.

So you're really depending on this Kodak equipment.

I sure am. They replaced a real mixed bag of copiers, some of which were very hard to get any service for at all. Going with Kodak copiers has been a good move. I have nothing but good response from all, including my top management.

Of course, machines do break down. How do you find Kodak's response when you do need help?

It's been tremendous. The Kodak service representative always shows up fast. Does his job fast. And does it right. And the proof is, our uptime on these Kodak copiers is running 95% and maybe better.

To Central Bank— as to many other customers— Kodak service plus Kodak quality and built-in serviceability add up to one thing: more predictable performance. And what makes it work— month after month, year after year— is the Kodak service team. By training and design, they have just one responsibility: making sure Kodak equipment works the way it's supposed to.

For more details drop us a line. Eastman Kodak Company, Customer Equipment Services Division, Dept. K901, Rochester, New York 14650.

Kodak

Kodak service pays off in performance.

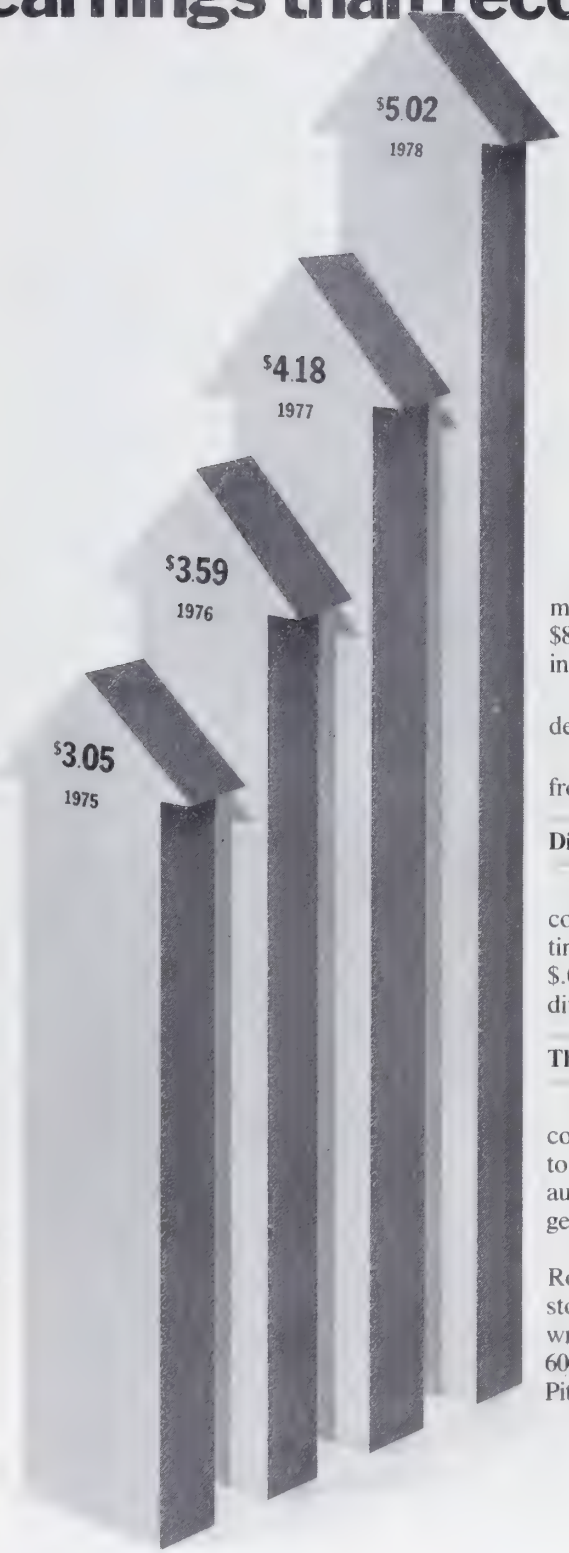
Note: Explanation of Yardstick calculations on page 40. ‡Four-year growth. def Deficit.

There's more to Rockwell International's 1978 record earnings than record earnings.



Fiscal 1978 was the most profitable ar in Rockwell's history. Net income was a record $176.6 llion, or $5.02 per share, up 23% over cal 1977 income of $144.1 million, or .18 per share.

e Story Behind the Record.

But there's more to Rockwell's 1978 ancial performance story than the cord shows.

- The company's operations covered nearly $500 million in venues lost by cancellation of the B-1 craft production program to achieve ar record sales of over $5.6 billion.
- In spite of a $.75 per share provision discontinuance of the company's mestic television business, earnings share increased $.84 to $5.02 to nieve the best earnings performance history.

althiest Financial Position Ever.

In addition to a 1978 record earnings formance, Rockwell's overall ancial position is stronger than at any e in its history. For example:

- Record capital expenditures of $219 million and record dividend payments of $81 million were fully covered by internally generated cash.
- During 1978, the company's total debt decreased by over $125 million.
- Debt-to-equity ratio is .38 reduced from .99 at the end of fiscal 1974.

Dividend Increased.

The quarterly dividend rate on common stock increased for the sixth time in seven years — an increase of $.05 per share, bringing our quarterly dividend rate to $.60.

The Company Behind the Record.

Rockwell is a major multi-industry company applying advanced technology to a wide range of products in its automotive, electronics, aerospace and general industries businesses.

That's just the beginning of Rockwell's 1978 financial performance story. For a copy of our annual report, write to Rockwell International, 600 Grant Street, Dept. 815, Pittsburgh, Pennsylvania 15219.

There are no easy answers to the worldwide energy problem. But one fact is obvious: any long-term solution will require massive and imaginative investment.

Canadian Imperial Bank of Commerce – over $38 billion (Canadian) strong – has been involved in worldwide energy development for years. And we are stepping up our involvement.

We participated in the formation of the International Energy Bank, whose shareholders and associates have combined assets of over $200 billion. This bank's purpose is to finance energy development worldwide, beginning with the North Sea. It's a sound idea. But it's only one of many which we are considering.

We have evaluated energy proposals ranging from nuclear power plants to hydro-electric complexes, from Norway to the Near East. As 'The Ideas Bank,' good ideas are our stock in trade. So if you have an idea in the energy business, call your nearest Canadian Imperial Bank of Commerce office.

Automotive

New Fords awaiting shipment to Europe
With the dollar down, and domestic markets nervous, overseas markets beckon.

TO HEAR General Motors Chairman Thomas Murphy tell it, Detroit will have a bumper year—and forget about any economic downturn. "We still expect record sales," he says, predicting 11.5 million new car deliveries in 1979, up from 11.3 million last year. But Ford Motor Co. Chairman Henry Ford II is far more pessimistic, conceding "a gradual slowdown in economic growth through the year." His forecast: a 4% decline in sales to 10.8 million cars. Then there are Wall Street analysts, like David Healy of Drexel Burnham Lambert Inc., who foresee more than an 8% drop in 1979 car sales, leading to a 35% to 45% slide in earnings for both GM and Ford, and, perhaps more worrying, to Chrysler sinking deeper into red ink.

Even without a recession, the automotive industry has big problems: notably the possibility of UAW and Teamster strikes and the necessity of compliance with the rigorous federal fuel economy standards.

Faced with these prospects, the industry may retrench in some areas and push ahead in others. Banking that change will stimulate sales, Detroit is introducing more midyear models than ever before. In the coming weeks Chrysler will begin promoting two sporty versions of its front-wheel-drive subcompacts, the Dodge Omni and Plymouth Horizon (so far, only four-door versions have been offered). General Motors' push will come in spring with a line of front-wheel-drive compacts. It is the first time GM has made a major midyear introduction. Ford will offer a new, flashier Mustang.

The new offerings, however, are breaking into a market where lagging sales have already forced Chrysler and American Motors to cut production in order to reduce growing dealer inventories. For this year, that means little improvement for the two automakers mired at the bottom of the FORBES ranking. The 15,000 workers Chrysler will be laying off in early January will not affect the production of its subcompacts Omni and Horizon, which are backlogged with orders. Further sales declines could also force GM and Ford to pare their output early this year as well.

The key, of course, is in the consumer's hands, which hold less dispos income and more debt than last Moreover, tighter credit promise make car loans more costly and hard get. Fear of recession drove car-bu plans down sharply, for example, to the end of last year as confidence sa according to Fabian Linden, direct consumer economics at the New Y based Conference Board, a nonprofi search organization.

But the industry has little choice o than to push full throttle in a market could run out of gas. Despite any decline, hefty capital outlays will co ue if only because the industry is mitted to spend $30 billion by the Eighties for more fuel-efficient and cars. Since that spending means bor ing in the face of rising interest r there could be an earnings crunch further disappointments for inve who rely on dividends. Trou Chrysler cut its quarterly dividend year and so far has been silent ove plans to restore it. GM reduced its end payout to conserve cash for its ital program, which totals $5 billion year compared with last year's re $4.5 billion. Ford expects to spend a $3.5 billion, an increase of 40% 1978. About 65% of the outlay will g domestic production. So, maintai dividends may not have the same p ity as in the past.

"We project more than 80% of North American product spending tween now and 1985 will be require meet government standards [for emissions and safety controls]," n Henry Ford.

Worse, upcoming labor talks c hurt industrywide profits and sale well. A strike by the Teamsters u whose contract expires Mar. 31, c sock trucking companies hard enoug stop new equipment purchases. T sales this year are expected to at l equal last year's record 4.1 million u Truck profits, in fact, strongly contri ed to Ford's above-average return o uity showing on the FORBES yards and helped offset the impact of a strike in its British operations. GM Ford account for about 75% of the mestic truck market. Current back

PONTIAC GRAND PRIX

OU'LL FIND SOMETHING NEW TO LOVE EVERY TIME YOU DRIVE IT.

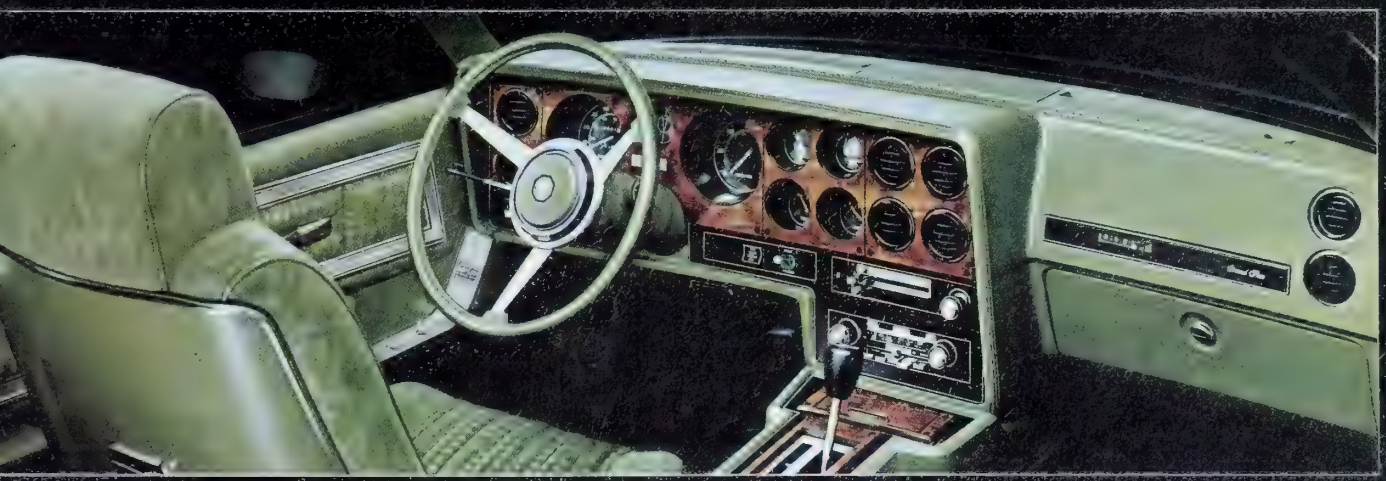
irst, it may be Grand Prix's beautiful, trim styling captivates you the most. With its rich, formal roof-. And new cross-hatch grille.

he next time, it may be Grand Prix's luxurious inte- that charms you. With its soft, available bucket seats. mpressive roominess. And impressive quiet, due in to special body mounts and door and body seals. 's easy to fall in love with Grand Prix's road ability, too. There's a new freer breathing standard 3.8 litre (231-CID) V-6 that will amaze you with its response. Grand Prix is equipped with GM-built engines produced by various divisions. See your dealer for details.

It all makes Pontiac's new 1979 Grand Prix one very enchanting automobile to buy or lease.

And makes owning one a love affair... that never seems to end.

GM

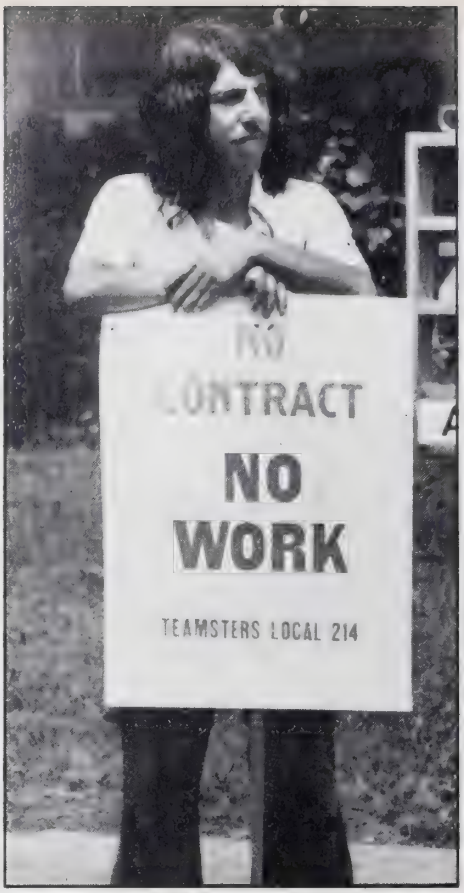


THE 1979 PONTIACS OUR BEST GET BETTER

are healthy, running 90 to 120 days for such heavy-duty truckmakers as International Harvester, PACCAR, Signal's Mack division and Fruehauf, which makes trailers. Harvester, the industry leader with 26% of the heavy-duty market, sees its 1979 sales "a little stronger" than last year's. Says Tom Dougherty, vice president for truck operations: "The order board for commercial trucks is up significantly. In my opinion, there is no reason to believe there is much, if any, error in our estimation."

The Teamsters aren't the only anxiety so far as labor is concerned. If the United Auto Workers decide to strike next September, the odds are, given its pattern in recent years, that GM and its suppliers would be hit first. Chrysler and AMC are too small and troubled. Ford was the prime target of the four-week strike in 1976. GM was last struck by the UAW in 1970 for ten weeks, resulting in a production loss of 1.5 million cars and trucks. "A 60-day strike would reduce GM's earnings roughly $3 per share," says Detroit auto analyst Arvid Jouppi.

The strike also would put a crimp in GM's ambitious overseas plans for this year. With well over half of the domestic car business, GM intends to pay more attention to European markets, where it lags well behind Ford—especially now



with the dollar down relative to Eu an currencies. It will concentrate o markets of Germany, Belgium, Sw land and Sweden.

The game is still fuel economy f automakers, whose fleet of cars i '79 model year must average 19 mil gallon. "From here on out, the cons will have to give up comfort for e austerity," suggests one Chicago dealer. It means a new crop of sm lighter, down-sized cars. And, in th of GM, it means two sizes of opt diesel engines in its Oldsmobiles, C lacs and light trucks. GM's Cadill dorado will be 1,200 pounds lighte 20 inches shorter. Ford and Mercury size cars have been pared by som pounds and more than a foot in len

Meeting the economy standards means higher prices on the bigger fuel-efficient cars in order to enco purchase of smaller cars. Ford will tinue pushing its Pintos, GM its vettes. Ford also is expected to hold filling orders for cars equipped wit engines. It is feeling the greatest pre meeting the standards due to the sales of its Pintos, which receive recall publicity for their alleged f gasoline tanks.

The redesigns may be a headac Ford, GM and Chrysler, but they

Sitting Pretty.

There are sound reasons why South Carolina's sitting pretty. We have a constitutionally mandated balanced state budget . . . one of the lowest per capita tax burdens in the nation. We've built technical schools, colleges and universities needed to provide business with both highly skilled workers and well educated professionals. Our construction and leasing costs have historically been the lowest in the nation.

We're at the heart of 7 million consumers in the strategic Piedmont Crescent and closer to centers of buying power than any other Southeastern state. We have one of the highest worker productivity rates in the nation and the lowest rate of business failure. Now that's sitting pretty.

South Carolinians have gone the extra mile to create an environment in which our cities can grow and prosper . . . because we know that once a city falls apart, all the king's horses and all the king's men can never quite put it all back together again.

Find out how your business, be it corporate or sales offices, research and development facilities, manufacturing plant or distribution headquarters, can share the wealth of a South Carolina city. Write or call the professionals at the South Carolina State Development Board, Robert Leak, Director, Suite 213, Post Office Box 927, Columbia, South Carolina 29202. (803) 758-3145, TWX (810) 666-2628.

South Carolina

Grumman brings you fresh flowers. 9 weeks old.

They're still fresh and fragrant as the day they were cut. Yet these carnations have lived 6 times longer than nature intended, protected by a unique development from Grumman.

Dormavac. A new way to store and transport flowers, meat and fresh produce without freezing, bringing them to world markets without adding the expense of air freight.

Using only an environment of controlled temperature, low air pressure and high humidity, Dormavac keeps commodities fresh for long periods of time. This means more fresh food on tables around the world, and new world markets for perishables, including beef, pork, lamb, strawberries, papayas, mangoes, limes and a variety of living plants and flowers.

Dormavac. Developed with the space age technology that goes into everything we make.

From our aerospace systems, like the F-14 Tomcat fighter which has no equal.

To our diversity of products. Like our Pearson yachts. Data Systems. And our Sunstream™ solar energy systems for home and business.

We're Grumman. We're technology, performance and reliability. Grumman Corporation, Dept. GCP, Bethpage, New York 11714.

GRUMMAN

The reliable source

nza for the 25,000 firms that annu-
leliver about $50 billion in parts and
ces to the auto industry. Any dip in
sales, of course, will be felt by origi-
equipment manufacturers (OEMs)
Libbey-Owens-Ford (the single larg-
lass supplier to the industry), Cum-
Engine, A.O. Smith (frames),
er-Globe (steering wheels), Bendix
es), Eaton (truck parts), Borg-
er (transmissions) and the tire pro-
rs, which chalk up 30% of their vol-
in new autos. General Tire & Rub-
the fifth largest among the tire
, but by far the most profitable with
% return on equity, is diversified
gh to withstand a mild slump. But
tire companies like Goodyear,
ber two in the ranking, and Fire-
, traumatized by its huge $200 mil-
ecall, will feel the impact even more
use of the beating they are taking in
gn markets. About 30% of both
year's and Firestone's sales are out-
the U.S. "A decline in sales would
excess capacity and could lead to
-cutting," says Donald DeScenza of
ldson, Lufkin & Jenrette.
anwhile, there are some OEMs that
found their niche. Purolator, for ex-
e, a maker of gasoline filters, is do-
xtra work for Ford in solving its

Other tire companies like Goodyear, which is number two in the ranking, and Firestone, traumatized by its huge $200 million recall, will feel the impact even more because of the beating they are currently taking in foreign markets. About 30% of both Goodyear's and Firestone's sales are outside the U.S. "A decline in sales would mean excess capacity and could lead to price-cutting," says Donald DeScenza of Donaldson, Lufkin & Jenrette.

Pinto gas tank problems. Signal's Garret Corp., a longtime maker of turbochargers for trucks, is tooling up to make 400,000 of them by June. Both GM and Ford intend to equip more of their small engines with turbochargers, the device that gives a car faster acceleration. Hoover Universal, which leads the FORBES yardsticks making casters, springs and bearings, will be on stream with its $8 million plant to make seat cushions for the '79 Volkswagen Rabbits. Other suppliers are still searching. Questor Corp., for example, decided to get out of the piston-ring business. It concluded the expense to upgrade its facilities would not be worth it since the advent of four- and six-cylinder cars means a smaller piston market. Instead it will focus on mufflers, toys and sporting goods to bring it off the bottom rung in return on equity on the FORBES yardstick.

Those companies that will least feel a downturn are the replacement parts suppliers. Echlin Mfg. Co., which ranks number two in the FORBES list on return on equity, will be supplying ignition, brake, carburetor and speedometer parts to autos that are three to ten years old. Champion Spark Plug, realizing that cars with fewer cylinders means fewer spark plugs, plans to diversify by making windshield wipers. Genuine Parts, which does no manufacturing, will maintain its strong profitability position (number one in return on capital) as a nationwide distributor of auto parts.

For sure, the automotive industry is vulnerable. Yet no one expects it to take the kind of plunge it did in 1974, when deliveries fell 23% to 8.9 million units. Still, the industry will have to work hard to avoid a serious earnings downturn in the months ahead. ■

ote: Explanation of Yardstick calculations on page 40. P-D Profit to deficit. def Deficit.

IBM is winning even while it is losing in one of the few major industries still booming.

Information processing

IBM terminals designed to help small retail stores verify credit cards or checks

A slipping market share in an exploding market.

IN LATE 1977 Frank T. Cary, chairman of IBM, told a FORBES man he traveled to the People's Republic of China and was "astounded." His hotel room had no lock, because in that communist society there was absolutely no stealing. But when Cary then went to Hong Kong, "the most capitalistic place in the world, the stealing was the worst I have ever encountered."

Of course, everyone knows what happens to thieves in places like Communist China. If they don't shoot them, they send them for "reindoctrination," which can be worse than being shot. Still, there must be times when Cary wishes he were in the People's Republic. In the States everybody is stealing little pieces of his market. Tiny Cray Research now dominates superfast scientific computers, and IBM isn't even remotely a contender. Amdahl, Itel and a dozen other firms make equipment that runs on IBM software and can be plugged in when you take an IBM machine out; most had record earnings in 1978 and will in 1979, too. Minicomputer makers like Digital Equipment, Data General and Hewlett-Packard continue their rapid growth, persuading many IBM customers to buy their small computers instead of trading up to larger IBM mainframes. Small and not-so-small companies (they include Xerox) are underpricing and outperforming IBM in word processors. Even Exxon has been taking bites. IBM's processor screen, with only eight lines visible at one time, is inferior to the 64-line job produced by Exxon-backed Vydec—as well as by a 66-line Xerox machine. Exxon also beat IBM to market with the intelligent typewriter. Even in electric typewriters, where IBM is entrenched, Olivetti's machine has picked up 2% in market share. Meanwhile, IBM's two main current efforts to steal other companies' markets were being talked about everywhere as flops: minicomputers and copiers.

Poor IBM.

Poor IBM? It had a record year in 1978 with an estimated 14% earnings gain and almost certainly will have a larger gain in 1979. In fact, 1979 is in the bag for it, helped by a huge backlog of orders for IBM's 303X series computers.

The simple fact is that the mark growing so fast, IBM can lose m share and market segments and come out way ahead. Thanks to m miniaturization, data processing i only major industry left where costs keep coming down in spit inflation, and so computer-type proc are a best buy.

IBM remains what it has beer years: a superb economic organizati perhaps the world's best. Despite huge size (revenues of over $20 billio is beautifully profitable (profits: $3 lion in 1978). This shows in its retur total capital, 22% *(see yardsticks)*. I net profit margin of 14.7% *(see yards* is not topped by any rival.

Nearly every information-proces company appears headed for higher ings in 1979, the oft-predicted reces notwithstanding. "I don't think we be hit as hard as more traditional ca ity-creating industries," says Edso Castro, president of minicomp growth champion *(see yardsticks)* General. "That's because we are pro tivity-increasing, and the demand that continues in an economic dc turn. The underlying costs of distrib processing such as semiconductors, c munications and a dozen other elem are going down. As costs fall, more jects become economically justifiec the whole market is exploding."

What is de Castro talking about— tributed processing? He's talking al the growing tendency for users to l small, auxiliary-type machines on l tion plugged into huge computing stat elsewhere. Machines that were once sive, like telephones, typewriters, registers and typesetters—that requ human intelligence to operate the now can work on their own with the a computers. Thus is electronic data cessing being "distributed." This cre demand for smaller, less complex eq ment and so provides big openings smaller companies. Control Data is n ing progress in computer-based inst tion for schools. NCR's electronic register systems—they can even ve credit ratings—have turned around once lagging company which is now ond only to IBM in profit margins.

ter Bleyler, vice president, tells how A&A works from a client's point of view:

"We're way ahead in projecting how new retirement laws affect benefits planning."

"Our computer operation is eady able to project accurately the anges in the Social Security law d tell clients what they need to ow: not only the employer cost of e Social Security tax but also its ancial impact on their benefits ograms. We're also counseling on e effect of the new mandatory irement age. From the client's nt of view, pensions, life insur- ce, medical plans and disability come programs could all be problem areas."

Working from a client's point of view is our way. In St. Louis, where Pete Bleyler, F.S.A., is a consulting actuary. And in over 110 cities here and overseas. That means working as allies, solving business problems together. Our Human Resource Management experts not only coordinate benefits planning to avoid costly overlapping, but they're on top of late-breaking governmental regulations.

We think our dedication to acting as an ally of the clients we represent is a big reason why A&A has become a worldwide leader in the insurance brokerage and financial services business. We have the facilities, expertise and strength to act as effective allies. We work from the client's point of view, whether the corporation is large or small.

Alexander & Alexander
The Allies

What do you see when you look at a tree? It depends on your perspective.

You might see a source of jobs.

You might see a source of lumber, plywood, paper, packaging—"need" products as opposed to "want" products.

You might see an ideal base for a growth business, a natural resource that, managed properly, renews itself perpetually.

You might see a splendid example of Nature's artistry.

When we look at a tree, we see all these things, and more. We see our life's blood. Much of what we do depends on trees. So we take care of ours.

We strive to manage them in a way that reconciles your perspectives and ours, so they'll provide jobs, products, profits and splendor forever.

If we succeed, everybody wins. You the worker, consumer, investor and citizen. And we the employees and shareholders of Boise Cascade.

Reason enough to try, don't you think?

Boise Cascade Corporation

A company worth looking at.

competition appears everywhere for the pieces and building blocks of what formerly would have been a strictly IBM system

The oldest, most established competitors of IBM have all prospered, but shown lower growth than the newer comers. That's because the old-timers like Control Data, NCR, Sperry Rand and Honeywell have tried to find a niche and leave Big Brother alone, hoping IBM does likewise. Sperry Rand particularly has been successful in creating a loyal customer base that stays with it as new machines are introduced. So has Burroughs. But the niche-finders have deliberately limited their prospects as compared to newer contenders like Amdahl.

The biggest growth, of course, has been in minicomputers—pioneered by Digital Equipment, which now has over $1.4 billion in revenue. IBM was slow getting into them, but it was inevitable that it would make a major thrust against the growing stronghold of companies like Data General and Hewlett-Packard. However, the smaller companies are no pushovers. "IBM's mini Series/I is internationally substantially below quotas," claims Data General's North American Sales Manager Frank M. Keaney, who recently left IBM. "The flaw was in their overall marketing strategy. They tried to emulate a minivendor with minimal software. But customers will not accept that from IBM. They have been trained to expect and demand full support."

Keaney goes on: "A second flaw is that

"IBM's mini Series/I is internationally substantially below quotas," claims Data General's Frank M. Keaney. "The flaw was in their overall marketing strategy."

Series/I is sold by IBM's Atlanta, Ga.-based General Systems division and it is not calling on many logical customers. Ideally, General Systems would be invited in by the White Plains, N.Y.-based IBM Data Processing division. Instead, IBM's DPD is worried about protecting its own customers rather than selling Atlanta's small computers."

In rebuttal, a spokesman for IBM's General Systems division claims the ies/I is meeting all expectations and improved Series/I will do well, too.

Long run, says Data General's de tro, IBM cannot be denied a signif market share of minis. But he "While IBM is taking a piece of the r computer business, we're going t taking away a chunk of what would formerly gone to their big mach Digital Equipment and ourselves built up a loyal customer base and ain't gonna own minis."

The turnaround of the year was X "Xerox entered 1977 with a weak uct line," says a well-informed obse "but now they have effectively strong, competitive pieces of cop equipment into every market segn That is a very major change." X 1978 earnings are expected to grow

Nevertheless, Eastman Kodak was ing Xerox fits with its Ektaprint c duplicator. But IBM's Series III c suffered from serious paper jams and er problems and even had to be te rarily withdrawn. Meanwhile X own big 9200s and 9400s, which serve as printing machines with qu

Get the latest update on Dana. Takes you two minutes.

That's right. *This* month's update. One phone call from wherever you happen to be will give you our year-to-date sales and earnings as well as a brief review of current events affecting Dana.

Here's the number to call: in the U.S., 1-(800) 537-8823; in Ohio, 1-(800) 472-8810.* At the end of our update, please make any comments or ask for any information you would like sent to you.

DANA

DANA CORPORATION
TOLEDO, OHIO 43697

*In Canada dial 1-(800) 263-7291. In the United Kingdom dial operator (100) and ask for FREEphone 2258

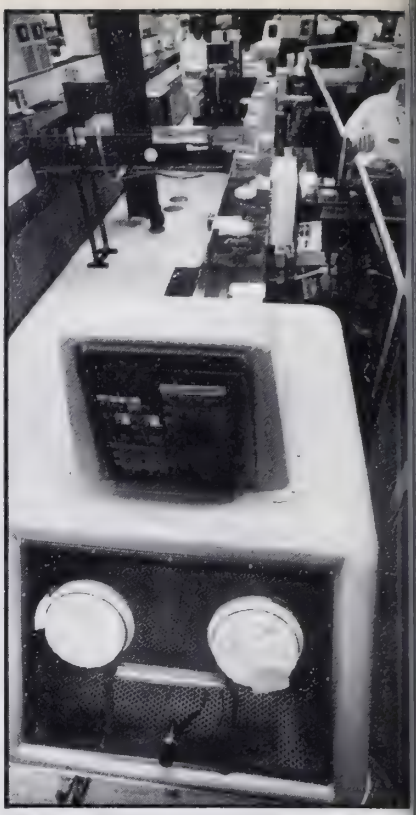
We want you to talk in our library.

Ours is a living library of spoken words. A library of roughly 40,000 textbooks on tape, available free of charge to blind students. Eligible students also include the visually impaired, the learning disabled, and the physically handicapped who cannot handle printed material.

These students continually require new texts. And to fill this need, volunteer readers make tapes in our 29 recording studios across the country.

We urgently need readers with technical or professional backgrounds, and native speakers of foreign languages. If you can spare two hours a week, please volunteer. We are a non-profit organization supported by contributions from the public.

Recording for the Blind . . . . . *an educational lifeline*
215 East 58th St., New York, NY 10022.



IBM computer-controlled chipmaking
Most integrated, most profitable.

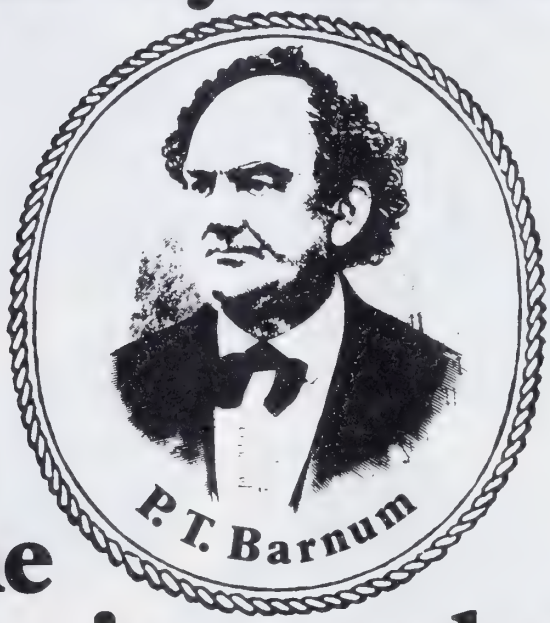
that is comparable to offset prin continued to do well.

In the low-priced plain-paper-c market, which Xerox neglected for cade, firms like Savin, A.B. Dick Nashua, which sold copiers made by Japanese firm Ricoh, continued to ha ball. Suddenly last fall Xerox count with its excellent 2600, which is pr about the same as a Savin, but has su or performance. Sales have taken off should continue strong in 1979.

Long run, Xerox knows IBM wil the competitor to beat. Sometime in mid- to late 1980s there will be no c ing industry. Instead, the office of future will utilize multipurpose chines which copy and do other th such as print electronic mail. So X has filed with the Federal Commun tions Commission to set up a sate system to compete with IBM and AT for data communications that will c out of those machines.

Even as IBM's market share drops ly, government lawyers and bureauc slowly shuffle masses of antitrust pa at incredible cost to shareholders taxpayers. The government wants break up a monopoly that no longer ists—if it ever did. While the bureauc fussed and fumed, the free-market tem and a series of tough, smart c petitors were doing the antitrust w for them. At the same time, thanks fast-growing overall market and to own organizational excellence, IBM growing stronger even as it is lo more than a few local battles. ■

P. T. Barnum once said: "I don't care what they say about me in the papers just as long as they spell my name right."



He'd have a hell of a time staying in business today.

Your sales—even your ability to do business—can be profoundly affected by what the papers say about you (with all due respect to old P. T.).

And you really have *little control* if somebody (even if he or she is completely wrong) picks a public fight with you.

Preparing for just such a public confrontation is what corporate advertising is all about. That's why so many companies carry this logic to the conclusion that follows it:

The Logic:

1. The time to make friends is before you need them.
2. You never know where you will need friends tomorrow.
3. So your corporate advertising should try to make friends everywhere—among millions.
4. You stand the best chance of making friends among reasonable, open-minded people.
5. Especially when you catch them in a friendly mood, prepared to believe what you say.

The Conclusion: Run your corporate advertising in Reader's Digest.

It goes to one out of four families in America. It guarantees the kind of public reach that television can only claim. It reaches well beyond the people whose support you already have (the readers of such traditional corporate advertising media as the business publications and newsweeklies) to a huge audience of people who are not yet committed either for or against you.

And The Digest goes to reasonable, open-minded people who read settled down, ready to feel friendly toward and believe companies that come into their homes with The Digest.

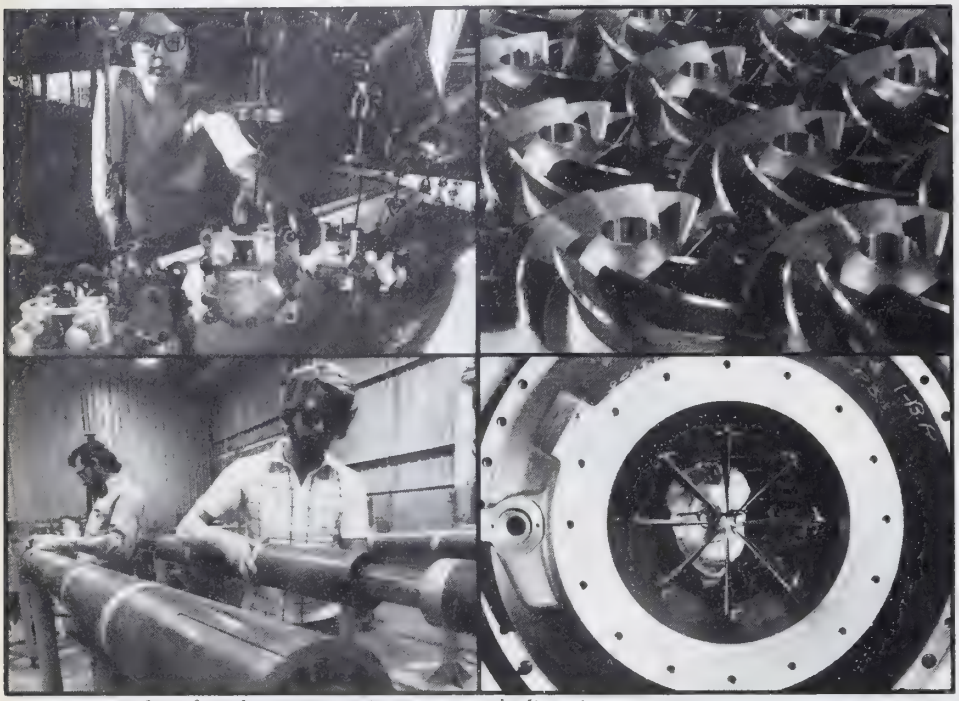
Corporate advertising in The Digest, in short, can help win millions of friends for your company *before* you need them. For *when* you may need them very much.

Reader's Digest

The place to make friends for your company.

For several compelling reasons—low stock prices and great interest overseas among them—the urge to merge and acquire goes on.

Multicompanies



Some examples of multicompany Borg-Warner's diversity
In the biggest deal of the year, it plans to merge with Firestone.

MULTICOMPANIES, which are to the acquisition and merger game what lions are to jungles, were more aggressive last year than at any time since the late 1960s. During the first 11 months of 1978, multicompanies and other firms announced or completed 74 acquisitions whose values topped $100 million. That's 80% above the level for all of 1977, when 41 such mergers were announced or completed, according to Tomislava Simic, director of research for W.T. Grimm & Co., the Chicago-based merger specialist. Of last year's mergers, 20 were in the superdeal class, involving more than $300 million each, including IC Industries' tender offer for Pet Inc., General Electric's takeover of Cox Broadcasting Corp., United Technologies Corp.'s bid for 49% of Carrier Corp., and the biggest deal of the year—Borg-Warner's $1.3 billion merger with Firestone Tire & Rubber Co., the nation's second largest tiremaker.

About 30 of the 44 conglomerates and 13 of the 25 multi-industry firms on FORBES' lists were engaged in some kind of acquisition activity. Chromalloy American Corp., W.R. Grace & Co., Alco Standard Corp. and Esmark, Inc. were among the most active acquirers, each doing four or more different deals during the year. Among those seeking acquisitions were "black knights," such as United Technologies and Curtiss-Wright Corp., which spent much of the year waging unfriendly battles for control of Carrier and Kennecott Copper Corp., respectively; "white knights," such as City Investing Co., which stepped in to save Uarco Inc. from merger-hungry Daylin Inc., and companies trying to save their own skins, such as LTV Corp., which finally consummated its shotgun wedding with Lykes Corp.

LTV, whose five-year average for return on equity ranks near the bottom of FORBES' conglomerate list, thinks the merger will bring health to its sickly Jones & Laughlin Steel unit and Lykes' even sicker Youngstown Sheet & Tube Co. operation. LTV Chairman Paul Thayer says, "The merger will primarily strengthen our steel operations by making them more competitive and significantly increasing their profit potential." He further asserts that the operation Youngstown and Jones & Laughlin f a way that will enable LTV "to ach substantial operating efficiencies."

Three companies on last year's glomerates list were themselves acqu by other merger-minded firms—Am Inc., by Dominion Bridge Co.; UOP I by Signal Companies; and National dustries, Inc., by Fuqua Industries, In

Why the continuing merger fever?

Although many firms continued t versify in an effort to hedge against cy cal downtrends in their main busines a principal impetus for acquisition c from the stock market. With stocks t ing at their lowest levels in years, it possible to offer a hefty premium market value and still end up paying than book value for some very attrac companies. For example, the new h ing company that will control B Warner and Firestone is offering F stone shareholders convertible prefe stock or debentures worth $870 mill or about 15% more than the market ue for Firestone common before merger was announced. But that's well below Firestone's book value about $1.6 billion.

As of Dec. 8, 1978, Norman Wein an analyst with Oppenheimer & counted 254 publicly held compan whose shares could be purchased for than the underlying current assets, all debt. "You get the fixed assets, go will, people and patents all for free," s Weinger. Companies like Cannon M Dynamics Corp. of America and G more Distilleries. In the case of Cann Weinger points out, for every share "buy at about 15, you get $2.59 in c $7.79 in inventory, $10.89 in receivab You get $17.34 in working capital, t have no long-term debt and the b value is about $32 a share. So yo getting about $2 in net working cap for nothing, and besides that you about $14 in fixed assets for nothi using a year-end balance sheet. Th why so many acquisitions are going 2½ to 3 times what the public is will to pay for stocks."

But low stock prices aren't alone sponsible for the spate of big-tic mergers. Contrary to popular belief

ote: Explanation of Yardstick calculations on page 40. ‡Four-year growth. P–D Profit to deficit. D–P Deficit to profit; not ranked. def Deficit.

good many companies received acquisition bids at premiums *over* book value. (In all cases the offering price was, of course, well above market price.) United Technologies recently offered $28 a share to holders of Carrier common at a time when its book value was about $17 a share and its market value was about $20 a share. Dart Industries, Inc. offered $51 a share to holders of P.R. Mallory & Co. common when its book value was about $28 a share and its market value about $29 a share. City Investing offered $52 a share to holders of Uarco stock with a book value of about $31 a share. Uarco common was trading at about $25 a share before Daylin first sought it for $42 a share.

Given the cost of starting from scratch in a new field, such bids often make good sense. Book value, after all, rarely equals replacement value. And if a company were to make a scratch start, says Donald P. Kelly, president and chief executive of Esmark, "I can tell you from experience that, whatever your estimates of plant investment, startup costs and construction periods are, they are probably too low. Secondly, launching a new product and obtaining significant market share is seldom easy." In contrast, Kelly says that when you acquire a firm, "you know the exact cost, you are in business right now, you know the market share and growth potential and you can reasonably project profit and loss capacity."

A decade ago, a good many firms

When you acquire a firm "you know the exact cost, you are in business right now, you know the market share and growth potential and you can reasonably project profit and loss."

didn't seem to care what they were buying so long as it provided a short-term hype to share earnings. Nowadays, there are signs that even the conglomerates are looking for a "good fit" when making acquisitions. International Telephone & Telegraph Corp., for example, which has gone as far afield in the past as Continental Bakers, now seems to be concentrating its acquisitions in th formation delivery" area. Last y bought Courier Terminal System of Phoenix for about $50 million an it may make one other acquisition field worth another $150 million. dustries, Inc., which manufactur supplies petroleum equipment an vices, agreed to buy the oil well ser business of Texas International C $101 million. Henry Derbyshire, tive vice president of Whittaker C conglomerate which bought 130 as companies between 1967 and 1 only to end up selling most of them says that the first question Whi asks these days about a potentia chase is, "What do we know abo business?" So, Whittaker has limit acquisition search to areas in whic already involved—"life sciences an cialty coatings and chemicals."

Other firms seem to be incr their holdings in existing invest rather than making new acquisi Thus, Tenneco Inc., which held a interest in Philadelphia Life Insu successfully tendered for the rest

Note: Explanation of Yardstick calculations on page 40. def Deficit.

In 1872, an ambitious young carpenter got his start in Cleveland. His international company is still thriving there, today.

It was April. Young Samuel Austin was headed for America. He had left his job in Grantham, England, taking only his carpenter's tools.

Later, he wrote: "We had heard that large numbers of men were needed to rebuild Chicago after The Great Fire. Some of us had agreed to leave for America, but when the time came to depart, all the others backed out. I decided to go alone."

Just over a decade later, in Cleveland instead of Chicago, Austin had already built the workshop shown in the left of the photo below. Located directly behind his residence at the right, it supplied doors and sash for his growing construction business.

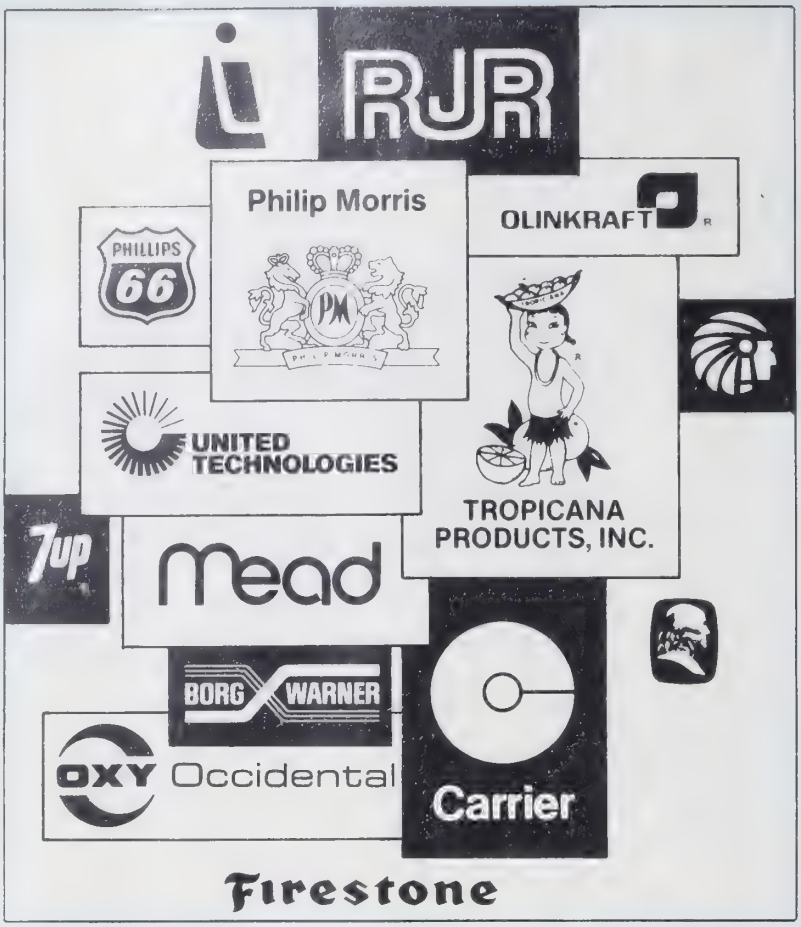
Today, The Austin Company is an international organization with design, engineering and construction experience that encompasses virtually every type of commercial, industrial and institutional facility. The company's offices throughout the world combine local purchasing, hiring and sensitivity with international scope and expertise.

Austin offers a full range of services—from consulting through interior furnishing—all provided with undivided responsibility. For more information, contact The Austin Company, Cleveland, Ohio, 44121.

One current project, above, is an aircraft manufacturing, maintenance and overhaul base near Athens, Greece, designed and under construction for Hellenic Aerospace Industries.

THE AUSTIN COMPANY

DESIGNERS • ENGINEERS • BUILDERS



Super deals of the year

Below, the largest mergers and acquisitions planned or completed in 1978

Acquiring company	Acquired company	Price (millions)
Borg-Warner*	Firestone	$1,327
Chessie	Seaboard Coastline	1,038
Occidental Petroleum	Mead	998
R.J. Reynolds	Del Monte	584
Johns-Manville	Olinkraft	581

he Working Trees: lass of 2020.

ıe time the seedlings in our tree nursery ome productive "working trees," America equire more than twice the wood fiber es today.

Since doubling our land resource is ally impossible, Potlatch has turned to r means to satisfy future demand.

One of the ways we plan to increase s is through genetically-improved trees.

Many seedlings in our nursery originate "parents" significantly superior in ıin desirable characteristics. Such traits ıe combined and enhanced through ıg and crossbreeding.

Our objective is to develop trees with r growth rates, fiber quality and insect disease resistance.

A better class of working trees will us get the most out of the land under our uctive control.

Potlatch Corporation, Public Information e, P.O. Box 3591, San Francisco, CA 94119.

Potlatch

We grow the working trees.

How do the middle-ranking companies in each of the 30 main industry groups compare in terms of growth and profitability?

Who's where in the industry groups

A USEFUL EXERCISE that seasoned investors sometimes put themselves through at year-end is to ask themselves what industries they'd like to see represented in their portfolios in the year ahead. Not what companies they want—that's the next question—but first, what *industries* they want. Asking so apparently fundamental a question before comparing individual stocks can sometimes raise provocative insights.

Did you realize, for example, that for the past five years the building equipment industry has shown a higher return on capital (16.2%) than, say, the toiletries and cosmetics industry (15.1%)? Or that the aging shoe industry, so vociferous in crying for protection from foreign competition, has made nearly as much on invested capital (12.7%) over the past five years as the booming computer industry (12.8%)—although granted shoes only rose one percentage point last year as opposed to nearly three percentage points for data processing?

Those are the kinds of insights that the broad overview yardsticks below are designed to give. Here FORBES ranks the median or middle-ranking companies in all 30 major groupings and subgroupings of American industry in just the same manner as the 1,006 separate companies are ranked elsewhere in this issue. We then break those groupings down even further into 82 separate industries within the main groups—showing, for example, separate numbers for five distinct areas of the industrial equipment industries. The results show what industries are the most profitable, which have the fastest earnings growth and which have the most promising trends in the latest 12 months. We use median numbers rather than average numbers to avoid having bonanza earnings or staggering losses at the top or bottom of any industry distort the results. These medians are simply that—the track record made by companies in the middle of a group.

Without looking at the table first, do you think you can guess what industry showed the highest return on capital for the latest 12-month period? If you pic the booming entertainment indu (16.9%), you're way off. It wasn't that standby ethical drugs (18.6%) eit And the bullish aerospace busi (13.9%) wasn't even close. The answ the fire and casualty business with impressive 24.3%. But don't expe repeat. Take a look to the right at five-year average in that indu (14.1%) and you'll see a perfect exam of what they call a cyclical industry.

Let's take an easier one. What indu has shown the fastest earnings gro over the past five years? No, it certa wasn't aerospace (25.8%) or compu (23.5%). You were close if you pic food service (26.1%) or the more obvi mining and drilling equipment (30.6 But the answer in fact is heavy consti tion, which has turned in a stunn 32.5% growth in per-share earni since the oil embargo.

At the bottom end of the table, s gloomier thoughts come to mind. pretty clear that the heavy hand of g ernment regulation isn't permitt most utilities to keep pace with inflat in terms of return on capital. So country is just running down its inv ment in that industry and if we keep t up for long the next generation w thank us. The steel industry may be most profitable in the industriali world at the moment, thanks to tr barriers, but its return on capital ha kept pace with inflation for years. I haps the saddest story is the railro beggared for generations by the gov ment while truckers got a free ride highways paved with taxpayers' gold.

Note: Explanation of Yardstick calculations on page 40.

There are over 44,000 ways in which Crouse-Hinds shows its concern for electrical product safety.

If you were to ask architects, contractors, designers, engineers and users of commercial and industrial electrical systems, "What company in the electrical manufacturing industry shows the most concern for safety of electrical product applications?" we're confident that many would answer "Crouse-Hinds."

That's because the safety we strive to build into our over 44,000 domestic products has won international recognition in many industrial and commercial applications. From the best to the worst environments.

It's also because our dedicated staff of code specialists has become known as industry experts at understanding hundreds of electrical safety codes around the world.

But, our reputation rests mostly on the products themselves. Crouse-Hinds products are constantly being proven in demanding, long term installations worldwide. In fact, we believe we have more electrical products *safely* at work than anybody else, not only in clean, but also in wet, damp, dirty, dusty, corrosive and otherwise abusive environments. Only a company with a long history of commitment to product safety could make that statement.

The Crouse-Hinds family of electrical products: Cable and conduit fittings • Plugs and receptacles • Enclosures • Industrial lighting • Outdoor lighting • Aviation lighting • Traffic signals and control systems • Wiring devices • Industrial controls • Specialty switches • Secondary electrical distribution assemblies • Safety switches • Circuit breakers • Meter mounts • Electrical control devices • Stampings • Castings • Coils and transformers.

For more information about the company that's concerned about product safety in over 44,000 different ways, write: Crouse-Hinds Company.

CROUSE-HINDS®

CROUSE-HINDS COMPANY

P.O. Box 4999, Syracuse, N.Y. 13221.

How do they rank in terms of return on stockholders' equity and return on total capital—stockholders' equity plus long-term debt?

Who's where in profitability

THE MOST OBVIOUS and also the most hard-nosed measure of how well a company is performing is how profitable it is relative to other companies over time. To gauge this by looking solely at how much a company earns as a percentage of stockholders' equity, however, can occasionally be misleading. If a company has had significant losses in the recent past, for example, stockholders' equity will be much smaller—so recovering earnings, as a percentage of that smaller base, will appear unusually high. But you can tell which companies these are by looking at return on total capital: equity plus long-term obligations.

For example, first-ranked Lockh whose equity was decimated by writeoffs on the TriStar program, s a lowly 650th on five-year return on ital. Second-ranked Columbia Pict despite two outstanding years w have brought its debt-to-equity back to normal, still has inflated year return-on-equity figures from losses—as its 180th ranking in five return on capital suggests.

Beyond such statistical extremes getting down to basics, the most p able major corporation of the top 1 surveyed by FORBES was once again ery Air Freight, sixth in return on e but first in return on capital—and n two full percentage points higher i latest 12 months. Another debt money machine, semiconductor pr er Intel, comes a close second—exce the latest 12 months, when the com was unable to sustain the pace. ■

Republic Steel: *action to meet your critical needs.*

Expanded facilities, pioneering technology, and "the best buy in America."

epublic Steel leadership — in apabilities to help you meet the emands of today's markets.

Providing sophisticated oducts that help you control aterial and fabricating costs, ven reduce them. Steels that ean *your* product can match the gher standards asked of it.

Expanding our facilities, to oduce more steels of more xacting quality.

Facilities like Republic's dvanced Strand Caster, produc- g quality alloy steels of the ghest structural uniformity, in the idest range of grades.

Providing a technological apability that has been a pioneer- g influence for more than 45 ears. Alloy steel technology and a nique internal/external quench nit, for example, applied to oil dustry needs produced Republic S-90* high-strength casing. To sist the disabling corrosion of ydrogen sulfide environments

-90 is a trademark of Republic Steel Corporation

Republic Steel's new Q-BOP facility in Chicago. A 200-ton per hour steelmaking unit, incorporating the most advanced technology, to produce carbon and alloy steels for billets, bars, and oil country casing. The energy efficient Q-BOP consumes on the average of 70% less energy than the four open-hearth furnaces it replaced.

faced by drillers in their widening search for energy.

Offering the assurance of a flexible inventory system, dependable delivery, and in-depth technical services.

Supplying what we know is pound for pound, the best buy in America. American steel, basic ingredient of industry success.

And Republic provides the full-line product capability to meet your expanding needs.

- carbon and alloy bar and wire
- high-strength steels
- cold finished bars
- welded steel tubing
- stainless and special metals
- pipe and oil country tubular goods
- cold rolled sheets

Action to meet your critical needs—that's what you get from Republic Steel. Responsive action, in products, technology, delivery and service. Our capabilities are designed around you. To help you make the most of what you make. Efficiently and profitably.

For more information about Republic Steel, its facilities and products, write Republic Steel Corporation, Department 1441, Cleveland OH 44101.

Republicsteel

Helping steel users make the most of what they make.

To handle the fast-breaking issues of the day takes a printer who can handle the fast-breaking issues of Forbes.

It takes us. City Investing.

Among our operations is World Color Press, one of the largest printers of magazines.

Including the one you're reading right now.

Forbes built its reputation on informed coverage of business and financial news. News that breaks faster by the day.

Keeping up with that news takes a printer who can keep up with Forbes. An efficient, economical operation that knows how to meet deadlines.

Exactly what the innovative management of World Color Press provides.

It's the same innovative management you'll find in all our operations. Water heaters. Heating and air conditioning. Containers. Housing and mobile homes. Budget motels. Insurance.

It explains why our assets grew last year to more than $5 billion. Why sales rose to over $3.7 billion. And why we're leaders in so many industries.

Including the printing of magazines like Forbes.

City Investing

Promising is one thing. Delivering is something else.

HNG has a history of keeping supply even with demand in the field of resources.

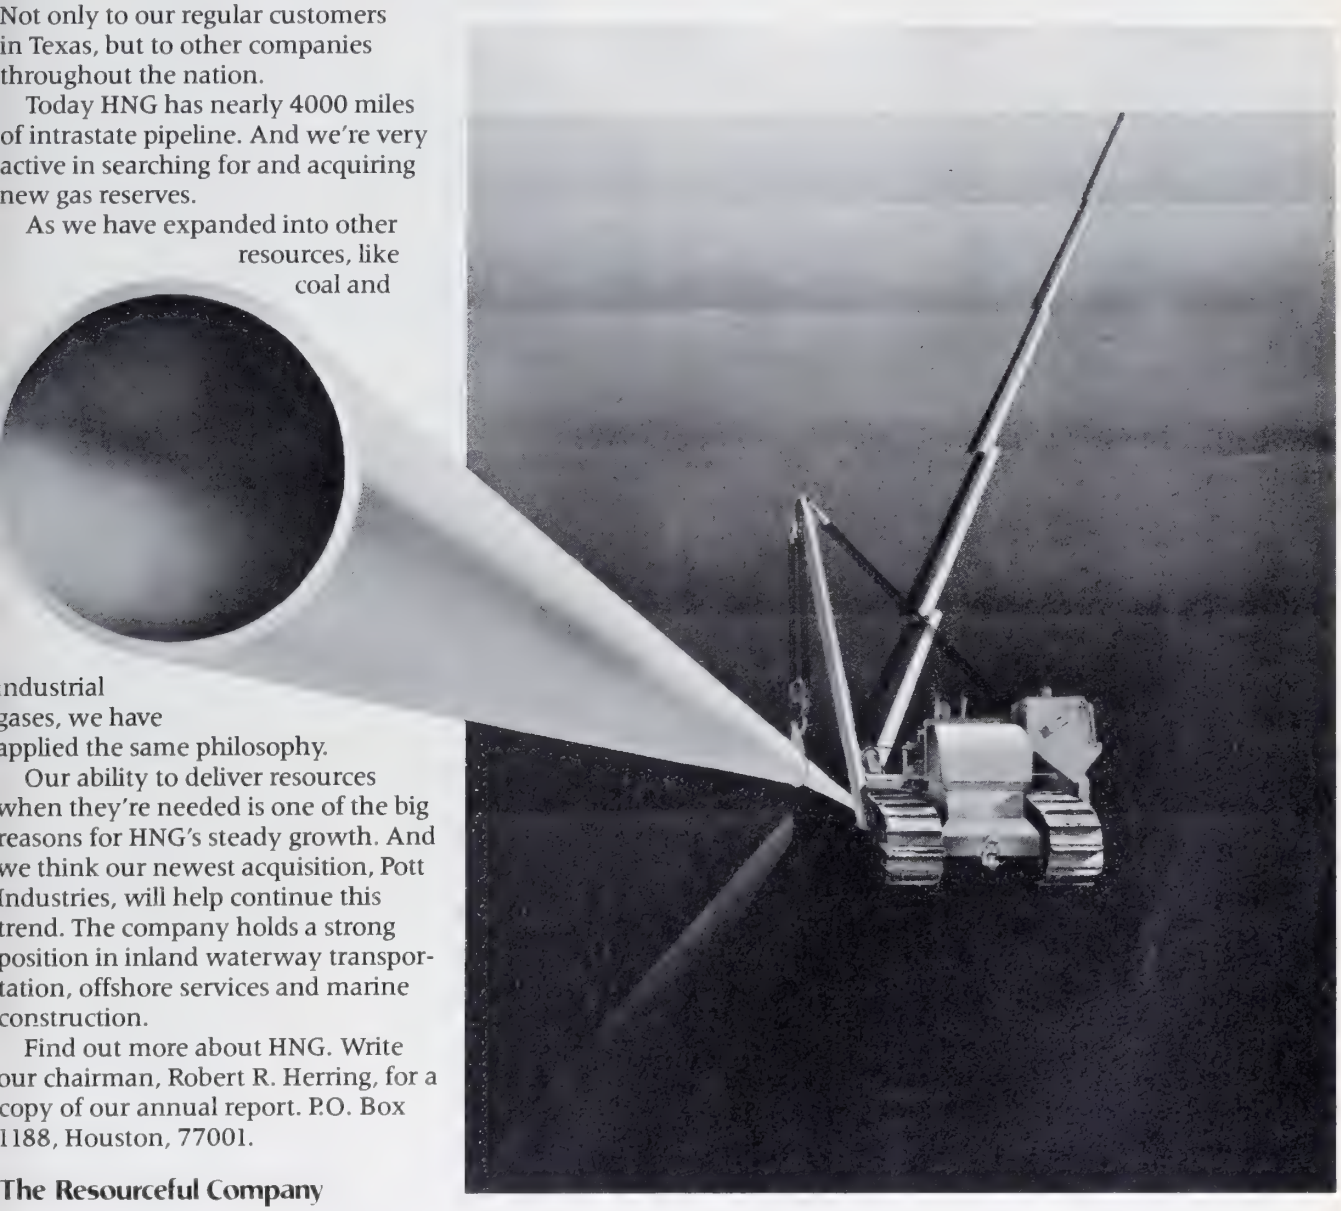
Years ago, our management made a decision to buy our pipeline supplier so we could ensure better delivery of gas.

Then, in 1965, we purchased the Bammel Gas Reservoir, one of the world's largest storage reservoirs.

As a result, HNG followed through with on-time deliveries even during the recent unusually severe winters. Not only to our regular customers in Texas, but to other companies throughout the nation.

Today HNG has nearly 4000 miles of intrastate pipeline. And we're very active in searching for and acquiring new gas reserves.

As we have expanded into other resources, like coal and industrial gases, we have applied the same philosophy.



Our ability to deliver resources when they're needed is one of the big reasons for HNG's steady growth. And we think our newest acquisition, Pott Industries, will help continue this trend. The company holds a strong position in inland waterway transportation, offshore services and marine construction.

Find out more about HNG. Write our chairman, Robert R. Herring, for a copy of our annual report. P.O. Box 1188, Houston, 77001.

w do they rank in terms of growth of sales d earnings per share over the past five rs? In the latest 12 months?

Who's where in growth

APS THE MOST sobering fact about able is that one-third of the compa- anked below failed to keep earnings ng as fast as inflation—as measured ly by the gross national product deflator of 6.8% for the period. ıg those who didn't are such former 'th stocks" as Litton Industries, Zenith Radio, Holiday Inns, Honeywell, Levitz Furniture and even proud Eastman Kodak. The plain fact, of course, is that, with a few exceptions, nothing is less permanent than rapid growth in earnings. Competition or market saturation, generally speaking, takes care of that. But, of course, that's not easy to remember when the wind is at your back and your sails are full.

As any veteran investor knows, of course, it's comparatively easy to *look* like a growth company for a while if you're recovering from a depressed base. For example, we use an average of earnings during the period 1969-73 as a base. So if a company had deficits in one or more of those base-period years, the road back to "normal" profitability will look initially like unusually rapid earnings growth statistically. The top nine companies on the yardsticks below all got there that way, for example. Not until you get to Tandy's league-leading 62.8% (restated for recent spin-offs) do you get genuine growth statistics. One good indicator is how closely earnings growth paces sales growth. If earnings growth lags, it suggests problems like dilution or weak earnings from acquisitions, or else profitless market-share gains. ■

ou had invested in each of these companies e years ago, how much would you have ade—or lost?

Who's where in the stock market

, THE BAD NEWS: You'd have lost ey in one out of every three of the stocks ranked below if you'd ht them in the depths of the recession five years ago and held on to them. e of the most popular growth stocks esterday were among the losers: onald's, Avon Products, Heublein, k and Polaroid. So was the most table major public company in the try: Emery Air Freight. And those are still looking for the "next k" might do well to take note of k' 975th ranking on this list.

the remaining two-thirds where would have shown a profit, nearly ailed to show as sharp a price rise as onsumer price index.

Now, the good news: You'd have doubled your money or better in 213 of the stocks listed here; you'd have quadrupled your money or better—generally much, *much* better—in 50 of the stocks below. So about 20% of the top 1,004 stocks ranked by FORBES turned out to be excellent investments since the oil embargo. And 5% were big, big winners.

Who were the winners? If you doubt that a certain tough-minded perversity pays off on Wall Street, think back to what all the brokers were saying about movie companies and aerospace companies five years back. There wasn't a good word to be heard about those troubled companies. Yet look at who's topping the list in stock market appreciation since then: MGM, Columbia Pictures, Twentieth Century-Fox and Boeing, Northrop and Lockheed—Lockheed, the company few thought could survive back then. The old adage about buying shares on the announcement of bad news still seems to stand the test of time.

"Recovery situations," companies whose stocks were selling well below earlier highs at year-end 1973, were also big winners. Memorex, which collapsed after 1969, jumped 1500% in value over the five years measured. Of course, everything is relative. Just to put things into perspective the current price of Memorex is only one-sixth of the high it hit back in 1969.

All of this raises some embarrassing questions for the random-walkers, the people who believe that stock prices at any given time accurately reflect their relative value at that time. Random-walk (or perfect-market) theory may be true, but it begs the point. The point is that investors aren't buying stocks for what they are worth today but for what they hope they will be worth tomorrow. And in that respect—as these figures so abundantly prove—a touch of Ben Graham and a willingness to buck the prevailing wisdom is worth bookshelves full of random-walk theory and miles of computer printouts. ■

It's not just one big simple world out there.

It's not just one big simple world out there, but many. Whether you have a single message for the whole world or many messages for many different markets, TIME can help.

For TIME offers reach, precision, and flexibility...worldwide.

There are 160 international editions of TIME. Big editions that go to Europe, Latin America, Canada, the Pacific. Other editions that can carry your advertising to regions, nations, even individual cities. And wherever it appears, TIME is the same influential news magazine that's read each week by 26,000,000 people around the world. Put your money precisely where your markets are.

For more information, call Dave Gibson, U.S. Area Director for the International Editions. (212) 841-4956.

TIME. The news magazine for the internationally minded.

The Forbes specials for 1979

JANUARY 8

The FORBES Thirty-first Annual Report on American Industry

This annual reference issue analyzes more than 1,000 of America's largest corporations based on the exclusive FORBES statistical yardsticks of management performance. Companies are ranked in the following lists: profitability, growth and stock market performance. These leading firms are also arranged by industry groups and sub-groups and ranked against their competitors.

An accurate and often-used start-of-the-year guide to who is where in the major management community—and why.

MAY 14

FORBES Eleventh Annual Directory to America's Leading Corporations

The Annual FORBES 500s present the most complete record of the year on American Business. Filled with facts, figures and editorial evaluations on the progress of about 800 companies, special emphasis is focused on the top 500 companies in assets, sales, net profits and stock market value. From banks to utilities, the Directory ranks all companies and spotlights management performances. Useful guidelines for understanding long-range trends are included in this valuable reference issue.

A reader service card will be available to all advertisers in the issue.

Closing date for all advertising:
April 9

AUGUST 20

FORBES Twenty-fourth Annual Mutual Funds Issue

An insightful guide for astute investors, the Annual Mutual Funds Issue spotlights those funds which are outperforming the averages and earning their fees. A detailed, statistical analysis is provided to measure both the long-term and short-term performances of more than 400 different mutual funds. A special analysis of an additional 200 newer funds is also included.

A reader service card will be available to advertisers in the issue.

Closing dates:
Black and White: July 23
Four-Color: July 16

APRIL 30

FORBES 1979 Annual Report Advertising Section

Here's the ideal place to advertise your annual report to FORBES' investment-minded audience (92% of FORBES' subscribers own corporate stock with an average value of $232,000 and 73% help make investment decisions for others).

The 1978 Annual Report Advertising Section generated a total of approximately 825,000 responses for 163 advertisers. It is an inexpensive and highly efficient means of putting your corporate story into the hands of those who are actively involved in the stock market.

All advertisements displayed in the section cost only $1,580 for ⅛ page black and white units.

A reader service card will be available to all advertisers in the Annual Report Advertising Section.

Closing date for copy and illustration: March 16

OCTOBER 29

FORBES Industrial Development Advertising Section

This multi-page advertising section is devoted exclusively to industrial development and plant site advertisers. It is an ideal location for advertisers to reach one of the most powerful and influential business audiences in America. Forty-six percent of FORBES' subscribers are in top management, one out of six is a Board Chairman, Director, President or Chief Executive Officer. Last year's advertisers in this special section received an average of well over 600 inquiries, with each inquiry including name, title and company of respondent.

All advertisements in this section are moderately-priced at $3,180 for ¼-page black and white units.

A reader service card will be available to all advertisers in the Industrial Development Advertising Section.

Closing date for copy and illustration: September 17

Three out of four corporate officers in America's largest companies read FORBES regularly. That's more than read Business Week, Fortune, Newsweek, Time or U.S. News & World Report. The high level of readership that FORBES enjoys among the most important leaders in the U.S. has been confirmed repeatedly in studies by leading independent research firms, such as Erdos and Morgan, Inc.

Top executives read and rely on FORBES because it provides them with the business information they need in making major decisions that affect the operations and profits of their companies.

Shown at left are five special opportunities to tell your corporate or product story effectively and efficiently to the most important audience of influential executives in the U.S.—and in highly compatible environments.

Plan now to advertise in one or more of these issues. Your advertising messages will enjoy the added benefit of repeated opportunities for exposure because the issues will be read and referred to frequently by those who own and run American business.

On the Big Board NICOR is known as 'GAS.' You should know us as 'The Basic Energy Company.'

What's a NICOR?
We're the corporation with revenues of $1.2 billion that's getting down to basics in energy. Basic energy sources like coal, oil, uranium, and natural gas. Northern Illinois Gas is our major subsidiary. It's the fifth largest natural gas distribution company in the nation. And one of the most efficient. Our customer-to-employe ratio is the best of any known gas distribution company in the nation while distribution expense per customer is among the lowest in the industry.

But gas distribution is just one of our basic energy activities.

Onshore and offshore, we're into exploration
Our subsidiaries participate in oil and gas exploration projects all the way from Belize, up to offshore Texas and Louisiana. And through the lower 48 states, into Canada and out to offshore Alaska.

Coal: Leasing, mining and gasification
NICOR Minerals controls about one billion tons of recoverable coal in Illinois. NICOR Mining, another subsidiary, has entered into a joint venture to mine a portion of those reserves. And our Mid-Continent Gasification subsidiary is a participating member of the Illinois Coal Gasification Group working on the first phase of a coal gasification demonstration plant.

Drilling rigs and equipment
These newly-acquired assets are engaged in contract drilling for other oil and gas producers.

New energy ventures
In today's modern era the proven, efficient energy company is best suited to lead the way in coming years. That's why you'll find a NICOR subsidiary in the Overthrust Belt of the Rocky Mountains.

You'll find a NICOR subsidiary working with an industry association to subsidize research into "exotic" energy sources. Extracting hydrogen from water, converting marine biomass to methane and tapping geo-pressurized zones where trillions of cubic feet of natural gas lie trapped in brine.

NICOR
The Basic Energy Company

Energy's basic to NICOR and NICOR's basic in energy
We're the basic energy company now. And we'll be basic in energy in the future. Whatever that energy is. For more information, write J. M. Quigley, Financial Vice President and Secretary, NICOR Inc., Box 200, Dept. FB-3, Naperville, IL 60540.

ver underestimate the consistency of hu-
an nature. Expectations go to extremes.

Inflation: Can we check escalation?

HARD these days to find anyone who ery optimistic about the near-term pects for bringing the inflation rate n. The worst pessimists, people like ry Kaufman of Salomon Brothers and man Robertson of Mellon Bank, do expect Administration and Federal rve measures to cause any dip in the tion rate but rather expect it to re- at the current 9% annual level or go higher. That would be ominous in- After 9%, can 10% be far behind? e optimists are not wildly so. They ct that strong Administration and action will bring the inflation rate to 7% for 1979. In other words, a couple of percentage points sepa- the optimists from the pessimists— h means, in effect, that nobody is optimistic. And no wonder. The t statistical data do not show signifi- slowing of business activity since the king-sized tightening of monetary and fiscal policy announced Nov. 1 by President Carter. In more normal times, a 1% increase in the discount rate would bring business to a halt. Home sales would dry up, autos fall flat and businesses rush to repay high cost borrowings. None of this has happened yet.

But never underestimate the consistency of human nature. Expectations nearly always go to extremes. If business is strong and prices are rising, people think about the bushel-basket inflation of the Weimar Republic. If business turns weak, people remember the apple-sellers of the 1930s. What we are saying is this: Let business slow a bit and expectations could make a dramatic turnabout. Instead of buying two raincoats, people would buy none. Thus, we stand among the modest optimists. We think that such a slowdown in business is at hand

The Economy

and with it a lowering of inflationary expectations. Note we say "lowering." Too much damage has been done to expect to see inflation really come down to, say, 3% or 4% in the near future. Still, a lowering even to 7% would be welcome in that it would stop the dangerous momentum of rising prices.

We disagree with those forecasters who project the current period of business strength into more of the same throughout 1979, leading to 14% or higher prime lending rates and 11% or more corporate bond yields. Instead, we believe business will be slowing a bit by midyear. By the end of 1979, inflation should be down to no more than 7% or so and should be headed lower. True, 7% is still a horror. Nevertheless, the *direction* of the trend will be important.

President Carter is convinced that he must stop inflation or go down in history as a do-nothing. (Better a one-term president than that!) With that as motivation, it is easy to understand why he will fight to hold down federal spending. It won't be easy. Even before the economy has slowed, Senator Kennedy rabble-rouses the President's own party, claiming that the anti-inflation program is designed to benefit the wealthy. Black congressmen have formed a caucus to demand that social benefits escape the paring knife. Farmers are ready to protest anew

The Forbes Index*

Composed of the following:

- **How much are we producing? (Federal Reserve Board Index of Industrial Production)**
- **What volume of hard goods are we ordering? (Bureau of Census latest three months new orders of durable goods related to inventories)**
- **How intensively are we building? (Bureau of Census privately owned housing starts)**
- **How much are people spending? (Bureau of Census retail store sales)**
- **To what extent are consumers going into debt? (Federal Reserve net change in consumer installment debt)**
- **How costly are services? (U.S. Dept. of Labor service price index related to the consumer price index)**
- **How much are workers earning? (Dept. of Commerce personal income, wage and salary disimbursements)**
- **How many people have been laid off? (U.S. Dept. of Labor initial unemployment claims)**

***Revised 9/78**

against any steps that might make them even a tiny bit less affluent.

However, Treasury Secretary W. Michael Blumenthal asserts that "there will be no waffling and no wavering" in the battle against inflation. There is every reason to believe that he speaks for Carter, who is in dead earnest this time.

The sticky part in the fight against inflation is food, fuel and housing. As this is written in late December, the first cracks are starting to appear in the housing market. "In the second quarter of 1979 we should see a significant easing in the housing activity along with some weakening of housing prices around the country. There is a belief that the government is not going to protect the industry to the degree that it has done in the past," says Richard X. Bove, vice president of research at Wertheim & Co.

Some of the increase in fuel charges may have taken place at the gas pump regardless of the OPEC agreement on crude charges reached on Dec. 17. Thus, additions to inflation from gasoline should be smaller than a straightforward calculation based on scheduled increases in OPEC crude would indicate. Natural gas prices, however, could rise.

The bleakest outlook is for beef and produce prices which weigh heavily in cost-of-living calculation. But a Carter decision to bring in more meat from abroad and consumer resistance could turn that price trend.

Overall, we think some deceleration of price increases is probable. When 1978 started it was daring to forecast a 6.5% inflation because most projections ranged between 5% and 6%. It turned out to be almost 8%—on a year-to-year basis.

This year, the surprise could come in the opposite direction. We hope. ■

If real income has been going up despite inflation, why does it hurt so much?

Is inflation real?

THE POLITICS of the President's battle against inflation have been muddled by a good deal of ignorance on every side. Many affluent people feel uniquely victimized by rising prices. So do the poor. No one, in fact, has been *uniquely* hurt. A good case can even be made that, thus far at least, no important group has been seriously hurt at all. Real income per person, after taxes, has gone up every bit as much in the last six high-inflation years as it did in the previous six when inflation was much lower.

Moreover, the years of inflation have apparently done relatively little to alter the income shares going to the rich and the poor and those in the middle.

If all this is true, then why do so many people feel so bad about their economic situation? There are probably three principal reasons:

- The sheer uncertainty created when conditions change.
- A form of "money illusion," with everyone unconsciously assuming that if inflation went away, they would still be getting 8% or 10% raises each year.
- The real growth of the last six years coming from different sources, principally through a larger proportion of the civilian population taking jobs.

The "money illusion" may well be the most important. MIT economist Lester Thurow described it this way recently at a Data Resources quarterly outlook conference: "People get dissatisfied if someone deposits $75 on their doorstep and then takes $60 away from them in the form of higher prices. They may even be able to convince themselves that their real standards of living have gone down. And in some psychological sense, they may be worse off. The real income gains may not be much different than they had been in the past, but everyone thinks how enjoyable his life would be if there were no inflation and money income continued to go up at the same rate."

Real incomes *have* been going up. Disposable income per capita (expressed in constant 1972 dollars) rose by $563, to $3,837, from 1966 to 1972. Since then, it has gone up another $571, to an estimated $4,408 in 1978. Of course, the *rate* of increase slowed from 17.2% over six years to 14.9%. But the gain, absolutely, was just as big.

At the same time, achieving this gain took more effort. Productivity gains have been much smaller since 1972, averaging about 1.3% a year compared to about 2.1% from 1966 to 1972 for all private business. To keep real income gains from tumbling, too, people had to work more hours, and more wives had to take jobs. This helps explain why so many people feel they are on a treadmill.

Inflation, too, is often said to hurt the poor. Economist Thurow's figures to disprove this. Consumer income bers from the Commerce Departr he says, "show essentially no chan the distribution of money income tween rich and poor. The top 40% population had 69.5% of the tot come in 1972 and 69.6% in 1977. bottom 40% of the population 13.7% in 1972 and 13.8% in 1977."

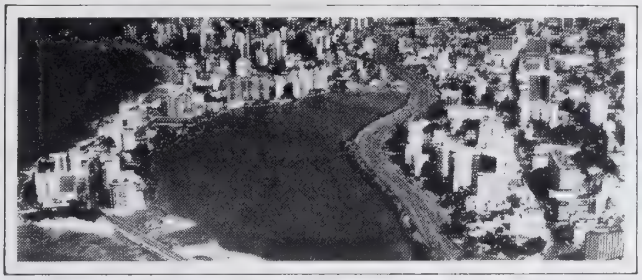
Hardly a conservative hir Thurow goes on to rebut the argume some very liberal economists, suc Gar Alperovitz, head of Washing Exploratory Project for Economic A natives, that the distribution of *re* come has changed because the pric necessities such as food and fuel gone up more than most other p But Thurow, using actual expenc data for different income classes, an measured rate of inflation for 13 diff categories of purchases (food, clot etc.), came up with an inflation ind each income group, covering 19 1977. While there were slight d ences, he found no group was more 0.5 percentage points away from 39% inflation average for everyone.

Looked at in another way, Th does find one group—corporations—has been hurt by inflation. Since 19 says, corporations' net share of GN fallen from 7.6% to 7.1%, primaril cause of larger interest payments—rect consequence of higher inflatio

The fact that the distribution come has *not* changed means tha entire economy, not just parts of it, effect, indexed to inflation. On th hand, that means inflation is easi bear and less of a distortion than people believe. On the other, it n that inflation will be extraordinarily to stop. "If the economy is inde adds Thurow, "an 8% rate of infl today leads to 8% wage and price tomorrow. But as a result, inflati also 8% tomorrow."

How much comfort can we d from all this? Alas, very little. Fo truth is that inflation contributes t certainty and makes business relu to invest. Moreover, the U.S. dol badly hurt by the fact that our infl rate is higher than Germany's or Ja And finally, unless we fight inflatio fight it hard, it will undoubtedl worse. Each external or internal s pushes it up a notch and the inc nature of the economy keeps it ther one could argue that some level of tion—say, the kind that rages in Latin American countries—would n dangerous to our society. There's a paradox here: We can live with infl but we ought not to accept it. ■

PUERTO RICO, U.S.A. SOLID AND GROWING



LOS ADOQUINES—the centuries-old cobblestones on the streets of Old San Juan—are a symbol of the strength and dignity found in the Puerto Rican heritage.

The modern city of San Juan—with its new buildings, extensive highways and a people with a dynamic sense of today—is a clear indication of the growth of Puerto Rico.

The Government Development Bank for Puerto Rico—along with other government and private financial institutions—has played an important part in this growth. The Government Development Bank for Puerto Rico acts as issuing agent for bonds to finance vital public improvements and it lends long and medium term funds to private business.

Puerto Rico Bonds have a triple exemption. Bonds of Puerto Rico and its municipalities, as well as its various Authorities, under existing laws, are exempt not only from federal but also from state and local income taxes.

At current market prices, Puerto Rico Bonds provide attractive yields.

Puerto Rico has always met its public debt obligations.

For further information about Puerto Rican government securities, contact your own broker or dealer. If you would like to receive free copies of our informative monthly Newsletter—PUERTO RICO BUSINESS REVIEW—or our free brochure—KEY FACTS FOR INVESTORS—write:

As suddenly as it ballooned, the demand for credit will deflate.

WHEN THE MUSIC STOPS PLAYING

By Ben Weberman

ROUND AND ROUND it goes, and where it stops nobody knows. But stop it will and with a jolt. I'm talking about the merry-go-round of interest rates.

Here's how it works: The savings banks and mutual savings and loan associations are issuing special six-month money market certificates and are currently paying around 10%. At the end of November some $60 billion of these high-yielding ultra-safe certificates were outstanding and the figure was undoubtedly higher at the year's end. When the regulatory agencies permitted the banks and the thrifts to issue these certificates, they intended the money to go into mortgages—so that a tight money policy wouldn't strangle the housing market.

What is happening is quite different. Many banks and thrifts are simply turning around and reinvesting the 10% money at a profit in other kinds of high-yielding paper.

Take New York State, where by law mortgage rates were for decades held to 8.5%—and even with new legislation to a below-market 9.5%. Why should the thrifts borrow at 10% and relend at 9.5%? That would be madness. Instead, they are taking much of it to commercial banks and making six-month time deposits in the form of large, negotiable certificates of deposit that pay 11.25%. That's a nice spread for the thrifts.

And the commercial banks? They relend these deposits to corporations and other businesses at even higher rates—which is 12.65% at the current prime rate, if you include the cost to the borrower of required compensating balances.

And why are corporations borrowing? Because they are in a panic over a possible credit crunch. Borrow now, use the money later is their motto. For now, primarily, they want the cash. With money in hand, they in turn buy commercial paper. True, the commercial paper yields only about 11%, less than the businesses are paying for the money, but they consider the negative spread as a kind of insurance fee to guarantee that they will have money when they need it.

Note this: Little of this money is going to productive uses. You lend to me and I lend the money to the next fellow who in turn lends it back to me. We all take in each other's wash.

But this kind of game doesn't go on forever. Somewhere, someday, a borrower is going to say: "This simply doesn't make any sense." Maybe it will be the corporate treasurer who will say: "Why should I borrow at 12.65% and relend at 11%?" Maybe it will be the commercial banker who will say: "Why should I pay the thrifts 11.25% for money they borrow at 10%?" As suddenly as it ballooned, the demand for credit will deflate. The music will stop playing and the merry-go-round will halt.

When? In spite of my having been burned in predicting a peak in interest rates earlier this year, I will stick my neck out again. My guess is that interest rates will top some time either late in the first quarter of this year or early in the second quarter. I base this prediction on the knowledge that the huge current demand for credit is largely psychological: Only part of the money is going into productive uses, into new housing, plant and equipment or inventories.

My advice right now to investors therefore is: Enjoy yourselves while it lasts. Partake liberally of this virtually risk-free opportunity to earn fabulous interest rates. If you are in the $100,000-and-up class, buy a negotiable certificate of deposit; unlike the money market certificates I mentioned earlier, the CDs are negotiable and you don't lose interest if you want to sell. Money market certificates carry an interest penalty if you should cash in prior to maturity.

If you are willing to accept somewhat lower quality, the opportunities are truly mouth-watering. With most people scared half out of their wits, investors are concentrating their bond market commitments on the highest-quality bonds, Treasuries and Aa-rated corporates. As a result, the gap between Aas and Bs is tremendous. Where Aas yield 9.15%, single Bs range from 12% to 13.5%. That's roughly 4%. The more normal gap between them is only about 2%.

Here are a couple of suggestions for people who want to lock in fat interest rates for the longer term at some sacrifice in quality:

Moody's rates *UNC Resources*, the holding company of United Nuclear Corp., as Ba—speculative. The issue matures in 20 years and came to market at par with a 12% coupon to yield 12%. The company turns out over 10% of the U.S. production of uranium concentrate. Sizable ore bodies are already under production or capable of near-term development. Potential problems: national energy policy and the slow growth of nuclear power generation. Down the road, emerging enrichment technologies could bring competitive profit reduction. Still, at 12% or higher because the issue is trading at a slight discount, these risks seem handsomely compensated.

If you like to live dangerously, there is *Champion Parts Rebuilders, Inc.*, which marketed 13¼%, 15-year debentures at 99 to yield 13.41%. The company rebuilds replacement parts for autos, trucks and farm equipment. It shows good growth, but has a record of high debt and uneven earnings. This issue of debt has a claim subordinated to $6.5 million of senior debt. With the high price of new cars and five-year installment-credit contracts, there should be a rapidly growing market for spare parts to keep the old roadster humming.

But maybe you want to sleep nights. You can get almost 9% on 10-year to 30-year Treasury bonds and almost 9.8% on U.S. guaranteed Government National Mortgage Association pass-through mortgage pool certificates. Can anyone believe our economy is so sick that the inflation rate won't come down sufficiently so that these bonds will look like beautiful buys for the majority of years they are outstanding? ■

Ben Weberman is economics editor of FORBES *magazine.*

We just couldn't wait to share our earnings story.

In 1977, Keene earned $2.03 per share for the year. From January to October of 1978, however, we've already surpassed that—reaching $2.11.

To get the story of the full year, just let us know where to send a copy of the annual report when it comes off the press late in February. Write us at 345 Park Avenue, New York, N.Y. 10022.

CORPORATION

We have come to realize that a perpetual boom based on uninterrupted inflation is of doubtful merit.

THE RECESSION EVERYONE WANTS

By Lucien O. Hooper

PRACTICALLY everyone seems to expect a business recession this year. If we *do* experience one, it will be the most confidently anticipated event in recent economic history. We are psychologically prepared for it, and the stock market seems to have gone a long way toward discounting it. Of course, the argument in favor of a cooling off or business setback is overwhelming.

Credit is being made more expensive and less available. The two industries most dependent on available credit are residential building and automotive sales. Since we know what's happening in the credit markets, and why it is happening, we ought to know what's ahead in 1979 for automobiles and building.

To most of us, all booms are good and all recessions are bad. Lately, however, we have come to realize that a perpetual boom based on uninterrupted inflation is of doubtful merit. So now we want to "tame" inflation without causing a depression. We have not had a real depression since World War II, but some of the older people among us remember that an uncontrolled recession can become a depression. We also recall that real deflation (such as we had in the early 1930s) is the most unpleasant of all economic experiences.

I am sure that the Administration and the more intelligent money managers who are at least intellectually independent of elected officials are aware of the dangers of a credit-created recession merging into a deflationary depression. I think human nature is predictable; and on that basis it seems to me that even the best-intentioned political personalities are more likely to act too soon rather than too late in reversing the impact of tight credit on the economy. This, of course, assumes the mastery of the craft of money management as well as a willingness and wisdom to act decisively, and with conviction, at the right time.

As to corporate income accounts, balance sheets and dividends, I don't think we need "inside information," computers, or specialist security analysts to tell us that, if this determination to "tame" inflation continues, and if it is successful, corporate profits in 1979, for most companies, will be lower than in 1978. How much lower, we can only guess. The most common estimates of 1978 earnings for the Dow Jones industrials is somewhere in the area of $104 a share. My guess is that $105 may be a bit more accurate. I would think $90 to $91 a share for 1979 would be a reasonable expectation, and that even as little as $85 a share is not impossible. At this point I would regard as much as $95 a share rather unlikely.

By this time, the reader is aware that I have wandered out into some fairly deep water. I might as well go the rest of the way and guess what all this means as far as the stock market is concerned. Please recognize that I am indulging in an art that no prudent man would practice. Further, I insist on reserving the privilege of changing my mind, and pattern, as the year develops. But I am in deep water and I must splash around a bit if I am to swim and not sink.

Most people assume that stock prices move up or down *pari passu* with earnings. In other words, when earnings go up, stock prices go up; and when earnings decline, stock prices drop. That's not always true, because stock prices discount, rather than reflect. To date, it is apparent that stocks have been discounting a drop in earnings rather than reflecting the steady increase. Again, stocks reflect the quality of profits; lately price/earnings ratios have been low, partly because the quality of earnings has been regarded as inferior. If the quality of earnings improves as a result of less inflation, stocks ought to be worth more. Finally, there is a connection between interest rates and the appraisal of earnings. When interest rates are rising, stocks tend to be restrained. If interest rates decline, as they are expected to do as soon as inflation is tamed, this should have a positive effect on stock prices.

We must remember, too, that stocks are historically cheap in relation to other things such as real estate, commodities, works of art, labor and money. If investors feel better about stocks as a result of lower inflation and more confidence, stocks may resume their former role as an acceptable hedge against the decline in the buying power of currency.

The dollar probably will continue to improve vis-à-vis the yen, the mark, the franc and the pound and this can be important. A more healthy dollar might make American equities more attractive to foreigners, whereas a cheap dollar has made them less desirable. As everyone knows, the weakness in the dollar last year put the U.S. in a distorted light in relation to the rest of the world.

So at the beginning of 1979, we must recognize that we are dependent on the skills and talents of those who are making such a determined effort to tame (rather than end) inflation by slowing down the economy without allowing a recession to turn into a depression. We had better cooperate with them, and pray for their success.

Near term, it usually is helpful to watch what the stock market does in the first two or three weeks of the year. Historically, the trend in this period has set the tone for the next two, three or four months, but not necessarily for the full year.

Once more I would like to say that the fastest-growing industry in our time is air travel and air transportation. That means we must have more and more airplanes. The important manufacturers are *Boeing* (72) and *McDonnell Douglas* (34). The automotive and residential building industries probably will have the largest declines in earnings. The best improvement in profits this year, outside of the planemakers, should be in natural gas.

(This is Mr. Hooper's last regular column for FORBES; *for an explanation, see p. 8.)* ■

Lucien O. Hooper is vice president of the NYSE firm of Thomson McKinnon Securities.

Receive 10 weeks of Value Line for $29

This trial subscription is open to you only if no member of your household has subscribed to Value Line in the past two years. We make this special offer because we've found that **a high percentage of new subscribers who try Value Line stay with us on a long-term basis.** The increased circulation enables us to keep our subscription fees to long-term subscribers lower than would otherwise be possible.

Under the special trial offer you will receive the 2400-page Investors Reference Service (illustrated above) at no extra cost. You'll receive all the new full-page reports to be issued in the next 10 weeks on the more than 1700 stocks and 91 industries regularly monitored by The Value Line Investment Survey. **Filing takes less than a minute a week. All this material is so organized in your binder that you can quickly turn to a continually updated report on almost any leading stock.**

Thus you'll find it convenient to have The Investors Reference Service at your fingertips whenever you need facts and figures, as well as Value Line's projected performance ratings on more than 1700 widely held stocks in 91 industries.

In the **Selection & Opinion** section, which accompanies your weekly reports, you'll also get analyses and forecasts of the national economy and the stock market . . . guidance on current investment policy explaining Value Line's bullish long-term position on the securities markets . . . plus Value Line's specific stock selections.

Take advantage of this special introductory offer—and receive, as bonuses without extra charge, the 2400-page Investors Reference Service and the "Investing in Common Stocks" booklet, which explains how even inexperienced **investors can apply thousands of hours of professional research to their own portfolios by focusing on only two unequivocal ratings, one for Timeliness (Performance in next 12 months), the other for Safety.**

This subscription is tax-deductible if utilized to aid in the management of your investments.

Fill in and mail the coupon below.

This is a sample full-page report of one of the 1700 stocks regularly reviewed by Value Line, reduced from 8½ x 11"

The collapse of our currency in the world money markets . . . was the way of tellin us that it was high time to mend our ways

DO WE HAVE THE FORTITUDE?

By Heinz H. Biel

IT DID NOT take long for Mr. Kahn, the candid guidelines czar, to be told that the word *depression* is still taboo. Even *recession* is a term to be avoided, if possible, because its negative connotation tends to revive uncomfortable memories. Fortunately, we have a knack for making up euphemisms, and so we now prefer to use such circumlocutious terms as *negative growth rate* in lieu of recession and *soft landing* to describe a shallow one. Don't they sound much more comforting—just like calling the undertaker a mortician?

However, regardless of what terms we use, we must face the fact that the expansionary phase of the present business cycle is soon to have its fourth anniversary. This is pretty old by past standards.

How did we manage to keep the pot boiling for so long? By constantly injecting artificially created buying power into the economy, partly by means of large budget deficits and partly by the liberal credit policies of our banking system. Both the budget deficits and the credit explosions were made possible by a highly accommodating Federal Reserve.

We are paying a stiff price for trying to prolong the period of prosperity. The value of the U.S. dollar has been cut in half in just over ten years. The collapse of our currency in the world's money markets was the final denouement. That was the world's way of telling us that it was high time to mend our ways.

I think we are really trying. I also think that the majority of the American people are willing to accept son hardship in return for reasonable st bility of our dollar. I remain hopefu But being a realist, I have to be skep cal about whether this country, as whole, has the fortitude to keep i spending close to its income.

If it were not for this skepticism or shall I say pessimism?—I wou advise staying out of the stock mark altogether at this juncture. Howev as I fear heavy inflation will be wi us for years and years to come, I wou rather own shares of sound corpo tions than have all my money in d lar-denominated securities.

The last time we went through period of very high interest rat some four years ago, investme bankers thought up a new type of curity that might attract reluctant vestors: "floating-rate" bonds, which the rate of interest would r be fixed but could fluctuate. The int est rate would be adjusted periodica to reflect the ups and downs on t money market rates, specifically t rate on 90-day Treasury bills.

Floating-rate bonds never beca popular in thie country and only a f such securities were ever issu However, there is one bond tl seems to meet today's requireme particularly well. It was issued by T New York Bank for Savings. Obvio ly, this is an obligation of high quali These are the terms:

1) It matures on Dec. 1, 1981, or less than three years.

2) Interest is being paid and adju ed on a quarterly basis to refl changes in the 90-day Treasury l rate; it will be 1¼% above this ra but never less than 8%. The pres rate, *i.e.*, for the period from 12/1/78 2/28/79 is 9.95%.

3) The bond is listed and qu actively traded on the New Y Stock Exchange. It is selling ri now at a price of about 98¼ fo *present* yield of over 10%.

Heinz H. Biel is a vice president of the NYSE firm of Janney Montgomery Scott.

know that similar yields are obnable on a variety of other investnts, but this bond, with its nearly al three-year maturity, provides for rticipation if money rates should go en higher and at the same time otects against a sharp decline in inest rates such as we saw between 74 and 1976.

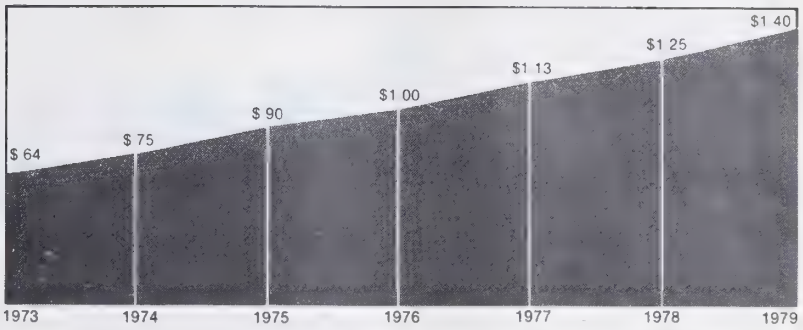
n recent months *Boeing Co.* (70) has en receiving commercial jet orders m airlines in just about every coun- in the world except, maybe, Alba- and North Korea. The company's er books are bursting at the seams. rring large-scale cancellations due a worldwide political or economic amity, Boeing can look forward to ny years of great prosperity.

There has been so much publicity ut Boeing's order influx, the stock been such a star performer in the rket and the analysts' earnings proions are so glowing that bullishs may approach the point of exstion. My affection for the stock ains high, but no one should have illusion that it can conceivably licate its stunning market perfornce of 1978. We have moved from icipation to fulfillment, and after fillment what is there to look ford to?

nvestors whose holding period is l short term may just as well sit on ir Boeing shares a while longer, n if the capital-gains potential is longer sparkling. However, there is ther and profitable way of playing Sell a May 1979 call option, exerable at 80, for which you will reve about $700 at present. If your ding period doesn't reach the oner market until later, sell the August ion for about $900. If Boeing uld sell below 80 by next May or gust, the option will expire and you l have earned extra income.

Boeing should sell above 80 at the iration time, your stock will be ed. This means, in effect, that you selling your stock at 87 (80 + 7), rly 20% above its current price. if in the meantime you have bene so enamored of the stock that don't want to lose it, just buy k the option before it is exercised. ou have to pay more to repurchase call than what you received when sold it, you will have a short-term s, but this is far more than offset by long-term gain on the stock you d. Or you simply buy another 100 res for delivery against the call and d on to the original shares with ir nice capital gain. ■

GNN raises dividend 17 percent



Reflects 5 for 4 split in 1974 and 2 for 1 split in 1976. 1979 is current rate.

GNN has increased its dividend to shareowners again. And again. Seventeen percent on November 1 and six times in five years. We see strong markets ahead for our paper and our dividend reflects our confidence.

Most of John Templeton's new positior are familiar names. A few years ago, mo of them were unrecognizable.

SMART MUTUAL FUNDS

By John Train

A SMALL open-ended fund, *Sequoia Fund*, has been outstandingly successful in both up and down markets. Its policy is a mixture of the Ben Graham style of "value" investing (Chairman William Ruane was a personal disciple of Graham's) and the search for unassailable business "franchises" which provide greater-than-average growth. Its largest position is in Capital Cities Communications (which owns television stations and newspapers), followed by Interpublic (the world's largest advertising agency) and the Washington Post Co. Media investments total almost half of the entire portfolio.

It is thus significant that the fund has cut back heavily on its holding of Storer Broadcasting, since this is an area that management knows well.

In recent months, new positions have been started in Reynolds Metals, Detroitbank, Western Pacific Industries (an industrial conglomerate that proposes to sell its railroad to its employees, giving it a $100 million tax loss to carry forward) and Supermarkets General. There have been major buildups in Capital Cities, Polaroid, Houghton-Mifflin, Ogilvy & Mather, Hillenbrand Industries (a leader in manufacturing both caskets and hospital beds), Tandy (proprietors of Radio Shack stores), Pittsburgh National (the holding company for Pittsburgh National Bank) and Glatfelter Co., who are manufacturers of fine coated papers. Glatfelter, says Ruane, is an outstanding company selling in the market for a quarter of its replacement value.

John Train is president of Train, Smith, Investment Counsel, New York, and the author of Dance of the Money Bees.

Bill Ruane and Richard Cuniff, w run the fund, point out that bank tr departments, corporate pension fur and individuals have all been selli reflecting a degree of discourageme about equities without parallel sir the late 1940s and early 1950s—a pe od that was followed by 15 years stock market happiness.

For many years, *Templeton Grov Fund* has been perhaps the best p forming of all nonspecialty inve ment companies. Portfolio mana John Templeton's technique has be based on seeking the best bargai wherever they were to be found, gardless of whether the compan were well known or not.

This has attracted a lot of inves interest. A few years ago the wh fund was less than $20 million; toc it's ten times larger: around $200 m lion. It has quadrupled in the last t years and more than doubled in last 12 months.

Needless to say, this creates a m difficult investment problem for m agement, and it would be remarka if the relative performance superior of the fund could be maintained in future. The most common reason loss of superiority in an investme organization is permitting too-ra growth. The second is that the k man tries to do too many things.

Not surprisingly, since I last wr about the fund in this column, Jo Templeton has started over two d en new positions. Most of them familiar names into which he can substantial amounts of money. A f years ago, most of his holdings w unrecognizable.

The largest industry category now oil and gas, up from 9.6% of total at the end of the April quarter 14.4% in October. New positions d ing the quarter (in order of size) Union Oil, Northern Natural, Cit Services and El Paso. The largest s gle holding, however, is Royal Dut which was doubled in size during

period, as were Amerada Hess, Gulf, Houston Natural and Mitchell Energy & Development.

The next largest industry category is insurance, which Templeton has built up from 7.3% of the whole portfolio to 12.6%. Here the new positions are Hanover Insurance, Reliable Investors, Washington National and American Income & Life. MGIC and USF&G have been increased from nominal to major size. Holdings that have been doubled in amount are Aetna Life & Casualty, INA, Kemper and Reliance Group.

Elsewhere in the fund large new positions include (in order of size) First Pennsylvania, PepsiCo, Denny's, Royal Crown, Cummins Engine, Grantree (which rents furniture and equipment), Service Merchandise (a large catalog showroom merchandiser), Envirotech, Eaton, Australian & New Zealand Bank (the second largest in Australasia), White Consolidated and Volume Shoe.

Templeton's other largest positions by far are now Ford and Alcan Aluminium; followed by Monsanto, NuWest Development, Hitachi, Church's Fried Chicken, Jim Walter, Teledyne and S.S. Pharmaceutical (the second largest Japanese producer of nonprescription drugs).

In a period of such rapid cash inflow, Templeton's eliminations and major cuts have more than usual interest. They include Storer Broadcasting (also cut by Sequoia), Interpool, Keller's, Mervyn's, B.F. Goodrich, Holiday Inns, Cummins Engine, Husky Oil, Pepcom, Sambo's and Canadian Pacific Investments.

Clarifying an error in the early part of the print run of the last issue, two South African gold-mining groups, Goldfields of South Africa and Anglo American, both sell at 40% discounts from breakup value, only pay out about half as much in dividends as they take in, and yield about 11%. To me they are more attractive for the nonprofessional investor than are individual South African mines.

Incidentally, in the two centuries from 1344 to 1552, gold slowly doubled, from a little over £1 to a little over £2 per Troy ounce. Over the next century, to 1662, it doubled again, to £4, where it remained for almost three centuries, until 1931, when Britain abandoned the gold standard. Since then it has soared over 1,700%! Inflation needn't be a way of life, and indeed is intolerable; but with paper currency it is inevitable. ■

HIGH TAX-FREE YIELD WITH NO SALES CHARGE. THAT MAKES US A STAR.

Investors seeking a high tax-free* yield should compare both the yield and the features of Fidelity High Yield Municipals to other funds, managed or unmanaged.

The Fund seeks a high tax-free yield from a portfolio consisting primarily of A and Baa rated bonds. There is no sales charge. All of your investment is put to work earning tax-free income.

In addition, there is full-time management, daily liquidity, a low management fee (45/100 of 1%), and automatic reinvestment.

Learn more about this five star combination today.

*A portion may be subject to Federal, state or local taxes.

The stock market simply cannot accommodate everyone rushing for the door at the same time—either to buy or to sell.

STOCK MARKET VIBES

By Ann C. Brown

As INVESTORS prepare for a new year in the stock market, it's time to pick yourself up, dust yourself off and start all over again. A casual observer from some other planet, looking at the beginning and the ending 1978 Dow Jones industrial averages, might conclude that nothing of any consequence happened—the market ended the year about where it began. Missing, of course, would be the January Plummet, the April Buying Spree, the August Hot-Stock Wave and the October Massacre. Fortunes were made—and lost—with a rapidity never before seen. As I see it, this quick, sharp up-and-down market syndrome will be with us for quite a while.

First of all, consider the institutional domination of trading. The latest statistics I remember seeing showed institutions owning some 30% to 40% of all stock outstanding while accounting for over 70% of the total trading volume. Ever since "May Day" of 1975 (when the commission rates were allowed to float) institutions have been able to trade for greatly lowered transaction costs. However, in the process of saving a few cents a share, the institutions have lost a greater advantage—the capability of the marketplace to absorb their large sales or complete their big buys at relatively constant prices. The specialist system, like it or not, once provided a measure of stability to stock prices. However, as the size of the orders grew, the ability of the specialists to provide any semblance of order disappeared. Today, even a modest buy or sell order in a stock can result in a sharp daily price fluctuation of 5%, 10% or more. As the exchanges move closer and closer to computerized trading, my guess is that the result will be even greater price volatility than we have seen.

Another factor that has caused the wild gyrations in the securities markets has been the improved communications systems and the insistence by the regulators on the simultaneous dissemination of company news. With a greater number of better-educated money managers, this information is almost immediately translated into action, and the stock market simply cannot accommodate everyone rushing for the door at the same time—either to buy or to sell. Trading halts, once almost unknown, are now common occurrences.

About all an individual investor can do in this changed market climate is buy stock in good companies, ignore the short-term negative news and hang in there. My wealthiest client began buying and selling stocks in the late 1920s and kept on doing so through the Great Depression, World War II, the Korean and Vietnamese wars, the Eisenhower heart attack, the Cuban missile crisis, the Kennedy assassination, the oil embargo, the Nixon resignation and the Carter Administration. We should all live so long, so patiently and so happily.

One stock that could make patient investors happy these days is *Combustion Engineering* (35). The company, a major builder of steam-generating equipment and petroleum refineries, reported a surprising 21% gain in the third quarter, suggesting the possibility of $4.85 this year, up from $4.17 a year ago. Sales to the oil and oilfield service-related companies are strong, and Combustion Engineering should benefit from new orders for environmental-control systems as utilities switch to coal as a primary fuel

Ann C. Brown is executive vice president of the New York investment firm of Melhado, Flynn & Associates.

source. At the current price, Combustion Engineering is yielding 5%-plus and 1979 earnings are estimated to be around $5.45.

Being addicted to the printed word, I have long followed the fortunes of newspaper, book and magazine publishers. At the moment my two favorites are *The Times-Mirror Co.* (29) and *McGraw-Hill, Inc.* (24). Times-Mirror had a super year. For 1978 as a whole, the company's estimated earnings are around $3.60, *vs.* $2.77 in 1977. In addition to publishing the Los Angeles *Times, Newsday* and the Dallas *Times Herald,* the company also publishes a wide variety of books. The company is involved in newsprint and forest products, magazine publishing, owns a couple of television stations (maybe five more if the Newhouse Broadcast deal goes through) and cable TV systems. Earnings for 1979 are a little hard to pinpoint because the company can be affected by the economy as a whole, but $4 seems attainable. Times Mirror is selling close to what it sold for ten years ago, while the earnings and the dividend have quadrupled.

McGraw-Hill is one of the largest publishers of textbooks and technical, scientific and other professional books. The company also offers educational films, tests and a large number of trade books. The publication division publishes magazines, newsletters and the like for numerous fields of industrial, commercial and professional activities. The F.W. Dodge unit is well known as the supplier of construction news and statistics; McGraw-Hill owns Standard & Poor's Corp.—a very familiar name to investors. Like Times-Mirror, the company also owns some few TV broadcasting stations. Since 1971, McGraw-Hill earnings have increased steadily from 79 cents to $2.08 for 1977. For 1978, earnings are estimated at $2.50 and preliminary figures for 1979 are in the area of $2.80 to $2.90. The company has bumped the dividend to $1 in 1978, and $1.20 may be in the offing for 1979.

One last suggestion, take a look at *Materials Research* (20). The company is a big factor in "sputtering" equipment (translated into people-talk, that's apparatus to apply a thin film) and is a prime supplier to the electronics and telecommunications industries. No promises here—and a very thin stock—but the company could earn around $1.75 to $2 in 1978, up from 35 cents just four years ago. Optimists are predicting $2.50 to $3 in 1979. ■

Wise old saying—

"REACH FOR HIGH INTEREST RATES BUT KEEP YOUR MONEY WITHIN REACH."

CD's are fine for some purposes, but not for liquidity. Six months can be a long time in a fast-changing world—not to mention six years.

Let us help you obtain the best of both worlds—

HIGH INCOME AND LIQUIDITY.

Keep in mind that it is the nature of commodity trading to get most of your profits in a given time period from a single trade.

A WINNING SEASON

By Stanley W. Angrist

As the old year exits and the new year commences, it is time to examine once again my performance record for the previous six months. It's not outstanding, but on a percentage basis it is better, I believe, than the record achieved by 90% of all individual commodity traders.

Before examining my record in detail, I believe it might be worthwhile to consider how a single event can affect commodity traders who are on the wrong side of the market. During most of the summer and fall bulls in precious metals had been riding high. They could do no wrong by going long gold, silver and platinum in the face of a sick dollar, worsening inflation and spiraling interest rates. The gold bugs, silver streaks and platinum platers kept adding to their long positions by day and reckoning their profits by night. (This activity included trying to decide whether or not a simple two-door Mercedes 450SL would make an adequate Christmas gift for the doorman.) The March 1979 gold contract moved from under $200 per ounce in late July to over $250 in late October. That move represents a $5,000 profit on about $1,500 in margin for the 100-ounce gold contract. The flight from paper currency left every morning from the gold pit at the International Monetary Market or Commodities Exchange.

On Nov. 1 Mr. Carter announced his program to defend the dollar (and as an added bonus, simultaneously increase the suicide rate among precious metal traders). The metals started down—giving up in a little over four days most of what they had gained in seven weeks. The meaning of the expression "paper profits" was made all too clear to those who had overstayed their welcome at the Gold Bugs' Ball. The door was just too small to let all dancers out at the same time.

Well, on to the review of my record.

On July 24 I took my chances in the precious metal market with a gold spread that promptly went the wrong way. The gold contract spread of long December 1978/short December 1979 initiated at $19 premium December 1979 promptly widened, and wise traders took their licking at $21 and left the yellow metal to others. Considering what happened to most precious metal bulls in November, I will gladly take the $200 loss.

In the Aug. 7 issue I turned my attention to the lumber market with equally disastrous results. I recommended a bull spread and a bear spread and told traders to do whichever they could. By the time the magazine reached most readers, they could only do the bear spread—to their sorrow. Fortunately, the pain was over in a week and those who used the suggested stop got out with a $300 loss.

I turned my attention to bellies and hogs in the Aug. 21 issue, recommending a long February belly/short February hog position at 12 cents premium bellies. I was looking for a 10-cent profit ($3,600), and the market did rally 7 cents before collapsing back to where the trade was initiated. So far this one is a wash.

In mid-September I looked at frozen orange juice, foreseeing that the premium that November orange juice had on January OJ could not be sustained. November juice collapsed, making me look like a genius (or incredibly lucky—take your pick). I recommended getting out at 6 cents premium November for a $1,500 profit per spread.

Back on the winning track again, I recommended a very high margin trade of long the December 1978 D-mark/short the December 1978 British pound at a $15,000 premium the D-mark. This trade recommended in the Oct. 2 issue easily exceeded my $3,000 profit goal by mid-October, and not-too-greedy traders were out before the Nov. 1 announcement sent the D-mark tumbling relative to the pound.

My Oct. 16 potato spread of long March/short May, initiated at 140 points premium May, could have been closed out with May 80 points over by the end of October for a very satisfactory 60 point ($300) profit per spread.

Soybean oil and meal attracted my attention in the Oct. 30 issue. I recommended buying December meal and selling December oil, with meal selling at a $2,700 premium or less. I thought an $800 profit reasonable. Actually, $1,500 could have been harvested within a week of the recommendation. Being naturally modest, I'll only take credit for an $800 profit.

The Dec. 11 issue brought you a trade you should have ignored—long March corn/short March wheat with wheat at least at a $1 premium to corn. I have estimated that most traders would have put this trade on at about $1.20 premium, and the spread has widened even further so that open positions should be showing about a 5-cent loss, or about $250 per spread.

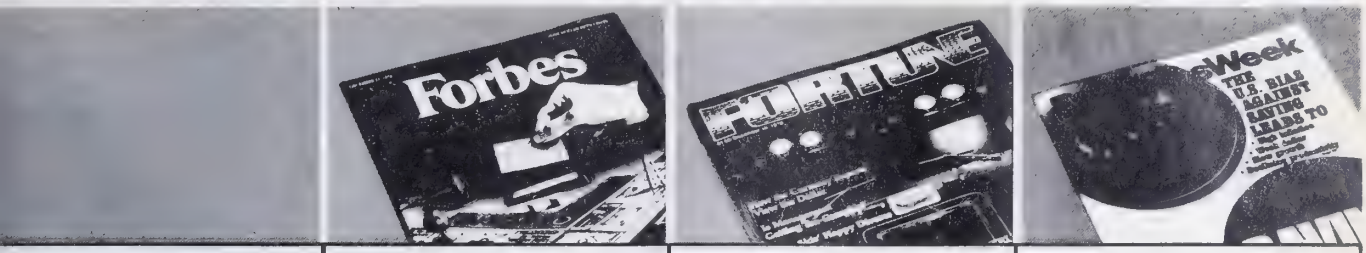
The long April/short October cattle spread recommended in the Dec. 25 issue has already moved so far in the forecasted direction that I do not believe any traders could have profited from the recommendation. I was correct, but a little late.

So where does that leave us for the second half of the year? Well, of the nine trades recommended, only eight of them could have been placed. Six of the eight that were recommended have been closed out, with four of them showing profits of $5,600 and two of them showing losses totaling $500. Thus on closed-out positions I am ahead $5,100. For the two open trades, one's a wash, and the other is showing a loss of about $250. (Commissions have been ignored in these calculations, but they would have totaled no more than $500.) Again, keep in mind that it is the nature of commodity trading to get most of your profits in a given time period from a single trade—in this case it was the D-mark versus the pound.

On balance, I believe the record is nothing to be ashamed of and most commodity traders would be pleased to go four for eight. It is certainly better than being poked in the eye with a sharp stick. ■

Stanley W. Angrist is a professor at Carnegie-Mellon University, and the author of Sensible Speculating in Commodities.

Forbes circulation is so healthy



NET PAID U.S. CIRCULATION*	**650,246**	**553,359**	**653,942**
Average Arrears and Extensions	**None, thank you**	**6,972**	**32,347**

(Comparisons of analyzed issues in Publishers' ABC Statements for 6 months ending June 30, 1978 less average arrears and extensions).

it's enough to give the competition high blood pressure.

's as simple as ABC.

In the first six months of 1978 FORBES emains nearly 100,000 paid U.S. subscribrs ahead of Fortune. And the net U.S. irculations of FORBES and Business Week re virtually the same.

ubscriptions Sold at Basic Price

During that same period, Fortune manged to sell only 27.5% of its subscriptions at asic prices. Regular price subscriptions re the very foundation of healthy circulaon. And in that department FORBES did vice as well as Fortune.

Subscriptions Ordered by Mail

This is the category of subscriptions genrally recognized as producing the best uality of circulation. Here's the score from he same Publishers' ABC Statements. ORBES: 93.4%.—Fortune: 87.0%.—Business Veek: 66.9%.

% of Subscriptions Ordered for Three Years or More

Nearly one out of three FORBES subscripons is sold for a term of three years or more. nd here's the competitive score—FORBES 1.6%.—Fortune 3.8%.—Business Week 0.9%. FORBES' percentage climbed. ortune's and Business Week's remained tatic. And FORBES needed to sell the fewest number of subscriptions during the period to maintain its circulation. As the chart indicates, FORBES did this with no arrears or extensions, such as the competition experienced.

The Reason for it All

Most important of all is the "who" behind these circulation figures, and the "what" that attracts them. FORBES subscribers own and run American business. Their average household income is $52,700. Their average net worth exceeds a half million dollars. More than two out of five are in top management. And very simply: FORBES editorial content gives them a range of news, analysis and comment matched by no other magazine in meeting their particular needs. In fact, repeated studies show that FORBES rates number one in top management's measured reading preferences among all other major business and news magazines.

Which is why leading advertisers are placing FORBES at the very top of their business and news media schedules.

After all, how a magazine circulates, determines how an advertising campaign circulates, too.

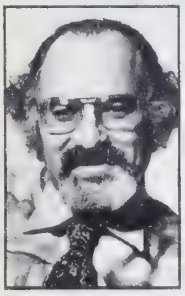
And in that respect, our circulation can make a healthy difference in yours.

Forbes: Capitalist Tool

New York and Beverly Hills are exporting high-chic inflation to the rest of the U.S.

THE $600 JACKET

By Martin T. Sosnoff



NEW YORK on $500 a day is no longer a gibe at the very rich. It is here, now, today. The hotels are jammed, office rents have doubled in two years: Try $30 per square foot for most of the prime midtown space. Desirable two-bedroom apartments rent for $1,500 a month—if you can find them—and co-op apartments sell as if they were castles in Switzerland.

I haven't bought a new suit in some years and when my wife nudged me in to my bespoken ragman, the going rate for a sports jacket had escalated to $600 from $200 five years ago. After the shock wears off, you leave the trendy boutique, resolved to make another $10 million so you'll have petty cash left over for a can of tennis balls and a few light bulbs. (Those 25-cent bulbs are now two for $1.66.)

I'm homesick for the late Fifties. When summer rolled around you bought a seersucker jacket for $25 and through the dog days coordinated it with your gabardine slacks. I made a hundred a week then as a junior securities analyst. My rent was $85 a month on Pierrepont Street in Brooklyn Heights. I ate well and was never short of money.

Admittedly, New York is not the rest of the country. Perhaps you can still get a solid breakfast in Akron, Ohio for $1.25. But I've got to believe that just as New York exports fashion from Seventh Avenue, we also export a lifestyle that eventually reaches even the American Legion Hall in Lincoln, Neb. Inflation is now a way of life in the big cities. The noise level in the hotels matches the Democratic convention. You are 18th in line for takeoff for San Francisco. The faces walking along Madison Avenue are exotically Oriental, Latin and Semitic; we are the haven for the currency of rich foreigners who fear getting their kneecaps shot off and crave the anonymity of the cities. Close the door and you are alone.

Martin T. Sosnoff is chairman of Atalanta Capital Corp., New York, and the author of Humble on Wall Street.

What have the narrow-gauged economists missed? They are just beginning to crank into their computers the changing sociology of work. Everyone works today, even the Beautiful People. Jackie O. and her crowd. Single-family households multiply and everyone spends what he makes. The consumer is not so dumb after all. If the inflation rate is 9% and you can borrow money for 10% or 11%, it's a good deal: There is little premium you are paying for the use of someone else's money. In fact, it is the country's biggest bargain.

This is the end of the rate cycle, says David Rockefeller. Morgan Guaranty Trust seconds the motion. Recession lurks around the corner, certain in six months or less. But bankers are wrong most of the time. If you don't believe me, keep a six-month suspense file on all the predictions you read about in the financial press. They go amiss. The only wonder is that the same people venture out in print so often.

There are two armed camps in Wall Street today. Those who see recession around every corner and those who expect the guest to arrive late, maybe early 1980. The interest rate and inflation cycles are tied to the guesses on economic deceleration. This is a mistake. Interest rates can hang up there, like a good punt, for a year after the economy tops out. Inflation likewise. My visceral reaction to the statistics and to my lifestyle tells me that the overheating, credit-crunch scenario is more probable. Light bulbs are oligopoly goods. Prices go up easier. General Electric and Westinghouse insist on rising profit margins. My tailor is a crook, but he is too well camouflaged to encounter Alfred Kahn, our inflation overseer.

Because my prayers for a recession have been lost in the Christmas mail, I wish that 1979 would go away and that it should be 1980 already. Actually, I think 1979 will make all the forecasters a little right. We could have high interest rates and inflation, but the stock market won't break much below 800. The dollar may wax stronger while the trade balance takes longer to correct itself. Gold could fluctuate 20% or more just as it did near year-end 1978, and the money managers will claim they are half invested or half disinvested, depending on which way the averages slant. Will Treasury bills once again outperform bonds and equities? Why not? They have been doing it nicely for many of the past ten years.

All of us who believe in the immense cash flow available for equity investment patiently wait for a more orderly environment. But the only orderly environment in this country is one made of recessionary forces: less spending and consumption. If only we had four quarters of zero real growth in the gross national product, the market would go wild. Gold bullion would be exchanged for IBM. Foreigners would stampede out of Hong Kong and Japan and buy all our blue chips. Price/earnings ratios would finally start up again and domestic pension funds, the Ford Foundation and Harvard University once again would believe in ownership of growth stocks just as in the Sixties and early Seventies. Everyone would take off his crash helmet and participate.

Sadly, it will take a deep recession to get all of us believing in growth again. This is my 1979 paradox that's worth some reflection. New York and Beverly Hills are exporting high-chic inflation to the rest of the U.S. For how long can Toledo and Akron hold out? Do the men in work shoes take to debt as a *Consumer Reports* best-buy, or instead do they demand from their politicians that tax reduction be indexed to consumer prices? (If prices go up faster than wages, you get it back in tax cuts.)

So far, Fatcatsville, high-chic inflation, is winning and people are defending themselves by going into debt. I can't tell you that I called my tailor a crook and walked out. Actually, I made an appointment for a second jacket. The New Year is here and it would be a mistake as an investor to believe in it 365 days' worth. If I had to, I would choose the second half. By then, the sold-out bulls will be reinvested and biting their nails like the locked-in bulls. Everyone will be waiting and waiting still for the good news—the recession that is just around the corner. ■

The bear will prowl the early months of the year, but the bull will raise his proud head in late 1979 and early 1980.

FIRST THE BEAR, THEN THE BULL

By Richard B. Hoey

INFLATIONARY expectations will be raging by the spring of 1979. Consumer price inflation should surge at a 10%-to-11% rate in the first half of 1979, led by meat prices rising nearly 2% a month. This should trigger renewed decline in the dollar and tighter monetary policy.

Foreign owners of U.S. dollars have a veto on U.S. monetary policy. Led by key members of the Organization of Petroleum Exporting Countries, they exercised their veto in October 1978 by dumping dollars so fast that we were in the early stages of a worldwide financial panic. If inflation does surge to double-digit rates in early 1979, foreigners may use their veto again, forcing the Federal Reserve to accept yet higher interest rates.

The Administration, the Congress and the Federal Reserve all want to avoid a recession. But the past inflationary actions of all three have doomed the U.S. to one. Before it begins, there should be a last powerful surge of industrial activity and inflation, driving interest rates higher by spring.

The sooner we bite the bullet and accept a recession, the better. If economic expansion continues through all of 1979, we could have even more serious problems with the dollar and inflation, and wage and price controls might become mandatory.

If economic expansion persists into 1980, it is hard to believe that the President would readily accept a recession in the year he runs for reelection. That would create a clear and present danger that President Carter will repeat the Nixon folly of 1972. Then, the inflationary impact of stimulative fiscal and monetary policies was temporarily suppressed by price controls in the preelection period. We're still living with the inflationary consequences of that policy error.

The prospects are good that the expansion *won't* go on that long and that we will be in a recession by this summer. That's not good news, but it's better than the alternatives.

There is a pattern linking the stock market and the economy that has been reliable in the past. The stock market always declines before a recession begins, and that market decline tends to persist through the early months of the recession.

But recessions are also the breeding grounds for bull markets. The best gains in stock prices usually occur late in a recession and early in an economic expansion.

Bull markets begin late in a recession for several reasons. First, by then the bad news is out and fully discounted. Second, interest rates eventually drop as a shift to easier monetary policy coincides with a slowing of credit demand. Third, the period of slowest inflation always occurs somewhere in the first 12 to 18 months of the economic recovery. The stock market often mistakes this temporary cyclical slowing of inflation for a more lasting slowdown.

In this cycle, there is a fourth reason to expect that recession will breed a bull market. Foreign investors are still hesitant to invest in our stock market because they view us as wildly inflationary. Once we go into recession, they may expect our inflation to drop in the future. If so, their buying could ignite strong gains in stock prices from deeply depressed levels.

Suppose that the economic downturn actually does begin in mid-1979. Then the bear will prowl the early months of the year, but the bull will raise his proud head in late 1979 and early 1980.

In the meantime, remember that it's the individual investors who have the margin debt, while the institutional investors have the cash reserves. Many individual investors are praying for their stocks to go up so they can get even and get out. The portfolio managers at the big institutions are praying for the market to go down so they can buy high-quality stocks at cheap prices.

In these uncertain times I'd rather be in the stocks that the cash-rich investors are looking to buy than in the stocks that heavily margined speculators may be forced to sell. Stay with the highest-quality stocks for the next several months. I would avoid any stock that has been a speculative favorite in the last year.

Union Oil of California (55), with earnings estimated at $7.90 for 1978 and $8.75 for 1979, is an attractive stock. The company's oil is already controlled down to an average of about half of the world market price. In contrast to the trend toward stiffer price controls for the overall economy, controls on oil and gas prices are gradually being eased. The company has huge reserves of natural gas and sells at seven times earnings. Its acquisition of Molycorp gives it a long-term kicker, with a virtual monopoly in rare earths. Union Oil now yields only 4.4%, but with the pay-out ratio now only 30%, strong dividend growth should be anticipated.

Yield-conscious investors should also investigate the convertible preferred stocks of *International Telephone & Telegraph* (27), which has estimated earnings of $4.80 for 1978 and $5.30 for 1979. Some of these preferreds have recently been yielding about 9% and offer potential capital gains if and when the underlying common stock moves higher.

We continue to favor regional banks located in the South and West, including *Security Pacific* (30), with earnings estimated at $6.25 for 1978 and $7.15 for 1979; *Western Bancorp* (24), earnings estimates: $4.50 and $5.15; *Flagship Banks* (10), which has estimated earnings of $1.60 for 1978 and $2.20 for 1979 and *NCNB* (12), with earnings per share estimated at $2.05 and $2.40. Loan losses should be much lower in this economic downturn than during 1974-75. Some potential for really large loan losses may exist in ship loans and foreign loans, but any such losses would hit the big money-center banks more than they would the regional banks. ■

AVIATION CONSULTANT

CORPORATE AIRCRAFT
Company Airplane?

The question is very complex and should be answered only after a professional study by an independent analyst.

Most decisions are made on emotions and hardware provided by biased aircraft salesmen. The decision should be based on software analysis and facts that include hardware in the overall pro forma. A thorough study will include analysis of travel, cash-flow, aircraft trade-offs, operating costs, maintenance, operating, and safety procedures. Crew evaluation and selection if desired.

Contracts with principal operating executives only.

★ ★ ★ ★ **is a millionaire** ★ ★ ★ ★

No one ever regarded the first of January with indifference. It is the nativity of our common Adam.
CHARLES LAMB

Philosophy triumphs easily over misfortunes past and to come, but present misfortunes triumph over philosophy
LA ROCHEFOUCAULD

We feel a kind of bittersweet pricking of malicious delight in contemplating the misfortunes of others.
MICHEL DE MONTAIGNE

So long as a man enjoys prosperity, he cares not whether he is beloved.
LUCAN

There is no dignity quite so impressive and no independence quite so important as living within your means.
CALVIN COOLIDGE

Never steal more than you actually need, for the possession of surplus money leads to extravagance, foppish attire, frivolous thought.
DALTON TRUMBO

Let us not complain against men because of their rudeness, their ingratitude, their injustice, their arrogance, their love of self, their forgetfulness of others. They are so made. Such is their nature.
JEAN DE LA BRUYÈRE

Never say you know a man until you have divided an inheritance with him.
JOHN LAVATER

I love my enemies for two reasons: They inspire me to recognize my weakness. They also inspire me to perfect my imperfect nature.
SRI CHINMOY

Thoughts on the Business of Life

*Since we had nothing to do with our Arrival and usually are not consulted on our Departure, what makes so many of us think we're entitled to so much while we're here?**
MALCOLM FORBES

If you cannot take a bird of paradise, better take a wet hen.
NIKITA KHRUSHCHEV

A son can bear with equanimity the loss of his father, but the loss of his inheritance may drive him to despair.
NICCOLÒ MACHIAVELLI

Adversity makes men; prosperity monsters.
FRENCH PROVERB

Security is mostly a superstition. It does not exist in nature, nor do the children of men as a whole experience it.
HELEN KELLER

Modesty is of no use to a beggar.
HOMER

To feel themselves in the presence of true greatness, many men find it necessary only to be alone.
TOM MASSON

*The Sayings of Chairman Malcolm, *a collection of over 500 thoughts embodying the wit and wisdom of Malcolm Forbes. Now available at $5.95. Send check and order to Forbes Inc., 60 Fifth Avenue, New York, N.Y. 10011. Add appropriate sales tax on New York State orders.*

There is no sadder sight than a young pessimist.
MARK TWAIN

If money is your only hope for independence, you will never have it. The only real security in this world is a reserve of knowledge, experience and ability.
HENRY FORD

The love for money is only one among many.
ALFRED MARSHALL

Money is like a sixth sense —and you can't make use of the other five without it.
SOMERSET MAUGHAM

Modesty is an ornament, but you go further without it.
GERMAN PROVERB

A Text . . .

Wherefore is there a price in the hand of a fool to get wisdom, seeing he hath no heart to it?
PROVERBS 17:16

Sent in by Florence A. Hnatko, Los Angeles, Calif. What's your favorite text? The Forbes Scrapbook of Thoughts on the Business of Life is presented to senders of texts used.

The future arrives before we expect it, but is seldom what we expect.
ARNOLD GLASOW

I go to seek a great perhaps.
FRANÇOIS RABELAIS

When we are born we cry that we are come to this great stage of fools.
SHAKESPEARE

engine.

SCOTT USA ski equipment is at home, literally, here in Sun Valley, Idaho—site of company headquarters.

Citibank, N.A. Member FDI

Scott USA equipment helps skiers maintain a healthy sense of balance. Worldwide Citibank helps Scott USA do the same.

Twenty years ago, this Citibank customer introduced the tapered aluminum ski pole. Today Scott poles, featuring a unique, contoured pistol grip, help skiers stay vertical on slopes around the world.

Scott's high-performance ski boots and thermal lens goggles also play a part in the company's steady growth. So do Scott ski accessories, from gloves and hats to socks and shirts. And so does Citibank—by helping Scott balance its special, seasonal financing needs.

To do this, Citibank structured a flexible, asset-based financing package that uses Scott's receivables and inventory. As Scott's sales grow and its assets increase, so, proportionately, does the dollar amount available to the company under this financing arrangement. At the same time, cash avai ability is matched with Scott's specific seasonal nee

Our bankers who work closely and knowledgeably with Scott have also arranged the leasing of computers and production equipment. They provide facilities for the collection of overseas payments, and letters of credit covering ski accessories import from the Far East.

This association with companies like Scott demonstrates conviction shared by Citibanker everywhere: that supporting th development of sound growth companies is an area of enterprise to which this bank is and will remain committed.

SCOTT USA President Jim Tobin (center) discusses product modifications with bankers Jim Hawkanson—Seattle (left) and Dave Jones—San Francisco.

Today's Chase

"Everyone talks global network. Our bank has it."

"Network capability is the key to international banking."

"We can provide local currency financing for multinational corporations almost anywhere. As well as in-depth knowledge about the more than 100 countries where we have a physical presence."

"A bank as big as Chase, with an operation as extensive as ours, is a major force in world money markets. We have the money... the local and Eurocurrencies... that our customers need."

"The more intricate international finance gets, the more complicated corporate banking becomes. And at Chase today, a single individual — your Relationship Manager — coordinates your needs worldwide. Both credit and non-credit."

The Chase Bank. A worldwide network of branches and affiliates providing vast sums of money and essential banking services for clients in over 100 countries. What we offer is yours through your Chase Relationship Manager. Call on today's Chase Bankers today.

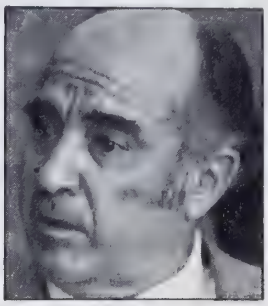
Forbes

January 22, 1979
Volume 123, Number 2

Tax Shelters: Eight years ago Hugh Pike was broke. Today he's a millionaire—thanks to the public mania for beating the tax collector and the entity Pike derisively refers to as "Uncle Sugar." **34**

Liquor: Want to see how socialism works? Thanks to such unlikely allies as the Rockefellers, a large part of the liquor industry has been "nationalized" for nearly 50 years. **42**



Cover Story: The U.S. almost made a blunder of historic dimensions by trying to beat down the price of Mexican natural gas. President Carter is going to Mexico next month to try to redeem it. **29**

Companies: The heart pacemaker business is almost classically research-intensive—as Medtronic Inc., once four times bigger than its nearest competitor, has painfully learned. **62**

Companies: Since Da Foster took over, Colga Palmolive Co. has made quisitions with $1.5 billi in sales—and is having tr ble digesting them. **66**

Features

The Courts: *A Litigation Free-For-All?* Teddy Kennedy wants to override the Supreme Court's "Illinois Brick" decision. If he succeeds, it will change the grounds on which business can be sued on restraint of trade—and probably lead to another bonanza for the lawyers. **33**

Companies: *Those Friendly Indians.* Why Sam Casey isn't worried about a takeover of his Great Northern Nekoosa Corp. **40**

Football: *Notre Dame's Money Machine.* No matter the score, the Fighting Irish always win on the earnings side. ..**44**

Musical Instruments: *Sour Notes In An Old Song.* While old-fashioned instruments decline, modern electronics takes over more and more of the musicmaking industry. But the trouble with being in the electronics business is that you're in—well, the electronics business. **46**

The Soviet Union: *"I Have No Authority."* You hear that a lot in the U.S.S.R.—one reason why expanded trade with the U.S. is easier to talk about than to accomplish. **48**

Companies: *What Bob Kirby Has Wrought.* Westinghouse Electric Corp. is building a strong, surprisingly lightly leveraged company outside nuclear energy. Whatever happens with its uranium problems won't sink the company. ..**53**

Companies: *A Tiger By The Tail.* Canada's Noranda Mines is sitting on natural gas deposits so rich it's straining to the limit of its resources to develop them. **58**

Companies: *After The Rabbit.* Volkswagen is booming again, but difficult decisions lie ahead. **64**

As I See It: *Missionary In Babylon.* An articulate Tory says Britain *can* climb out of the morass. **72**

Companies: *How Shell Caught Up.* For years, it was the weak sister of the Seven Sisters. But its rivals' bad luck has been Shell's good fortune, and in the four years since 1974, it has been leading the pack in profitability. **75**

Automobiles: *Something A Little Smaller.* With every fiber of its being, Detroit yearns to sell big cars. But government rules are forcing change, not only in its technology, but in its marketing. **80**

Statistical Spotlight: *Yankee Bonds.* An attractive deal for many Americans, foreign debt issues floated on the U. capital markets have enjoyed a spurt of popularity. .....

The Funds: *Games Mutual Fundsmen Play.* Fighting the doldrums, mutual funds have come up with some ingeniou little gimmicks—like legal check-kiting, life and health insurance and playing the market. **1**

Faces Behind The Figures

Robert P. Bryant (Dobbs Houses)
Gene M. Woodfin (Marathon Manufacturing) .....
Takatoshi Yoshikawa (Takara Belmont)
Barry Munitz (University of Houston) .....

Money And Investments

The Economy: *Riding Off In All Directions.* Listen to *all* the forecasters and you'll come away thoroughly confused. But lo at a couple of straws in the wind—consumer and mortgage debt, for example, which has increased $139 billion in one year and is now at nearly $1 trillion. .....

Why the long run St. Joe investor led 98% of the field in the FORTUNE 500 ten year marathon

J-925

*Includes both price appreciation and dividend yields.

St. Joe topped 490 of FORTUNE's 500 with a total return* to investors of 17.7% over the 1967-77 decade.

Why? It's partly because of the basic underlying strength of a natural resources company. The mining and crude oil production industry median of 6.85% in total return to investors for 1967-77 was second highest among all industries.

The other major factor is our continuing program of diversification, exploration and technological development. This has given St. Joe a new direction over the past ten years, changing it from a specialist in lead and zinc to a broadly based source of energy fuels and minerals.

As late as 1972 less than 40% of our operating profit came from energy-related business. Through coal, oil, gas and lead for batteries our operating profits more than doubled by 1978 and over 75% came from energy sources.

To help keep the long-run St. Joe investors up front in the next ten year marathon, we have planned a 1978-81 capital investment program of over $655 million.

For more insight into our future, write to Dept. 4 for our annual report.

A BASIC SOURCE

VISA
MasterCharge

Now: Two ways to bail out the kids.

Beginning this month, VISA® joins Western Union's emergency Money Order service.

Which means you now have two easy ways to send money when it's needed fast.

All you need is VISA or Master Charge and a telephone.

With Western Union's Charge Card Money Order service, you can send a Money Order anytime. Up to $300. And charge it to your VISA or Master Charge®.

Simply call Western Union's toll-free number, 800-325-6000, day or night (In Missouri, 800-342-6700.) The Money Order is cashed to one of our 8,100 offices or agencies, located throughout the country except Alaska and Hawaii. It usually can be picked up within two hours, when the selected location is open for business. (Some are open around the clock.)

The Money Order amount and our charge will appear on your VISA or Master Charge statement. Simple as that.

You can send regular Money Orders, too.

If you don't have a VISA or Master Charge card, we still can help. Just take cash—any amount—to a Western Union office or agency. And we'll send a regular Money Order.

That's not all. Our Commercial Money Order service offers an instant credit line to businesses once they qualify. Up to $5,000. No charge to open or maintain the account.

Your Money Order can be picked up at one of our 8,100 offices or agencies, located throughout the country except Alaska and Hawaii.

And if you're a Telex or TWX® subscriber, you can send Money Orders directly from your terminal.

Send for your free emergency money wallet card.

For more information about our Charge Card Money Order service, and for a free wallet card that explains how to use it, complete the coupon.

"It's not *my* job"

The fear of making even small decisions that FORBES Economics Editor Ben Weberman found so pervasive in the U.S.S.R. *("I have no authority,"* seems to extend to Soviet officials based in the U.S.—as Reporter researcher William B. Harris discovered while checking Weberman's story. Soviet representatives in Washington and New York. Reports Harris:

"When I called the press office at the Soviet Embassy in Washington, no one picked up the phone and announced 'There's no one here now. Call back.' 'hello,' no salutation, nothing. Called back proved futile because no one picked up at all. When I called the main embassy number to report the difficulty, I was referred to the press office.

"Next, a telephone call to the Soviet mission to the U.N., where they advised the phone by repeating the digits of the number you've just dialed—no hello, nothing. A woman in the press office there said it was not within her 'competence' to answer any questions other than those dealing with the U.N. itself."

It was as if the Soviets were determined to underline the point Weberman makes in his article: that business dealing with the Soviet Union are plagued by seemingly interminable bureaucratic hassles.

Economics Editor Weberman
Who decides to replace the lights?

Owlish editor

Last month, U.S. Steel announced the two winners of its annual Wise Old Owl Award, given to those who make the most accurate predictions about the performance of the economy each year. Runner-up for 1978: Senior Editor Malcolm S. (Steve) Forbes Jr., who is the only person in the 40-year history of the competition to have won first place twice—in 1975 and 1976.

Steve was near the mark in his 1978 predictions for the GNP, inflation, prime interest and unemployment rates, auto production and the price of gold. Alas, he was off on his prediction that the Dow Jones industrial average would hit 1000 in 1978—it never got over 908 and ended the year just over 800. Says Steve: "Stocks were such bargains that I thought the fundamentals were bound to be better reflected during the course of the year." However, he's still convinced stocks will have their day. He's again predicting a 1000 Dow for 1979. As for inflation, he says, it will be down to a 6% annual rate by year's end. ■

Prognosticator Forbes
Don't give up on the Dow.

The new Saxon 302 Plain Paper Copier.

Engineered for people who run copiers.

Priced for people who run companies.

Our new Saxon 302 copier makes life easy for the machine operator. Fact is, it runs so smoothly, so reliably, and is so easy to keep in shape, we call it "The Great American Runner." But for all its features, the Saxon 302 has a very reasonable price.

We think the people who pay the bills deserve a better break, too.

Here's the way it works:

Dual cassette automation. Just click in our dual cassettes. New automation lets you change paper size with a touch of the control panel. And our extra paper capacity (600 sheets) lets you run longer without reloading.

Press-tone control. We have gone well beyond pushbuttons.

stead simpler, more reliable pressure sensitive ess-tone controls complete with digital readout.

lf-diagnostic center. To reduce downtime—self-diagnostic center that monitors all machine nctions. For consistently sharp, clear copies—new automatic toner system. For reliability—microprocessor solid-state brain. Plus new ergy saving features. And more.

n economical American. The Saxon 302 made in America. Backed by a nationwide service stem. There's a lot of competition out there. And axon is meeting it head-on by offering you more rformance at a lower purchase or rental price. nd out more about our Saxon 302 today. You'll love e way it runs. And the price it runs you.

The Great American Runner.

The fringe on top

The White House decision to exclude some major fringe benefits from its wage guidelines will mean even louder sighs of relief than might have been thought. During the past 20 years, fringes have grown from less than one-quarter of payroll expenses to 37%. That is the salient finding of a new survey by the U.S. Chamber of Commerce, covering 748 companies. Biggest spenders on fringes are the chemical and primary metals industries, which both top 43%.

Climate on Capitol Hill

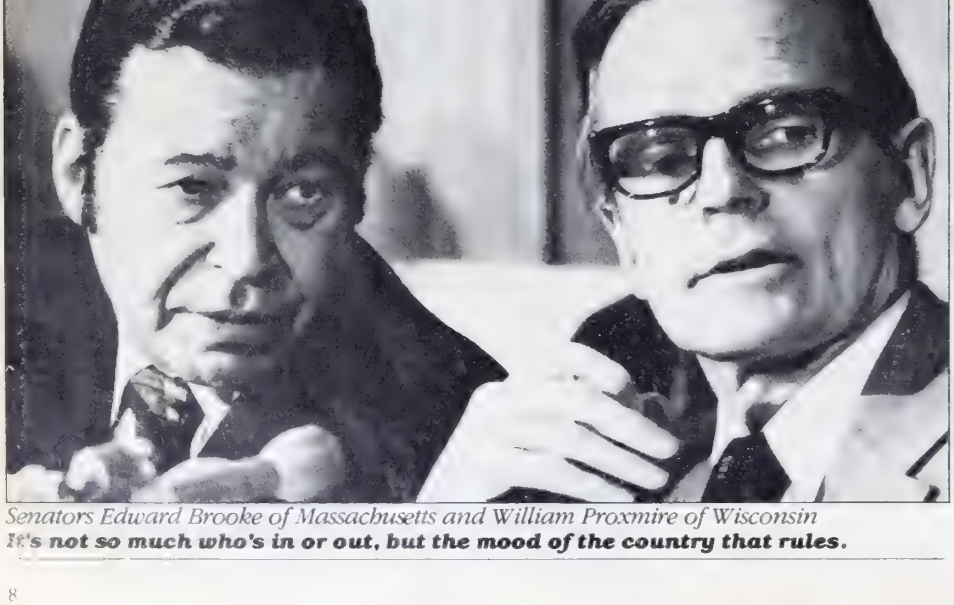
How will business, which fared as well in the 95th Congress as labor did poorly, do on Capitol Hill with the 96th? The new board chairman of the National Association of Manufacturers, Herbert E. Markley (president of Timken Co.), is "delighted" with what he sees as a growing pro-business trend. NAM Executive Vice President Forrest I. Rettgers shares that optimism and claims the November elections gave business new allies. "We were heartened by the entire thing," he says, citing the defeat of liberal Iowa Democratic Senator Dick C. Clark as a major business victory, and saying that Illinois GOP Senator Charles H. Percy had promised a more pro-business stand in exchange for desperately needed, last-minute support in the 1978 voting. (Percy supported the unsuccessful labor-sponsored general picketing and union-organizing bills.)

The NAM's high hopes are based on mood, political arithmetic—and some wishful thinking. The GOP did gain 3 Senate seats and now holds 41, enough to sustain a filibuster. They also added 12 seats in the House, but neither advance puts a real dent in the Democrats' solid majorities. More comfort can be found in shifts in committee membership. On the two tax-writing bodies, for example, the Senate Finance Committee lost two liberal Democrats, Maine's William D. Hathaway and Colorado's Floyd K. Haskell. On the House Ways & Means Committee, consumer activist Martha Keys of Kansas is gone. Senator Edward W. Brooke of Massachusetts, generally rated a liberal, is out, and the ranking GOP member on the Senate Banking Committee is now Utah's conservative Edwin J. Garn. Businessmen also can hardly lose with the departure from the House Commerce Committee of California's John Moss, whom Ralph Nader termed "the best member of the House."

This kind of political handicapping, however, can be misleading. Clark's defeat in Iowa, for instance, is credited more to antiabortion groups than to business. The many new faces on the Senate Banking Committee really mean that Wisconsin's William Proxmire, its Democratic chairman, will run the show all the more firmly.

Some changes do mean a new climate, not necessarily friendly. The retirement of Mississippi's James O. Eastland gives the chair of the Senate Judiciary Committee to Edward M. Kennedy, an antitrust zealot (and, ready or not, a strong presidential contender). Kennedy's antitrust subcommittee, in turn, goes to Ohio's Howard M. Metzenbaum, a loud critic of the oil companies.

Overall, business probably will fare well with the new Congress, n much because of changes in me ship, but because of the mood country. Veteran Washington lobb who make their living reading moo the Hill, think that is the reason bus did so well last year. The fall of the the flare of tax revolt, the gnawing cern about the economy, all help strengthen the argument of busines that they needed help, not hindr from Washington.



Senators Edward Brooke of Massachusetts and William Proxmire of Wisconsin
It's not so much who's in or out, but the mood of the country that rules.

The "never-nesters"

Real estate men now see some of liveliest prospects among what the the "never-nesters." This is their for married couples that either pos having children or decide never to any. Usually, both partners are wo full time, with one a professional. N nesters, the home-sellers say, buy to take advantage of the tax breaks hedge against inflation. Such custo want quality and a minimum of ma nance, a combination that opens door to selling extras in a home.

Private *vs.* public

Which are more profitable, privately or publicly owned companies? De the difficulty of collecting data in private sector, two professors at the versity of Southern California have led the question. Private ownership hands down. The private comp they analyzed earned almost three t more per sales dollar than their s holder-owned counterparts. Mark Professors Roger A. Strang and Ro Herberger found that in 1975 (the they studied), net income for the pr firms was 9.3% of sales and for p companies, 3.8%. That year, they mate, the U.S. had 2 million pr companies (*vs.* 10,000 publicly dominating construction, agricul forestry, general service business an tail sales. Privately owned manufact had sales estimated at $428 billion assets of $328 billion. The tab fo U.S.C. study was picked up by Reli Steel & Aluminum Co., a Los An metals distributor with sales of than $150 million—and privately he

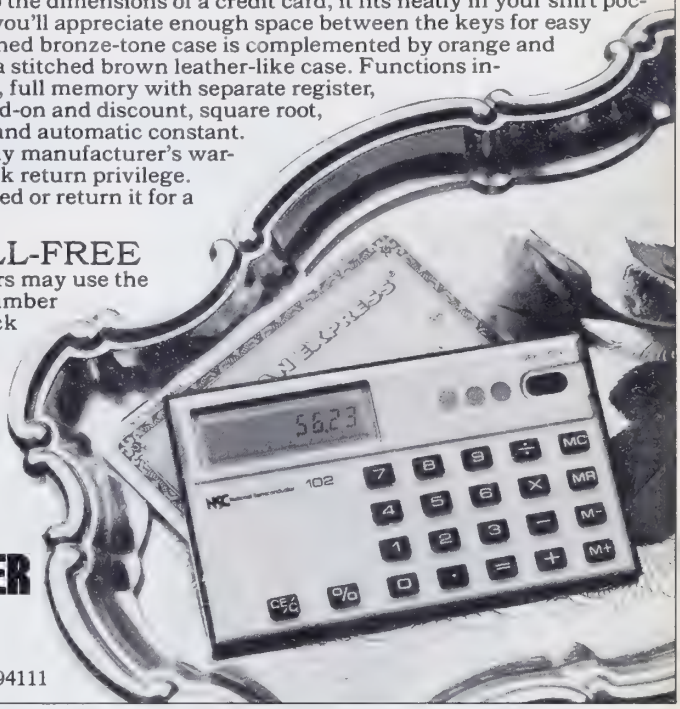
Wafer-Thin Elegance

You've come a long way, and so have calculators. You've seen thick ones and thin ones, red ones and green ones. The latest and best ones have the new LCD display, which shows the numerals in large black digits—visible even in bright sunlight.

The National Semiconductor is our personal choice as the one you'd most like to own. It consumes so little power that its 2 batteries last up to 5 years—even if you never turn it off! As thin as 2 quarters, it's the ideal traveler and constant companion. Sized to the dimensions of a credit card, it fits neatly in your shirt pocket or billfold. And you'll appreciate enough space between the keys for easy operation. The brushed bronze-tone case is complemented by orange and brown accents and a stitched brown leather-like case. Functions include 8-digit display, full memory with separate register, percent key with add-on and discount, square root, chain calculations, and automatic constant.

Comes with 90-day manufacturer's warranty and our 2-week return privilege. You must be delighted or return it for a full refund.



ORDER TOLL-FREE

Credit card holders may use the toll-free ordering number below. Or send check for $29.95 plus $1.50 delivery (add $1.80 tax in California).

Follow-Through

The Anaconda caper

Atlantic Richfield, FORBES reported six weeks ago *(Dec. 11, 1978)* got more than it bargained for in acquiring Anaconda Co. Along with $1.5 billion in mining and metals sales, Arco also had unwittingly guaranteed millions in shaky and probably uncollectible bank loans. At first, Arco said cryptically that Anaconda's former treasurer had engaged in "significant wrongdoing." Later it revealed that ex-treasurer Charles H. Kraft had been fired and arrested.

On its own, FORBES learned that Kraft had been okaying loans to non-Anaconda companies for half a dozen years and that most of the $19.5 million still outstanding had been to a New York-based firm, Robin International, headed by 73-year-old promoter Nicolas Reisini. How had Kraft managed it? Bankers Trust, on the hook for $11.2 million, had accepted the fact that an "Anaconda official was authorizing the loans." Arco general counsel F. X. McCormack noted that Kraft could short-circuit auditors because, as treasurer, he supplied the list of main banks and simply left off those involved in his extracurricular affairs.

As the year ended, the story was confirmed in detail in federal district court in New York. Kraft pleaded guilty to charges that he had "fraudulently induced" the banks to lend to Reisini and to West Coast real estate promoter James Fallon, described in the charges as Reisini's "close confidant." Eight counts, including conspiracy and fraud, were filed against Reisini and Fallon, charges that could mean 28 years in prison and fines of $42,000. Kraft, whose return for all those millions was a little cash, promises of more, some art, and a $13,000 car, faces 15 years and a $12,000 fine.

As for Arco, counsel McCormack says it denies any liability for Kraft's "purported guarantees" and that insurance will cover any liability that might be found.

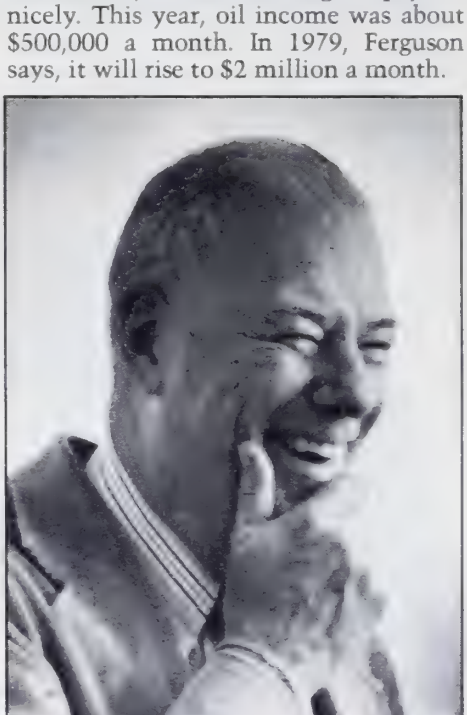
The daring dowager

"What's a nice old dowager from Milwaukee doing in high-risk, high-pressure investments?" FORBES asked two years ago *(Feb. 15, 1977)*. The dowager in question was the multibillion-dollar Northwestern Mutual Life Insurance Co., a 121-year-old firm that had picked up its skirts and skipped into things like offshore oil, Arizona farm land, shopping centers, apartment houses and solar energy because its $250,000-a-year president, Francis E. (Fergie) Ferguson, wanted his policyholders to get the best, not necessarily the safest, deals.

Ferguson's philosophy continues to pay off. In 1977, Northwestern's assets were $8.5 billion. Today they have topped $9 billion and the company ranks ninth among all life companies (it sells only individual life and disability insurance), sixth among mutual life firms. In November, it announced its 20th dividend increase in 27 years and will pay out a record $412 million in 1979, $46 million more than in 1978. The company also managed a before-tax return on its total portfolio of more than 7% for the first time in its history.

Return on assets, of course, is not just a matter of pride for life insurance companies. It is a matter of life and death. Northwestern has one especially serious problem—more than a fifth of its investments are in loans to customers, at rates determined not by the money markets but by state laws. Ferguson has led the charge in a campaign to get states to allow higher rates. Two years ago, this effort had prevailed in 35 states; today, 45 and the District of Columbia allow the 8% Ferguson and other insurers want. (New York, a key state, allows the increase on new but not old loans.)

The bulk of Northwestern's money is still in the tradition of the industry—bonds, mortgages, common and preferred stocks—but its oil and gas exploration, perhaps its most radical departure from convention, is also starting to pay off nicely. This year, oil income was about $500,000 a month. In 1979, Ferguson says, it will rise to $2 million a month.



Northwestern's Francis E. Ferguson
A bold helmsman needs a tight ship.

Not everything Ferguson touches to gold. In the early 1970s, for exa his investment scouts thought an e tional "merchandise mart" was what downtown Chicago needed would bring a 20% to 30% return education market turned sour, a early 1977 Northwestern was stuck a 30-story, $40 million building tha only 30% occupied, and Ferguso trimmed his goal to a 7% return. P tence paid off, and by the end of 197 building was 95% leased. (Luck hel high-ceilinged auditorium designed education in mind became the hom Chicago racquet ball club.)

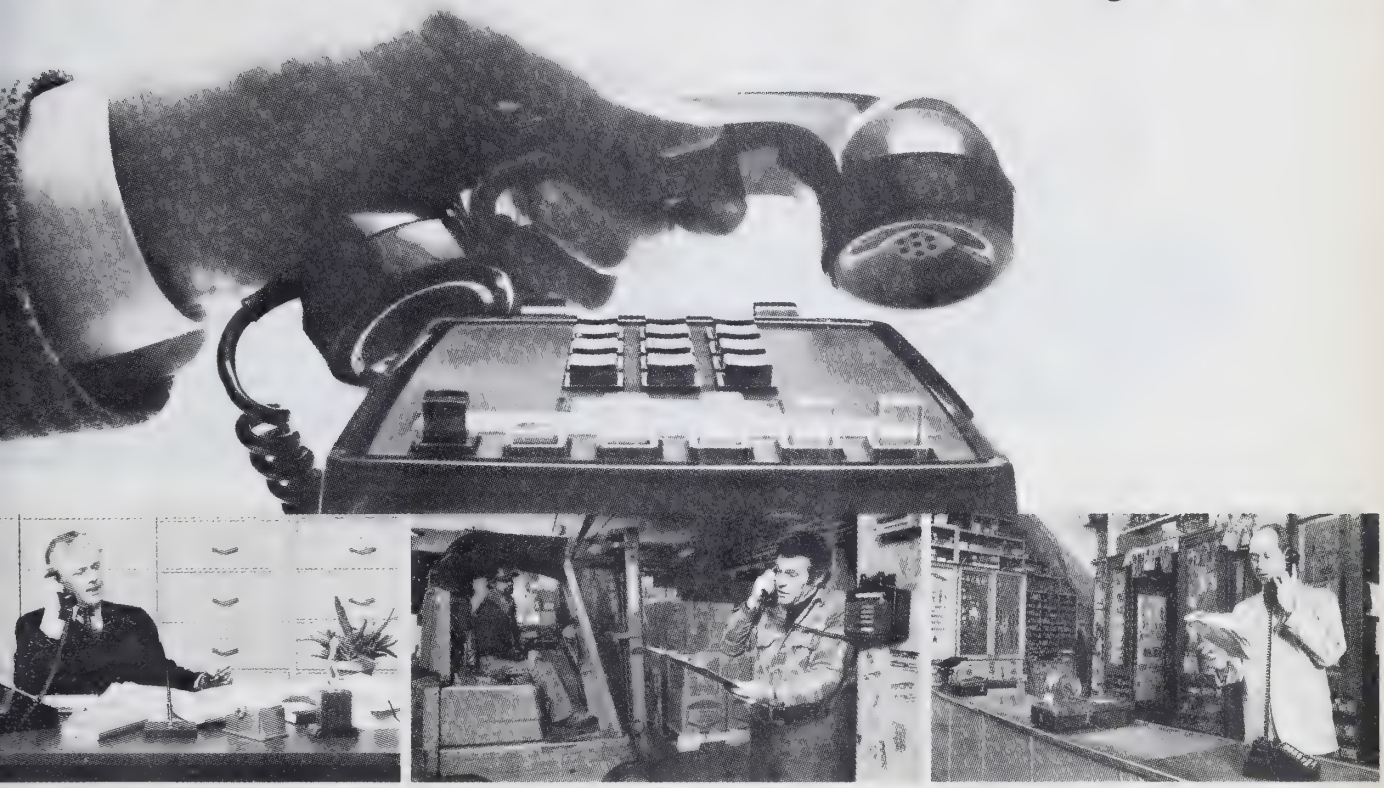
Solar energy is another field that has been slow to pay off. Northwe has put up $3 million in seed mon help scientists at Ohio's Battelle M rial Institute develop ideas. All it h show to date is a sheaf of patents a experimental 50-hp solar pump he to irrigate the company's 76,00 farm in Arizona. Ferguson is still hu for industrial partners to join his venture but says resignedly that power is "no overnight payoff like oil, gas and other energy." This pat comes naturally. Ferguson was down during the 1943 "ball-bearing over Schweinfurt and spent 19 m in a German POW camp.

Despite a penchant for ventures are off the beaten track, Ferguson wildcatter. He is proud of his oil but he is just as enthusiastic abou tight rein he keeps on his comp day-to-day routine. *Best's Insuranc ports*, the industry's bible, gives N western top marks in expenses an costs to policyholders ("remarl low"), mortality experience ("very f able") and policy lapses and surre ("very low").

Ferguson gives credit for these grades to Northwestern's 3,600 ag and its success in keeping them i fold for more than four years, more double the industry average (for 29% *vs.* 13%). The number of hom fice employees per $100 million in i ance, another benchmark, is 4.6, to the field. His nearest rival, Ferg notes, needs 6.7 employees per $100 lion, a difference that means $11 mi in annual costs. The caliber of N western agents is another plus: have won the industry's National ity Award, compared with an indu average of 10%; 35% can put C.L.U Chartered Life Underwriter), the i ance blue ribbon, on their calling c *vs.* 14% for the competition. Fergu plan is to keep running this tight with the same kind of crew.

How are his *personal* investments ing? A farmer's son from upstate York, he bought 2,500 acres of Missi pi delta land in 1976. "It was $1,00 acre," he says. "Now it's $1,500." ■

Now—the no-rent, no up-keep ranch office from the Bell System.



You can do business in a distant city for only $16* a month.

nks to the new miracle of Remote Forwarding—RCF—you can open ranch office" in a distant city where e is potential business for your firm. hout investing in office space, equip- t or additional help.

r cost? Only $16* a month.

w RCF works.

Bell System will assign your firm cal telephone number in the city re you want to develop new roots. l to establish your identity in this , your company will be listed in both white and yellow-page directories. *o additional cost.*

r customer in the remote city sim- dials your local number, and the is automatically forwarded *directly ou... with no waiting and without ator assistance.*

you pay for your new "branch e" is the low monthly service charge 16* plus the low direct dial rate for n incoming call. Since your RCF nber is connected to your regular ness phone, *no telephone is needed he distant city.*

F—fast, convenient, inexpensive.

F establishes your identity in another city. Your customers and field representatives can call you locally and directly.

Though you're physically located in a distant city, to your customers you're only a local phone call away.

Now you can grow with your market.

RCF offers you the opportunity to explore new markets—practically without investment.

To begin, you may only want to start out with RCF service in a single market. Later, you may want to open additional markets. No problem. You simply add RCF as you need it.

As you'll find out from a Bell Account Executive, there are countless applications for RCF.

Find out from the Bell System how we can help your business grow.

Your business has special needs. This is why you should talk to a Bell Account Executive. We can tailor service to *your* specific needs.

*$16 is the typical monthly rate for your first RCF number, with slight rate variances in some locations. In addition, a nominal service connection charge usually applies. Each call forwarded is charged at low direct dial rates and is applied to your RCF bill. Your Bell Account Executive will advise you on the availability of RCF in the market area you choose.

There's no obligation of course. Call our toll-free number right now—while you're thinking about RCF.

A Bodine machin about anything in a ca And save you up to 95¢ o

Our business at Bodine is making small-parts assembly machines. Not for things like frames and body work—but for assemblies like those listed above.

If you make small parts, we can tell you how to assemble those small parts faster, better—and for far less than it's costing you now.

Think about it for a moment and you'll quickly see why. Industry today is investing literally millions of dollars in trying to cut material and fabricating costs. Trouble is, there's not much room left to cut.

Where the savings are.

The one place left where you can make really significant cost reductions these days is in assembly. That's where your capital expenditures should be, because that's where you stand to save the most. And that's where we can show you how to save up to 95¢ on every assembly dollar.

We know because we've done it for many of America's most successful companies.

Does that mean we can do the same for you? Not necessarily. But 50 years experience in this business tells us that 6 of eve manufacturers can switch t kind of "selective automatio end up with substantial savin

What kind of savings?

We're not just talking labor costs although, obvi that is a big consideration. Yo save because your product q will improve. Which means warranty costs will go dow nally, you will be able to inc production substantially witho hassle of costly hiring and tra procedures.

Readers Say

Swiss more productive?

SIR: The Swiss franc has every right to soar against our dollar *("An absurd compliment to Switzerland," Fact and Comment, Dec. 11).* In terms of gross national product, they outproduce us per capita $16,500 to $9,500.
—Stephen M. Totton
Park Ridge, Ill.

Experts say that to get a proper comparison of productivity, one should use what economists call "purchasing-power parity" exchange rates instead of the exchange rate you find in the newspaper. The adjusted exchange rate measures what a dollar earned here will buy in the U.S. compared to what a franc earned in Switzerland would actually buy in Switzerland. On this basis, the Swiss are no more productive than the U.S.—ED.

Bishop Steinberg?

SIR: After reading the Dec. 25 issue, I realize it is a tough world out there and I guess sooner or later we all need someone or something to lean on.

The Methodists are worried they might actually be held responsible for their retirement home fiasco *(p. 25)*; the international construction and equipment business needs government subsidies because they are at a disadvantage operating under the rules of free enterprise *(p. 27)*; the trucking industry needs government regulation to save it from the destructive competition of little entrepreneurs *(p. 41)*.

Fortunately there are still a few Saul Steinbergs around *(p. 30)*. I wonder what he would do if he were a Methodist bishop.
—Jim Stjernstrom
Longview, Tex.

New York Times poll?

SIR: Dr. Gallup's poll *(Fact and Comment, Nov. 27, reference to public support for price and wage controls)* must have been taken in *The New York Times'* newsroom.
—Donald MacArthur
Sarasota, Fla.

Secs' lib

SIR: Your article "The secretary is becoming an endangered species" *(Dec. 11)* was most perceptive, especially for recognizing that it's the secretary's competence and commitment which often conceal managerial mediocrity.

Perhaps the trend you foresee blow some good, by eliminating th retarial roles of Nanny, gopher, and cover-upper for a nurd manage
—E.J. Finn
Convent Station, N.J.

SIR: Isn't it a shame there is a sh and the girls are demanding a wage? I can just imagine, 100 or so ago the bemoaners saying, "If slaves demand wages for choppin ton, we are going to have inflatio the price will go sky high."

Chop your own cotton. We're fi last—and upwardly mobile.
—Mary Ellen Cohon
Morton Grove, Ill.

He looks good, but. . .

SIR: Thank you for the compliment cerning my] quotation picked up a Sarnoff's *(Fact and Comment, Dec. 2* is most appreciated.

Reimann's contention

SIR: FORBES *(Nov. 13, 1978, "Saturday ning blues")* reported that my comp International Reports, was owned

Monte Carlo.
Personal luxury
or people who've earned it.

Every fleet needs special cars with special touches of comfort and styling. They go to special people, proven performers who've earned recognition. Chevrolet makes just the right car for those people... Monte Carlo.

A car that stands apart from the crowd.

Monte Carlo is a car with a personality all its own. It pleases the eye with its clean sculptured lines and the effortless sweep and flow of curves from front to rear. It's quiet. The ride is soft and comfortable. Inside it's thickly carpeted, richly upholstered, beautifully laid out. Arriving in a Monte Carlo makes a definite statement about the driver and his company.

New punch from the standard V6.

Choose from a variety of four engines—two V6s and two V8s (one V6 and one V8 in California). For 1979 the base 3.3 Litre V6 features power-boosting refinements in the ignition, carburetor, and transmission for added response in the low and intermediate speed range. Monte Carlo is equipped with GM-built engines produced by various divisions.

Monte Carlo is packed with Chevy value. That's the quality and solid reputation behind a great name. Why not call the man with all the details, your Chevrolet Regional Fleet Account Executive. Ask him about the car that stands apart from the crowd. The 1979 Monte Carlo from Chevrolet.

Chevrolet

Chevy cars, Chevy people,
Chevy dealers, the proven performers.

"In making investment decisions, I want as much information as I can get. That's why I read Barron's."

Tinkham Veale III
Vice President—Investments
Alco Standard Corporation
Cleveland, Ohio

"As the manager of my firm's pension fund and other investments, I have a great need for a variety of economic and investment information. So it's important to me to keep on top of what's happening to companies and the market. Barron's is a big help.

"There are a number of articles I find particularly useful in my work. I like the fresh inside perspective that Abelson's Up & Down Wall Street gives me, whether he's writing about a specific company—or events of broader significance.

"Investment News & Views—with its in-depth company analyses—does two jobs for me. It gives me information about firms that are not often covered elsewhere. And, when we do have an investment interest in the reviewed company, Barron's facts and judgments play a valuable role in our decision-making process."

Whether you're a professional or an individual investor, you're constantly faced with important decisions. And no publication works harder to help you make the right decisions than Barron's. With facts, figures and insights. We look ahead—to help keep you ahead. That's why over one million people read Barron's every week.* Subscribe today.

King's dream. Kennedy's courage.

A decade of change. When confident leadership moved the nation in new directions. Here at home. And in outer space. Avco changed, too. Exploring new frontiers in technology and financial services.

Yesterday, we designed and built the heat shields that brought Apollo Command Modules safely home. Today, we're producing a lightweight coating able to withstand metal-searing temperatures. Providing lifesaving protection for the petro-chemical industry.

In the Sixties, we began to organize Avco Financial Services and acquired The Paul Revere Companies. Today, AFS is the third largest consumer finance company in the world. Serving clients in five countries. And Paul Revere is revolutionizing life insurance with our innovative Super Standard Policy. Providing special premium rates for people across the nation.

Leading the way for fifty years. From aerospace to financial services, from research to manufacturing. Where Avco leads, confidence follows.

Today, Paul Revere's Super Standard Policy is a reward for good health.

AVCO CORPORATION

Where Avco leads, confidence follows.

"Any computer company that helps architects reach new heights of design and educators break new ground in instruction is more than a computer company."

Henry J. White
Executive Vice President, Data Services
Control Data Corporation

Peachtree Center Plaza pierces the Atlanta skyline with a majestic elegance that is the hallmark of a John Portman design. The seventy-floor hotel is also a towering example of the speed and efficiency with which the famed architect-developer turns dreams into steel and concrete.

Like San Francisco's Embarcadero Center and the more recent Renaissance Center in Detroit, John Portman & Associates started on ground zero with a plan. A purpose. And the computer technology of Control Data.

Using computer structural analysis programs available through Control Data's CYBERNET® Data Services, Portman engineers were able to speed the design cycle of a large part of the Peachtree Center complex, including the Plaza, one of the world's tallest hotels.

The frames, beams, steel columns and foundation of the massive design were analyzed and verified for structural integrity in hours, not months—using a terminal linked to computers that are part of our worldwide data services network.

"Just as Control Data is helping architects break fresh ground in urban centers, we're helping educators achieve breakthroughs, too. Control Data is working with the University of Delaware to establish a campus-wide, computer-based educational system.

"Utilizing the flexibility, simulation capability and responsiveness of the world's most advanced instructional system—Control Data PLATO®—more than 1,000 students are already benefiting. And this system's ability to deliver information in the form of texts, drawings and animated graphics makes it applicable for any course of study.

"CYBERNET Data Services for structural analysis, Control Data PLATO for computer-based education... just two of the broad-based capabilities of a company that is meeting important needs, worldwide."

CONTROL DATA CORPORATION

More than a computer company

Piggyback.

Stack up your roll towels and use every inch of paper you buy.

Piggybacking is how Fort Howard's Commander I® cabinet can help reduce your maintenance costs. You can save two ways.

Commander I helps reduce paper waste. It has room for a full roll plus the "stub roll," the leftover roll your maintenance crew may be removing and throwing away. When the stub roll runs out, the Commander I begins dispensing the new roll. Automatically.

Commander I helps save maintenance time, too. When you fill the Commander I with our 850-foot No-Rivet® roll, you have the longest roll towel in the business. That means fewer refills. And less chance of running out.

See how you can stretch your maintenance dollar. Call the Fort. Dial (312) T-H-E-F-O-R-T. And start using every inch of paper you buy.

Fact and Comment

By Malcolm S. Forbes, Editor-in-Chief

FLATION

is what we're after. We can't afford more *in-* or much *de-*.

THE JOLTING OPEC OIL PRICE JUMP

ocks the boat we're all in—OPEC included. It's not, r, an *unmitigated* disaster.

the embargo of five years ago, the world has adjusted ole new economic scene. We've lost the sense of energy . Instead of digging coal, we fall back to debating its l cons; instead of all-out stockpiling of a year's reserve e futz about its cost and fringe problems of storage; we ing price games with Mexico and its vast oil reserves, turn aside the pipelines and the understanding needed ne fuel here; we keep such a rigamarole of gas and oil ntrols that the companies who'd go after more of the uld lose money doing it.

taking an almost unaffordably long time to learn we pay at the pump the price the rest of the world is or petrol.

to $1.50 a gallon it would still cost less in the U.S. than est of the world. At that price, though, it wouldn't be long before energy was coming out of our ears. And a pretty good hunk of that cost ought to be straight federal tax. The added revenues would do two things—largely reduce the anticipated $40 billion deficit with lots left over for tax rebate for essential job-connected driving and other stimulative tax cuts as well.

Would paying the real price of gas spur inflation?

To a lesser degree than one might suppose.

We'd be using less, importing appreciably less of the stuff. We'd soon have much more of it from competing sources, and that would bring the price down in the not-too-distant future. Between lessened oil imports, heightened federal revenue and a greatly lessened deficit, the buck would start climbing.

We still hang by an OPEC oil line. We can lessen that dependence, strengthen our freedom by cutting out this phony pricing minuet. Let's pay the pipers, and energy will soon be in abundance. Overabundance.

CHINA-PACT CRITICS ARE ALL WET

jumping on Carter for recognizing that China is ave to be emotionally or politically motivated, because no sound ground on which to base their assaults.

k us 25 years after the Czar's overthrow to establish elations with the U.S.S.R., and it's taken almost 30 years p to the fact that Taiwan is not China and that China and nillion citizens—a quarter of the globe's people—won't if we continue to pretend they don't exist.

on hadn't been given the Watergate, what Carter's now uld have been done four or five years ago.

Russia scoring—by intent or default—in Africa and , with us losing in Iran, and the breakdown of Israeli- negotiations, it is mighty helpful to have closer, real ina ties to restore the global balance of power.

China looms large right now as an export market to one of the key contributors to our inflation, and as a l additional source of oil.

n? Its security and its prosperity are based in major measure on exports to this country. It is not, as a practical matter, threatened in the foreseeable future.

Younger Americans probably don't realize how long-standing and deep our ties with China have been. They go back to before the collapse of Chiang Kai-shek's corruption-weakened government to the disciplined Red forces soon after World War II. At the turn of the century our "open-door" policy saved China from colonization by European powers. As a kid in school, I can remember that time and again we collected pennies and contributed things to Chinese flood and famine relief. American feelings were inflamed—though our aid was ineffectual—as Japan began its rape of China in 1931.

Although our great problems and China's enormous ones are vastly different, the U.S.S.R. is one we have in common. Normalizing relations doesn't provide any magic wand, but it contributes importantly to our posture, to common sense, and to our security to acknowledge that China exists.

And that *China* is China.

Q&A

Forbes Magazine: Why Its Nettling Feels Like Needling

Malcolm S. Forbes interviewed by financial editor Arelo Sederberg.

Question: It is said that FORBES "puts in the needle" when it does a corporate story. Is that true?

Forbes: No, it's not true. Somebody considers it a needle when he's asked, for instance, why he's doing less well than his competition. A gentleman who is being interviewed because his company's sales are up 20 percent expects you to concentrate on why he's doing so well. Our interest would be why he's only up 20 percent, and the three other fellows in the field are up more. We examine the footnotes, not the shiny face.

Q: You don't consider that a needle?

A: I consider it a needle when you are derogatory of a man's overeating or describe him as fat. A needle is not when you nettle somebody because you've asked things that don't reflect the most brilliant part of his performance.

Q: Where does FORBES stand now, compared to other business magazines?

A: You ask at a good time. We are in our fourth year of record-breaking advertising pages, revenue and circulation. In this country our circulation is about equal to that of Business Week, and about 100,000 ahead of Fortune.

Q: When did you pass Fortune?

A: We passed Fortune in advertising pages three years ago, and in circulation over ten years ago.

Q: Do you own the magazine?

A: As they say, lock, stock and barrel.

Q: Did you found it?

A: No, my father did, in 1917.

Q: It's said that FORBES editorializes in its stories—that the writer has an opinion on the subject of the article.

A: Absolutely. And it often turns out to be the reverse of what he had when he set out to do the story. The thing that has enabled FORBES to keep good editors and to attract bright and able young ones is because their point of view matters. Sure, there are senior editors who may leaven the loaf from a greater fund of knowledge. But the view of the writer matters.

Q: You don't consider that editorializing?

A: We don't editorialize. But we're not doing an article if there's no purpose to doing it. If it's merely a platitudinous report of quarterly earnings, that's not our function. We are always appraising a company in relation to its competition, trying to measure the man running it. So many people think a GE or a GM is impersonal. It's not. The fellow running it can screw up a major company, as we see time and again.

Q: Are businessmen, by and large, honest?

A: Absolutely. They are as honest as any given segment [of society], and perhaps more honest than most. It's like motorcyclists. They are not all Hell's Angels. But there is a percent [of dishonesty] in business, and it varies from 2 percent to 10 percent, depending on your definition of dishonesty.

Q: Would you give us an example of what you consider dishonesty?

A: When the packaging companies came out with cereal boxes four times the size of the content, I term that dishonest. It got the FTC [Federal Trade Commission] into the cereal act to the point where now those jerks want to tell you what your kids can eat for breakfast.

Q: Is there an antibusiness attitude in America?

A: Yes, but far less than it was. For instance, since Proposition 13, everybody has an opinion of its significance; I have one too. I don't think it represents a tax revolt or a swing to the right. It's simply a reflection that there are more people in the country today with a piece of the action.

Q: That helped people understand business?

A: The awareness of government inefficiency, plus the fact that more Americans have something to lose by high taxation, has made for a rehabilitation [of business] in the eyes of most people. The understanding of profit and of what it takes to run a business is much more widespread than it was.

Q: You've been described as an arch-conservative. Is that accurate?

A: Oh no. I have seldom been accused of it, if you read the letters to the editor in FORBES.

No, I'm something that's out of fashion these days. I'm a liberal. You conserve by coping with change, not by opposing it. I hate to use silly words, but for the economy to stay alive the system has to be dynamic. That means coping with changes, changes in mores, attitudes and preferences. The conservative, to me, is somebody who wants to keep things as they were, or to keep his niche. That's a hopeless case.

Q: General Motors says it has 25,000 employees just to cope with government regulations. Is industry overregulated?

A: Absolutely. It isn't so much the regulation. It's the failure to calculat cost of directives. The idea of emis control became essential. Now, wheth percent is adequate when another 5 cent is going to add $400 to the cost car—that [5 percent] becomes a dimi ing point. The danger of regulation i so much of it is in the form of direc Nobody has costed them and equated and made a decision about whethe worth it. Or submitted that decision t people, Congress, the President, some board.

Q: So you think many of the regula have no connection with reality?

A: Some of them are expensively ab OSHA [Occupational Safety & Health ministration] is in that category in mu what it does. See, Congress legislate motherhood. But some little guy with equate knowledge is the fellow interpr what the law means. Then a whole b of people are out ringing the doorbel saying, "How high are the fire exting ers in your gas station, and are they si from the nearest acetylene torch?"

Q: What businessmen do you admire?

A: A.R. Abboud at First Nation Chicago and David Rockefeller. Peopl that I admire because they recogniz running vast companies, that their bi responsibility isn't the next product. have to be in there with their clout, t to influence the conditions under business can survive.

Q: Are there any that you do not cially admire?

A: Yes. Those who just grab comp for the sake of ego trips.

Q: You oppose bigness?

A: A General Motors, an AT&T ha be big. We've benefited because IB big. But pure conglomeration for exec ego trips presents a danger.

Q: One of the sayings in your bo "No winner always is." Is that tru corporations?

A: Oh, sure. Every company b from time to time.

Q: You are a balloonist, too. Wh you do that?

A: Well, it seemed a natural extensi the hot air business that we're in. Ser ly, it's a happy thing. It's fun. Nobody mad at a balloon, they enjoy it.

Q: Do you regard ballooning as ris

A: No, I enjoy life too much to wa lose it.

YOU'D NEVER KNOW

from her vitality and her unbounded cheerful enjoyment in living that Luvie Pearson, widow of Drew Pearson, passed her 21st birthday several decades ago.

Chided recently about smoking too much by those of us who want her to live forever, she replied with the unmatched wry humor that helps make Luvie everyone's favorite person: "Listen, I'm not going to deny myself one of life's little pleasures when I'm on the last lap. Who wants an extra decade in the nursing home?"

MOVIE REVIEWS

Deer Hunter—A $13 million epic that may be branded a n war film, but it isn't. It's an attempt to convey the ul bind of (nongay) male friendship. Spectacular as the raphy is, an hour less would much improve the remain-. **Once in Paris,** too, is about the strength of male hip, in this instance stemming from love and/or sex e same gal. The chauffeur hero is of low key but heroic ions. This con man of sterling character makes the film kleful delight. **Get Out Your Handkerchiefs**—Another French delight about a strong friendship two men develop during their efforts to save a lovely they both love, by getting her with a child she so yearns to have. It takes a 13-year-old to do the job though, and the kid's a fabulous actor. **Midnight Express**—The true story of a young American caught smuggling hashish out of Turkey and his intolerably long and brutal imprisonment is bad enough. But this jolting, hauntingly photographed movie overkills Turks and Turkey and fictionalizes so much that the real point of film and book is blunted.

TO STICK WITH A MISTAKE
is worse than making one.

ISN'T IT FORTUNATE HOW SELECTIVE
our recollections usually are.

ANOTHER PIECE OF INFLATIONARY REGULATION

By M.S. Forbes Jr.

n important source of today's in-ion is regulation. Everyone puts it his list of inflationary villains, but ny observers don't yet fully appre-e how important an item it is *(see column, Dec. 25, 1978).*

ecently, the Environmental Pro-tion Agency gave us yet another mple of how political decrees can l to higher prices. The EPA has ounced that it will probably order o's major electric utilities to burn lly mined coal instead of the less-uting out-of-state variety—all the ities have to do is add much more ensive depolluting gizmos.

Why must Ohio's electric compa-s go this costlier route? Under the 7 Clean Air Act, the EPA can or-utilities to burn local coal if that l prevent "disruption" of the local nomy. This provision was slipped o the legislation at the behest of United Mine Workers union, ch feared that clean air rules uld induce utilities to use low-sul-coal from nonunion strip mines in West. The wording of the law is h that the EPA could—if it chose—mit Ohio utilities to buy low-sulfur l from neighboring states. But the ncy may not permit the power npanies to do even that.

In any event, Ohio consumers will have to pay for this measure of bureaucratic and legislative politics. Cleveland Electric, for example, argues that installing the necessary scrubbing equipment will raise the average residential bill 25%.

TO BE FAIR

to Washington, however, not all of the inflation we're experiencing today can be laid at the government's doorstep. Take housing, the cost of which has risen rapidly in recent years. The "culprits" here are demographics and the women's movement.

We all know the post-World War II baby boom suddenly required more schools and, after that, greatly increased the labor supply. Now it is affecting housing. These grown-up babies are at an age where they want to own their own pads, and the housing market was no more prepared for this surge in demand than school officials were 25 years ago.

Adding to the pressure from this demographic bubble is the phenomenon of millions of women entering the labor force rather than staying in the home. More than 30 million families today have two sources of income instead of the traditional one.

The higher net incomes mean these working couples can not only save more rapidly for a down payment on a house, but they can also afford to take on more debt. The Equal Credit Opportunity Act of 1975, passed under pressure from women's rights groups, stipulated that lenders can no longer disregard a wife's income when judging a couple's credit standing. As Kidder, Peabody's often perceptive economist Sam Nakagama points out, "This act has enormously expanded the borrowing capacity of the household. . . . Far from being victimized by rising housing costs, young people are largely responsible for the inflationary boom in home prices."

In still another break from the past, single people are today more apt to buy houses as well. The proportion of new sales made to singles is the highest ever.

It is true that some of the recent frenzied house buying was prompted by the fear that "If you don't get it now, you'll only pay more later." Some of it, too, was fueled by sheer speculation.

But even without those factors, the underlying demand for housing created by demographic and social forces was so powerful that a surge in prices was unavoidable.

Housing is one contributor to inflation that the government didn't create and cannot control.

Other Comments

Often comments by others stimulate, irritate, abuse or amuse this editor's mind.—MSF

Alaska, Japan & Oil

Commissioner Sterling Gallagher, who heads Alaska's equivalent of the Internal Revenue Service and works closely with Alaska Governor Jay S. Hammond on the state's oil and gas policies, said, "We're not shutting it [oil exploration] off. It's the silly federal government that won't allow exports." The state and a number of oil firms have urged the President to allow exports of Alaskan crude to Japan in exchange for foreign oil delivered by the Japanese to the East or Gulf coasts. They note that the current West Coast oil surplus of some 500,000 barrels a day, which is being shipped through the Panama Canal to East and Gulf coast refineries, is adding some $2 a barrel to overall transportation costs.

Knight-Ridder Newspapers

Unimportant Details

As usual, [writer Djordje Jovanovic-Jarac] reinforced his air of seeming indifference with jokes and swearing, though he was aware that I knew him to be an extremely sensitive person. In war he apparently found a confirmation of his imagined personality—fearless and daring. For a while we chatted about anything and everything, even our common frustration as writers. I lamented this, while Jarac pointed out ardently that this war against the most inhuman of forces was in fact the most complete fulfillment of every authentic intellectual. . . .

I spotted a louse on his sleeve and said, "Why don't you get deloused? We have the facilities here."

He flicked the louse off and replied, "What for? I'll just get some more tomorrow. Lice are annoying only if you notice them."

"So you are still a Surrealist," I observed.

"Not at all! It's just that my men and I don't want to lend importance to things which aren't important today."

—Milovan Djilas, *Wartime*

Culture Gap

I asked three Chinese college students what they wondered about America. Their questions: "Why do American children leave their parents?" "Who takes care of the parents when they are old if the children are not there?" "What happens when the old people get sick?" "Don't the children feel guilty?"

1979 Oldsmobile Ninety-Eight Regency.

It's comforting to know you can lose your heart without losing your head.

It's rather easy to lose your heart to the Olds 98 Regency. After all, the Oldsmobile commitment to quality and luxury is reflected in every detail. Classic lines. An environment that surrounds you with fine appointments. Yes, the Olds 98 Regency was designed to appeal to your heart, to your desire for creature comforts. But beneath all that luxury is a fine-tuned machine with surprising maneuverability in city traffic and a smooth, big car ride. Its trim size is easy to park. And its efficient design permits room for six inside, and over 20 cubic feet of luggage space. Finally, compare Regency's price to that of other cars of its size and luxury. Then you'll see why we call it the thinking man's luxury car. Test-drive one soon.

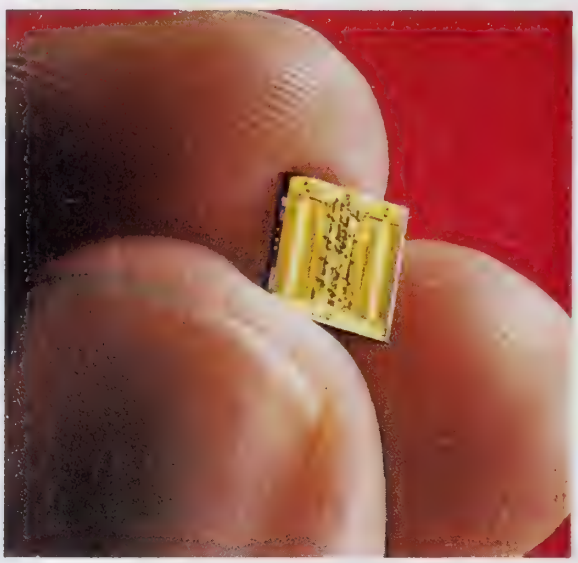
Oldsmobile

98 Regency

Have one built for you.

IBM Reports

Another first from IBM. Another way to do more for less.



This tiny electronic chip is a technological breakthrough in IBM computers.

A product of our laboratories, it can hold more than 64,000 pieces of information. That's 32 times more than previous IBM chips. And almost as much information as you could put in the entire memory of our early room-sized computers.

A handful of these chips could store all the works of Shakespeare.

In October, IBM became the first company to announce new computer systems to use such advanced, high-density chips. We're proud of that. Because being innovative means finding ways to put the products of our laboratories into products for people.

What's really significant about these amazing chips is that they can do a lot more for a lot lower cost.

For example, main memory prices for our new systems are about 1/6th the price of memories in our most powerful computers when they were introduced just two years ago.

In inflationary times like these, it's important to find ways to do more for less. We're working hard at it. So are our competitors.

That's why it's a constant challenge to make our products the best.

IBM

Helping put information to work for people

e U.S. is wise it will not ask what Mexican oil can do us but rather what we can do for Mexico.

Mexican oil: The U.S. is most definitely *not* in the driver's seat

By James Flanigan

ITTLE OVER A YEAR AGO, the U.S., nation that meekly accepts oil rice rises while it sends its Treasecretary to kiss the robes of OPEC tes, tried to beat Mexico down OPEC prices on its asking price The same U.S. which purchases n Canada and Algeria—the one a r whose government has refused sales to the U.S. since 1970, the rabid, pro-Soviet nation which r tried to get the U.S. to pay over usand cubic feet for gas—refused $2.60 per mcf for 2 billion cubic as a day from neighbor Mexico. President Carter is journeying to to say, in effect, "Sorry, we'd like after all—at your price."

nonth the U.S. signaled its new hen the Department of Energy two proposals to import costly d natural gas from Algeria, saying rred gas from more "proximate" —meaning Mexico and Canada.

dvance publicity for Carter's trip pful hype that should make it r President José López Portillo to at selling the gas is in the best s of both countries. In rejecting , the U.S. had put López Portillo spot. Leftists and chauvinists in party object loudly to anything ps Uncle Sam; in Mexico they e to wave the bloody shirt of the age cadets of Chapultepec who isting General Winfield Scott's n 1847.

will be put to rest an insult that would have gotten in the way of more important matters the two presidents have to discuss, such as: How much oil Mexico will produce, and export to the U.S., and what Mexico will demand of the U.S. in return.

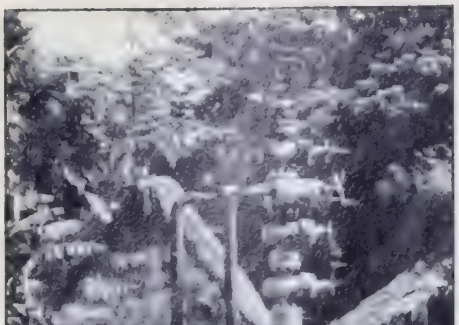
President José López Portillo
Waiting for Carter, and U.S. respect.

The gas itself was never more than a minor factor in the U.S. energy picture; 2 billion cubic feet a day amounts to 3.5% of U.S. annual gas usage, some 1% of its total energy use. The amount of money involved in the haggling was less than what we pay OPEC every two-and-a-half weeks.

It came during López Portillo's first full year in the office he assumed in December 1976 in the wake of Mexico's peso devaluation. Mexico's economy was in bad shape, government deficits eating up the available credit supply. Economic growth had slowed to a walk and the balance of payments had run $3 billion-plus deficits—4% of GNP—two years in a row. López had to accept International Monetary Fund requirements to clean up the deficits in exchange for currency-supporting credits. And so, one of his first acts was to order the rapid development of newfound oil reserves, looking toward $5 billion in oil export earnings in 1982, the final year of his presidential term. Such a figure would amount to 30% of the budget of the Mexican federal government in 1977, as if a single export earned the U.S. $160 billion.

Huge amounts of natural gas would be produced along with that oil, because Mexico's reserves are over one-third gas. Fortuitously, there was the big northern neighbor shivering through the gas-short, bitter winter of 1977. A sale of Mexican gas to the U.S. seemed a natural, the perfect embodiment of the interconnectedness of U.S. and Mexican issues that López spoke of during his visit to Washington in February 1977.

Mexico offered favorable terms. Six U.S. pipeline companies—El Paso, Florida Gas, Southern Natural, Tenneco, Texas Eastern and Transco—welcomed the deal as a source of gas for which the heavy capital outlays were almost all on the Mexican side. An 800-mile, $1.5 billion pipeline would be built from south-



"Christmas tree" in southeast Mexico
No blank checks on nature's gift.

ern Mexico to the Texas border. It would be financed partly by the Export-Import Bank, whose credits would finance purchases of $400 million worth of U.S. equipment for the line—meaning jobs in the U.S. On the U.S. side, only $180 million would bring the gas into the main U.S. pipeline system at Houston.

But from the reaction of the U.S. government, you'd think Mexico was offering to sell not gas but filthy pictures or rancid tequila. Energy Secretary James Schlesinger tried to beat down the Mexican gas price. The State Department gratuitously reminded Mexican representatives of problems the U.S. had with their country—illegal aliens coming over the U.S. border, marijuana coming into the U.S. Senator Adlai Stevenson (D–Ill.) stupidly blocked the Export-Import Bank credit for the pipeline. In all, the U.S. acted more like a banana republic than the world's greatest democracy. Stevenson thought he was pressuring the Mexicans to lower their gas price, the implication being that if Mexico couldn't borrow in the U.S., it couldn't borrow anywhere. The further implication behind both Stevenson's and the Carter Administration's reasoning was that Mexico had nowhere else to sell its gas. Its own industry is not sufficiently developed; its neighbors to the south have far less industry than Mexico. And overseas sales would involve enormously costly liquefaction plants, with relatively little benefit going to Mexico in the price of its natural resource.

Reasoning thus, the Carter Administration decided to adopt what it considered a stern, businesslike stance toward Mexico. Instead, it fell on its face.

The Mexicans, insulted, walked away from the gas negotiations in December 1977. That same month, Petróleos Mexicanos (Pemex), the state oil company, borrowed $200 million from a group of French banks. The following month Pemex borrowed $104 million from 16 Japanese banks. Later in 1978 a group of U.S., European and Japanese banks lent Pemex $1 billion. So much for Senator Stevenson's pressure.

In January 1978 Pemex announced that it was going ahead with the big pipeline and placed orders not in the U.S. but with West German, Japanese, French and Italian suppliers for the steel and equipment. The line is being built to Monterrey—some 150 miles from the Texas border—but without the 18 compressor stations that would have moved the huge volumes to the American market. The gas will replace fuel oil in Mexican electric power plants.

López Portillo warned the Mexican people in September: "Using the gas in Mexico requires more time, more promotion and generates less foreign currency in the short term." To boost foreign receipts López pushed Pemex to reach its 1982 targets by 1980—2.25 million barrels daily of production, 1.1 million of them for export.

Then, after complaining that Mexico gets no "respect" from the U.S., López busied himself in 1978 with a public show of diversifying Mexico's trade partners—a warning to the U.S. that we need Mexico as much as Mexico needs us. In October it was announced that a deal was in the works to sell Japan 20% of Mexico's future oil exports—220,000 barrels a day from 1980—in a package deal in which the Japanese would build a supertanker port on Mexico's west coast and help with a new steel mill. In December a deal was struck in Mexico City with France for another 10% of the oil exports—100,000 barrels a day—in return for France's help with Mexico's uranium development.

Mexico's trade figures at the half year showed the U.S. market share slipping to 54% of Mexico's imports from levels that ranged for years above 60%. The $77 billion GNP Mexican economy—about as big as Sweden's—was sending signals to the $2 trillion GNP economy next door. Belatedly, Washington got the message. By November word was out that the U.S. government was "reviewing" its policy toward Mexico, and U.S. officials began to talk more and more of how close, really, are the views of Carter and López Portillo, 58, a lawyer and teacher who rose as a financial planner through Mexico's one-party government. They talked, too, of how enormous, really, are Mexico's oil reserves.

All the talk of Mexico's potential wealth was a recognition at last of how inextricably intertwined the fates of the two nations are. And recognition of the new fact that Mexico has a sense of dignity that must not be ignored. If well handled, President Carter's visit can go a long way to repairing past damage.

Properly handled, how much of a contribution can Mexico's oil resources make toward filling the U.S.' energy

López announced in September Mexico's oil reserves are at least 2 lion barrels, probably 37 billion b and potentially 200 billion. (That least 13 billion barrels of oil and 3 lion cubic feet of gas, converting can reserve figures back to the commodities.) But the U.S. govern already seems to be doing him on ter, dispensing estimates to U.S. jou ists that the reserves are at least 5 lion barrels. Indeed, Pemex itsel nounced on the last day of 1978 Mexico's proven reserves had ris 40.2 billion barrels, its probable re to 44.6 billion barrels. The potenti serves remained at 200 billion. Wh Mexico has as much as Saudi Ara *i.e.*, 148 billion barrels producible day's price with today's technolog still open to question. We are lea about Mexico's oil almost as Mexi self learns about it. The reason re figures reported out of that country rising is that the true size of the fie the Reforma area in southern M and in the nearby Gulf of Campec only being determined by current ing. A Pemex petroleum engineer ca from the work so far that the Re area's Bermúdez complex (named late director general of Pemex) is as Alaska's North Slope, which, at 1 lion barrels, is the largest field previ discovered in North America. And múdez is one in a region of num oilfields.

The full extent of the Reforma Campeche deposits won't be know some time. Pemex' labor unions, people for whom Mexican oil wa tionalized in 1938, have a contra right to do 40% of all drilling work this slows progress. Mexico meanw has announced, and begun produ from, another vast field near Tamp at the location of Mexican oil dep whose production dates to 1901.

comes the real question, which is size of Mexico's reserves but how xico means to produce them. The nts lots of oil quickly. But what exico want?

ico wants to be a partner, not a servant," says Fernando Garza, of information for López Por- he president himself put it this an address to the nation last Sep- "This abundance obliges us to be ely careful and to seek a balance n what we are now and what we ome. We shall use it to generate sources which are renewable and can be multiplied through work. why it is so important to produce n all areas, instead of writing hecks on our oil deposits."

meaning is clear: "Don't think of as another Iran or Saudi Arabia. nt to use our petroleum resources e to create jobs and to raise the Mexican technology; we will ex- ly what we need to close inevita- ble gaps in our balance of payments. We will try to oblige the U.S. but not at the price of becoming a mere supplier of raw materials to a richer neighbor."

The Mexican dream is of a fully developed economy; the specter haunting those dreams is Venezuela. "There are oil-producing countries," says Under Secretary of Foreign Trade Hector Hernandez Cervantes, courteously omitting any names, "that have spent all their oil income just to import food and consumer goods." Rather, he says, "the oil gives Mexico a better opportunity to try to develop the economy as a whole."

Mexico has been one of the world's most rapidly developing nations for over 30 years. But until now it has followed the path of import substitution that was seen by economists after World War II as the sum of human wisdom for developing countries. This has produced a Mexican industry, highly protected by import quotas, that is as much an assembly operation as anything else. Mexico imports the capital goods—the products of innovation and industrial knowhow—mostly from the U.S., while its industry turns out high-priced, often low-quality goods for an internal market. This industry is not competitive in world markets. In 1977 Mexico's leading exports, aside from petroleum, were coffee and tomatoes.

But that is the past. Mexico is changing to the path of export promotion that is the new vogue in development economics, inspired by the success of Taiwan and South Korea. The protectionist import quota system is being cautiously dismantled. Mexico is demanding that its automobile industry concentrate on exporting where it can. Petroleos Mexicanos is exporting 95,000 tons of petrochemicals—out of total production of 6 million tons. Both figures are going to increase dramatically in the next few years. And the private business community has got the message: Produce manufactured goods for export.

Jorge Escalante is the owner of Perforadores Marina del Golfo, a $70 million (revenues) drilling company with its own 14-story office building in Mexico City and close ties to Pemex. He repeats the current thinking in Mexico today: "What we need is a strong industry that is also able to export, like the Japanese have done." His company is going into the manufacture of oil drilling tools and equipment. The largest construction company in Mexico, Grupo ICA, does $500 million of construction business a year, 20% of it outside Mexico in Latin American countries. It is going into the production of turbine generators, in a government-supported joint venture with Hitachi.

The Alfa Group of Monterrey is Mexico's largest private company, with $620 million in revenues. It produces steel, televisions, chemicals and paper, and it is developing an enormous tourist oper-

ation at Las Hadas in Manzanillo. It also is going into a joint venture with Hitachi to produce electric motors, initially for the internal market but later for export. Everardo Elizondo, its Harvard-educated vice president-economics, says: "Many of our industries are unable to face competition today. But tell them they will have to and let them prepare for a year, and they will be ready."

Elizondo goes on, "That is one of the very good points about the oil money: We can use it as a buffer for structural change, as a cushion against external imbalances and to funnel into new ventures to update Mexican industry and technology." Alfa's economists foresee Mexican economic growth accelerating to 8% a year in 1980 and 1981.

Note his choice of words: "cushion," "funnel." No talk of vast wealth descending on Mexico from petroleum *exports*.

When you think about it, it's a natural for Mexico to use the oil and gas to upgrade its industry. The country now has abundant supplies of cheap energy the way the developing U.S. once did. Natural gas is priced to Mexican industry at 35 cents per mcf, oil products for industry are priced at one-fourth their "world market" value. (Significantly, gasoline for passenger cars is fully priced—at 80 cents a gallon. Mexico's priority is industrial development, not personal consumption.) Lord knows, Mexico has abundant low-priced labor. The minimum wage in Mexico is 78 cents an hour, 27% of the U.S. rate.

The upshot, says Under Secretary Hernandez at the Secretariat of Commerce in Mexico City, is that Mexico wants all future joint ventures with industrial firms from developed nations to produce for the Mexican market *and* for export.

This attitude on the part of Mexico has profound implications. U.S. politicians and journalists are already looking past Mexico's near-term production targets—2.25 million barrels a day, 1.1 million for export—to a day when Mexico can produce 5 million barrels, perhaps 10 million (the U.S. currently imports over 8 million barrels a day). Mexico's wry reaction to such expectations is best expressed by Cesar Baptista, subdirector of industrial production for Pemex, a petroleum engineer with 36 years' experience in Mexican oil. "We find our future oil policy being made in the Washington *Post* and *The New York Times*," says Baptista. Mexico, in fact, is saying nothing about its long-term production plans.

But it has taken counsel from the World Bank, which advises a moderate buildup of oil and gas production so as not to inundate Mexico's economy with oil money. The U.S. Embassy in Mexico City estimates that by 1985 Mexican production will be no more than 4 million barrels a day. Calculate that half of that will be exported—2 million barrels—and that the U.S. will get some 60% of those exports, and the outlook is that in the mid-1980s some 15% of U.S. oil imports could come from Mexico. That's about the same percentage of our imports as Saudi Arabia or Nigeria now give us. So Mexico will become a leading supplier of oil to the U.S.—but not a sole supplier or anything near it.

The even more sobering implication is in Mexico's plans to make its industries competitive and to export. The obvious market is the U.S., which today takes 65% of Mexico's exports. The U.S. and Mexico last year did about $7 billion worth of trade. The balance, on figures for eight months, was fairly even: $2.34 billion in Mexican exports coming to the U.S.; $2.52 billion in U.S. exports to Mexico. That trade is going to double in the next couple of years. We will be taking in roughly $5 billion worth of Mexican energy—$1.8 billion in gas and another $3 billion for 660,000 barrels a day of oil, double today's level of 320,000 barrels.

No great worry about that. U.S. exports to Mexico will expand in response to the neighboring country's accelerating development. But for the products of that development Mexico wants a new kind of trade deal with the U.S., a *quid pro quo* as it were, for producing and selling us the energy. Mexico wants the U.S. to open its markets to Mexican goods, not just today's tomatoes but tomorrow's steel and chemicals and electrical goods.

That is what the Mexicans mean when they say Mexico wants to be a partner and when Under Secretary Hernandez talks about a new kind of venture which would be allowed port. López Portillo is going to ask my Carter for a new U.S. trade p one which would encourage U.S. co nies to produce in Mexico—in pa ship with Mexicans—for export ba the U.S., as many American firm now in Korea, Taiwan, Singapore, the Carter Administration—can U.S. administration—deliver on given the hostility of U.S. trade unio what they regard as the produc "cheap labor"? The answer is: It wil to if we expect the Mexicans to b operative on energy.

If such *quid pro quo* is possible, p in the southwestern U.S. may one soon be driving a fair number of M can-made Fords and Chevys (the Americans now drive cars made in ada). Mexican petrochemicals could have an edge on U.S.-produced ones en the Mexican advantage in natur costs. Mexican steel is already co into the Houston market.

The Mexicans realize that a vast trade agreement would be the ha thing for Carter or any other U.S. p dent to deliver. But they are going t for it because they need the U.S. m for their future manufacturing even than they need it at present for winter vegetables.

Old-fashioned Army drill serg once shouted at sloppy recruits: guys look like the Mexican Army!" attitudes, though no longer openl pressed, die hard. But the Mexican really was that pleasant fellow sle off his tequila binge under a cactus industrial, yes. Lazy, no. At any rat new Mexico is better represented b people and factories of Monterrey—ing for all the world like a Pittsbur embryo—than by *campesinos*. And about time the Mexicans gave up b ing the *gringo* for all their troubles—though U.S. behavior on the gas dea nothing to dispel the old prejudice.

"We need a self-confident Mexico a hostile one. Energy gives Mexic confidence to deal with us on a equal basis," says a young official o U.S. National Security Council.

As if responding to such thinking nando Garza in his cluttered office a Pinos, the Mexican President's of residence, says with some passion i voice, "Now the possibility exists Mexico will have the money for fina self-determination."

No, the Mexicans are not going especially obliging. We got ourselves our energy mess and they have no i tion of bailing us out of it. But the o tunity exists for fruitful cooperatio tween equals. Let us hope that Rosa Carter's Spanish is at its best whe and her husband journey south o border next month.■

Senator Ted Kennedy
Should states be able to sue?

saying basically that it is too difficult to determine who paid the inflated price: A middleman might well absorb some or all of an overcharge. The court was also concerned that if everyone down the supply chain sued for three times the overcharge, excessive settlements might result. In short, the consequences might be out of all proportion to the benefits to society.

All manner of lawsuits could result if the courts would hear them. Take the one launched by Glenn Freie, a 45-year-old farmer who raises 150 head of cattle and 1,200 hogs in Latimer, Iowa. On behalf of 500 cattlemen, he brought a class action suit against 18 food chains, charging them with conspiring to depress prices paid to farmers for live cattle. Stripped of legal niceties, the effect of Freie's action might be to hinder food chains in haggling to bring down meat prices. The result, of course, would be higher beef prices for the consumer, since hard-pressed supermarkets have no choice but to pass price increases on to the consumer (FORBES, *Jan. 8*). A U.S. district court threw the case out on the grounds that the farmers didn't sell to the food chains, but to meatpackers.

Some court watchers say the justices' real concern in the Illinois Brick decision probably was one close to Chief Justice Warren Burger's heart: reducing the workload of federal courts. Burger certainly has a point—a favorable decision for the plaintiffs in the Illinois Brick case might well have encouraged suits like that of the beef farmers.

However, an alliance of consumer groups, small businessmen and cattle farmers is pushing Congress to reverse the Illinois Brick decision. This *ad hoc* group feels that the people who are actually injured, the final users, cannot sue. While the middleman can sue, they claim it is unlikely he will. The groups argue that a middleman won't want to irritate his suppliers and, besides, the middleman might well suffer no loss if he merely passed on the rigged prices.

Not surprisingly, business lobby groups, such as the Business Roundtable, National Association of Manufacturers and U.S. Chamber of Commerce, oppose legislation to reverse the decision. They believe every price-fixing case could become a tugging contest to decide who passed what on to whom. "The legislation would open the floodgates for a morass of litigation, particularly class action cases," Roundtable attorney Boyden Gray points out.

Still, businessmen have not heard the last of the matter. Prospects are fairly good that Congress will reverse the decision. As chairman of the Senate Judiciary Committee, Senator Ted Kennedy (D–Mass.) has vowed that the legislation will be given a top priority. "The Illinois Brick opinion has virtually immunized large manufacturers from the antitrust laws and they will not lightly give up this newfound immunity," he told the Senate.

There are issues here that touch upon the public's right of access to the courts—and they should be faced. But there are also practical questions.

If such a law were passed and if it deterred potential price-fixers, there would be benefits for the public. But the one sure winner would be the lawyers, who would reap fees both from prosecuting cases and from defending businessmen and advising them on how to avoid liability. The cost, of course, would be passed on to the general public in the form of higher prices. It always is. It's part of what people call "inflation." ■

The possibilities for making a profit off the U.S. government without giving the taxpayers much of a bargain are wondrous and manifold. Meet Hugh Pike.

Hugh Pike vs. "Uncle Sugar"

By Paul Blustein and Norman Pearlstine

BROKE. That's the word Hugh Pike uses to describe his status eight years ago. Pike, then 33, was not about to starve; but he needed a job, a new *kind* of job, fast. There was no going back to his old field, the securities business. A stiff decree from the Securities & Exchange Commission had seen to that.

He found what he was looking for. Today Pike, a millionaire, lives in the comfortable community of Woodland Hills near Los Angeles, has a condominium at Lake Arrowhead, Calif. and takes frequent junkets to Europe. He hobnobs with important political figures. The chief source of Pike's new prosperity: Realty Investment Associates, a firm of which he is president and half-owner, which manages over 20,000 apartment units in 21 states and which earned over $1 million in 1978. In a few short years Pike's firm has become one of the nation's largest managers of low-income and conventional apartment projects. Along the way Pike helped package millions of dollars' worth of tax-shelter deals for investors.

How did a defrocked stock salesman make so much money so fast? How did he learn a new trade so quickly? The answer to both questions is that he moved into that nebulous area where private enterprise and government enterprise meet, an area where many businessmen simply do not feel at home.

Hugh Pike's story is a story for our times, for his fortune would not have been possible without the generous help of what Pike derisively calls "Uncle Sugar"—the United States government, particularly the Department of Housing & Urban Development. Pike's business is, in the somewhat hyperbolic words of one man who has observed his ascent closely, "a microcosm of just about every scheme that has been thought up to make a buck out of government activity." He might have added: "and to cater to the public's mania for beating the tax collector."

Hugh Pike of Realty Investment Associates
A not-so-warming rags to riches tale.

Lately the relationship between Uncle Sugar and his nephew Pike has turned acrimonious. The Inspector General of HUD, the SEC and even the Federal Bureau of Investigation have launched probes into Pike's operation. HUD has referred at least one matter to the Justice Department for possible criminal prosecution. Pike, in turn, has filed suit against HUD charging "arbitrary and capricious action."

The federal investigations have produced no indictments so far, but their very existence has caused some political rumblings: When word of them leaked out last autumn, the reelection bid of California Lieutenant Governor Mervin Dymally, a leading black politician, was dealt a serious blow—because Dymally was a Pike business associate. Dymally went on to lose in November.

Pike has filed a $15 million libel suit against *CBS News* for a report about him and Dymally—and that's just one of dozens of lawsuits flying back and forth in the tempest surrounding Pike. Another suit involves a $600 million complaint against Pike filed by a former top official of Realty Investment named Burton Sanborn. Sanborn claims that Pike's company defrauded him by absorbing San-

A Pike-run HUD project in Los Angeles
Subsidies piled on top of subsidie

born's company in a merger and failing to honor agreements to pay born's debts. Sanborn also accuses of having misused federal funds fo sonal expenses such as travel cost gifts, and of having used investor as collateral simultaneously at thre ferent banks.

A case of a conscientious emp quitting and courageously exposin boss? No, the evidence suggests t more an example of the pot callin kettle black. Sanborn himself has sued by banks and investors for pl fast and loose with their money.

Whatever the merits of Sanborn's Hugh Pike clearly attracts controve

To make matters even more in ing, packages of documents relati Pike's supposed wrongdoing have mailed anonymously to federal ag real estate figures and employe

ompanies. FORBES began receiv- documents after it started work story. Many recipients of the s believe Sanborn is responsible , but Sanborn denies it.

Pike—as did FORBES—and you understand both why he became ssful and why he made so many . A large, booming, driven man, ooze southern charm one minute pt in frightening fury the next. ted a FORBES reporter with loud, nt threats to file a libel suit, but rs later was all cordial gentle- ss.) "He does one helluva job sell- self," says one former employee, his head bemusedly. Among the es that Pike enjoys dropping is her than Jimmy Carter. On his all are handwritten letters from long with a picture of Pike and ogether. Pike claims his friend- ship with Carter began many years ago when Pike was growing up in Georgia.

Along with his charm, forcefulness and Jimmy Carter photos, Pike is well supplied in the self-confidence department. In 1971, when he decided to enter the real estate field, he had had no prior experience in running properties. But he did have gumption. "I interviewed a couple of management companies and became convinced that the level of competence in property management wasn't very high," Pike says. Beginning with one ten-unit apartment building in Los Angeles, Pike started his own business.

By 1975, Realty Investment had about 2,000 units under management, all in southern California. Then Pike doubled his firm's size by plunging into government-subsidized housing.

At the time, bureaucrats at HUD were delighted. "We thought Pike could be the messiah who would clean up the mess we had with a lot of troubled projects in Los Angeles," recalls one man responsible for collecting federally backed mortgages. "No one else would touch them. He sold everybody on his ability to turn things around." Quite a challenge for a firm so new on the real estate scene.

Pike's firm took over scores of financially troubled HUD-backed and conventional projects in 1975, 1976 and 1977. By early 1978 Realty Investment had around 24,000 apartment units under management, 12 times the 1975 figure. Why would a real estate management firm be so eager to snap up distressed properties that more seasoned realty firms shunned? The answer seems to be that whereas conventional realtors saw a piece of *property*, a poor one, Pike saw instead a packageable tax shelter. Not for nothing had he worked ten years as a

stockbroker and mutual fund wholesaler.

Here's how Pike worked. Distressed properties, by definition, means properties whose cash flow is insufficient to service the mortgages. HUD likes to boast that it has a low foreclosure rate. What it doesn't like to admit is that it is sitting with a good many delinquent properties where it chooses *not* to foreclose. Instead of foreclosing, HUD frequently prefers deferring interest or principal payments in a way that no private lender would.

Pike sniffed an opportunity here. Why not expand his realty empire by offering to take over such projects? Of course, he would have to get HUD to agree to scale down mortgage service. HUD was willing, but only if the new equity owner put up fresh capital. It was looking for private businessmen who would keep the properties going even if it meant some loss for the government; HUD does not want to be a landlord. Raising the new money turned out to be more of a boon than a problem to Pike, thanks to the magic word: tax shelter.

Real estate—in particular, low-income housing—is just about the last of the great tax shelters left. The Tax Reform Act of 1976 put a damper on many popular shelter deals like movies and oil drilling. So doctors, dentists and wealthy businessmen have in recent years ponied up millions for the few investments that still offer big "front-end" writeoffs in the early years of the deal.

A typical tax shelter deal involving federally assisted housing works like this: A limited partnership puts up, say, 10% to 25% of a project's cost in equity capital; the rest of the cost comes from the project's mortgage. For putting up the initial equity capital, the limited partner-investors get to claim nearly 100% of the project's depreciation. Rental income from the project goes mostly to paying operating costs and debt service—there may be no dividends. But who cares? An investor might claim over $2,000 in tax writeoffs in the early years for every $1,000 in cash he puts up; if he's in the 50%-plus tax brackets, he gets his money back in tax offsets and still has a piece of the action.

In many deals Pike and his associates put together, the tax leverage was even greater than in the average real estate shelter. Pike took over a number of rehabilitation projects, which tend to be far riskier than new construction but can be written off in just five years. In other cases, where HUD was desperate to hand projects over to new management, Pike was able to persuade the bureaucrats to let the new investors put up well under 10% of the mortgage. Investors in some of these deals have claimed $3 of writeoffs for every $1 invested.

But surely there must be a catch. Of course there is. Low-income housing is a risky business. If a project fails, and the mortgage holder forecloses, an investor can really get stung. The difference between his accelerated depreciation writeoffs and the regular straight-line writeoffs suddenly becomes taxable income at ordinary rates. Instead of escaping taxes, the investor may wind up facing a huge unexpected tax liability with no cash to pay the taxes.

But that's mostly a problem for the investors—not the syndicators, brokers and lawyers who collect huge fees for putting the deals together. FORBES readers will recall one man with a reputation for peddling shaky deals—namely, A. Bruce Rozet (*"The Robin Hood Game,"*

A. Bruce Rozet
A key Pike adviser has a spotty record.

FORBES, *Oct. 1, 1976*). What does Rozet have to do with Hugh Pike? Plenty. First, Rozet had been largely responsible for selecting and managing the horrendously troubled Los Angeles HUD projects that Pike took over in 1975.

Since the time that Pike took over Rozet's projects, Rozet has remained one of Pike's closest associates. It has been a profitable association. In one tax shelter deal where investors put up $500,000, for instance, Pike and Rozet split a $150,000 finding and consulting fee.

"For all of the things people say about Rozet, good, bad and indifferent," says Pike defensively, "he has proven to me to be a tremendous structurer of a deal." The SEC apparently thinks that "tremendous" isn't the most apt word to describe Rozet's deals. In 1977 Rozet signed a consent decree with the SEC after it charged him with numerous violations of securities laws in connection with his housing tax shelters.

Pike, too, has had his past problems with the SEC, which accused him of securities law violations in connection with stock sales of Minnie Pearl's Chicken System Inc. and other companies. In 1971, before he got involved in real estate, Pike signed a consent decr ring him from associating wit broker-dealer. Investors in most real estate deals that Pike hel syndicate, however, were nev formed of the decree; nor was H until Burton Sanborn's lawsuit dr tention to it. "I went to an at here in Los Angeles," Pike ex "and he determined that it wa necessary [to disclose the decree]

Legalities aside, what abou economics of Pike's tax sh A number of people familia Pike's operation say he and his asso often selected projects for syndi without paying much attention t long-term financial viability. "In T says one former insider, "they wer dicating any distressed property th for sale. Are you going to turn d $100,000 syndication fee, after all?

"Pure bull," Pike storms. In cases, he admits, nasty surprises t up when he took over projects th been sold off to investors: unpaid taxes, unpaid debts, and the like. B says, things were patched up and tors aren't unhappy.

"I'm not so sure that investors w business with guys like this do so b shrugs a man who is otherwise crit Pike. "They are buying paper that them a tax loss. They don't give a about next year." Probably so, in cases. But what if those precious d tions are questioned by the Interna enue Service? The giant front-end offs claimed in some of these dea get pretty dicey.

An even bigger question than the ity of Pike's tax shelters: What taxpayer getting for the big tax wr that Pike promises his followers? the mortgage relief that HUD gran for the management fees his firm from HUD-backed projects?

In *theory*, there's nothing wrong this kind of taxpayer generosity—a not if you accept the premise that *one* has to provide housing for the and that government ought to sub businessmen to do it. Didn't Hugh offer to take over some troubled ho projects and find money to assist He certainly wouldn't have done so out the lure of subsidies.

But the taxpayers can easily get a by deal. If the projects aren't car selected, planned and managed, subsidies often have to be piled on subsidies. That's apparently why last year tried to foreclose on s Pike-run projects in Los Angeles. being stymied by Pike's lawyers in HUD later agreed to allow ext mortgage relief on most of the pro Meanwhile, HUD has not allowed firm to take over any new projec some time now.

while, top policy makers at HUD
ne midst of a long look at their
s designed to rescue troubled
me housing projects. They are
wondering whether turning to people like Pike is the best answer. "We are examining all sorts of ways to bring these projects back to viability," says HUD Assistant Secretary for Housing Lawrence H. Simons, "and not only those methods involving private ownership; we're looking at tenant ownership, cooperative ownership, community ownership, all sorts of things." What's more, HUD is trying to create new regulations which would require tax shelter syndicators and investors to have more of a stake in the long-term viability of the projects they take over.

The real lessons of the Hugh Pike affair, however, transcend specific problems with specific policies, and leave one scratching one's head in wonderment. His peculiar, meteoric success was the product of the modern welfare state's tangled agglomeration of grants, loans, guarantees, offsets and other subsidies. The fascinating, disquieting thing about Hugh Pike is that his business is so complicated, the means by which he exploits government largesse so diverse. It is tempting to point to chunks of evidence here and there and say that he seems to be involved in a hustle that enriches him and impoverishes the rest of us. But the blame for that isn't his alone. ■

The FORBES Thirty-first Annual Report on American Industry

This annual reference issue analyzes more than 1,000 of America's largest corporations based on the exclusive FORBES statistical yardsticks of management performance. Companies are ranked in the following lists: profitability, growth and stock market performance. These leading firms are also arranged by industry groups and sub-groups and ranked against their competitors.

An accurate and often-used start-of-the-year guide to who is where in the major management community—and why.

MAY 14

FORBES Eleventh Annual Directory to America's Leading Corporations

The Annual FORBES 500s present the most complete record of the year on American Business. Filled with facts, figures and editorial evaluations on the progress of about 800 companies, special emphasis is focused on the top 500 companies in assets, sales, net profits and stock market value. From banks to utilities, the Directory ranks all companies and spotlights management performances. Useful guidelines for understanding long-range trends are included in this valuable reference issue.

Three out of four corporate officers in America's largest companies read FORBES regularly. That's more than read Business Week, Fortune, Newsweek, Time or U.S. News & World Report. The high level of readership that FORBES enjoys among the most important leaders in the U.S. has been confirmed repeatedly in studies by leading independent research firms, such as Erdos and Morgan, Inc.

Top executives read and rely on FORBES because it provides them with the business information they need in making major decisions that affect the operations and profits of their companies.

Shown at left are five special opportunities to tell your corporate or product story effectively and efficiently to the most important audience of influential executives in the U.S.—and in highly compatible environments.

Plan now to advertise in one or more of these issues. Your advertising messages will enjoy the added benefit of repeated opportunities for exposure because the issues will be read and referred to frequently by those who own and run American business.

Great Northern Nekoosa had record net income and its stock sells below book value. But Sam Casey isn't too worried about a takeover.

Those friendly Indians

By Howard Rudnitsky

SAMUEL A. CASEY'S Great Northern Nekoosa Corp. sits on a treasure trove of timber and coal and had record net income in 1978. So, why does its stock sell below book—making it an obvious takeover candidate? One reason is that its greatest resource, 2.2 million acres of prime timberland, is under Indian attack; it's part of 12 million acres claimed by Maine's Passamaquoddy and Penobscot tribes under a 1790 law.

Formed from the 1970 merger of Great Northern Paper Co. and Nekoosa-Edwards Paper Co., GNN has a good record. Its revenues have grown from $410 million in 1972 to over $975 million in 1978. Income has tripled to about $65 million. That's despite some initial digestive problems blending Great Northern's proletarian newsprint and containerboard business with Nekoosa-Edwards' high-quality writing and computer-printout paper. Earnings dropped off in recession 1975, then climbed back, and for 1978—despite a 59-day strike last summer that cost about $10 million—will be ahead of those for 1977.

This year looks good, too: A $245 million expansion program at GNN's Ashdown, Ark. paper complex will start to pay off by the fourth quarter. An expanded mill will start spewing out an additional 280,000 tons of pulp a year, and a new machine will produce 135,000 tons of paper for the booming copier and business-forms market, in which GNN is a leader. Says Casey: "Ashdown will more than double GNN's pulp capacity. That's a big increase for us or for anyone."

At Millinocket, Me. another new expansion project will boost, by 46,000 tons a year, production of GNN's low-priced coated groundwood paper, Baxter Text, which sells for $200 a ton less than rival kraft-process papers and offers a 20% greater yield. GNN will also have the uncoated groundwood paper market all to itself for awhile longer, while its bigger rivals (it's the number six paper company) mull over the multimillion-dollar capital investment it would require for them to compete in this more limited but expanding market. In the meantime, GNN's cheaper paper is opening up new uses in catalogs, road maps and paperback books.

Down in Jasper, Ala. Casey is also expanding GNN's Brilliant Coal Co
serves: 210 million tons), whic
bought primarily as a defensive me
in 1974's oil embargo pinch. By this
at a cost of $12 million, coal produ
capability at Jasper will have incr
from 350,000 tons to 850,000 tons a
Casey hopes to get a 25% rate of r
on that investment—overly optim
perhaps, but even a good portion of
payoff would be highly profitable.

But Great Northern's greatest tre
is in those northern Maine ground

No laughter, please

The Nonintercourse Act of 1790 is not what you think. It says Indian lands can be sold or leased only by treaty with the federal government. Under it, Indian tribes of the eastern U.S. have filed claims so far for nearly 13 million acres of mostly undeveloped land now in private ownership.

In the West, where almost all land was federally owned before it was turned into states, the act isn't the basis for Indian claims; they're usually based on alleged treaty violations. But in the East, millions of acres of Indian land were purchased or leased by individuals or states.

Some famous tribes have been suing to recover land under the act. The Mashpee Wampanoags want 13,000 acres—or about three-fourths—of the Cape Cod town named for them. The Oneidas claim 246,000 acres in upstate New York worth at least $123 million. (They claim another 5.5 million acres under two treaties, the Constitution and the Articles of Confederation.) The Cayugas may soon settle their claim for 64,000 acres of upstate New York and the St. Regis Mohawks for an other 15,000.

Maine timberland
Indians claim 12 million acres of it.

South Carolina's tiny Catawba tribe hopes to get 32,000 acres (worth an estimated $32 million) on their 140,000-acre claim. Connecticut's Schaghticokes and Western Pequots have sued for 2,400 acres.

In the only Nonintercourse case resolved so far, Rhode Island's Narragansetts received 1,900 acres—two thirds of their original claim—in an out-of-court settlement. Congress appropriated $3.5 million to reimburse the private landowners involved. The 12 million-acre claim of the Passamaquoddies and Penobscots in Maine *(see main story)* is by far the largest.

By judicial ruling, statutes of limitation don't apply in Indian claims. Since the 1940s, the federal government has awarded nearly $2 billion in Indian cases, including the $1 billion settlement of Alaska's Indian claims in 1971. More than $800 million was awarded by the Indian Claims Commission (abolished by Congress last year).

—Alyssa Lappen

ing below stated book value of $33 a share, but for less than half the $73.37 that Oppenheimer & Co., Inc.'s Gary Palmero figures for the replacement value of its assets. Other paper companies, like Olinkraft, Inc. and Mead Corp., have recently been takeover targets at much higher prices than stated book value. At recent prices, an acquisitor could offer GNN a 40% premium and still buy the whole company for under $700 million.

Which means that if the Indian claim is settled quickly, GNN might be highly vulnerable. But if the Indians turn down the latest offer, or if Congress take time approving the deal, or if the ma drags on for years in the courts, won't find Sam Casey and Bob Hel dale shedding tears. What oil compan conglomerate wants to get involved war with the Indians? ■

Thanks to the Rockefellers, part of the U.S. economy is unshakably socialist.

Prohibition's last revenge

By Steven Solomon and Gerald Odening

LIKE SEX and politics, the subject of alcohol has often caused otherwise rational men to become irrational. It caused Mississippi Baptists to ally themselves with bootleggers, keeping that state dry into the 1960s. And it once led staunch capitalist John D. Rockefeller Jr. to advocate state socialism.

On the eve of Repeal in 1933, the teetotaling Rockefeller funded a study on the subject of liquor distribution. The study concluded that if Repeal must come, the liquor business should become a state-owned monopoly, as in Canada and the Scandinavian countries. Eliminating the profit motive, the study argued, would lessen demand for liquor and promote temperance.

Since that time, 18 states and Montgomery County, Md. have adopted the so-called monopoly or control system. States like Michigan, Ohio, Washington, Alabama, Virginia and Pennsylvania (the liquor industry's largest single customer in the Free World) control the wholesaling and retailing of alcohol. In all, state-owned monopolies sell $9 billion of the $36 billion worth of alcohol sold in the U.S. annually.

The state-owned system, of course, has become a valuable source of patronage, but what adds to the power of po cians is not so good for consumers. for competitive-minded distillers.

The public suffers from inco nience, poor product selection and some cases, higher real prices. Free m ket or "open" states have seven ti more liquor stores for only two-an half times more population than mo oly states. Product selection is gre limited, too. Only 800 to 1,000 out of 30,000 distilled beverage products m the state lists, and though the natio brands are usually available, regio brands dominate the inventories.

Prices vary depending on state po but, on average, monopoly and op state prices are nominally about same—what's absent in monopoly st are the specials, discounts and pro tions which boost distillers' ma share and give consumers a price bre

Predictably, consumption under state monopolies is lower. John D. right. But other moral issues as seriou temperance have developed with monopoly system: cronyism at best, c ruption at worst. The market is c trolled by politics, not competition. the words of one distiller: "The nam the game is friendship, not product."

State-controlled New Hampshire border liquor store
Generating state income, not temperance, is the raison d'être.

movement back in the early 1970s, but the powerful retail clerks union killed the bill in the legislature.

Not all monopoly systems are inept. New Hampshire runs a cut-rate, modern self-service store system—with the largest stores poised on its border with Massachusetts. Some 55% of New Hampshire's sales come from the pockets of out-of-state residents, and out of the mouths of private merchants in neighboring states. In fact, the situation has flared into a small-scale war, with Connecticut and Massachusetts deploying undercover police to identify "bootleggers" and New Hampshire retaliating with state troopers to keep them out.

Over the years state liquor monopolies have tended to forget that their *raison d'être* is to promote temperance and have instead concentrated on raising money for the state. The result is an anomaly: a state monopoly that is a source of political patronage and can cover most of its inefficiencies through increased prices. For these reasons, it's inconvenient for the public, unhealthy for the industry—and unlikely to be changed. ■

Anti-Prohibition cartoon, 1930
When the Noble Experiment failed, the drys turned to socialism.

Never mind the national ratings, Notre Dame is still a powerhouse when it comes to winning football profits.

Take the money and run . . . and pass

ON THE SCOREBOARD at the end of the Cotton Bowl football game in Dallas on New Year's Day, it was the University of Notre Dame 35, University of Houston 34. On the profit-and-loss sheet, Notre Dame's score was even more satisfactory.

At a time when many college athletic directors are at their wits' end coping with soaring costs, Notre Dame remains in good shape. Even before it shows up for the post-season games like the classic in Dallas, Notre Dame ordinarily takes in nearly $3 million in regular-season football revenues. With an additional $670,000 from other sports (mainly basketball), it easily covers the cost of its total athletic program, $3.3 million, with about $270,000 to spare.

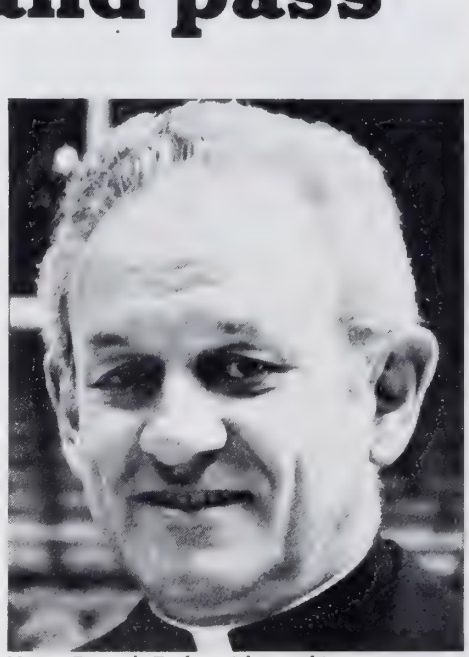
Its $1.2 million share of the Cotton Bowl receipts came on top of that. Unlike Houston, which had to split its $1.2 million share with eight other members of the Southwest Conference, Notre Dame, which has no conference affiliation, kept it all. It cost some $300,000 to go to the Cotton Bowl, so there was a whopping surplus, which goes to minority scholarships and other academic purposes (the regular season's surplus went into general revenues).

For decades after the legendary Knute Rockne—a sometime chemistry instructor and full-time football genius—helped transform Notre Dame from a little midwestern Catholic school into a national institution, the Holy Cross Fathers who run it had a deep aversion to post-season football promotions. It's possible that if the cost of running a big-time program hadn't escalated—coaching and other salaries alone now come to $300,000 a year—Notre Dame would be avoiding them still. But since it reversed that policy in 1970, Notre Dame has been in a post-season game every year save This year, although they finished regular season with 8 wins, 3 l ranking no higher than ninth in the service polls, the Fighting Irish wer really in doubt that someone woul them to play on New Year's Day.

Still, the good Fathers are gl about the future of college athl "College football may have disapp completely in the next 20 years, Reverend Edmund Joyce, Notre D executive vice president, says Competition from professional fo teams is one reason. Explains F Joyce: "The University of Minnes having terrible problems. Northwe can't attract anyone to its stadium Miami is having difficulties against the Dolphins."

Another big problem, Father says, is that the newly proposed go ment guidelines for Title IX of the E tion Act of 1972 require a univers spend proportionately as much o women's athletic program as it do its men's. There are some exceptio these guidelines, but there are no the case of football scholarships, f ample, on which Notre Dame s more than $500,000 a year. Thu would have to come up with a con able sum for women's athletics i guidelines were put into effect.

Father Joyce is not unsympathe the purposes of Title IX. "Where a versity is spending general revenu subsidize football," he says, "it s fair that they should spend the proportionate amount on wor sports." But he feels that schools Notre Dame, which spends about $2 lion on football to produce nearly $3 lion in revenue, cannot survive u Title IX with their programs intact. less special consideration is given t enue-producing sports," Father says, "it's going to do away with time college athletics." ■



Notre Dame's Father Edmund Joyce

WHEN THE FIRE-BREATHING, ter-rock band Kiss played b 40,000 screaming Japanes Tokyo's Budokan arena last April, stage was loaded with $100,000 wor guitars and drums and $22,500 wor speakers and amplifiers, all of which projected through a $1 million sound tem. Music? Or sheer noise? The tronic notes should have sounded s to the new musical instrument indu

Today, 40% of the $2 billion wor musical instruments and accessories in the U.S. annually are electronic: " thesizers," the fastest growing U.S strument; computerized organs that tually play themselves; and amplifi speakers and mixers, once consid components of a stereo phonograph tem but now adapted for guitars, ele pianos and even violins.

Electronic organs equipped with grated circuit technology have c manded the largest dollar volume of instrument for over a decade. They a you to make paint-by-numbers musi companied by computer-generated c bal, maraca and castanet sounds. A nuscule business in the 1950s, electr organs, now costing anywhere from $ to $15,000 apiece, are a half-billion d market.

Other electronic instruments and cessories have more than doubled in lar volume in the past five years to $

VALUE.

It's one reason Canon's NP 500 is the copier more companies are discovering.

The Canon NP 5000 is the perfect combinatio of advanced technology and practicality. And it offers a real competitive advantage over copiers lik the Xerox 3100 and Xerox 4000.

Because not only is the sturdy NP 5000 the fi "dry" toner console plain paper copier with 11"x 17 copying capabilities. But it features the world re-nowned Canon lens, a convenient push-button dou cassette paper-changing system, plus an automati toner control, so excellent copy quality is main-tained auto-matically. All features which neither the Xerox 3100 nor the Xerox 4000 has.

Biotechnologically designed control panel

Value. It's what you get from the NP 5000 eve before you get the copies. For more details or to arrange a convenient demonstration, fill out and mail the coupon below.

ion. "Business has never been bet-" says Danny Burgauer, vice presi- of Manny's in Manhattan, where erations of musicians from Duke Ell-on to the Rolling Stones have bought ruments.

ut predictably, what seems to be hap-ng in the new electronic musical in-ment business is what happened to y industry invaded by electronics, adding machines to watches. Take hesizers, which tripled in sales be-en 1973 and 1977, to $24 million. synthesizer makes pure electronic ds. It can imitate conventional in-ments or create pitches Bach never med of, and it is now used in a large of rock music. Norlin Corp.'s Moog sion was the brainchild of Robert A. g, the former physics student who nted the first marketable synthesiz- the early Sixties. But Moog is now ber two in synthesizers. It has been taken by tiny ($7 million sales) Arp ument, Inc. of Lexington, Mass. rheim Electronics Inc. of Santa ica, Calif. now produces what some essionals think is the most advanced hesizer. And Arp itself is making hesizers controlled by guitar strings ead of by keyboards.

ys analyst Lee Isgur of Paine Webber chell Hutchins: "The problem is the with which a company can market oduct that has fairly sophisticated electronics. Whether you're a $100 million company or a $7 million company like Arp, you can acquire the expertise."

Even the organs aren't sounding as harmonious as they once did. Unit sales last year were less than in 1974. "The cheaper models are gimmicks, impulse items," says David Friend, president of Arp. "You can quickly run to the end of their musical limits if you have any talent at all." Hammond Organ Co., for example, slipped into the red in 1974 after trying to sell supercheap organs through mass merchandisers. It is now owned by The Marmon Group, Inc., a $1.3 billion manufacturing and coal mining company.

But the traditional, nonelectronic instrument business sounds even flatter. The number of nonamplified string, brass and woodwind instruments sold in this country has declined steadily along with the under-20 portion of the population and austerity-stricken school budgets. Even acoustic guitars peaked at 1.6 million units in 1973 and fell to 1.2 million in 1977.

So, while new musical instrument companies have proliferated (the total number of instrument manufacturers has doubled over the last decade, to about 600), the old-style makers have consolidated. Fifty years ago there were 300 piano makers. Today there are fewer than 20. "In the 1950s," says William Peters, president of Selmer, North American Philips Corp.'s musical instrument subsidiary, "there were dozens of companies making brass and woodwinds; now there are fewer than 20. We are a mature industry. When the dust settles, it may be just like the automobile industry."

So, it's easy to lose ground—or money—in the musicmaking business. Macmillan, Inc., which bought C.G. Conn, Ltd. in 1969—a manufacturer of organs, orchestra and band instruments—lost about $5.5 million last year in its musical instrument group. Norlin acquired Chicago Musical Instrument Co. and is now the largest diversified instrument company, with $150 million in sales; but its income from music was flat last year. CBS has bought seven musical instrument companies, including Steinway (pianos), Fender (guitars), Gemeinhardt (flutes) and Rodgers (organs), which now have sales totaling over $100 million. CBS says it did well last year after a year of slightly down profits in 1977.

Despite the electronic invasion, the piano is holding its own; over the last three years unit sales climbed, to about 275,000 in 1978. But the accordion—remember the accordion? Says Jerry Ash, president of New York's Sam Ash Music Stores, "It's almost totally dropped dead. It's the only instrument we've cut out in the last five years." ■

nd here's Canon's full ne of solutions for your opier problems.

ow you can copy computer printouts, ledger and size originals in full size—or reduce them to letter -with the new *Canon NP 5500* reduction copier. nd you can get the same features without ction capability in *Canon's NP 5000*, the first toner console plain paper copier with 11" x opy capability. Designed for offices with um-to-high volume requirements, the NP 5000 able, versatile; copies onto everything from let-ad to transparencies; and comes with a unique -button double cassette paper changing sys- and automatic toner control for consistently copy quality.

The Soviet maître d' was only following orders, but—unwittingly—showed a passel of top U.S. businessmen that expanded U.S.-U.S.S.R. trade is easier to talk about than to accomplish.

"I have no authority"

By Ben Weberman

PERIODICALLY, U.S. businessmen and the U.S. press get excited about prospects of trade with the Soviet Union. A visit there goes a long way to dash such expectations.

"Picture the entire United States run by the U.S. Postal Service and you get some idea of the bureaucratic mess that prevails in the U.S.S.R." That was what a high-level Treasury official told me after he spent four intensive days negotiating with the Soviets. This American does not doubt that the Russians want to trade more with us; they most definitely do. The difficulty is getting anything done. The Soviet system and the Russian character both conspire against it.

Let me describe a scene I witnessed while accompanying Treasury Secretary W. Michael Blumenthal on his recent four-day trade mission to Moscow:

The business-oriented U.S.-U.S.S.R. Trade and Economic Council was having a meeting there at the same time, attended by such top U.S. executives as Chase Manhattan Bank's David Rockefeller, PepsiCo Inc.'s Donald M. Kendall, Hewlett-Packard Co.'s David Packard and International Harvester Co.'s Brooks McCormick. A reception had been scheduled for the American brass and their Soviet counterparts, the business-type officials who actually run the Soviet economy. The Americans were told that the reception was to begin at 5:30 p.m., and so began to trickle into the anteroom to the ballroom of the elaborate new Intourist Hotel. Inside, a half dozen beautifully laid tables were set with caviar, sturgeon, smoked salmon and the like. The bars were ready to dispense Russian vodka and Scotch whisky. The floral arrangements were in place. Waiters stood about the ballroom, their tuxedos immaculate. It could have been a Hilton Hotel anywhere in the U.S. But it wasn't in the U.S.

Prompt arrivals found the maître d' blocking the door, refusing to let them enter. His schedule showed that the party was due to start at 6, not 5:30. By 5:45 such U.S. dignitaries as David Packard, Donald Kendall and W.H. Krome George of Aluminum Co. of America, were cooling their heels. Why not let the guests in, the maître d' was asked? "I have no authority," he replied. "I am only a small shot and cannot alter the program." At 6 p.m. sharp he stood aside and let the by-now thoroughly miffed guests file in.

A small episode but typical. The Soviet Union is a place where few people are willing to assume responsibility and where "those are the rules—I'm just a small shot" is the typical answer to any request for a bending of the rules.

Little wonder that visiting businessmen find there is virtually no office space, little hotel space and a primitive telephone service. Telephone directories are hard to find. Want to call someone? Walk over and get his phone number and go back to dial it. Switchboards are nonexistent except in some newer hotels.

International phone calls take two to six hours to place. Try negotiating a deal where the head office must approve some new proposal under these conditions. When it is necessary for the Bank of America representative office in Moscow to talk with the home office, someone sends a message over the Telex machine, which keeps contact with San Francisco, and requests a return phone call. Direct dialing from the U.S. to any Russian phone is possible and quick.

The Soviets are neither lazy nor du The basic trouble is that Russian p and Soviet ideology stand in the wa their adopting Western technology Western systems. Suppose a U.S. f agrees to build a turnkey project to g duce American-designed goods: The viets will not permit it to retain qua control over the output. U.S. produc justifiably fear that Soviet quality p duction of their product could harm th worldwide reputation and, adding ins to injury, the Russians might start dump the product at prices below cost of output.

By coincidence, Blumenthal, when was head of Bendix Corp., had star negotiating with the Russians for c struction of a much-needed spark p plant. These talks were reportedly ab doned when it became obvious that Russians were unwilling to grant lice or royalty fees, would not permit fore factory supervision and wanted to re Bendix in Russian-made "Bendix" spa plugs—over whose production and qu ity the company would have absolut no say. This is a standard Soviet dema in such deals.

C. William Verity Jr., chairman Armco Steel Corp. and cochairman

Report from Number One Wall Street

Irving's international strengths: People.

Total global service. Coordinating Irving's relationships with a select group of international companies is the responsibility of Bob Richardson and his staff. "Our role encompasses virtually all aspects of banking: from financing major projects and rendering high-volume cash management services to assisting expatriate employees with their personal finances," says Richardson.

Kiyoshi Shiino, Assistant Vice President, International Corporate Banking Division

"We aim at knowing our customers and their needs thoroughly. And we're committed to excellence—to providing them high quality, useful service on a timely basis. We're constantly refining our procedures. And we're always on the alert for new ways to assist our corporate customers."

Japanese market specialist. Kiyoshi Shiino comes to Number One Wall from Irving's Tokyo Branch. "I know what Irving can do for business abroad, having helped many companies to expand in Asia," he explains. "Now, my role is reversed. I am here to work with Japanese companies in the U.S., but my work as an Irving banker is the same. Arranging financing. Advising on cash management procedures. And very important to my customers, offering all our services to meet their financial needs at any time."

Shiino-san is also prepared to advise U.S. companies on business in the Far East.

Extra effort pays off. Each of the 120 staff members in Irving's London Branch is dedicated to providing comprehensive banking services for corporations.

Bill Mills, Manager of Irving London's multinational activities, defines this dedication: "Providing personal attention is the first order of business.

"Every customer has individual needs. Whether it's a special letter of credit or a unique type of financing, we're prepared to custom-design what's needed. And customers tell us they appreciate our extra efforts to help them."

W. Gundry Mills, Vice President, International Corporate Banking Division, London Branch.

Robert J. Richardson, Vice President, International Corporate Banking Division.

clear power is on the back burner for now. where does that leave Westinghouse?

What Bob Kirby has wrought in adversity

By Jean A. Briggs

Westinghouse Electric Corp. Chairman Robert E. Kirby becomes exasperated at questions nuclear power. "Why don't you ask bout broadcasting, or defense?" he a reporter. "Or industry products? ear is only 8% of our business."

a very important 8%. Westing—number two, three or four in of its markets—is number one in ar power. It is widely considered chnology leader and has 40% of the et, compared with General Electric 34%, Combustion Engineering's nd Babcock & Wilcox' 12%.

act, the only domestic order for a uclear plant in 1978 was awarded nonth to Westinghouse by Chica-Commonwealth Edison Co. That nore than just a morale booster for nghouse. It makes more money on ear plant than on a coal or oil plant e simple reason that it makes more h a plant: It makes the steam sup-stem and the fuel, as well as the e generator; for a coal or oil plant it s only the turbine generator.

Kirby himself says, "This is a big item for us."

clear remains a giant headache for nghouse but in no sense a poten-lethal problem. For one thing the any has built up tremendous cash es. Recently, moreover, a federal admonished the utilities that are Westinghouse to be realistic in the ments they are seeking. It is clear hat the uranium mess could turn be expensive, but it will not sink mpany or come near sinking it.

estinghouse has tremendous h and depth," Kirby says.

s indeed a giant outfit—the 36th t corporation in the country—and rse one. When Kirby took over in he organized it into four subsidiary anies, each with its own manage- and staff. The question is, what estinghouse's prospects, based on its nonnuclear businesses alone?

Sales for the entire company, estimated by Robert Cornell of Paine Webber Mitchell Hutchins Inc. at $6.7 billion for 1978, grew 9% over 1977, just about keeping up with inflation. Profits before extraordinary losses from uranium settlements probably did a bit better, growing 11%, from $270 million to an estimated $300 million. Return on equity, at 12%, is an improvement over prior years but it remains well below the electrical equipment industry median of about a 19% return.

"When I look at the plans our business units have," Kirby says, "even I get ecstatic." According to Douglas D. Danforth, former head of the Industry Products Co. subsidiary who became corporate vice chairman and chief operating officer last July, "The biggest percentage gain in the near future will be from Public Systems."

Public Systems Co. got its name from the fact that most of its sales go to government units ranging from the Pentagon to the local school board. Thomas J. Murrin, Public Systems' blunt, burly president, deserves high marks for amputating several money-losing businesses within Public Systems and for putting together a number of successes in this incredibly diverse company.

These include a defense business with a backlog of well over a billion dollars. The company beat out Hughes Aircraft Co. in 1975 for the contract to supply radar for the F-16, the General Dynamics fighter going to the U.S. Air Force and NATO. It also supplies surveillance radar for air traffic control and for defense, both in the U. S. and overseas, as well as communications equipment for Morocco and Nigeria.

There are three more business groups in Murrin's Public Systems: construction, learning and leisure and community development.

Products for the construction business include elevators, where Westinghouse is number two after Otis but number one in escalators and airport people-movers. It also makes big commercial air-conditioner units, modular office furniture and industrial fans. Learning and leisure includes the 7UP bottling operation, which Westinghouse is now expanding; a test-grading company; a language study outfit and the Longines-Wittnauer Watch Co.

Westinghouse is one of few big companies that have made money in land development. Public Systems' community development group is working on properties in Florida and California.

Taken as a whole, Public Systems earned an estimated $80 million pretax last year on revenues of $1.5 billion. At just over 5% pretax on sales, this profit leaves room for further improvement—which is precisely what Tom Murrin is working toward.

Much more profitable for Westinghouse is its Industry Products Co., now headed by marketing man Edwin V. Clarke Jr. Pulled together by Donald Burnham, Kirby's predecessor, before he became CEO in 1963, it has been quietly making money ever since. "Our products go behind walls, above ceilings or under floors," says Clarke. "You don't see them." They are all manner of electrical gear: The company makes a vast array of motors, for example. It also makes process control systems, or, as Clarke says, "pieces of control," from a simple light switch to a complex system to operate a paper or steel mill, and distribution equipment: bus ducts, wiring systems, light bulbs.

The business is highly competitive—with General Electric and Emerson Electric Co. taking much of the motor market; Square D Co., much of the process control market; McGraw-Edison Co., the distribution market. And there are dozens of other sharp outfits, from the Honeywells to the little backyard companies, which all get their share.

Two of Westinghouse's strongest businesses are in this division: It is a strong number two in light bulbs from which it reaps hefty profits, and it is number one in over-the-road refrigeration through its Thermo King division, which it purchased in 1961.

Both Clarke and Danforth believe that Industry Products has some growth opportunities as companies get more interested in energy-efficient equipment and as inflation makes it more and more economical for them to spend the money to upgrade old plants rather than build new ones.

Industry Products Co. includes a service and repair business that is huge and growing. "It is so big we have to have eastern, western and international managers," says Clarke.

This Westinghouse company, its profit mix enriched by light bulbs and truck refrigeration units, is the backbone of

the parent company's profitability. On less than 40% of revenues—an estimated $2.6 billion last year—it accounted for well over half the probable pretax profit—some $240 million. It is nicely profitable by any standards, earning 5% on sales after tax.

Power Systems Co. may not be selling nuclear or any other kind of generating plants to utilities, but as Gordon C. Hurlbert, its president, points out, it is making money on its backlog and on providing services for older plants. Hurlbert is proudest of his transmission and distribution division. "We've moved from number four to number one in pad-mounted transformers," he claims, "and from number two to number one in small power transformers. We were always number one in large transformers."

In spite of the slowing of new orders and the nuclear disappointments, Power Systems is solidly in the black with profits of around $118 million on revenues of $2.4 billion. When utilities start to order heavily again, Power Systems may again be Westinghouse's most stalwart producer of profits.

Westinghouse's little jewel is Group W, its broadcasting division—an estimated $80 million pretax profits on revenues of only $200 million. The outfit has its quota of VHF stations (five), and its quota of AM radio stations (seven), all in good markets. It has a cable-TV operation and a TV production and syndication business.

Donald McGannon, Group W's boss, has a reputation as the conscience of the TV industry, for his efforts to get more intelligent programming and to lim number of advertisements. Critic McGannon has not been as aggress he might have been in expanding inghouse's advantage in broadca He has not gone after UHF statio FM radio, for example. Nor has h sued cable TV aggressively. His cabl tem, in Florida and Georgia, has 64,000 viewers. Teleprompter's, by trast, has well over a million and Ge Electric, if its proposed deal with Broadcasting goes through, will 660,000. But such carping aside, Mc non and Westinghouse stand for q in an industry where standards ar always of the highest.

Westinghouse Chairman Robert Kirby
"We want our people to think about what might go wrong in management."

Bob Kirby deserves high mar bringing this sprawling and trouble-beset corporate gian der firm control; the kinds of unple surprises that occurred so frequent the past now seem unlikely. And h brought Westinghouse back from brink of financial danger. By husba cash and raising more through disp of hopelessly losing businesses like ances, he has made the company h liquid and only lightly leveraged. W he took over, debt was 39% of equit burdensome; it is now down to a 15%. The company came out of with well over $700 million in ca ample money not only to handle backs in the uranium cases but to a for future expansion as well.

An engineer who spends part o leisure time playing with compu Kirby has not abandoned techno The company continues to support spected research and development e But it has been carefully defined.

Dr. George Mechlin, who heads unit, says that the company is no l venturing forth into new areas—e for new processes to get at uranium- sticking to familiar territory *(see* "When a securities analyst hears t he complains, "he rubs his stomach says, 'That's just what I wante hear.' " But Westinghouse is comin with new ideas and new applica that keep its product lines up to such as a new light bulb that gives s so-called "natural light" for product plays. That has given Westinghou temporary advantage in the retail market.

Robert Kirby, 60, is an aggres hard-driving man whose parents al made him earn his own spending m (Kirby recalls, when he was nine, se little bags of peanuts and little bouq of flowers on a nearby college cam When he believes in something, Kirb not afraid to push it hard. Example was among 13 businessmen invite the White House last summer to dis the Administration's energy progr Carter had already stated publicly th didn't want to go ahead with the Cl

River breeder reactor. The tale is told that while the others were awed, Kirby argued with the President over the merits of breeder reactors. Confronted with the report by a FORBES reporter recently, Kirby smiled and said: "We reached an impasse."

Kirby describes himself as a "people person," underlining his concern for Westinghouse's organization as opposed to an exclusive concern for technology. Appropriately he has placed heavy emphasis on management development—moving those Westinghouse engineers around, much as GE moves its engineers so they'll have broad managerial experience. He's also giving them courses in risk management. Says he: "We don't want people to just look at the good side of their business. We want them to think about what might go wrong." His hope, of course, is to avoid such traps as those Power Systems Co. fell into under its former president, John Simpson, when it sold uranium at prearranged prices before buying it, and got caught in big price increases.

More recently the company has increased its emphasis on so-called strategic planning—forcing business units to monitor more closely their competitive positions and decide exactly what to do to improve them. It has also reorganized its sales force along market rather than geographic lines.

The new Westinghouse is too well structured, too tightly controlled to repeat the mistakes of the old Westinghouse. But what about the continuing nuclear problem?

By the end of the year the damage done by the uranium fiasco will probably be pretty well known. Of the 21 lawsuits that resulted from its 1975 decision to try to get itself excused from its uranium obligations because of "commercial impracticability," four have been settled out of court. Estimated cost of those four: $150 million pretax. (It could be somewhat higher because the settlements all involve providing goods and services as well as cash.)

Thirteen suits remain. In Richmond, Va., where seven of them were tried recently, Judge Robert R. Merhige Jr. ruled that Westinghouse had not proved its case. But he also admonished the utilities to be more realistic in their demands and to try to settle the suits out of court. The damage award trial for the seven starts in May and three other suits will be tried in March.

That leaves three more proceedings in Sweden. In theory, the company could be considered liable for 65 million pounds of uranium. While no one expects that worst of all possible worlds, the settlements could cost up to $1 billion. Westinghouse can handle even that figure, what with its cash hoard, borrowing power and potential tax credits.

The fact remains, however, that nu ar power prospects seem pretty bleal the near future. Utilities aren't orde now, partly because demand isn't g ing rapidly, partly because they d have the money and partly because don't know what kind of plant to o Many utility executives would prefe clear, but the great uncertainty cause the government's shifting policies its failure to deal with the problem nuclear waste disposal and the issu licensing deter them.

There are some smart people think that nuclear power make a comeback. They point that the U.S. cannot go on running ever-higher oil import bills. They a that a widespread return to coal might seem logical, would involve a in environmental hazards and l problems that the country simply not pay. When these facts are re nized, the argument goes, the cou will look at Chicago—where Comm wealth Edison efficiently, cleanly economically gets 45% of its po from nuclear plants—and say: Nucle the best bet.

Westinghouse stockholders may ye grateful for the company's early and tinuing pioneering in nuclear po True, the time element may be frigh ing, but any management worth its must look beyond the next quart earnings statements.■

Are you listening, Jimmy Carter, Teddy Kennedy?

Dr. George Mechlin, head of the Westinghouse Research Laboratories, had something on his mind. He sat down, harrumphed, then like an old professor looked up and said:

"I want to comment on something—a national issue that relates to Westinghouse. Frank Press, the President's science adviser, is heading up an intergovernmental committee making a broad study of the innovation process—about what's going wrong, about industrial unwillingness to do something called basic research.

"You don't really need a presidentially sponsored study to figure out the answer. It's obvious that the research problem is just a subject of the reluctance to invest. There are quite a number of companies around with enormous bundles of cash. IBM, for example, has $4 billion. Its financial vice president's mattress must be getting awfully lumpy.

"Having all that cash around indicates there's something wrong with the investment process, not the savings rate. I don't know why. I'm not enough of a student of economics to know what's wrong.

"But R&D is the cheap part of the investment process—all God's children can afford R&D—it's the implementation of it that costs money. That involves training a sales force, educating the marketplace to accept new products, building factories, securing dealers, establishing service organizations. You have to invest 10 to 100 times as much money in implementation as in R&D. The restraint on R&D is simply the national reluctance to invest.

"Our strategies at Westinghouse have begun to resemble national strategies. We're concentrating on the products and technologies in which we have a well-established position. One example is electron meters that would replace electromechanical meters. If and when a market for them develops, we could convert our current production of meters to the new meter in a relatively short period relatively inexpensively. We are less willing to use technology to move out and undertake unfamiliar businesses."

Mechlin repeated: "I don't know why." But then he told a couple of stories which suggested he knew better than he admitted. There was the case of Westinghouse's costly involvement in sewage treatment. Mechlin:

"The government had a multibillion-dollar program with stringent requirements on performance. We got the impression it would be fertile ground for *technological* improvement. But the government chose to make the money available for *plant construction*. It was in the interest of the architectural engineers who wrote the specifications for the bid packages to use proven technology—things they knew worked. The consequence of this is, we as a country have spent $2 billion or $3 billion on sewage plants that were technically obsolete when they were procured. There was no opportunity to do much in the way of technical innovation. A lot of us marched into this business not knowing the realities of the market. We had a water- and waste-treatment business based on technology. In the real world it didn't work, so we got out."

Mechlin told a few other stories. They all added up to this: When Westinghouse did go into venturesome R&D, it got its fingers burned. Nuclear, for example.

So we guess that George Mechlin's message to President Carter and his science adviser, Frank Press, is this: It is not so much that companies like Westinghouse are unwilling to invest in R&D; rather that the political process makes such investment too risky and too unrewarding. **—J.A.B.**

You may not know my company yet, but you know my partner.

Patrick de Cavaignac, President of Vydec, has good reason to be smiling.

His company is part of Exxon Information Systems, Exxon's fast-growing business activity in the information field.

By joining forces, Exxon Information Systems and Vydec combined the resources of a large organization with the growth potential of one with unique technological skills.

Today, the Tiger and many others of the Fortune 500 are using the Vydec® Word Processing System to up to triple office productivity.

Vydec streamlines the handling of mounting paperwork loads. By automating most office typing tasks, Vydec Word Processing Systems can save you money, as they have in companies large and small throughout the country.

Vydec Word Processing Systems allow increased workload with no increase in staffing.

Vydec has also introduced moneysaving options, like a text reader that can turn your secretary's typewriter into a low-cost word processing station.

One more thing: Vydec Word Processing only takes hours to learn, not weeks. And it can be adopted without disrupting regular office procedures.

Vydec Word Processing Systems. They can triple office productivity, and more.

The Tiger would like you to know more about how Vydec and his other partners can help streamline information handling in your organization.

For a brochure which details products and services, call 800-223-2479 toll free (in New York State, call 212-398-3141), or write to "Exxon Information Systems Brochure," 1251 Avenue of the Americas, New York, N.Y. 10020.

Canada's Noranda Mines sits on one of the continent's richest natural gas deposits. That's the good news. The bad news is developing it will strain Noranda's limited resources.

A tiger by the tail

Noranda Chairman Alfred Powis
A rich empire of natural resources in which natural gas is now the crown jewel.

By Paul Gibson

SELDOM DO BAD economics and po cal horse-trading make for g corporate results. An exceptio the case of Noranda Mines Ltd., wh may be among the investment wor most intriguing natural gas plays.

With $1.4 billion in sales and $2.2 lion in assets, this Toronto-based di sified (copper, zinc, uranium, molyb num and gold mining) enterprise ra in size alongside such U.S. giants AMAX Inc., Phelps Dodge Corp. ASARCO Inc. But Noranda is far m than mining. It is also big in metal fa cation, potash, forest products, and ov sizable blocks of stocks in such ot Canadian natural resource companie Kerr Addison, Mattagami Lake Mi and British Columbia Forest Produ *(see table, p. 60).*

In earnings, moreover, Noranda is i class by itself. During the past four ye while its U.S. competitors struggled keep out of the red as metal pri sagged, Noranda has almost doubled net income. In 1978 Noranda earne least $4 a share, its best showing si 1974, the last boom year for base met This year expect $4.50, with even sha er gains to come in the 1980s. Wh happening here?

In large measure Noranda is curren benefiting from the mismanagement the Canadian economy, which if a thing is in worse shape than the U Inflationary wage claims there, plus h welfare benefits and high taxation, h sent prices soaring and the Canadian c lar tumbling even faster than the U dollar. Where the Canadian dollar as cently as 1976 commanded a 1-cent p mium over the U.S. greenback, it n sells at a 16-cent discount, its lowest r since the 1930s.

The cheap Canadian dollar is g news for Noranda. The company d about a quarter of its business abro mainly in the U.S. So while Norar pays its miners and keeps its books Canadian dollars, it receives much of income in foreign currencies. The lev age effect on Noranda's earnings is en mous. Where U.S. producers get only cents a pound for their copper, Norar gets 85 cents (Canadian). "It sudde dawned on us a few weeks ago that producer price for copper in Canad funds is at an alltime high," says N anda Chairman Alfred Powis, explain how a 1-cent decline in the value of Canadian dollar means an extra $5 n lion after taxes on Noranda's bott line. That's equal to 20 cents a share.

"Ostensibly we are doing relativ well. But I told my guys to go back a recalculate the price of copper in Sw francs," Powis continues. "They found was at an alltime low. So while we tough against the Swiss and the Germa

lity is that the drop in the Canadi-
lar is our margin of survival."
vever, Noranda is poised to do a
leal more than merely survive. It is
to become one of North America's
t natural gas producers thanks to
esight in correctly reading the po-
horse-trading between Canada's
l and provincial governments over
exports to the U.S.
s part of the story begins back in
d-1970s. After the Mideast oil cri-
tawa—over the protests of energy-
lberta—began insisting that Can-

Bringing Noranda's gas to market

By chance, Noranda's major discovery of natural gas in western Canada is located only about 40 miles from an existing gas-gathering system. It is also close by the probable route by which gas will travel from the Arctic during the 1980s.

hance, James Gray and John Mas-
wo geologists with Kerr-McGee
decided not to go to the U.S. when
mployer cut back in Canada. In-
they convinced Noranda to hire them and invest an initial $5 million to explore land straddling the Alberta and British Columbia border that had been largely spurned by most leading exploration companies, including Kerr-McGee.

Almost from the start, they found an abundance of natural gas, and today Noranda is probably the biggest landowner, with claims to 1.2 million acres in what may be the largest pool of natural gas yet discovered in North America. Known as the Deep Basin, this field is located about 250 miles northwest of Edmonton, Alberta and could contain twice the gas reserves in New Mexico's prolific San Juan basin and double Alaska's Prudhoe Bay. In fact, geologist Gray contends that Deep Basin will yield at least 50 trillion cubic feet at current prices and triple that amount if the wellhead price of natural gas were $2 per thousand cubic feet today. To put this figure in perspective, Canada currently consumes about 1.5 trillion cubic feet annually and exports another 1 trillion. Noranda's discovery means Canada's total projected reserves have doubled overnight.

While some of Gray's figures are still being challenged by other geologists, his optimism does not appear unwarranted. After last month's 14.5% hike in oil prices by the Organization of the Petroleum Exporting Countries, who would argue that—even if supplies become plentiful—gas prices are not headed a lot higher in the years ahead?

"It's impossible to quantify how much gas we have with any degree of accuracy," says Powis, with the air of a man who doesn't need to worry about the final details. "It's a hell of a lot."

So far Noranda, through a wholly owned subsidiary, Canadian Hunter, and other affiliates, has spent $140 million, drilling some 40 wells, most of them successful, and boasts proven reserves to date of about 1 trillion cubic feet. Under a firm take-or-pay contract Noranda later this year will begin selling part of this gas to TransCanada PipeLines Ltd. Some Toronto analysts put a $1 billion price tag on Noranda's gas holdings (about $40 per Noranda share), which so far it has carried on its books for less than $100 million. News of the deal not surprisingly helped push Noranda's stock (book value, 34) to 39, up from 21 only a year earlier.

The cheap Canadian dollar is good news for Noranda. The company does about a quarter of its business abroad, mainly in the U.S. So while Noranda pays its miners and keeps its books in Canadian dollars, it receives much of its income in foreign currencies. The resulting leverage effect on Noranda's earnings is enormous.

This year, according to Wood Gundy Ltd., the respected Toronto investment bankers, oil and gas will add 18 cents a share to Noranda's earnings and that figure will rise rapidly to at least $1 in 1982. While he doesn't talk figures, Powis readily lets it be known he thinks such estimates are too cautious.

Will any of this gas find its way to the U.S.? By lucky chance the part of the Deep Basin gas field where Noranda has found most gas lies only 40 miles from an existing pipeline that in the past flowed gas plentifully into the U.S., linking up with the Pacific Gas Transmission system at Kingsgate, B.C. and with the Northern Border System at Monchy, Sask. *(see map)*. "We now know Canada has plenty of gas and we believe we should be allowed to sell in the U.S," says Powis. He contends that, contrary to what Ottawa says, greater exports would stimulate more exploration of the Deep Basin and in time increase, not diminish, Canada's energy reserves. So this March Powis will be lobbying hard when Canada's National Energy Board holds its final hearings before making a recom-

mendation to Ottawa about future energy sales to the U.S.

"What you must remember," says Gray, "is that selling 1 billion cubic feet of gas a day would have a $1-billion-a-year positive impact on Canada's balance of payments." With Canada facing a $4 billion current account deficit, his argument will not fall on deaf ears.

Noranda will sell its gas to Canadian customers at $2 per thousand cubic feet. The same gas, says Powis, could be delivered to northern U.S. cities for $2.40 (Canadian). That's about half the expected delivery cost of gas from Alaska, which is due to begin flowing in 1983.

Noranda. Hardly a familiar name to U.S. investors. The company prefers it that way. Its shares are not listed on any U.S. exchange, and some 94% of its stock is still in Canadian hands with the balance split between the U.S. and Europe. Says Powis, scornfully, "We don't choose to subject ourselves to the tender mercies of your Securities & Exchange Commission. If we did that, we would have to hire 40 people to cope with its reporting requirements."

That's the way Alf Powis talks: He's not one of your typically faceless, colorless Canadian businessmen. Starting as an auditor in 1955, he shot through the ranks to become chief executive 13 years later when he was only 38.

Under Powis, Noranda has become leveraged by the standards of U.S. mining companies. Its long-term debt, from virtually nothing in 1966, had soared by 1976 to over $600 million, almost equal to stockholders' equity. This in contrast to U.S. outfits like Phelps Dodge, which carries about 50 cents of debt for each $1 of equity. As a result, last spring the Dominion Bond Rating Service downgraded Noranda's bonds to triple-B.

"Our success in gas is damn near bankrupting us," Powis says, only half jesting. "The demand for funds is almost bottomless. If I told my geologists they could spend $500 million this year, they would." Noranda has, in fact, been reduced to selling off pieces of its patrimony to pay for the gas development. Last fall it cut Exxon's Imperial Oil in for a 12.5% stake in Deep Basin for $180 million; other such deals have reduced Noranda's ownership to over 60%.

Almost from the start Noranda geologists found gas, and today Noranda is probably the biggest landowner, claiming 1.2 million acres in what may be the largest pool of natural gas in North America. Known as the Deep Basin, the field is located about 250 miles northwest of Edmonton, Alberta.

Noranda's cash flow is running around $150 million annually, but most of t needed for dividends and to keep it isting businesses in shape. Also month Powis must find extra fun buy an aluminum rolling mill in tington, Tenn. that will fully inte Noranda in aluminum. So Powis duced to juggling his assets. Last fa sold off a couple of sawmills to W haeuser Co. and agreed to sell a c mine in British Columbia to Z Corp. Then at year's end he was n ating a complicated $150 million swap for the publicly held shares in sidiaries Mattagami Lake Mines an chan Mines. That deal had the a tages of improving Noranda's debt-t uity ratio while diluting to 9% the ownership of Noranda's biggest ou shareholder, Argus Corp. (FORBES, *A 1978*), which is rumored to be e Noranda as a takeover target.

"It's going to be quite a balancing sighs Powis, thinking of the funding deals still to be done. But then his brightens as he points out that c prices should soon start trending u that after 1981 Deep Basin will beco substantial cash generator instead cash drain. Adds a beaming Powis, five-year goal is for Noranda to be to four times as profitable as it is no constant dollars."

Given his record for making the of a bad situation, Powis, with a b luck, might just make it. ■

Noranda Mines: A rich empire of raw materials

Investing in Noranda Mines buys a stake in 11 other publicly owned firms in Canada. For Noranda these holdings allow faster growth and offer protection against unwanted takeover since several subsidiaries in turn own Noranda's stock.

In Canadian dollars. Noranda also has a large interest in Tara Exploration & Development Co. Ltd. (41.3% of stock) which, because of recent startup, has no comparable figures.

*Through the 3rd quarter of 1978. †Metal revenue only. D–P Deficit to profit.

The best part of the best incentive package in the EEC.

It is important to compare incentives when you're deciding to build a new plant in Europe. Plant Location International studied them all and decided the best overall package was available in Northern Ireland.

But how do you assess the quality of the worker any country puts on the job?

You can check the industrial performance of Northern Ireland. Measure our long manufacturing tradition. Chart our steady growth in productivity. Count how few working days we lose in a year.

You can look at intangibles, too. The depth of company loyalty. The willingness to try new production methods. The healthy climate of labor relations.

Add it all up, and you'll see why more than 30 American companies manufacture in Northern Ireland. They like the incentives, but they value even more the quality of the men and women they employ here.

Put our assistance programs and our people to work for you. Get the facts from Reg Browne or George McLaren at the Northern Ireland Industrial Development Office in New York. They can quickly tailor an offer of assistance to suit your plans. Call (212) 593-2258. Or write: NIIDO, British Consulate-General, 150 E. 58th St., New York, NY 10022.

William Dornan works. A toolmaker at the Bridgeport Brass Co., he brings 30 years of experience to the job of producing tire valves for the European market.

Northern Ireland works.

In high technology, you can fall as quickly as you rose—just ask Medtronic, Inc.

A pacesetter's dilemma

In business as in sports and gambling, it often takes one kind of skill to get ahead, but another kind to stay there. That's the lesson that $182 million (sales) heart pacemaker manufacturer Medtronic, Inc. has had to learn the hard way. Three years ago, with earnings of $13 million on sales of $129 million, Minneapolis-based Medtronic was four times bigger than its nearest competitor and commanded over 50% of the fast growing market for heart pacemakers.

But in pushing its sophisticated 220-man sales force to extend the market life of its Xytron pacemaker to an enthralled market of surgeons and cardiologists, Medtronic was sowing the seeds of its own comeuppance. Upstart competitors such as Cardiac Pacemakers, Inc., founded by four former Medtronic executives, were at the same time staking their futures on introducing advanced pacemakers with longer lives than the Xytron.

Then disaster struck Medtronic. Between midsummer of 1976 and the fall of 1977 it had to recall over 35,000 Xytrons—many of them implanted in the chests of seriously ill heart patients. The problem was the Xytron's hand-soldered sealing that allowed moisture from the body's wet tissues to seep inside the pacemaker and disable its batteries. While Medtronic was replacing thousands of pacemakers at a cost of around $400 each, its opportunistic competitors were catching the stunned market's attention with their "state-of-the-art" lithium battery models—not only longer-lived than the Xytron, but also machine-sealed to prevent moisture leakage.

By the end of fiscal 1977-78, thanks to higher prices for its own better-late-than-never lithium pacemaker called the Xyrel ($2,295 for the top of the line *vs.* $1,450 for the faulty Xytron), Medtronic's sales volume actually increased 23% over the previous year, to $182 million, with a 18.5% aftertax earnings increase to $17.3 million. But its unit sales stayed flat at around 80,000 pacemakers a year, and its market share was down to only 35% of all pacemakers sold. Says one Wall Street analyst, "They were just stupid. They should have been the first on the market with lithium. The technology had been around for a long time."

Medtronic's first half of the 1978-79 fiscal year was up 26%, to $106 million, while its earnings jumped 35%, to $1.49 per share. But, again, unit growth was minimal and market share was still 35%. At the same time, another small competitor, Intermedics, Inc., captured the market's attention with a new generation of "multiprogrammable" pacemakers that can be adjusted to changes in a patient's condition or lifestyle without additional surgery.

Medtronic, anxious to recapture its market share, would rather forget about tangential market developments like Intermedics' programmable pacemakers and concentrate on its newest no-frills lithium batteried model, the Mirel. Says National Sales Director Larry Whalen, "The bulk of the population can be well treated with the basic nonprogram pacemaker. A number of patients w sold these more sophisticated pro who don't need them."

Yet Medtronic can't afford a rep 1976-77. If the pesky competiti turning surgeons' heads with pro mable pacemakers Medtronic will to keep up. Now it has been beaten draw again. "Intermedics is sl ahead," says one industry analyst. it hadn't been for that recall wouldn't even be an Intermedics."

Medtronic does have a big res and development advantage ov competitors—and it has yet to pl ace. So far, all pacemakers, progra ble or not, work by sending elec impulses to the heart's lower cha the ventricle, which pumps bloo the arteries. But the organ's pr pumping station is the upper cha the atrium, which so far has re synchronized pacing. Medtronic's Byrel A-V sequential pacemaker, w approval by the Food & Drug Adn tration, affects both chambers and be nearly twice as effective as c models. When the Byrel A-V mo finally approved, it could get Medt back its lost market share—and mo

But it had better not squander i vantage this time. ■

Volkswagen is booming again, but difficult decisions are ahead for Germany's number one automaker.

First the Beetle, then the Rabbit—now what?

When Toni Schmücker became chief executive of Volkswagen in 1975, he was the third man in seven years to take the job. The German automaker was nearly bankrupt. The year before, it lost a record $312 million—nearly twice as bad as Chrysler's current performance, though on a far smaller revenue base.

But now, Schmücker, a veteran of 28 years with Ford of Germany, is all smiles. In 1978 his company earned an estimated $250 million from sales of $14 billion. With its superior margins, of course, General Motors would have done three times as well on the same revenues. But VW's return to profitability—plus the fact that it has not boosted capital spending as fast as U.S. automakers—leaves the German firm flush with cash. With a $3 billion nest egg, VW has more money than GM though it is only one-fourth as large.

Investing such an embarrassment of riches, however, poses a challenge for VW management that is in many ways far tougher than engineering the company's recent turnaround.

The turnaround involved bringing out new products, but products with which VW was familiar. Its 28-year-old Beetle design was old-fashioned and overpriced. But once its Scirocco and Rabbit were in full production, and once Schmücker had trimmed 25,000 workers from VW's payroll of 202,000, the company was rolling again. With special tax credits because of its earlier losses, VW posted record $400 million earnings in 1976. And profits for 1978's first nine months were almost 40% over 1977. German investors who bought the stock in the bleak winter of 1975 have more than tripled their m

Dave Foster's Colgate is having indigestion from its $1.5 billion (sales) acquisitions.

The morning after

By Cynthia Saltzman

DAVID R. FOSTER took over as CEO of $4.2 billion (sales) Colgate-Palmolive Co. in 1971, with the aim of turning the nation's number two toothpaste-and-soap company into a diversified consumer products company. The marketing man who headed Colgate's household products was as good as his word: In only six years he has acquired 21 good-sized companies doing a solid $1.5 billion a year in food, hospital supplies, sports products and cosmetics.

But Colgate's earnings this year at $2.15 a share will be up no more than 6% from 1977—much less than the increase Foster predicted last December—despite an $11 million improvement in currency translation losses from overseas, where Colgate gets 63% of its operating profits. Without that currency gain, Colgate would have been down for the year; that's not supposed to happen to companies like Colgate. The most glittering of Foster's acquisitions, Helena Rubinstein cosmetics, will lose at least $2 million overall—down from 1977's $6 million in profits. Another key acquisition, $565 million (sales) Riviana Foods, will be down some 10% in earnings.

The soft-spoken, stocky Foster sits in his Park Avenue office and talks about his problems with commendable, almost startling, candor. While a financial officer fidgets nervously in his straight-backed chair, his 58-year-old boss raises a stout hand and ticks off on his fingers operations he wants to get rid of, the mistakes the company has made, the earnings projections that have fizzled.

"Seven years ago I said I hoped we could get our return on sales to 5% from 4.1%," he says with a touch of a British accent. "We certainly can't get that with Riviana's earnings down and Helena Rubinstein losing money."

Speaking slowly, steadily, pausing now and then to pick up his thick, black-framed glasses from a marble coffee table, he goes on: "With Rubinstein overreached, we oversold, we over duced. We didn't realize the pro wasn't going through to the consu until it was too late."

Riviana? Foster now realizes it c burdened with rundown acquisitior its own he wants to sell—like P burn's, a candy company he describ "a poor man's Whitman's—and we c think too much of Whitman's." Lum's (in Florida), once a fast-food h flyer, now grounded, and Ranch Hou regional restaurant chain.

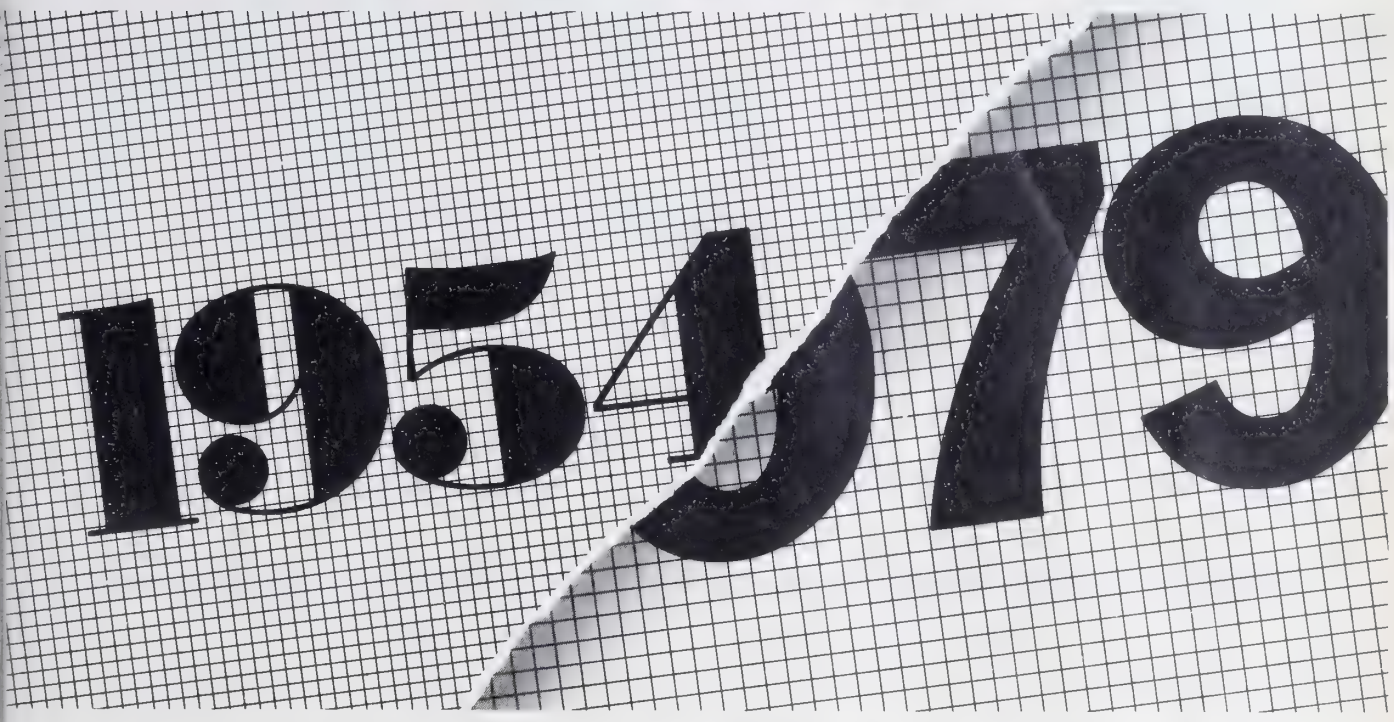
For 20 years Colgate has been tr in vain, to solve its basic dilemma: I U.S., it is a distant number tw Procter & Gamble. True, Colgate long had one of the best internati distribution systems for consumer p ucts, which helps account for its 15% return on capital over the last years. Yet P&G is still Colgate's n esis—twice as big and with an adve ing budget four times as big. Every gate CEO since the late 1950s has l trying to find a way around it. Ge Lesch, Foster's predecessor, now re but still a major stockholder, stabil the domestic business by expandin detergents, setting up a new product gram and instituting iron parsim throughout the company.

But the domestic gap between I and Colgate remained as wide as Foster's big-scale diversification, th fore, was tacit admission that P&G c be neither beaten nor flanked. Col would have to look elsewhere tha soap and toothpaste for growth and proved profitability. Foster's goal: d sify to the point where fully half gate's earnings and revenues come businesses outside its traditional pro lines. All through the middle Seven that strategy seemed to be working From 1972 to 1976, Colgate's earn increased by 95%. Its net on sales creased from 3.4% in 1971 to 4.3% 1976. Its common stock price rose $15 in 1974 to $34 in 1975.

It was important in Foster's view Colgate's slightly stuffy image was b transformed. In addition to Helena binstein and Riviana, there was Ker Co., a $500 million (revenues) hos supply company with a good consu line in Curad bandages and dispos diapers. There was a clutch of spo goods manufacturers—golf clubs, ning shoes, racketball equipment, te rackets, even baseball hats—a glamour to leaven all those familia products.

Then there was the Colgate D Shore Women's Golf Classic. For Foster bought a golf course and co minium complex—Mission Hills out Palm Springs, Calif. for which he about $5 million in 1974. This was tainly not the sort of thing the t

How's Lear Siegler doing in its 25th year?



Better than ever.

Lear Siegler has made a profit in each of its 25 years. Earnings for the first year were $775,000 and currently are at an annual rate of more than $50 million—a record pace. Sales have increased from $6.5 million to more than $1 billion today. The experience and skills of 25,000 individuals in LSI's diversified operations made it all possible. The celebration of our 25th Anniversary is marked by our pride of achievement and our confidence in the future.

If you would like to know more about us, write to Dept. AR, 3171 South Bundy Drive, Santa Monica, California 90406.

Vision made us what we are today

LSI™

LEAR SIEGLER, INC.

pursed George Lesch would have done.

But then things started to come unraveled. By early this year Helena Rubinstein, for which Foster paid $142 million in stock, was in serious trouble. Foster had installed Peter Engel, 43, a self-assured Colgate executive who had been in charge of Colgate's Western Hemisphere division, to run Helena Rubinstein. He gave him a free hand. Engel did exactly what Michel Bergerac (FORBES, *June 26, 1978*) chose *not* to do at Revlon. Previously, both Revlon, under the late Charles Revson, and Helena Rubinstein, under its legendary founder, battled it out for prestige in high-class department stores and boutiques whose arrogant buyers demanded exorbitant promotional giveaways and marketing support. That in turn was supposed to help sales in drugstores, where the volume is.

Bergerac, a cold-eyed numbers man out of ITT, recognized a loser's game and started pulling out of the department stores. Helena Rubinstein kept going down the same old track. Says Foster: "It was our biggest mistake. We were trying to maximize our sales in the department stores while everyone else was going to drugstores and independents. We were giving those stores something like 78% on sales [in promotion and advertising support] when our margins were only about 67%. So the more we sold, the more we lost."

In October, Peter Engel departed Helena Rubinstein, staying at Colgate as a consultant until Jan. 1. He now works for a family firm. Under his successor, William S. Shanahan, former vice president of marketing services, says Foster, "we are going back to the department stores with a more realistic approach." Meaning, Colgate is much more hard-nosed now with the customers.

But then things started to come unraveled. By early this year, Helena Rubinstein . . . was in serious trouble.

At Riviana, his other major problem acquisition, Foster is negotiating to sell off Lum's, Ranch House and Pangburn's. He is working on new rice consumer products, a market he's enthusiastic about because there is little competition in Europe and South America. Colgate has started a joint venture for a new rice product in Colombia this year, and is test-marketing a parboiled rice product in Europe. The aim, of course, is to add value (and profitability) to what is essentially a commodity product.

Meanwhile Colgate's traditional business in the U.S.—household names like Ajax and Fab, Colgate and Ultra Brite toothpastes—has been marking time. This year it will contribute only 8 corporate earnings on about 19 sales. Even in Colgate's European m bastions for those products, earning grow only about 8%. "How many ucts are you going to get the housew buy?" Foster says, with an en glance at P&G. "How many deter are you going to get her to fall for?"

The bright spot is Kendall, which petes with Johnson & Johnson American Hospital Supply. Since C took it over, Kendall's consumer ucts have been moved to other C divisions and its operations conso ed. Compound earnings have g some 15%. There's a moral in th course: Kendall was a good acquisit company with good product lines a excellent technological capability. moral is: The art of acquisition is t of buying good companies, not buying sales volume.

With Riviana and Rubinstein, Foster has found it's easier to buy digest, easier to turn a company i complex modern conglomerate tha it once you've done so. Colgate cont to be a highly profitable outfit; it e about 16% on stockholders' equit year, still below P&G's 19%. But mains precariously dependent on foreign earnings and has yet to sh can make a real go of it in tough businesses like food and cosmetics.

Perhaps you need The Economist, too.

It gives you a view of world politics and business you just can't get anywhere else.

ternational events reported weekly —with a difference.

135 years, the world's leaders have been ing The Economist for a penetrating ght into international affairs, politics, ness, science, technology and world trade the consequences. It is coverage you just not get elsewhere—no matter how much are willing to spend.

The Economist presents a total view of t's happening in America and abroad that eases your understanding of the interrela- ships between global affairs and the reali- of today's marketplace.

To those who say we're just economists, we say "RUBBISH!"

he uninitiated, our name conjures images ory towers. Of dust-dry academics. Noth- could be further from the truth.

The Economist is one of the most lively, ossing newsweeklies you can read. No and nothing is sacred as we report on er-than-life leaders...national goals erica's and others)...the jockeying for er here and abroad...how new legislation, ements, treaties affect the business of g business worldwide.

More than any other newsweekly, we dare to pin down the future.

etimes we've been wrong.

More often, we've been right. And that too s you an advantage hard to come by in a d where talk is cheap and guesswork can ostly.

A few of our recent "right" predictions: oil producer's cartel. The energy crisis. gers and demises in industry (like o/Saab-Scania). The tanker glut (we *warned* banks not to over-invest) and the Wall Street boomlet in early 1978.

But that's all history now. What you probably want to know is—

What we've been up to lately.

In recent issues we told why Mexico could be the next oil power...revealed the next step for international terrorists...zoomed in on Hollywood and the future of the world film industry...warned of deadly Soviet weapons ignored by SALT negotiators...and spun a report of a new recording disc that stores up to 15,000 pages of information for 10 cents.

And much more...including a view of—

America...as you rarely see it.

Our weekly six-page "American Survey" is a stimulating look at American news in the context of international affairs—a cool, level-headed perspective you would expect a critical and expert outsider to deliver.

The sun never sets on readers of The Economist.

The Economist is airmailed weekly to 160 world capitals. In North America, 28,000 leaders at "the pinnacles of power" turn to it weekly. *Newsweek* has called us "required reading on Wall Street and in the White House."

That's not surprising. The Economist has a knack for knowing—in advance—who's doing what to whom in Bonn, Zurich, Moscow, Peking...what's up (or down) with the dollar, the yen, the D-mark, the rand...what's new with the EEC, AEC, SEC, OPEC, even the CVP, the OECD and Comecon countries.

1979 will demand innovative solutions to a host of world problems. Businesses will falter, expand, turn venturesome, turn inward. Old markets will evaporate, new ones rise up unexpectedly. And The Economist will report it all—often first, with consistent accuracy, always from its special objective vantage that today's decision-makers cannot be without.

Sample 4 issues RISK FREE.

Get a different view. Get The Economist regularly. *You can sample 4 weekly issues risk-free* simply by returning the card bound in at left. (If someone's beat you to it, use the coupon below.) You'll get a special savings of over ONE-HALF the newsstand price and full assurance of a prompt, full refund if you wish.

Can Britain climb out of the morass of pseu socialism? Yes, says this articulate Tory.

Missionary in Babylon

REGULARLY, Sir Keith Joseph treks to Britain's universities to lecture on what he calls "the moral and material case for capitalism." That's like preaching Christianity to the nobility of Imperial Rome; the British universities are the source of the intellectual corruption that has brought Britain to its present low economic position. Not surprisingly, Joseph's tightly reasoned rhetoric draws frequent boos, catcalls—and an occasional fresh egg or tomato. Undaunted, he proceeds with such sensible recommendations as curbing the chronic overstaffing that cripples his country's competitiveness or turning portions of Britain's Post Office over to private industry. Echoing Frederik von Hayek who warned 35 years ago that you couldn't have political freedom without free enterprise, Joseph feels that the British people will not permanently accept what amounts to a dictatorship by a handful of trade union leaders.

Joseph's think tank, the Center for Policy Studies, operates from a London town house headquarters that resembles the low-budget intensity of Ralph Nader's Washington digs. A Conservative member of Parliament since 1957, he was instrumental in installing Mrs. Margaret Thatcher as his party's leader. Unlike her counterparts for most of this century, Mrs. Thatcher isn't a middle-of-the-road Tory. And her party no longer aims to me-too its Labor opponents. That makes Joseph a leading candidate to become Chancellor of the Exchequer if the Tories win a soon-to-be-called general election. Interviewed by FORBES recently, Joseph declared:

"It is remarkable that despite such vivid evidence of failure the collectivist idea is still surviving, let alone strong. There are, of course, islands of [free enterprise] encouragement around the world—Singapore, Hong Kong, Korea. You'd think the contrast between what's happening there and elsewhere would have some effect. There was a kind of *annus mirabilis* last year when Mrs. Gandhi in India, Mrs. Meir in Israel and Olof Palme in Sweden were all toppled by more libertarian parties. I'm also impressed by what's going on in France now. But on the basis that Britain was the first of the free nations to go down, we aspire to be the trend turners."

The statistics about strikes and productivity don't give you much encouragement. What could reverse the present decline?

"First, you have to look at why capitalism is in such disfavor. An antienterprise snobbery has permeated this country for the past 100 years. You get a gentrification of the thrusting entrepreneurs, and it's made far worse by the socialist hostility to profits. We were pioneers in the Industrial Revolution, and everybody read all those novels about the evils of the 19th century. The middle class and the intellectuals became ashamed of their relative prosperity, and they have spearheaded a drive toward egalitarianism.

"That is what is ruining free enterprise. And your country is being poisoned by it just as we have been. There's an intellectual fascination with egalitarianism that captivates politicians. And let me say it's usually equality for others, not for them. They say the difference between the moderates and the extremists in the Labor Party here is that the moderates want to defer the revolution until they've put their children through private education.

Sir Keith Joseph
Are the intellectuals moving right?

"Inevitably, the market will reward those people who are successful more than those who aren't. But our opponents see this as a zero-sum game. They say that profits are at the expense of the public. However, the process of competition produces a better use of resources, so that however much profit is made the economy has gained. It raises the whole level of performance. What people forget is that those poor souls who move untarily to the 19th century slums—horrible though they were—have had less horrible existences than in the rural poverty from they fled.

"The difference in today's atmos is this: I spend a lot of time in the u sities, and the intellectuals are m over [to our side]. The momentu toward a free economy. The present ers and civil servants of this co were brought up at the height o Fabian Socialist boom. The gener that is going to dominate the end o century sees the results, and it is aff by the present academic environme

Even if you're right and a few intelle are converted, what about all those wo people whose votes win elections?

"Well, it is one thing to put the lectual case and another to shift p But remember that collectivizati very unpopular in this country. We'l the next election if 35% to 40% trade union members vote Conserv The last election 30% of them did.'

Conservatives have been in powe most of the years since the Second War—the time when Britain's welfare was created. Why will they manage the omy any differently now?

"Recent Conservative governm shared with Labor the principle o mand management. That means the nomic steering aid was the unem ment statistics. They assumed tha crude total of registered unemploy indicated a demand inefficiency. I employment went up by 1%—ev there were more vacancies than u ployed people—it was still consi right to pop extra demand into the omy. The result was a steady increa inflation.

"In our new Conservative go ment, the central navigating tool is g to be the growth of money supply. we'll do it on Milton Friedman's and not fiddle around with that rat ther. Also, we regard public spendi taking far too large a proportion o national income. So we'll cut spen both as a way of reducing borrowing to let us lower taxes. After all, the ent government slashed the budget billion in one year when the Internat

The more you trade the more you'll save. Automatically.

When you trade at Source, you are guaranteed a discount of at least 30% and as much as 81%.* Furthermore, you earn your higher discounts automatically. Each month our computer reviews your commission volume and, based on a fixed volume discount schedule, raises the discounts you're entitled to.

Example of an 81% Discount at Source

Source's highest volume customers pay a commission which is the lower of a 50% discount or $15 per hundred shares.

For example, on a trade of 200 shares of a $55 stock:

a. The last NYSE commission is $161.46.
b. Source's commission at a 50% discount would be $80.73.
c. Source's flat rate charge would be $30.
d. The commission charged is the lower of the two, $30.
e. The discount from the last NYSE commission is 81%.

To find out what discounts you can earn at Source, call or write for our free Commissions and Services brochure. Call toll-free 800-221-5338 or in New York State call collect at 212-269-9127.

*From last NYSE fixed commission schedule in effect prior to May 1, 1975, subject to a $25 minimum charge per order.

at was bad for its big international com-itors has turned out to be good luck for al Dutch/Shell.

How Shell caught up

By Paul W. Sturm

OR YEARS, Royal Dutch/Shell was the weak sister among the Seven Sisters, the international giants dominate the petroleum industry. four years before the 1973 oil price the Group's return on equity aver-nder 9% annually. That placed it ow the U.S. multinationals, paced xaco's 13%. But no longer. In the ears since 1974, Shell leads the Sisters: Its 17% average return is percentage points above second-l Exxon.

h dual headquarters in London and ague, Royal Dutch/Shell is the larg-mpany in the world based outside the U.S. Its revenues of $42 billion last year rank it second only to Exxon in the oil business—and more than one-half again as big as the likes of Gulf, Standard of California and Texaco. Its 100 far-flung subsidiaries make it the very model of a modern multinational. "We've got large, integrated companies in eight places: Australia, Canada, France, Germany, Japan, the Netherlands, the U.K. and the U.S.," says C.C. (Michael) Pocock, chairman of the Group's board of managing directors. Houston-based Shell Oil Corp., its 69%-owned U.S. affiliate, accounts for only one quarter of the parent company total.

Why the remarkable turnabout? Thank OPEC. Since 1907, when it was created through a merger of Royal Dutch Petroleum, a producing company with extensive Asian interests, and Shell Transport & Trading, a marketing organization founded by a London merchant banker, Marcus Samuel, the Shell Group has been short of crude. It still buys about 60% of its oil in the open market, more than any other major. That was a significant disadvantage when other companies had juicy arrangements with oil-producing countries, but it hurts far less today, when Shell's competitors have lost most of their high-profit crude through forced buyouts or confiscation.

"Because it was so weak upstream, Shell always had to keep its refining and marketing side in trim," explains petroleum consultant Paul Frankel. "Now that the huge profits at the wellhead are gone for everybody, Shell can adapt much better than the others." The Group's Treasurer Howard Macdonald agrees: "We always could sell oil better than we could find it, so in a sense the OPEC changes were a good watershed for us."

The improvement shows clearly in long-term results. In 1970 Royal Dutch earned a shade under $4 a share when Exxon, for example, earned $3. By 1977 Shell's earnings had risen nearly 200%, to $11.73 a share, while Exxon's were up less than half that amount.

Things were confused last year, however, by the Financial Accounting Standards Board's rules governing currency changes. Because the pound sterling was weak in the first quarter of 1978, Shell's earnings were "reduced" by $500 million. With the pound stronger in the fourth quarter, however, profits will presumably be "increased" then. Partly because of such silly accounting rules, Royal Dutch reported a 37% drop in earnings to $1.3 billion for the first nine months of 1978.

Another accounting technicality causes still more confusion. As a U.K. company, Shell must use a first-in-first-out inventory valuation while its U.S. competitors use the last-in-first-out method. Thus when OPEC producers make abrupt changes in the wellhead price of oil, the Group's earnings are out of sync with industry cycles.

Oilmen, however, see more significant indicators of Shell's good health in the way it manages to post better downstream profits than competitors. The Group now sells about one-third of its product mix as gasoline—an increase of 20% over the past five years. As a result of that yield-maximizing move, trade sources say Shell has recently passed Texaco to become the top gasoline marketer in the U.S., where each Shell station pumps 55% more gallons than the industry average. In the same period, Royal Dutch's sales of low-margined fuel oil have dropped from 30% to 24% of its total volume. Both those changes are remark-

l Pocock, top man on Royal Dutch/Shell's board of managing directors
h in oil until 2050—if Shell stays in the right parts of the business.

able in their scope and speed for a company that sells one-tenth of the world's petroleum. Clearly, Royal Dutch's vast size does not render it inflexible.

Within the Shell Group, such shifts in product mix are called "whitening of the barrel," and this is a key corporate objective. "There is an obvious plateau of oil volume—probably at about the year 2000," says Chairman Pocock, an Oxford-educated executive who earned his stripes running Shell operations in Venezuela. "From then on, every year fewer barrels will be used; and the uses will be in transportation and chemicals. No more burning oil for steam; that will come from coal or nuclear power. So we think the oil business will be strong until 2050, but only if you're in the right parts of it."

That explains Shell's massive investment in chemicals. Its worldwide chemical operations produce over $6 billion a year in revenues, making the Group half as big in that industry as Du Pont. What's more, Shell kept pouring money into the business after other companies cut back. In 1977, its chemical expenditures were well above $1.2 billion—over half the total of all the oil majors.

At the moment, with Shell chemical plants losing money in Europe and barely profitable elsewhere, that commitment seems questionable. Royal Dutch's chemical earnings in 1978 were probably below $100 million, one-fourth their total two years ago. "Of course, our return on that capital looks sick today," says Pocock. "But we can afford to invest counter-cyclically, which is something a straightforward chemical company can't do. Come back in 1981, and we'll show you the results."

Mention tankers or nuclear reactors, however, and Pocock becomes far less sanguine. Shell may be losing $100 million a year now on its shipping operations. Its own overbuying is largely to blame. The Group pioneered the use of supertankers in the mid-Sixties. Competitors rushed to catch up, and shipyard overcapacity resulted. Instead of cutting back, Shell weighed in with massive orders. "We thought we saw another opportunity to invest when everybody else wasn't," Pocock explains. "Obviously we shouldn't have bought those ships, even at half the price." The Group's marine troubles are now reversing, but at one point it had 15 huge tankers, worth $30 million each, lying idle.

The flyer in Gulf Oil's General Atomic Co. was an even greater fiasco. Shell put up $200 million to become a partn that operation late in 1973, and s losses have come to over $400 mi General Atomic, which aimed to de a new reactor technology, is now la out of business, but legal claims litigation with United Nuclear could bring still more expense.

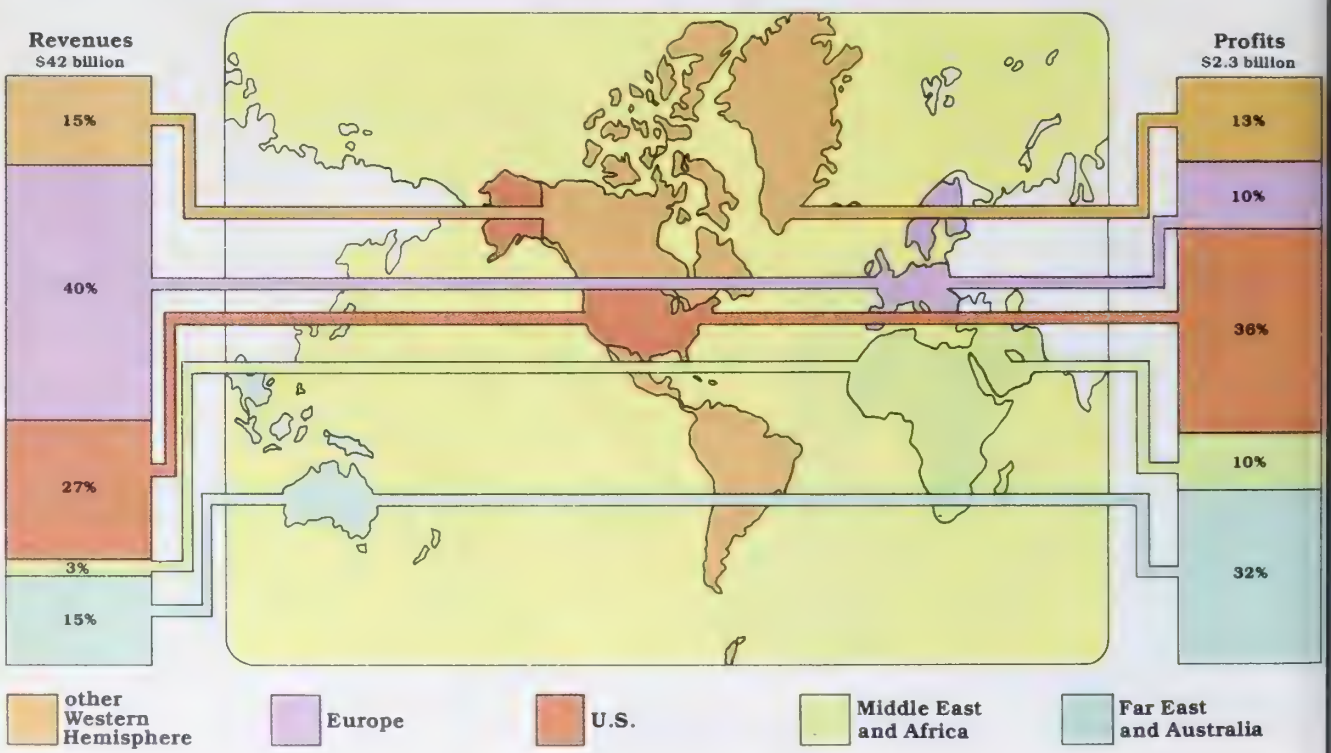
One move that hit the jackpot, ho er, was Shell's foray into liquefying ral gas. Back in 1970, Shell launcl pioneer project to supply Japan Brunei, a tiny sultanate on Bor north coast. Today, that $600 m investment is the world's largest venture. With a fleet of seven shi provides nearly half of Japan's na gas, and Shell's share of the profit ru $150 million annually after tax.

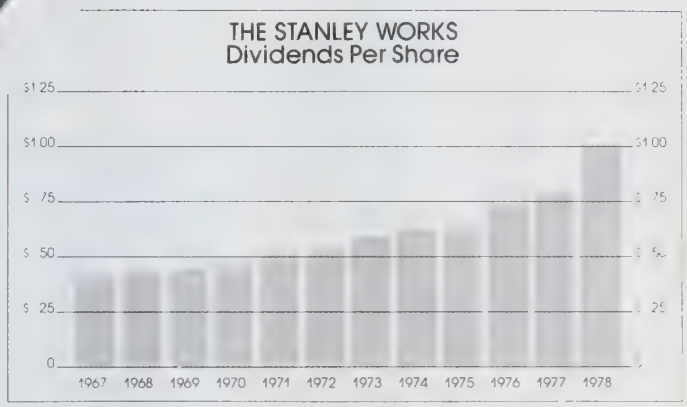
Already, Royal Dutch has plans t low that success with similar efforts where. "The company has a de strategy for the Eighties," says ar Constantine Fliakos of Dean Witter nolds. "Now they're getting nearly of their earnings from Brunei an Groningen gas field in the Netherl but as those taper off they'll be bri in several new LNG projects and N Sea production."

The Shell Group also has a big sta

Where Shell collects its money

Royal Dutch/Shell makes money all over the world, as this estimated breakdown of its 1978 results shows. But U.S. earnings are only about one-third of the total, versus one-half or more for the U.S.-based oil giants. Shell's best return on investment comes from the Far East. Recently, it has earned 19% a year (pretax) on its assets there. In the U.S. the comparable figure is 10%, but it is only 2% in Europe, where refinery and chemical overcapacity depresses margins.





STANLEY HELPED DEVELOP DO-IT-YOURSELFING INTO AN INDUSTRY NEARLY 4 TIMES BIGGER THAN PHOTOGRAPHY.

The industry that started with a Brownie™ has rown into a giant, with retail sales of $4.9 billion.* But ne growth of do-it-yourselfing has been even more xciting. It's an $18.8 billion** industry that's nearly oubled in size in the last five years alone!

Stanley began supporting the do-it-yourself gen- ration when it was still in its infancy. And being early elievers really paid off. As money became tight, peo- le found it made more sense to improve their homes han to sell them. Professional help became harder to nd, and more expensive. So homeowners began oing their own maintenance and repairs. And they iscovered it was fun!

Nearly 3/4 of all Americans now consider them- elves do-it-yourselfers. And almost half have home workshops.*** We've supplied them with tools, hardware, and drapery hardware. We've anticipated their needs with new products like Stanley's "U-install" do-it-yourself Garage Door Opener. We've given them building ideas with our growing library of "How To" plans. And, because our products are basic, lasting, and affordable, we've prospered through inflationary times.

So when we say "Stanley helps you do things right,"™ we're talking about investing as well as do-it-yourselfing. Our record supports our claim: 102 consecutive years of dividend payments, and dividends that have increased steadily for the last eleven! Write for complete information to Thomas K. Clarke, Vice President, Finance, at the address below.

STANLEY®

the North Sea. It is now investing there at the rate of $1 billion annually—nearly one-sixth of its worldwide capital expenditures. Technical difficulties abound in such deep, rough waters, but Pocock worries most about politics: "The attitude of the government is absolute nonsense. They say, 'You can't have a bonanza. It's socially unacceptable. But if you get in trouble, just come to us and we'll allow the return you need to make things viable.' Well, exploring for oil doesn't work that way; it never has."

With the political risks in oil growing, Royal Dutch is hedging its bets. It isn't out to be a true conglomerate like Mobil, but it is quietly learning how to sell consumer products *(see box, p. 43)*. Also, in 1970, the Group bought Billiton, a Dutch metals company with worldwide revenues of about $1.2 billion.

Shell is building a stake in coal, too, though true to form its approach differs from the competition. "It makes sense for U.S.-based companies to acquire domestic reserves," says Pocock, "and our U.S. subsidiary is doing that. But we figure that there will soon be an international coal trade, and we want 10% to 15% of it." To be ready, Royal Dutch is lining up coal transport ships, negotiating sales agreements with producers around the world and exploring for its own reserves in areas—such as southern Africa—that could become major export centers.

How do you run a company as big and diverse as Shell—$42 billion and 100 subsidiaries, many of them huge? Decentralization is a cornerstone of its corporate operating philosophy. In fact, the Group has functioned effectively without a chief executive since hard-nosed Henri Deterding retired in 1936. "He was a tough, dynamic leader," says Pocock. "But that kind of control isn't acceptable for a big company today."

Instead, Pocock and his seven managing director colleagues set Group policy and approve all investment of over $20 million at weekly Tuesday morning meetings. The sessions are held alternately in The Hague and London, and even though four nationalities are represented, no question ever gets a formal vote. To ward off accumulations of power, retirement is mandatory at age 60. "We don't want our managers in the field to feel we're sitting here telling them what to do," says Pocock.

Such a hands-off approach to the oil business may not be typical, but it clearly attracts Wall Street. Americans now hold one share in seven of the stock in Shell's parent companies, plus a 30% minority interest in their domestic subsidiary. Combined, that's a $3.5 billion stake—the largest in any foreign corporation. If Royal Dutch's focus on the future is correct, the investment should prove a shrewd one. ■

Shell versus P&G?

Exxon is dabbling in office equipment. Mobil is into retailing and real estate. Royal Dutch/Shell, too, is experimenting far afield from its traditional petroleum business. Just after the OPEC price hike, it quietly set up a subsidiary to market consumer products in the U.K.

That company, Temana International, is based in suburban London. Last year its sales were roughly $200 million—with pretax margins that should approach 15%. Though Temana does peddle fly-killers, insect repellents and other traditional petrochemical spinoffs, its line doesn't stop there. It recently acquired one of the U.K.'s largest seed companies, and perhaps its most successful venture is Airbal solid room deodorizer. The Shell subsidiary also mounted a TV ad campaign recently to introduce Breathe Easy, a cold remedy that uses the same slow evaporation principle as Airbal.

"We're looking for a niche in specialty household products—comparable to the things that S.C. Johnson & Son, Inc. makes in the U.S.," sa Temana's managing director Ja Slechte. Like Johnson, Temana a ready has an institutional product li that includes cleaners and detergent It is also heavily into exports, doi perhaps 10% of its business in deve oping countries.

"Unilever and Procter & Gamb shouldn't worry about us," says M chael Pocock, who chairs Shell board of managing directors. "We ju want to see what it is like to distri ute through supermarkets." Howeve the Group is also gaining a marketi savvy that meshes well with the trer for some service stations to peddle broad line of nonautomotive ware "Obviously, we're not making a b splash about the fact that Shell is b hind us," Slechte concludes. "W don't want to frighten off the comp tition." Like all Royal Dutch oil tan ers, the Group's consumer produc subsidiary is named for a particul species of crustacean. Appropriate enough, Temana means "little shell deep water." —P.W.S

Four keys to profit: a good product, a good sales rep, a good credit manager and Dun & Bradstreet.

Dun & Bradstreet?

Yes, Dun & Bradstreet. Because, with 9 out of very 10 business transactions done on credit, the right redit decisions can substantially affect a company's arnings.

It takes the evaluation skills of a professional redit manager. And it takes Dun & Bradstreet, the usiness world's number one source of commercial redit information.

Only Dun & Bradstreet arms credit managers ith complete information on 5,000,000 companies orldwide. Up-to-date information, so credit can alert les to changing situations among current customers. Growth patterns that can steer a sales force to new profit opportunities.

Most importantly, complete credit reports from D&B can help credit managers increase net profits by reducing the average collection period of receivables.

Consider the impact on profits if your customers paid you an average of just 10 days sooner. For a paper maker with annual sales of $40-million, this translated into a $50,000 increase in after-tax profits or approximately a 10¢-per-share gain.

The credit manager and Dun & Bradstreet. Two of the keys that can open doors to more profits.

DUN & BRADSTREET

With every fiber of its being, Detroit yearns to sell big cars, but Washington's rules are changing both technology and marketing strategies.

How about something a bit smaller?

By Paul Gibson

Ford Motor Co. is running scared about its gas-mileage carryforwards. And well it may.

You've heard of tax-loss carryforwards, but not gas-mileage carryforwards? These are credits or debits the automakers accumulate each year for exceeding or falling behind the new fuel economy standards for cars and trucks. They could be crucial in deciding how much profit the carmakers show in the early 1980s. They will also be a key factor in the coming weeks as Detroit again starts battling Washington over fuel policy.

They work this way. For every one-tenth of a mile each car fleet falls below the limit, the manufacturer must pay Washington $5 for every car sold. Conversely, there's a $5-per-car credit for every one-tenth above the mark. These credits can be applied against future debits, but only in the following year. Confided a top auto executive recently to Forbes, "These penalties could break even a sizable company." For example, if Ford, which builds and sells about 2.7 million cars annually, misses the gas-mileage standard by a mere 5/10 of a mile it must pay the government $63 million—about 22 cents a share after taxes.

It was back in 1975 that Congress mandated the corporate average fuel economy (CAFE) standards starting at 18 mpg in the 1978 model year and rising in stages to 27.5 mpg in 1985. Initially Detroit—despite much grumbling in public—reckoned privately that it could meet the standards without too much sweat. Now the carmakers are having second thoughts. Says Ford Executive Vice President Fred G. Secrest, "Our optimism is fading fast."

In 1978, the first model year under the program, all the carmakers easily exceeded the 18 mpg standard *(see chart)*. Now the going gets tougher. For both the current and the 1980 model years, the standard rises by 1 mpg a year. In each of the following three years it rises by 2 mpg a year, with a final 1.5 mpg spread over the last two years of the program.

GM recently announced that it is faring far worse than expected. Instead of its preseason 19.7 mpg estimate, GM now is hoping to scrape by at 19.1 mpg and President Elliott M. Estes says GM's fleet average recently was down to a meager 18.9 mpg. Ford isn't giving out details, but both AMC and Chrysler Corp. say they will beat 20 mpg.

However, Chrysler only looks so good because its bigger cars are selling so poorly. In 1978 Chrysler, with its subcompact Omni and Horizon models, won an impressive 20% of that market, *vs.* 3% of the full-size car market—which is where the real profit is. Result: Chrysler in 1978 posted about a $220 million loss.

Whereas Chrysler is doing well in subcompacts, Ford is doing poorly there. Its Pinto, plagued with bad publicity, has dragged down the Ford division at a time when Lincoln-Mercury has been plowing ahead. By December Lincoln-Mercury's 1978 model year sales were up 6% *vs.* an 11% dip for the Ford division.

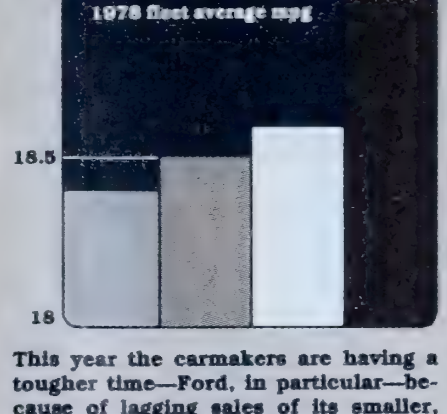
So last October Ford began limiting sales and restricting availability of some larger-engine cars while selectivel ing prices on them. Its competito lowed suit, but in Chrysler's cas smaller increases.

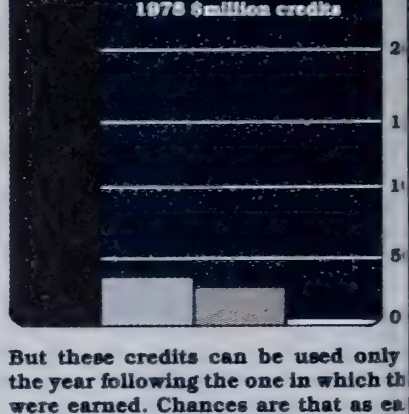
Previously automakers aimed marketing strategies at selling as proportion of big, expensive cars a sible. But the EPA regulations are this to change. Well and good—t why the rules were imposed. The t is that, after imposing the rules, th made them tougher. There's no qu that, when the car companies talk keting strategies today, what's most in their minds is meeting standards. Ford, for instance, s would have to make "drastic chan its plans" if the 1979 standards even one-tenth of a mile more stri Ford would either have to sell extra Pintos (a tough assignment their present popularity rating) or tra 160,000 Fairmonts (difficult this model is trailing its year-earli ures) or forego producing 225,00 size family cars. That would be like ting down a two-shift assembly pla a year, says Ford, and jeopardizing 2 jobs. Not to mention a lot of profit

Chrysler thinks it can use its p high fuel score to improve market "Because we have a nice margin o ty," says Chrysler Vice President S Terry, "we can push sales of the cars and not worry where we end up our average mileage figure. That's plus when you're out there mark cars." So don't be surprised if this Chrysler, under newly installed

Why Ford Motor is beginning to sweat

To curb the use of energy, the car fleets produced by each automaker must deliver, on average, at least 18 mpg in the 1978 model year, 19 mpg in 1979 and rise in steps to 27.5 mpg in 1985. For each one-tenth of a mile below or abo the standard a $5 charge or credit is against every car made. In 1978 all f beat the target—General Motors eas Ford Motor less so.





This year the carmakers are having a tougher time—Ford, in particular—because of lagging sales of its smaller, more efficient vehicles. Because of the large credits picked up in 1978, it's unlikely any car company will end up owing the government money this year.

But these credits can be used only the year following the one in which th were earned. Chances are that as ea as 1981, when the standard rises to mpg, automakers with few—or n credits to bring forward can begin face stiff penalties.

FIDELITY GROUP
Over $3.5 billion of assets under management

Even with the weakened dollar, foreigners came to America to raise $1.6 billion in bonds last year.

Yankee bonds

"CARTER BONDS" is the nickname for two recently floated three- and four-year bonds the U.S. government issued in West Germany and denominated in deutsche marks, $1.6 billion worth. "Yankee bonds" are those of foreign governments or foreign companies which come to the U.S. capital market to float debt issues with interest and principal paid in dollars; these Yankee bonds are registered with the Securities & Exchange Commission and sold in the U.S. in contrast to the Eurodollar bonds, which are unregistered and sold abroad.

Carter bonds can be bought only by German residents, but anyone can buy Yankee bonds. The restrictive interest equalization tax, which socked U.S. investors who bought foreign securities, was ended in 1974. During 1977 Yankee bond sales reached a peak of 29 issues worth $2.3 billion. With the weakened dollar, 13 issues totaling $1.6 billion were still issued in 1978.

Even with the dollar's instability, many countries like Norway and the U.K. or enterprises like Nippon graph & Telephone and the Eur Investment Bank still come to th They like the huge U.S. capital m which can handle larger financing relative ease. Longer-term maturiti to 20 years, are hard to sell in Europ so here.

From an American investor's po view, Yankee bonds have many a tions—not the least of which is high yield. Most are backed by th faith and credit of a governmen merely a company. Most are rated A, highest-investor quality.

Yankee bonds generally have a yield premium ranging from ½ 1½% more than comparable U.S. suries, according to First Boston, a er in Yankee bond financing. For ple, while long-term U.S. Treasuri yielding 8.9%, the Société Nationa Chemins de Fer (the French ra system) yields 9.32%. The Vene 8¾s of 1992 yield 9.6%. Ban which handles financing for p works in Mexico, yields 10.35% bonds due in 1982.

Are Yankee bonds for the People public of China next? None are in but you never know. ■

Yankee doodle dandies

High yields and Triple-A ratings of many foreign issues floated in dollars make them attractive to U.S. investors—while giving foreigners a chance to play currency roulette.

own contract with the airport; in Atlanta, all the shops will have a contract with the prime concessionaire which, in effect, guarantees that the airport will get its rent.

"The shops will pay rents to us," says Bryant. "And we, in turn, have guaranteed to the city the rental for 15 years (1981-96). It's the largest contract of its kind in history, about $240 million."

The total volume over those 15 years, says Bryant, should be about $1 billion. Some 70% of the shops will be run by Dobbs itself, which is already the country's largest airport operator, with retail and airline food catering facilities in 45 domestic airports. At least a quarter of the retail businesses, and probably closer to 30%, will be minority owned. The businesses will range from barbershops to cocktail lounges.

"We will see to it that all the individual operations are successful," says Bryant. "We'll see that they have financial advice, support for their borrowings, training and development, recruiting and general management support.

"Most of the money will be made at the concession level, not by the management group. It's a very sincere effort. To make this a sham would be not only immoral, but I'm sure highly illegal with the way the contract was written."

Shipyard, anyone?

In its glory days, Scotland's Upper Clyde Shipbuilders gave birth to great ships like the Queen Mary and both Queen Elizabeths, but right now the Clydebank shipyard is giving little but headaches to Houston's Marathon Manufacturing Co.'s Gene M. Woodfin. A lawyer and former investment banker, Woodfin was called in back in 1973 when Clydebank and problems in the Brownsville, Tex. yard sank Marathon $18 million into the red. Woodfin straightened out Brownsville's problems but Clydebank still plagues him, six years after Marathon took it over. He inherited the barely profitable yard from his predecessor, Wayne Harbin, who thought he could turn big profits building drilling rigs at Clydebank, given the substantial subsidies the British government was prepared to provide.

The nadir came shortly after Woodfin took over in 1973, when he found Marathon teetering on the brink of bankruptcy and two years late on delivery of four oil rigs to the Hunt family of Texas. Woodfin pulled off a gutsy maneuver: He called the Hunts and pointed out they had little alternative—if they wanted their rigs—to buying $14 million worth of Marathon stock and debentures. The Hunts agreed, and that kept the company afloat until the oil embargo came along later in the year.

"I have to be very careful about what I say," says Woodfin, 59, "because the English read everything I say about Clydebank. We have a very low production rate there." Then he adds tactfully, "The men are excellent craftsmen, but it takes about 40% more man-hours to build a rig there than, say, in our yard in Vicksburg, Miss." Woodfin also admits that his type of rig, which must float in the water while its legs are being jacked down to the sea floor, are not so effective in the rough North Sea as semisubmersibles. So many of the rigs built at Clydebank must be shipped long distances to be delivered. That additional shipping cost, on top of the higher production costs, makes Clyde-built rigs less attractive to oilmen.

But the good thing about this Upper Clyde problem is that, if worse comes to worst, Woodfin could always walk away from it. How's business otherwise?

his success sitting down.

ranging from a $300-a-copy beauty parlor chair to a $600 Pierre Cardin-designed unit. All have the electric tilt and height adjustments, and are made in the U.S.

Until 1956, the barber chair business was dominated by Koken of St. Louis, and Chicago's Emile J. Paider, which used to make traditional heavy chairs. Then Takara Belmont, which already owned the Japanese market, landed in New York and set out to capture a big chunk of that market. By 1969, Belmont had enough of a chunk to be able to afford to buy Koken, and to force Paider out of business a few years later.

Takatoshi's father, Hidenobu Yoshikawa, founder of the Takara Belmont group, used to say: "Let all the barber chairs around the world be Belmont." His son is broadening the slogan. Even with 99% of the barber chair and 70% of the beauty parlor market, Yoshikawa's eyes light up when he talks about the dental chair business, of which Belmont already has about a 20% share.

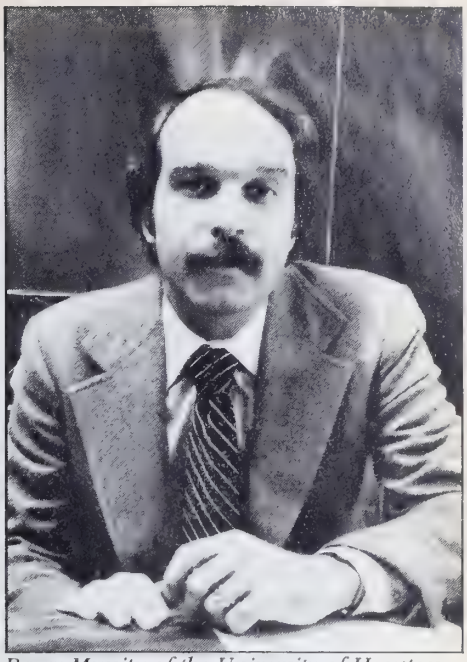
"Medical insurance that covers dental work is still a small percentage," says the staid Yoshikawa, "but when people get dental insurance, they will start flocking to the dentists." Nearly half of all Americans, says Yoshikawa, never set foot in a dental office. As more get covered by insurance, more will go to the dentist, and more chairs will be needed.

Yoshikawa is not sitting on his monopoly waiting for the dental orders to come in. For one thing he's trying to encourage more barbershops and beauty salons to revamp their interiors; in Japan, such shops change interiors every four or five years. "In Japan, barbershops and beauty parlors spend about $200 million a year for equipment," says Yoshikawa. "Here, with twice the population of Japan, the market is only about $40 million." The Americans may have invented planned obsolescence, but the Japanese seem to be improving on our technique.

Econ 101?

"Do you know what a Ginnie Mae reverse repo is?" Barry Munitz, chancellor of the University of Houston's central campus, asked his friend David Heller, an investment banker in Chicago, one day in late November 1977. Heller's reply, and the subsequent inquiry into just how the university was investing its short-term money, led to a financial scandal that saw two men sentenced to jail and left the university with $14.8 million less than it thought it had.

It turned out that the school's financial wizard, 36-year-old Samuel Harwell, had used its short-term money to build up an elaborate pyramid of Ginnie Maes (Government National Mortgage Assn. passthrough certificates). Harwell sold the Ginnie Maes to a broker and agreed



Barry Munitz of the University of Houston
All that glitters wasn't there.

to repurchase the certificate at a future date for a set price. That cash would then go to buy another Ginnie Mae. And so it went till the time of Munitz' phone call, when the school was committed to buy $450 million worth of Ginnie Maes. The investments were of questionable legality (the Texas constitution forbids any state agency from incurring debt), and the record-keeping was so shoddy that it's taken a year to untangle. Worse yet, Harwell and his half-brother, Patrick Sullivan, used university assets to secure a loan of their own. They are facing jail.

"There were a lot of people who were enamored of, if not mesmerized by, the money they thought we were earning. When they would write me and say, 'Harwell just earned us another million dollars,' I would say, 'Super, I've got another piece of computer equipment I want to buy.' That's when it all started to unravel—when I wanted to spend it."

The university discovered it has $14.8 million less than it thought it did, but its cash now lies safe in certificates of deposit and Treasury notes.

With Harwell's funny millions evaporated, the school may have to cut back on some future spending, but it has been able to pay current expenses.

Munitz, 37, with a Ph.D. in comparative literature from Princeton, admits, "I've learned more about Ginnie Maes, bonds and options than I ever hoped to know." The young chancellor had come to Houston in 1976 from the University of Illinois system, where he had been academic vice president. "I came to Houston because there would be the potential for building a 21st century public university. What we did here would be visible to the rest of the country," says the Brooklyn-born academician. "Little did I know how visible it would be." ■

The night we went to the moon.

One in a series of paintings by Joseph Cestari depicting Taft Broadcasting Activities.

Television coverage of the first moon landing brought families together all across America. And our television stations helped make this event possible.

At Taft Broadcasting Company, television is just one of ways we combine community service with earnings growth. We're in the business of providing information and entertainment to the American family.

And it's a great business to be in. With radio and TV stations, Hanna-Barbera Productions and themed amusement parks, we're in some of the best growth industries around.

For the down-to-earth details on our history making performances, send note on your letterhead to:
Mr. John T. Lawrence, Jr., Taft Broadcasting Company, 1906 Highland Avenue Cincinnati, Ohio 45219.

Informing and entertaining the American family

Did Santa bring us a recession?

By Ben Weberman

The new year dawned on an economy far stronger than most of us hoped it would be. At this stage of the business cycle, a strong economy can only mean stepped-up inflation together with high interest rates—one of the few things we know how to do for an overheated economy. But not even a prime interest rate pushing 12% seems able to slow things down. How long can the boom continue? Consumer spending has been the mainstay of the expansion, but a considerable part of it came from borrowing. By historic standards this should have ended about six months ago. It has not.

Remember when it was considered kind of disgraceful to be in debt? No more. Being free from debt today is as out-of-date as wearing cuffs on your trousers or feeling disgraced if your wife works. The Federal Reserve Board compiles Flow of Funds Accounts data that come out tardily but are all-encompassing. By the end of the third quarter of 1978, consumer and mortgage credit had risen to $995 billion from $856 billion a year earlier. Think of it: an additional $139 billion of debt in one year!

The relationship to disposable income worsened, too. Debt outstanding came to 68% of personal disposable income during the third quarter 1978, up from 65% a year earlier.

How long can we afford this? Five-year auto installment contracts. Gimmick mortgages with low payments in the early years and heavy repayments later on. The consequence of all this easing of credit terms is that repayments were still at 20.5% of disposable income, the same as a year ago and not much more than in 1969, when debt was $397 billion. We have made it too easy to borrow.

One thing is clear: You can postpone a day of reckoning with debt but you cannot avoid it. A good case can be made that we are close to that reckoning right now. We may, in fact, already be there. The chart below shows that banks outside the big money centers were financing not only the bulk of business expansion during much of 1978, but a lot of the consumer spending boom as well.

The money-center banks, linked to the corporate world rather than the consumer, did not share in this lending bonanza. New York banks had $41 billion of loans at the start of the year and $41 billion on Sept. 6. They went nowhere for eight months. But once talk started about controls the business world decided to get its money before the spigot was shut down. New York banks' loans shot up from $41 billion to a year-end $45 billion.

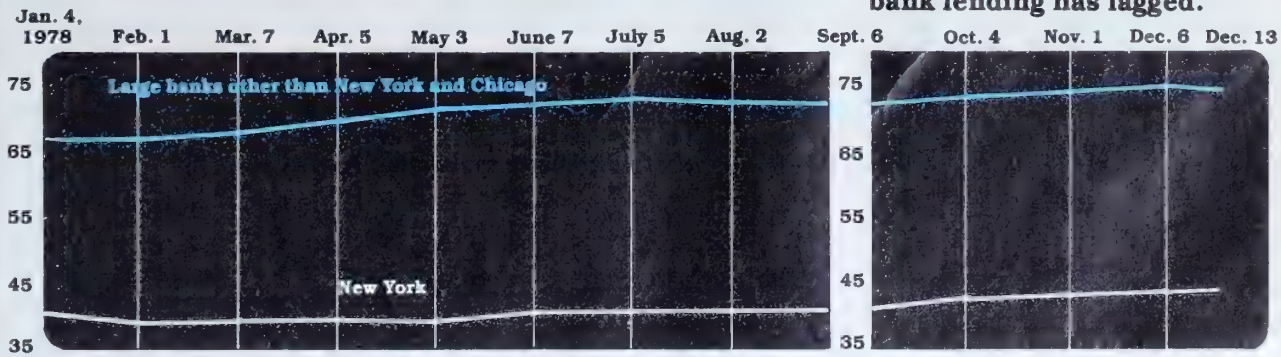
This to us is significant: Just when the New York banks were experiencing a pickup in loan demand, the regional banks were experiencing a flattening. After hitting $73 billion in June, the business loan trend outside New York and Chicago suddenly became sluggish. The loans increased hardly at all at Christmas when there is normally an explosive growth in consumer borrowing.

What are we to make of all of this? An excellent case can be made that the consumer spending boom crested in June and that the overall demand for credit continued to grow after that only because of scare borrowing by businesses. By this reasoning, the boom has already peaked and we are about to slide into a recession. If so it will be the most eagerly awaited and popular recession in history.■

Contradictions in finance

Business loans of regional banks grew rapidly through the first eight months while New York languished....

Since September, New York banks took off...and regional bank lending has lagged.



What's going on here? For some guesses, see story above.

Let me begin by making the most favorable case—an economic downturn.

BAD IS GOOD— AND VICE VERSA

By Ben Weberman

I DON'T know how Jimmy the Greek, the oddsmaker, would call the prospects for 1979 economics and interest rates. The forecasters are evenly divided—and almost all are without deep conviction. As my readers know, I am not normally a fence sitter. I usually put my neck out, sometimes with fortunate results, as in 1975-77; sometimes with terrible results, as last year. But this time I am genuinely perplexed.

Let me begin by making the most favorable case. Favorable in this instance means an economic downturn. (In the topsy-turvy world of post-Keynesian economics, good is often bad and bad good.) A downturn would take some of the steam out of inflation and allow interest rates to fall to a more sensible level.

Among the "favorable" developments that could take place in the coming months:

- Credit demands normally run off during the early months of the year. If this happens, banks and finance companies would have plenty of money to lend and, therefore, would price credit more aggressively (meaning lower interest charges).
- Consumer demand may turn down after the heavy Christmas business and the huge buildup of installment credit.
- Management and labor may decide to cooperate—even a little bit—with the Administration's anti-inflation program. If so, such evidence would strengthen the resolve of President Carter to hold down fiscal expenditures and to put up a stiff fight against congressional free-spenders, whether they are white urban liberals or farm belt so-called conservatives.
- The dollar may be steady in the early months of 1979 despite dire predictions of another "bear" raid by multinationals and banks that still have large short positions against the dollar.
- The combination of these events would alter the psychology of money managers who are holding billions of dollars of long-term funds in short-term, liquid form. They would rush to pin down currently juicy yields.

Now for the pessimistic case:

Business ended 1978 stronger than even the optimists predicted (remember: Good is bad; bad is good).

This could mean that the steps taken to date by the Federal Reserve to restrain credit and slow business activity are not yet biting. Therefore, all of the preceding assumptions could be reversed. Business and consumer needs for credit would be increasing early in the year. The consumer would remain confident of jobs and income and be willing to spend what he doesn't have.

Under these conditions, it would hardly be likely that either business or labor would find it easy to adhere to the wage-price guidelines, and inflation would continue at an unacceptable rate. The dollar would come under further selling pressure.

So, what does the poor investor do? Fortunately, under present circumstances he can both have his cake and eat it. That is, he can stay very short—thus hedging against a further rise in interest rates—without sacrificing high yields. Today large negotiable bank deposits yield 10.25% for a 30-day maturity and 11.55% for six months. Even an individual can get more than 10% on a six-month saving certificate of $10,000 or more. If you buy the assumption that the economy will remain much too strong until mid-year and then fall into a recession, the wisest investment course would be to commit your money for just under six months and then reinvest at maturity in a long-term issue.

My preference would be to invest for less than six months, because if the economy really is going to turn down at midyear, the money markets are likely to sense this well in advance and celebrate (remember, bad is good) by going up sooner. That means that interest rates on long-term, fixed-income issues would peak out before June, perhaps in April or May. It would be better to prepare for such a possibility by placing funds in three-month money instruments, which pay about 10.75%. Sacrifice a little yield as insurance and take a fresh look in April.

If you want to go a bit farther out to lock in some of today's juicy yields, there are tremendous values in the four-year range of U.S. Treasury issues. Several issues maturing between May 15, 1982 and Nov. 15, 1982 are trading, as this is written, at prices set to yield about 9.4%. I like the four-year Treasury note because it provides a very generous return at the outset. Furthermore, it gives protection against change in yield in either direction. If the Fed must tighten the screws much more, and even if short-term rates are up in the 13% stratosphere, the penalty for a holder of a four-year issue would not be great. A four-year note (down to a 3½-year maturity by mid-1979) selling to yield, say, 10.5% would lose 3¼ points of price if it were necessary to sell the issue at that time. Otherwise, it brings a high yield throughout its life.

On the other hand, if the yield drops to 8% as the yield curve assumes a more normal shape, the price would rise almost five points. That is almost the same price gain as a 30-year bond, which would move from 8.9% to 8.4%.

Take your four-year note, and you have $105 to invest for every $100 you put in originally, and you can still get the same number of dollars back each year on a long bond even though the yield would be lower and the price higher.

I am sure that some of my readers won't let me off the hook by simply saying the situation could go either way. Okay, in my highly personal view, the economy is likely to turn down before 1979 is very old, taking interest rates down with it.

I am an optimist by nature (bad is good), and common sense still says that the wise investor will be in a position where he won't be too badly hurt no matter what happens. ■

For 26 straight years we've mailed this same old message:

CASH DIVIDENDS HIGHER THIS YEAR THAN LAST!

his message reflects our past per-rmance.

But – what do we see ahead, to-ay? A busier, better America.

We see, too, the diversified indus-es and communities we serve in ur seven-state area–so often called America's industrial heartland" – laying a major role in our nation's future and growth.

And we're planning for it... as we always have.

Right now we're investing at the rate of $1 billion a year to be ready for the 1980's.

This includes power generation, power delivery, and environmental facilities–as well as the development of advanced technologies in all phases of our business.

All for that busier, better America we see ahead.

All extensions of policies which have resulted in our enviable dividend record

A record that has made our shareholders happy. And us proud.

American Electric Power

we see a busier, better America

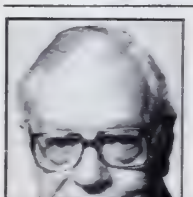
Stock Comment

There is just no one else in IBM's league its size, market position and financ strength are without parallel.

THERE'S NO SUBSTITUTE FOR QUALITY

By Heinz H. Biel



A GOOD-SIZED dividend increase had been taken for granted, but IBM's stock split, and 4-for-1 at that, came as a complete surprise. The Street responded with proper enthusiasm. I don't know what induced the IBM board to seek a lowering of the stock's price from its exalted level in the hundreds to a more mundane range with the plebeian stocks. As a result, however, it has become easier for investors to compare IBM with other companies—I'm reluctant to say competitors—in its field:

	IBM*	Burroughs	NCR
Present price	$75	$73	$61
Est. 1978 EPS	$5.20	$6.20	$6.70
1978 P/E ratio	14.3	11.8	9.1
Est. 1979 EPS	$6.00	$7.25	$8.00
1979 P/E ratio	12.4	10.1	7.6
Dividend rate	$3.44	$1.60	$1.00
Dividend yield	4.6%	2.2%	1.6%

*Adjusted to reflect proposed 4-for-1 split.

IBM is a company that virtually defies imagination. At its recent high, IBM's equity has a market value of about $45 billion, which is more than the yearly GNP of any but a few major countries of the world. Its new dividend rate adds up to about $2 billion a year. There is just no one else in that league—its size, market position and financial strength are without parallel. The stock's investor appeal is obvious, and with some 583 million shares to be outstanding, the supply should be adequate to meet the demand. Of the other two stocks in the table above my preference is NCR Corp.

Heinz H. Biel is a vice president of the NYSE firm of Janney Montgomery Scott.

Before long we will be flooded annual reports for the past year. I week there will be stacks of them they have become so voluminous it is a physical impossibility to much more than a casual glan most of them. That is a pity and a for all concerned, because cor tions not only do try to put the foot forward, which is unders able, but also give an intelligent view of prospects as well as probl

Corporations whose fiscal year not coincide with the calendar have the advantage that their re have a much better chance of read than merely scanned. Rec the report of the *Emerson Electric* whose year ends Sept. 30, came a my desk. As my interest in this pany goes back a great many y having first commented on it in column as long ago as Jan. 1, 19 took it home to read.

Thanks to steady internal gr and some acquisitions, this tig managed maker of a broadly divers listofelectrical/electronicproduct systems is now doing a sales volu well over $2 billion, more than t times what it was ten years ago.

What is even more remarkab that there has been no qualitativ terioration. In this past decade, profit margin and the return on ital have been remarkably ste with the return on stockholders' e ty last year at a new high wit impressive 20.5%. Despite con ing heavy capital expenditures, E son's balance sheet is as strong as with long-term debt amounting mere 8½% of total capitalization.

In a period when the consu price index doubled, Emerson's share earnings increased 2.8 t (from $1.04 in fiscal 1969 to $2.93 year); the dividend rate increased

(from 48¾ cents to $1.20, and
1.44); and the equity per share
up 2.6 times (from $5.92 to
). How is that for beating infla-

DEBEERS: ALL THAT GLITTERS

By John Train

IF YOU ARE prepared to accept the risks of owning a South African mining stock, I think there's a good case for preferring DeBeers to any of the gold mines.

The conservative way to think of DeBeers is probably as an income stock. At present prices, the American Depositary Receipt yields about 15% before withholding taxes. (The 15% withholding tax is, however, a credit against U.S. taxes.)

DeBeers has not cut its dividend in 40 years, and historically the dividend has risen about 15% per annum. Should that continue, you'd recover your investment in about five years and then have a stock yielding about 30% on original cost.

If conceptually you write the stock off to 1 cent the day you buy it—which is a good way to approach any investment—you can ask yourself, is this a deal I'm willing to settle for?

It's exceedingly likely that DeBeers will be able to maintain reasonable dividend growth. It sells in the market for slightly over 2.2 times cyclically strong earnings (its alltime low multiple) or little more than the value of its cash and gem inventory.

More specifically, DeBeers makes almost $1 billion aftertax, sells in the market for about $2 billion and has some $1 billion in cash and a gem inventory worth at least $500 million. Its mining investments are written off as incurred. It has virtually no debt, naturally.

The company mines roughly half of the world's *gem* diamonds, and through its Central Selling Organization sells perhaps 90% of the gem diamonds marketed in the Free World, including Russia's sales.

About 90% of DeBeers' profits come from gemstones, the rest from industrial diamonds.

About 60% of all gem diamonds are sold for engagement rings, about 20% for wedding rings and the rest for diamond jewelry. DeBeers likes to limit both production and wholesale selling to the amount actually consumed by the jewelry trade. This helps prevent the type of disorderly seesaws that created disruption in the wine business in 1975-76. To that end it has tried to discourage the present epidemic of mail-order sales to Americans by boiler-room hustlers and others, but is becoming reconciled to some hoarding of diamonds for investment, rather than for use, as a fact of life in the American market.

Since the U.S. represents half the world market for diamond jewelry, that may be a permanent structural change of some significance. Furthermore, the use of diamonds for engagement rings in Japan (which buys about 20% of the world's gemstones) is rising steeply: from 5% of all engagements in 1966 to over 40% today. About two-thirds of U.S. and one-fourth of German brides receive diamond engagement rings. The U.S., Japan and Germany together buy about 80% of all gem diamonds.

DeBeers' stock sells so cheaply because of political concern, together with moral scruples and the fact that it's overowned in South Africa and barely understood here.

I would not minimize the political side. However, one should look behind the generalities. In the first place, in labor matters, DeBeers is considered to be South Africa's most liberal and progressive large company. It can afford to be. (Incidentally, its chairman, Harry Oppenheimer, is perhaps the most eminent spokesman for a loosening of the odious features of the present regime.) Its labor force is very small for such a large mining company—about 16,000. If circumstances cause a steep rise in South African labor costs, DeBeers, with its huge profit margins, will have a better time than will most gold mines.

Then, only half of DeBeers' profits come from the Republic of South Africa itself.

The company's largest mine is Orapa in Botswana, owned 50-50 with the government. The Botswana government levies a 50% income tax on the operation, giving it about 75% of the total profit *vs.* DeBeers' 25%. It seems unlikely that the local government will want to squeeze much harder, since if DeBeers pulled out, Botswana would have trouble either operating the mines or selling the output.

About 22% of DeBeers' profits comes from its open-pit mines in South-West Africa/Namibia. The mine area is 100 kilometers long and 2 to 3 kilometers wide. This property is the largest user of earth-moving equipment in the western world, after the U.S. Army. Since it requires vast amounts of cash and technical savvy, here again, even if SWAPO got in, it seems hard to foresee anything worse than a rise in local government profit participation in one form or another—essentially a cost increase, which DeBeers could pass on to the consumer. And even if it couldn't, a pessimistic estimate of the effect on profits might be a decline of 10% to 15%—far from catastrophic.

Throughout Africa, revolutionary governments such as the ones in Angola and Tanzania have tended to come to terms quite promptly with DeBeers, so that production and profitability have been little affected.

The most convenient way to buy DeBeers is through ADRs, which have a broad market over the counter.

Arnhold & S. Bleichroeder, which makes a market in the ADRs, thinks that a reverse split of about 4-to-1 in the ADRs, bringing the price from about $5 to about $20, should improve their standing. I concur.

Besides politics, there are several other possible problems for DeBeers. First, the Russians could sell outside of the CSO. But they would make less money that way, and they need the foreign exchange. The cartel exists for the advantage of the producers.

Second, large, perfect, cheap synthetic gemstones may eventually come into existence. (In a way they already exist: zircons, and so on.) This would be more of a concern if almost all new diamonds didn't go into engagement and wedding rings. On that occasion one wants the real thing. ■

John Train is president of Train, Smith, Investment Counsel, New York, and the author of Dance of the Money Bees.

Wanted: 77,000,000 movers and shakers.

Nothing pinpoints the movers and shakers like a few pertinent questions.

Did they go to college? Are they professionals or managers? Are their household incomes $20,000 plus? Are their homes $40,000 plus? Are their corporate securities $20,000 plus? Have they played active roles in local civic issues? Have they written any elected officials or editors lately? Have they written any books or articles? Have they addressed any public meetings or worked for any political parties?

Only 77,136,000 adults can answer yes to one or more of those questions. And only a well-balanced media plan is going to reach them with any degree of impact and efficiency.

The fact is, 21,785,000 of those primary corporate targets are big on television and not so big on magazines. But a much greater number—32,740,000 primary corporate targets—are Magazine Imperatives. And that means they're big on magazines and not so big on television.

No wonder a nothing-but-television media plan misses out on the movers and shakers. And no wonder it misses out with the very people who can't be satisfied by a 30-minute news show, much less a 30-second commercial.

Make this your year to re-evaluate the balance of power between television and magazines in your media planning. And ask the MPA for an IMS computer run based on the Media Imperatives® and your prospects, your data, your dollars.

The singular most important advantage of an option is that you never have at risk more than the premium.

TRADING WITHOUT TEARS?

By Stanley W. Angrist

THIS COLUMN is about commodity options. In it I will try to point out their advantages and disadvantages and how they can be used by speculators to make a buck. *However, under no circumstances should you consider purchasing a commodity option from someone who calls you on the phone from a firm of which you have never heard.* What those guys are selling, you don't need.

But a legitimate commodity options market now exists in the U.S., and for certain speculators (and hedgers, too) it can be extremely useful. Through licensed commodity futures merchants, two dealers offer options on gold, silver, platinum and copper. The largest of these dealers is Mocatta Metals Corp. of New York. Mocatta options are available through Bache Halsey Stuart and other brokers.

An option is the right—but not the obligation—to buy or sell something, in this case a specified amount of a fungible commodity. The Mocatta option is different in a number of important ways from the London commodity options that have been offered here by scrupulous, and not so scrupulous, dealers for the past ten years. The current dealer options have fixed strike prices and fixed maturity dates just like the stock options sold on the Chicago Board Options Exchange.

Commissions may vary but Bache, for example, charges 5% of the premium or $100, whichever is larger, to buy an option, and 5% of the premium or $50, whichever is larger, to sell an option. Obviously, option commissions will be substantially larger than those paid on comparable futures contracts. (It is also reasonable to assume that option commissions, like almost everything else in the financial markets, are negotiable.)

Given the fact of a larger commission, why would anybody want to own a commodity option rather than be long or short a futures contract? Suppose you purchase a March 1979 gold call option on 200 ounces of gold at a strike price of $210 per ounce for a premium of $3,135. This option gives you the right to buy 200 ounces of gold at $210 per ounce regardless of the market price of gold for the next 2½ months or so. You paid a premium $15.77 per ounce for this right. The premium amounts to about 7.3% of the current price of gold. If by March gold advances about $16 from its current price of $216 to $232 you will be just about even. If the price of gold were to advance sharply in the next couple of weeks or so when there is plenty of time value left in the option, the premium could rise to such an extent that you might have a profit even if the price had not reached $232. But suppose that the price just slowly crept up to $250; at expiration the option would have a profit of $40 per ounce over the strike price and would be worth $8,000 ($40 per ounce x 200 ounces). Commissions in and out would amount to about $550. Of course, if gold's price winds up below $210 in March, your option will expire worthless and you will have lost the entire premium plus commission.

But the singular most important advantage of the gold option is that you never have at risk more than the premium of $3,135 no matter what the market does. That is, gold could fall completely out of bed the next day and go limit down five days in a row and your risk remains the same. Furthermore, Mocatta will accept stop loss orders on the premium, so that if you wanted to you could, for example, limit your risk to $1,000 of the premium. So you have double protection—the stop-loss and the premium you paid can both limit your risk. (Of course, if the market starts to limit down, the grantor of the option might not be able to get out of his long position in the futures market. In that case the price you get for your option might not be the stop-loss price.) A commodity option can reduce the major problem of commodity trading—timing. The market can go the wrong way for a few days which would, if you were holding a futures contract, put you on margin call or force you to liquidate. But as an owner of a call, you would suffer no adverse effect other than some reduction in premium.

Mocatta sets the price of its options by means of a computerized model that is most heavily influenced by a commodity's volatility and the time left before the option expires. A volatile commodity commands a high premium because the opportunity for profit is greatest there. But since options are wasting assets, as the expiration date approaches, an option with a strike price above the market will see its premium approach zero.

Though the example presented above is for a call option, it is well to keep in mind that Mocatta, through the same brokers, also offers puts that gain in value as market prices decline. Indeed, at the present time Mocatta offers calls and puts at ten strike prices for four expiration dates. The most distant date is always approximately one year out from the present.

Should commodity options play a role in your speculative activities? That depends upon your taste for risk. I believe that they are an appropriate vehicle in certain circumstances where traders might be unduly disturbed by adverse limit moves in commodities of high volatility. ■

Some recent quotes for commodity options*

With an option you pay for two things—a commodity's volatility and the time remaining to expiration.

	March 1979	Sept. 1979
Gold (200 ounces)

Stanley W. Angrist is a professor at Carnegie-Mellon University, and the author of Sensible Speculating in Commodities.

How much will your money be worth next year? Substantially more, we believe, if you follow this advice.

Send for United's 1979 Investors Planning Kit today.

Worried about the possibility of a recession? Wondering what rate of inflation you'll see? Concerned with fluctuations in the stock market? Stop worrying. We believe you will find clear cut answers on what to do in these advisory reports on Business, Investments, and Taxes.

Special Report #1

Stocks we believe you can make money on in a recession

Even if there should be a mild recession next year, as some think likely, certain companies and industries will continue to profit. In fact, there are even some industries which have traditionally benefited from recessions. We've searched out the characteristically recession-proof industries, and we've found these specific stocks, which we believe have the qualities that should allow them to do well this year, come what may.

Special Report #2

United's 10 Top Picks for profit in 1979

Here are United's researched choices we believe will do well in 1979 no matter what the stock market or the economy does. Why? Three reasons: 1) because they are either special situations with takeover possibilities, or 2) they are depressed "bargains," or 3) they are stocks acting better than the market. There are risks, but we picked these 10 out of hundreds of issues as special buys for profit.

Special Report #3

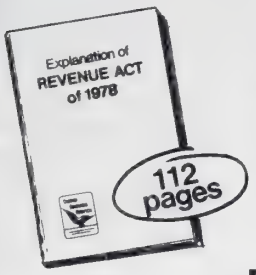
Stocks we believe will beat inflation

Do you think you could stay ahead of inflation with stocks whose dividends have increased from 135% to 450% in the past decade? After all, the cost of living has gone up 100% in that time, but these 9 companies have boosted their payments often enough to beat inflation—some by a wide margin—most at least once a year these last 10 years. And you can't discount capital gains possibilities, either.

Special Report #4

Convertibles for growth and income with relative safety

If you feel uncertain about buying common stocks, you may well find Convertibles an interesting alternative. They give you some resistance to market declines, yet they can be very profitable in an advance. Convertibles are fixed income securities, of course, but they possess the special privilege that you can exchange them for the common, when it is to your advantage to do so. In addition, each of the choices we've picked is yielding well above the common.



You receive this extra bonus at no extra charge: The Revenue Act of 1978 . . . A Concise Explanation

Reference is fast and accurate, so it's likely you could easily save yourself some real money, or avoid a costly mistake. The 112 pages are packed with ready answers to your questions, with vital sections of the law carefully analyzed in clear, concise language. An invaluable guide.

I have yet to find the person who can precisely identify market bottoms until they've passed.

GET 'EM WHILE THEY'RE COLD

By James H. Farrell Jr.

THE TITLE of this column appeared recently in an advertisement by a mutual fund management company. Undoubtedly, it brought forth a number of smiles. However, it also pointed out an important truth that is frequently missed by many investors. Namely, that the securities markets are expectational, and when the outlook is bleak it is reflected in low stock prices, and, conversely, when optimism prevails, stocks are close to their highs.

A friend of mine recently commented on all the ills that beset the domestic and international economies and remarked in conclusion that he had lost nearly all reason to buy common stocks. I asked him if he would let me know when he had *completely* lost all of his reasons for buying common stocks. For it is when such a feeling becomes widespread that a market bottom is already in sight.

Despite our knowledge of the nature of the stock market, it is surprising to hear professional investors frequently make the comment that they will increase their equity holdings when they feel more comfortable with the economic outlook, or they will buy an individual stock when various uncertainties have become clarified. Unfortunately, when we become more comfortable or the outlook is clarified, prices have risen and opportunity has diminished if not disappeared. It is the fate of the successful investor that often he will feel very uncomfortable in making his most profitable investment decisions, for to be a truly successful investor one must often have the courage to stand alone.

In assessing today's environment we see a high level of inflation, interest rates escalating to new peaks, deteriorating liquidity and the prospect of a recession in 1979. At the same time, however, a Dow Jones industrials price/earnings ratio of 8, dividend yield of 6% and prices below book value suggest that current values in the market reflect much of the uncertainty. Skeptics will counter that cheap stocks can get cheaper, and there is certainly the possibility of short-term price risk over the next several months. However, I have yet to find the person who can precisely identify market bottoms until they've passed and, therefore, it becomes necessary to have the courage and patience to get 'em while they're cold.

While the Dow Jones industrial average is selling at the above levels and a 12% discount to its year-end 1978 book value, many individual stocks of well-run companies are selling at even more attractive valuations. Not only are these stocks cold, their price levels are close to the freezing point. Some examples are:

Continental Illinois (26) is the seventh largest commercial bank in the nation. Over the past five years, earnings have compounded at a 13.8% annual rate. Even during 1975 and 1976, which were catastrophic for bank earnings, Continental Illinois was one of the few banks to produce consistent earnings gains. Its return on equity of 14.9% is second only to BankAmerica among the large money-center banks. Recently, Continental Illinois was selected by one business magazine as one of the five best-managed companies in the country. Recent projections by management have set a minimum goal of 10% earnings gains over the next three years, and the dividend should keep pace with earnings. Yet the stock sells at only 5 times estimated 1979 earnings of $5.15. The recently raised $1.44 dividend provides a yield of 5.5%, and the current price represents a discount of approximately 16% from an estimated book value of $31.

Colonial Penn (24) offers a range of insurance products to that segment of the population over 50 years of age. Earnings have compounded at 17% annually over the past five years and return on equity is currently well above average at 23%. The stock price has been volatile as the company is periodically subjected to unfavorable allegations regarding its relationship with the American Association of Retired Persons and the National Retired Teachers Association. Yet the company provides a valuable and efficient service to this growing segment of the populace, and should continue to grow at a 12% to 15% annual rate. The stock sells at 5 times our 1979 estimate of $4.90 per share, and the rapidly growing dividend of $1.20 provides a 5% current yield.

Delta Airlines (42) has the most efficient aircraft fleet, an excellent balance sheet, an outstanding management and the best earnings record in the airline industry. After a modest dip to $6.20 in 1979, earnings growth of 12% to 14% should return. Yet the stock is available at only 6.8 times our 1979 estimated earnings.

Scott & Fetzer (25) produces a wide variety of products, including vacuum cleaners; air compressors; electrical fittings; oil and gas burners; hitches and winches for recreational trailers and precision instruments. Earnings growth over the past five years has averaged 14%, and the 18% return on equity indicates an above-average profitability. The recent acquisition of World Book-Childcraft International should boost 1979 earnings nearly 15% to the $4.80 area. In spite of this prospect, the stock sells for 4.6 times earnings while the dividend of $1.60 provides a yield of 7.3%.

Other stocks selling at attractive prices based on 1979 earnings prospects include *Eaton Corp.* (34) at 4.9 times estimated earnings of $7; *Champion International* (21) at 6 times earnings of $3.50; *Dresser Industries* (36) at 6 times 1979 estimated earnings of $6; *Parker Hannifin* (24) at 7.2 times estimated earnings of $3.35 and *Crouse Hinds* (21) at 6.9 times estimated earnings of $3.05. ■

Notice of Increased Dividend

THE BOARD OF DIRECTORS has this day declared Dividend No. 124, a regular quarterly dividend of Seventy-Five cents (75¢) a share on the common stock of the Company, payable February 15, 1979, to stockholders of record at the close of business January 15, 1979.

The dividend represents a new annual rate of $3.00, compared to the previous annual rate of $2.76 a share.

The new rate will mark the fourteenth consecutive year of increased dividends.

H. A. OFFUTT,
Vice President and Treasurer

December 12, 1978

Fiber optics had been a disappointment. "We grossly overestimated sales three years in a row. Our credibility was gone."

FAILURE BREEDS SUCCESS

By Thomas Murphy

GEORGE BATCHELDER'S wife sometimes reminds him: "Where would you be today if you had been a success at Bendix?"

Today George Batchelder, 48, is head of marketing and a major stockholder of a fast-growing, independent fiber-optics outfit, Galileo Electro-Optics Corp.; he is, potentially at least, a millionaire instead of being just another vulnerable, moderately well-paid corporate executive.

Here's how it happened: His associate, James Oglesby, who is now president of Galileo, was riding in an elevator in Bendix Corp.'s Southfield, Mich. headquarters one day in 1973 when the bombshell hit. A Bendix staff man mentioned, more or less matter-of-factly, that Bendix was dumping the fiber-optics business that Oglesby headed and Batchelder worked for. It was the first Batchelder or Oglesby had heard of it. Bendix' then boss, now Treasury Secretary, Michael Blumenthal, had decided that fiber optics just didn't belong in the Bendix corporate stable. Besides, fiber optics had been a consistent disappointment. "We grossly overestimated sales three years in a row," Oglesby admits. "Our credibility was gone at Bendix headquarters."

Jim Oglesby and George Batchelder had to wonder if they were going to get a new boss, at best, or join the thousands of middle-aged executives before them who found their businesses sold out from under them and themselves looking for work.

This time it did not turn out that way. Instead of job-hunting, they met with the legendary Royal Little. Little wanted to know if Oglesby, Batchelder and three other key executives in the fiber-optics division wanted to run an independent company. If they did, Little said that Narragansett Capital Corp., a venture capital firm, would back them in a leveraged buy-out.

Here was the deal: If the five men would come up with $150,000, Narragansett would match the money. Management and Narragansett would share ownership 50-50. Narragansett would also lend the new company $1.5 million and arrange a bank loan of equal size. It came to $3.3 million, which was Bendix' price for its fiber-optics business—about 70% of the book value of the assets.

That deal did not leave much for working capital, but at least Jim Oglesby and his team were in business for themselves. "People told me I would be working 80 hours a week," Oglesby, now 53, recalls, "but the truth is I didn't know what to do with my time that first year."

Oglesby, in fact, had so much time on his hands he was the best-read executive in Sturbridge, Mass., and then all of those rosy sales forecasts started coming true. Sales, which were $3.75 million in the last year at Bendix, were nearly $20 million in 1978. Oglesby figures $25 million for this year.

Could they have done it as the division of a big company? Oglesby doesn't think so: "It just takes too long to get decisions made through a corporate hierarchy."

What made the difference? Morale in part. People liked working for the independent company and productivity increased. Luck helped, too. The old sales projections had been based on the military's intentions to launch a major "night vision" program. Fiber optics, coupled with electronics, has the curious ability to amplify light. In

Thomas P. Murphy heads a venture capital firm, Partnership Dankist, Stamford, Conn.

Value Line looks at . . .

Major Stocks With P/E's *Under* 4 And Yields *Over* 7%

Plus the potential to double in price, we estimate, within 3 to 5 years.

Among 1700 major stocks under its continuing review, The Value Line Investment Survey finds . . .

- 91 stocks are selling at *less than 4 times* estimated current earnings . . . compared with past P/E ratios up to 20 times or *higher.*
- 71 of these low-P/E stocks also offer Appreciation Potentials in the next 3 to 5 years of *more than 100%* . . . based on Value Line's estimates of their earnings and P/E ratios in that future span. (26 offer long-term Appreciation Potentials of more than 200%.)
- In addition, a significant minority of these "combination" stocks currently *yield from 7% to 8.6%,* based on our estimate of dividends in the 12 months ahead. (In many of these stocks, moreover, we look for sizable dividend increases—from 50% to 100%—in the next few years.)

But we urge you *not* to leap into stocks like these, good as they may sound, without also checking Value Line's current ratings for *Probable Price Performance* and—most importantly—*Safety.* This is easy to do:

UPDATED EVERY WEEK

Every week, Value Line's regular *Summary & Index* presents up-to-date ratings of EACH of 1700 stocks *relative* to all the others, as follows . . .

a) Rank for Probable Price Performance in the Next 12 Months—ranging from 1 (Highest) down to 5 (Lowest).
b) Rank for Investment Safety (from 1 down to 5).
c) Estimated Yield in the Next 12 Months.
d) Estimated Appreciation Potential in the Next 3 to 5 Years—showing the future "target" price range and percentage change from current price.
e) P/E ratio and current price, plus estimated annual earnings and dividends in current 12 months. Also latest quarterly results against a year ago.

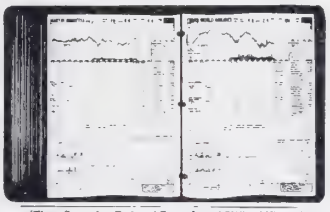
PLUS FULL-PAGE REPORTS

In addition, each of the 1700 stocks is the subject of a comprehensive new full-page *Rating & Report* at least once every three months—including 22 series of vital financial and operating statistics going back 15 years and estimated 3 to 5 years ahead. About 130 new full-page Reports like this are issued each week . . . 1700 every 13 weeks.

SPECIAL INVITATION

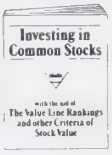
You are invited to receive the complete Value Line Investment Survey (with 30-day money-back guarantee) for the next 10 weeks for only $29—about HALF the regular rate—if no member of your household has had a Value Line subscription in the last two years.

You receive, as a bonus, Value Line's 2000-page *Investors Reference Service* incuding our latest full-page Ratings & Reports on each of 1700 stocks—fully indexed and looseleaf-bound for your quick and easy reference. . . and systematicaly updated by new full-page Reports in the weeks ahead. (It takes only 30 seconds to replace the old Reports with the new in your binder.) All this material is so organized that you can quickly find a continually updated report and current evaluation on almost any stock you may be interested in buying selling, or equally important, holding.



(These Pages Are Reduced From Actual 8½" x 11" size.)

And—as an *extra bonus*—you will also receive *Investing in Common Stocks,* by Arnold Bernhard, Value Line's founder and research chief. This 64-page book explains how even inexperienced investors can apply thousands of hours of professional research to their own portfolios by focusing on only two unequivocal ratings, one for Timeliness (Performance in next 12 months), the other for Safety. This book is YOURS TO KEEP even if you return the other material under your money-back guarantee.



This subscription is tax-deductible if utilized to aid in the management of your investments.

To accept this invitation—and to pinpoint the current list of low-P/E "combination" stocks referred to above—mail the coupon today.

Fighting the doldrums, mutual funds have come up with some ingenious gimmicks.

Legal check-kiting and other games fundsmen play

By Richard Greene

BACK IN the golden days when they were riding high, the mutual fund managers proudly sold their supposed expertise to outperform the market.

But when the stock market was being kicked downstairs, lo and behold, the funds were, too. Total assets dropped from $46.5 billion in 1973 to $34.1 billion in 1974. Assets in October 1978—$43.5 billion—still haven't climbed back to the 1973 level. Factor in inflation and it's clear that the funds—whose lifeblood is management fees—have been hurting.

With their credibility reeling, the funds went in search of new ideas, starting with money-market funds. And though the money-market funds have been a success, total purchases for all other funds were $5.5 billion in the first ten months of 1978 against $6.2 billion in redemptions. That's sure not growth.

So, now the funds are getting downright ingenious. They're in the insurance business and the lending business, for example. They've even found a way to beat the U.S. Post Office and make a little money off the IRS.

Take free check-writing, one of the most popular of the new mutual fund gimmicks. First introduced in 1975, the checks work like regular bank checks, but draw against the fund. There's a nifty wrinkle in it, too: The money-market funds collect dividends on a daily basis. So, if you pay your income tax with a check against the fund, you can take advantage of the five or six days the check is in the mail and shuffling around the IRS.

Some investors have taken this a step further by buying Treasury bills with these checks. So from the time the T-bills are purchased until the check clears, the money is working twice: once gathering interest on the T-bills and again gathering dividends in the fund.

One California fund, the Capital Preservation Fund, has even gone so far as to use banks in four states through which the checks are cleared; one each in California, Rhode Island, Florida and Montana. If the investor is in Oregon, say, he writes out his check against the bank in Florida, thus taking maximum advantage of the float in the mails.

Another feature: In a family of funds, the investor can transfer money from one fund to another without paying additional commission. If it looks like a recession is on the way, get out of the stock fund and move to a safer money-market fund. And if things are looking up, go the other way. Some investors have been using this device to play market swings, switching back and forth several times a week (but some funds are clamping down on the practice).

Scudder, Stevens & Clark introduced an insurance policy just six months ago, with rates general cheaper than savings bank life. T only hitch is, you must stay in the fu to continue the policy. Says W. Russ Peabody, senior vice president of Scu der, "That's the objective—to keep t shareholder wedded to the fund."

New York-based Neuberger & B man, the first to offer life insuran four years ago, is adding a health surance plan now.

Boston-based Fidelity Group h yet another service: a loan progra Individuals use their shares for coll eral, and interest rates are tied to t broker's call money rate, slight higher than the prime. Money can borrowed for any purpose. Of cour even this is expensive money now at about 13%.

Fidelity, which has one of t broadest arrays of extras, is now co sidering a new twist: low-cost brok age services. If a client wanted co mon stock outside the fund's port lio, he could call another subsidiary the group and order it at fees low than The Street's.

A mutual fund service which is d ing especially well is the Keogh plan tax-sheltered retirement plans for t self-employed. The funds get the ne essary IRS approval and, in exchan the investor puts his pension mon back in the fund. Many funds al have small-company pension loans.

Will these tricks save the fun from slow decay? Although they m not increase sales, there is hope th they'll cut down on redemptio Overall, "they're marketing aid says one fund executive, "and tha the name of the game." ■

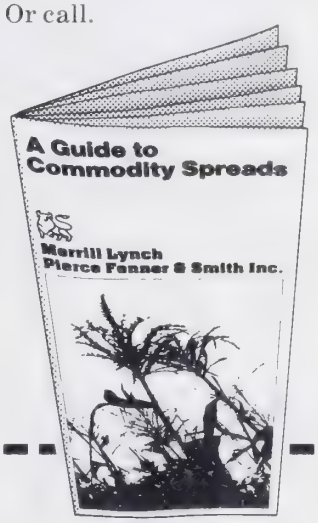
How to cut the risks of commodity speculation

To find out, send for Merrill Lynch's free booklet explaining how commodity traders could reduce the risks of futures speculation—and also trade with less capital.

It's done with a special approach to futures called "spread trading." It gives you an opportunity to take advantage of commodity price changes in more ways than conventional trading.

Booklet explains how to keep the risks of speculating manageable. How it can produce profits. Gives rule-of-thumb strategies. Explains different spreads, techniques. Mail the coupon. Or call.



"A Guide to Commodity Spreads"

Write: Merrill Lynch Service Center, P.O. Box 6118, Chicago, IL 60680

Sent in by Marilyn Bell, Salt Lake City, Utah. What's your favorite text? The Forbes Scrapbook of Thoughts on the Business of Life is presented to senders of texts used.

Power flows to the man who knows how. Responsibilities gravitate to the person who can shoulder them.
ELBERT HUBBARD

I have to be wrong a certain number of times in order to be right a certain number of times. However, in order to be either, I must first make a decision.
FRANK N. GIAMPIETRO

A successful executive is one who can make decisions.
JOHN H. PATTERSON

Thoughts on the Business of Life

Your success depends upon you. You have to steer your own course. You have to do your own thing. You must make your own decisions. You have to solve your own problems. Your character is your handiwork. You have to write your own record. You have to build your own monument—or dig your own pit. Which are you doing?
B.C. FORBES

Seek respect mainly from thyself, for it comes first from within.
STEVEN H. COOGLER

There are only two ways of getting on in this world; by one's own industry or by the weakness of others.
JEAN DE LA BRUYERE

The will to win is worthless if you do not have the will to prepare.
THANE YOST

The wicked are wicked, no doubt, and they go astray and they fall, and they come by their deserts; but who can tell the mischief which the very virtuous do?
WILLIAM MAKEPEACE THACKERAY

We don't always know when we have failed or succeeded.
ARNOLD GLASOW

More than 3,000 "Thoughts," indexed by author and subject, are available in a 574-page book at $11.95. Send check and order to: Forbes Inc., 60 Fifth Avenue, New York, N.Y. 10011. Add appropriate sales tax on New York State orders.

The very substance of the ambitious is merely the shadow of a dream.
SHAKESPEARE

The ladder of success doesn't care who climbs it.
FRANK TYGER

Having connections may help a man on the ladder of life, but it will never keep those rungs steady beneath his feet.
JOYCE HIFLER

Only a mediocre person is always at his best.
SOMERSET MAUGHAM

Any piece of knowledge I acqu today has a value at this mome exactly proportional to my skil to deal with it. Tomorrow, whe I know more, I recall that piece of knowledge and use it better.
MARK VAN DOREN

The quest for knowledge and t application of that knowledge f man's benefit will not be denie
ROGER M. BLOUGH

Originality does not consist in saying what no one has ever sa before, but in saying exactly what you think yourself.
JAMES STEPHENS

A man's reputation is the opini people have of him; his charact is what he really is.
JACK MINER

Personal initiative, competitive selection, the profit motive, corrected by failure and the infinite processes of good house keeping and personal ingenuity these constitute the life of a free society. It is this vital creative impulse that I deeply fear the doctrines and policies of the socialist government have destroyed.
WINSTON CHURCHILL

You owe it to yourself to drive this car.

Introducing the all-new 1979 Mercury Marquis.

Take the Ten Minute Test Drive and discover a new Marquis standard of driving comfort.

owe it to yourself to spend ten minutes paring the 1979 Marquis to last year's quis, and comparing its EPA Interior ume Index ratings to any full-size car.

inute 1: Check the luggage capacity.
American car has more. With the new mini e, there's even more room than last year.

inute 2: Settle into more spacious interior.
e shoulder room and hip room than any Buick, Olds or Cadillac; there's nearly half ot more hip room in front. The '79 Marquis en roomier than last year.

inute 3: Take corners flatter.
quis has a new rear suspension. A four-bar design with axle centered coil springs, t mounted shock absorbers and larger ings at all suspension points.

inute 5: On bumps, dips — more stability.
oln-Mercury took years creating a tradi- of Marquis riding comfort. Ten minutes he road and you'll discover how far we've e in 1979.

Minute 7: Handle with new maneuverability.
A reduced steering ratio makes steering more responsive, maneuvering in tight places easier.

Minute 9: View the road through expanded glass area all around you.
More glass, a lower hood and new seating give you a commanding view of the road.

Minute 10: Read more visible instruments. Operate more accessible controls.
Dials are positioned to be read easily. Horn, wipers, high beam switches are mounted on the steering column virtually at your fingertips.

Listen to former Buick and Olds owners who drove Marquis and bought it.
Dial toll-free (800) 228-2400. (In Nebraska, (800) 642-8888. Alaska and Hawaii, (800) 228-2424.)

Listen to what some of them have to say. Then take the Ten Minute Test Drive yourself. You owe it to yourself.

A new Marquis standard of driving comfort.

LINCOLN-MERCURY DIVISION Ford

RCA launches television's first 4-hour video cassette recorder.

When television becomes more versatile, it's only natural to find RCA right there.

The SelectaVision video cassette recorder is the first video cassette recorder with a 4-hour capacity on a single cassette.

Viewers can tape any program off the air, replay it at their own convenience – and use the same cassette again and again for additional recording. They can record from one channel while viewing another. A built-in timer makes it possible to tape up to 4 hours automatically while everyone is asleep or away. There is even a black & white camera option that enables anyone to shoot a home-grown television special.

RCA is marketing this exciting new consumer product at a highly attractive optional retail price – and with heavy promotional and advertising support. The goal: to carve out a significant share of what promises to be a billion-dollar market.

From home entertainment products to Coronet floor coverings, from Hertz rental cars to weather satellites, RCA is dedicated to innovation, quality and steady growth. © 1977 RCA Corporation

Every year a leader... every year more desirable. That's Cadillac.

The Sedan deVille and Coupe deVille (shown) are leaders in the U.S. luxury car field. In sales success . . . in resale value . . . in repeat ownership. And yet, refinement continues. With Cadillac touches like seat belt chimes. Digital display AM/FM stereo radio. And more. All standard. Whether you buy or lease, see your Cadillac dealer. Every year, more people do.

SOMETIMES A PRODUCT JUST KEEPS GETTING BETTER AND BETTER.

The Kodak Carousel projector is a good example of such a product. Tried, proved, and improved over time.

It uses gravity to gently drop each slide in place. It's whisper-quiet, too.

It features a curved-field projection lens. For sharp edge-to-edge projection.

It uses the Transvue slide tray that lets you see the number of the slide shown, even in the dark.

It comes in many models. So you can choose just those features you want. Such as remote control. Automatic focus. Even automatic slide changing at timed intervals. And there is a wide variety of accessories made for it. Everything from special-purpose lenses, trays, stack loader to special "presentation aids."

See the Kodak Carousel projectors at your photo dealer's. And enjoy the projector that keeps getting better.

Now, Chemical Bank gives worldwide cash management a whole new name.

Chems

Here's how unique services, systems and peop
combine at Chemical Bank to provide you
with the financial control you need.

It's not just the help you need to-
. It's the help you need to get a head
rt on the future. Because Chemical
nk's ChemSphere is dedicated to
iovation in cash management both
w and in the months and years ahead.
nging together the right people with
right knowledge, and backing them
with a commitment to R&D makes
emSphere constantly evolving, keeps
onstantly performing, commits it to
stantly providing the timely informa-
n you need to maximize the return on
ir financial assets. So if you think
emSphere is just another fancy
me, think again. Because even with
present services outlined below, it's
eady earned Chemical Bank a reputa-
n as the leader in worldwide cash
nagement.

hemical's ChemLink – e proven cash anagement system in ompanies and banks round the world.

As one part of ChemSphere,
emLink is an on-line system that pro-
les you with a modular, integrated
ans of planning and controlling your
nds management. As an information
tem, a mover of funds and an ana-
ical tool, it is without peer—currently
lping improve people productivity and
cision-making time in 31 countries
rldwide. With ChemLink, and the
e-to-face help from Chemical's con-
tants, you can access all your balance
formation from any combination of
emical and/or non-Chemical Bank
counts worldwide; initiate domestic
d international funds transfers, exe-
te foreign exchange transactions, and
t back hard copy confirmation almost
stantaneously; receive the most cur-
nt credit advices any time of day or
ght; design alternative short-term in-
sting or borrowing plans for evaluation and incorporation into your company's financial strategy under almost any economic situation likely to develop. Plus much more. And all with the ability to customize features and reporting format.

Chemical's Foreign Exchange Advisory Service – protecting overseas exposures for companies both domestic and foreign.

Faced with floating rates, new accounting standards, complex tax effects and constantly changing foreign regulations, many treasurers and financial officers are finding the help they need in another of ChemSphere's services. Because Chemical's Foreign Exchange Advisory Service tailors a specific package of consulting, up-to-the-minute information and computer programs to meet the particular exposure management needs of each individual client. Personal consultation on a continuing basis provides you with detailed knowledge of current techniques and protection strategies. Among the information material are daily, weekly and monthly reports on money market and foreign exchange conditions and the outlook for 26 key currencies. The computer models help you measure exposure and simulate protective strategies, as well as to compare borrowing possibilities in one or more currencies. To date, more than 120 companies worldwide have taken advantage of this truly unique service to protect their companies and their shareholders from foreign currency losses.

Chemical's ChemLock – the time-saving lock box system specifically engineered to speed your collections.

Here, again, is another part of ChemSphere that helps Chemical people put more bottom line benefits within your reach. Because ChemLock can speed the conversion of your receivables into cash.

It provides direct send availability of lock box remittances; improved float; a computer system that can access and update your receivables file on a 24-hour basis; increased control through a daily summary report that indicates each item's Federal Reserve endpoint and its availability. Not only can ChemLock help increase your funds availability, it can cut your administrative and operating costs, and give you more control over your remittance operations.

Chemical's people – the catalyst that makes the whole concept work like no one else's.

In today's fast-moving financial world, cash management can no longer be looked at in piecemeal fashion. That's the reasoning behind Chemical's ChemSphere. A continually evolving concept in cash management that can keep you one step ahead today, one step ahead tomorrow. A new concept in cash management that results from the interaction of Chemical's cash management specialists with each other and with their customers. The fact is, at Chemical you'll find people who are as innovative as the concept they sell and the customers they serve—people who have made us the leader in worldwide cash management. People who can help you simplify, gain greater control, make more productive use of your financial assets.

To learn more, write or call W.D. Baird, Jr., Vice President ChemSphere, Chemical Bank, 20 Pine Street, New York, New York 10005. (212) 770-3600.

Charitable bookkeeping

Executive Editor Jim Cook and Reporter-Researcher Chris Miles began reporting on our cover story about charitable organizations and fundraising with hopes low and their guard up. "The Greek word that charity comes from," Cook recalls, "designated the girdle of Aphrodite. Charity wasn't love, but it contained, encompassed, encircled it, and I thought charity today had pretty much lost that character. If nothing else, there were all those scandals—from Father Carcich dissipating $18 million in behalf of the Pallottine Fathers to Boy Scout locals falsifying membership records in order to bolster their Boypower registration drives."

By the time the reporting was done, Cook's hopes were considerably higher. "Most of the fundraisers I talked to," he says, "were sincere, dedicated people committed to the importance of the causes they were involved with and even idealistic about them."

But Cook's guard is still up. Part of the trouble in assessing any charitable organization, he says, is the lack of reliable, standardized financial data. Most major health agencies present consolidated financial statements, often drawn up according to generally accepted charitable accounting principles. But, curi United Way, by far the largest fund in the U.S., does not (few of the ag United Way funds do, either). Th cost of fundraising for which U Way is widely applauded must be largely on faith (undoubtedly jus but an act of faith all the same), wh those of, say, the National Found March of Dimes are verified by De Haskins and Sells.

Which is not to say that such acc may not be as creative as sometim the corporate accounts on which are modeled. Worried about their raising costs, many agencies try t derstate them by ascribing fundra costs to other programs. For exa the National Information Bureau watchdog of nonprofit organizat complains that Muscular Dystr charges some $1.2 million in tele expenses to "Clinical, Diagnostic, Community Services." Even the Cross subsidizes its supposedly self porting blood operations to the tu $8 million a year because local cha of United Way and the Red Cross t supporting the blood program mak easier to raise money—a cost that tainly shouldn't be ascribed to bloo to somebody's fundraising expenses

In the hall of the vitamin king

"Go see Roche, they're the ones who know." It was a competitor speaking, and it could have been anybody in the burgeoning bulk vitamin industry. Hoffmann-La Roche, the Swiss-controlled pharmaceutical giant (Librium and Valium), is the acknowledged colossus in this product area, which of all the high-profile products in the U.S. must be among the least understood.

"Come on out," exclaimed Roche's top U.S. man, John Kelly, when FORBES asked to visit the company's enormous, 250-acre drug and fine chemical complex in Belvedere, N.J. He practically slapped FORBES' back through the receiver: "I'll get some of my top executives together and we'll meet on Monday and fill you in on the vitamin industry."

The address turned out to be an obscure office building a mile or two away from the main campus. Kelly was not in evidence. Instead, a row of hard-eyed executives appeared, with manners that ranged from suspicious to hostile.

"Are you planning a Ralph Nader article about the vitamin industry? manded one fellow. After FORBES Writer Harold Seneker fielded s more questions about motives, a se executive broke in: "How much do know about the industry?"

Once satisfied their visitor really come to them to learn, the execu lost interest fast. They made it clear any conversation would be about th tail end of the business, which H mann-La Roche is not in, and not bulk manufacture of vitamins, where company predominates. "This is a c petitive, secretive industry," snapped. "The information is pr etary, expensive to get, and we a going to give anything away."

These tough, wary people seem t the pattern for the whole industry dominate—other producers say the s things in almost identical language. dismayed, Seneker looked elsewher learn what was up with the vita boys. His report begins on page 92.

Millions of people in America's small cities and towns depend upon the regulated trucking industry for their very survival.

But the industry did not always run smoothly. The Supreme Court of the United States described the industry prior to its regulation by the Motor Carrier Act of 1935 as "unstable economically . . . unable to satisfy the most minimal standards of safety or financial responsibility."

Today the trucking industry is giving America the most efficient, stable, orderly and low-priced freight transportation system in the world. Our motor carriers are virtually a lifeline to every community in the country, especially the more than 64 percent of all U.S. communities that don't have rail service. This lifeline delivers the food, clothing, manufactured products, machinery and other goods vital to America's homes, businesses and industries.

Regulation in general has become a matter of current interest. Those who see airline passenger traffic increasing as a result of deregulation might question whether deregulation of the trucking industry would be beneficial. However, this is marching straight into the past to make the same mistakes all over again.

Lack of regulation didn't work for shippers or the public in the 1930s, and it won't work today.

Air cargo deregulation, for example, has not brought lower rates. This concept was touted on the basis that shippers would get more service at lower cost, but air freight rates have already gone up as much as 10 percent—instead of going down.

Freight, unlike people, doesn't move because rates are lower. Freight volume is a stable "commodity," pushed higher or lower by the state of the nation's economy.

If motor carrier service were deregulated, shippers would not always know what they would be charged. Nor would they know whether their rates were higher or lower than those of other shippers. It would be the same story that it was in the past with the early non-regulated trucking industry.

The modern American motor carrier system efficiently supplies more than 200 million people with all the things they need at minimal cost. It has kept pace with an ever-growing and changing economy. Let's not jeopardize this system.

Today's Trucking Industry...It Works for America

Edited By John A. Conway

Antitrust apathy

Even with the clout of Senator Ted Kennedy behind it, don't expect much more than talk in the new Congress on the proposals to ban some conglomerate mergers. The Justice Department has already suggested such legislation and Kennedy, the new chairman of the Senate Judiciary Committee, will push it but he is given scant chance of success. The Justice bill would prohibit, with few exceptions, any merger creating $2 billion or more in sales or assets, and any union of a $1 billion company with one holding 20% or more of a concentrated market. Kennedy plans to introduce a similar bill in late February.

What makes adoption doubtful is that many politicians and economists remain unconvinced that "big is bad," the credo on which the proposals rest. Antitrust problems, they argue, arise from market concentration, not size alone. With no clear consensus, the probable result will be another long debate. During the 1960s, Congress threshed over this same issue for years and produced no legislation.

The new Congress, moreover, would appear to be no more enthusiastic about antitrust action than the last one. The 95th Congress tried and failed to reverse the Supreme Court's Illinois Brick antitrust decision (FORBES, *Jan. 22*), which allowed only direct purchasers, not final users, to sue for damages in a price-fixing case. Reversing that ruling had top priority and backing from President Carter, the Justice Department, the states' attorneys general, and consumer, labor and some small business groups. The ban on conglomerate mergers is much more controversial and has nothing like the support Illinois Brick generated. The President hasn't announced a position and even business groups are split. (Some small business organizations do back the idea of banning big-company mergers, a puzzling stance since that should logically make small companies all the more desirable as targets for takeovers—but perhaps that is what these small businessmen want.)

What Johnny eats

Washington's plan to ban or reduce sales of "junk foods" in public schools is proving a far tougher job than its advocates thought. Last April, the Agriculture Department proposed barring sales of candy, soft drinks, gum, etc., until after the final lunch period. The ban, affecting lunch lines, snack bars and vending machines, was to take effect in September. The reaction, from food firms, the public and the schools, was so strong that the department first postponed and then withdrew the proposal. Maggie Glavin, director of Agriculture's school programs, says the idea is not dead, however. Before making any new recommendations, Agriculture will hold public hearings during the next few weeks in three cities: Nashville, Detroit and Seattle. The federal government has authority to regulate sale of "competitive foods" in schools because it spends $2.7 billion a year on pupil-lunch subsidies.

The ineffable Rolls

Toyota, Datsun and Volkswagen may be the hot names in imported automobiles, but in its own quiet way the stately Rolls-Royce is more than holding its own. A 1979 Corniche convertible, for instance, bears a $110,000 price tag, a Silver Shadow II goes for $65,400—and both have waiting lists. The 1975 Corniche went for $63,800, a Silver Shadow for $36,250. Rolls makes only 3,000 cars a year, exporting 60% of them, between 1,000 and 1,100 to the U.S., 180 to 200 to the Middle East, about 100 each to France and Switzerland. Demand, obviously, exceeds supply. A 1975 Corniche that cost $63,800 new today commands $75,000—wholesale—and a $36,250 Silver Shadow of the same vintage will bring $37,500 from a dealer. In England, where the waiting list runs up to six years, markups are even more startling. A "new-used" Corniche (*i.e.*, one with 200 to 300 miles in "delivery mileage"), for example, costs $82,647 and resells for $137,500. Similarly, a 1979 Silver Shadow II, retailing for $56,800, brings $82,800 at resale.

An encore for the Founding Fathers

California's Governor Jerry Brown, in his new incarnation as tax-cutter, has already drawn one answer from the White House, following his call for a constitutional amendment requiring a balanced federal budget. That ringing challenge did not sit well in Washington, where Brown is regarded as a 1980 presidential hopeful and where President Carter has been touting his own plan to balance the budget by 1982. James T. McIntyre, the director of the Office of Management and Budget, said it would be "practically impossible" to write an amendment flexible enough to cover economic emergencies. "There's no magic solution to the problem," he maintains. Nonetheless, Brown, who became a fiscal conservative the day after Californians approved Proposition 13 and its 57% slash in property taxes, can count on plenty of support. So far, 22 states have petitioned Congress to call a cons tional convention to consider such amendment and others are slated to low suit before long. It takes 34 state get such a convention—which woul the first since the Founding Fathers theirs in 1787.

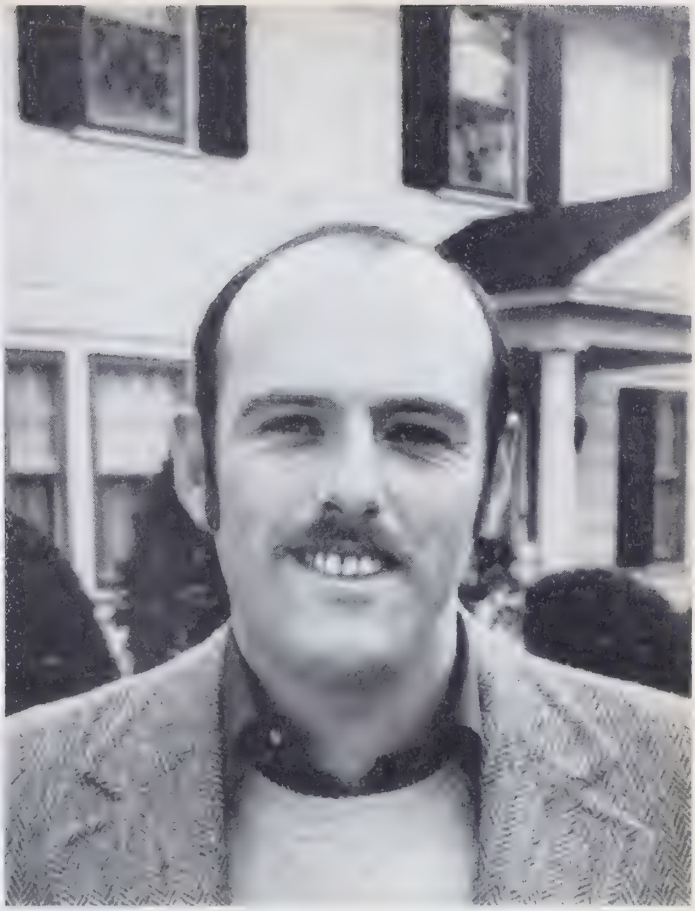
Perils of the press

Swashbuckling war correspondents not the only newsmen who walk in p at least in the Philippines. Teodor Valencia, that country's best-known umnist and one regarded as a lea spokesman for its president, Ferdinan Marcos, has advised businessmen are "harassed" by reporters to s them. Some newsmen, the *Manila Ex* columnist charged, were really "for business, trade or intelligence age and when they "intrude into private b ness and threaten business with adv publicity, they deserve some violent r tion." After one startled business re expressed incredulity, Valencia de any slip of the typewriter. "That's exa what I meant," he stated.

Goofy at the Games

In the midst of a typically French bro ha, France's athletes are scheduled take the field at the 1980 Olym Games in Moscow under the aegis o emphatically non-Gallic mascot—W Disney's Goofy, Mickey Mouse's clo ish canine sidekick, known to Fre

Goofy in Olympic regalia
Will la belle France be dishonored?



One of these homeowners is thrifty, safety conscious, and a sitting duck for financial disaster.

He doesn't even know it. He thinks he's done his est to protect his home and his possessions. He hasn't.

Many people, like the man on the left, believe they ave adequate homeowners insurance. But inflation as been pushing up the value of their homes. They on't update their coverage every year. So when disaster trikes, they are unable to fully recover their losses.

Rising replacement costs are one reason. In the ast 10 years the cost of re-siding a home jumped 132%, e-shingling a roof 155%; and repainting a living room 42%.[1] In the last five years alone, the cost of building a ew home has increased 63%.[2]

As a group of property and casualty insurance ompanies, we don't want you to be a sitting duck by not aving your insurance provide full protection for your ome. Check with your agent to be sure your home-wners policy reflects the amount of additional coverage nflation has made necessary.

lere's what we're doing to help protect you:

- Offering policies with a built-in inflation clause.
- Supporting strict building codes to reduce fire risk.
- Designing new coverages to meet the special insurance needs of older homes.
- Helping to develop safety standards which protect life and property.
- Operating special claims assistance and damage repair programs in times of catastrophe.
- Conducting fire prevention and arson control programs.

Here's what you can do to protect yourself:

- Re-evaluate your home insurance needs annually with your agent.
- Take a higher deductible if you can. It lowers your premiums.
- Install a smoke detector or burglar alarm. Many companies offer premium discounts for such devices.
- Get a receipt or appraisal for all major household items (furniture, antiques, jewelry, art). Duplicate it and keep it and all such records in a safety deposit box away from your home.
- Inventory all your possessions and take photos of each room to document what you have.

audiences as "Dingo." Although the should be lucrative—Disney is givin French National Olympic Comm half its 6% share of the take on t shirts and the 100 other items Goofy adorn—not all Frenchmen are enth A storm erupted in the Chamber of uties and in some French publica about the incongruity of using the ish, snaggle-toothed hound (Dis first contribution to the Games) to r sent *la belle France*. "A completely bitten American mascot will reall spire our champions," sneered one e rial. A Communist Party member o Chamber, posing a question for the ister of Youth and Sports, put an logical spin on the controversy by cl ing that in the U.S. Goofy "is seen symbol of success through money" thus is hardly compatible with Olympic spirit. Goofy/Dingo migh nonplussed by that far-out analogy though his late creator would prob grasp it instantly. Despite the uproa French Olympic Committee was val ly vowing to send Goofy to Moscow

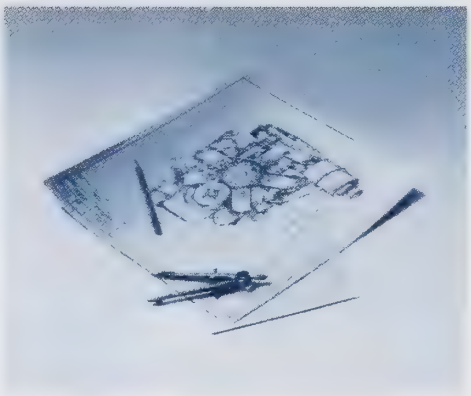
A doctor's dissent

The current campaign by public and vate health authorities urging an facing an operation to get a second s cal opinion beforehand is not ge unanimous endorsement from the m cal world. One dissenter is Dr. W. Stelmach of Kansas City, Mo., hea the American Academy of Family Ph cians. Get the second view, he says, not necessarily from a surgeon. "Pe definitely should take into considera that the business of surgeons is t surgery," Dr. Stelmach argues. "Cut is cutting and always traumatic. A surgical alternative should always be en a fair hearing."

Mutual money

Mutual fund managers are regarding year just past with mixed emotions. vid Silver, president of the Investm Company Institute, the industry's t association, calls 1978 the best yea history, with a net inflow of sales redemptions of $5.2 billion. Howe almost all the fresh money went into burgeoning "money market fun which invest in short-term paper Treasury bills and certificates of dep These had a net inflow of $6 bill Common stock funds were the lo with a net outflow of $2.5 billion. were disappointed," Silver says, poin out that the stock funds rose 31% value over the past three years, al 12% faster than the market generally

Phase 2: A 4.3-litre V8 diesel for mid-size passenger cars.



Only Oldsmobile now offers diesel V8s available in 19 different models.

Last year Oldsmobile introduced the world's first diesel V8 for full-size cars. This year we've introduced a new 4.3-litre diesel V8—especially for mid-size cars.

Only Oldsmobile now offers diesel V8s available in 19 different models—more than any other car line in the world.

Exceptional fuel economy. Now you can have the size car you want, with the fuel economy you need today. And you'll save money on every gallon based on the traditional price difference between diesel fuel and unleaded gasoline.

EPA mpg ratings—diesel V8

Models	Estimated mpg	Estimated Highway
C. Salons (4)	24	32
C. Supremes (3)	24	32
C. Cruisers (2)	22	29
Delta 88s (4)	21	29
Ninety-Eights (4)	21	29
Toronado (1)	21	29
Custom Cru. (1)	20	28

Remember: Compare this estimate to the "estimated mpg" of other cars. You may get different mileage depending on your speed, trip length and weather. Your actual highway mileage will probably be less than the estimated highway fuel economy.

Smooth and quiet performance. Diesels traditionally haven't been famous for smooth, quiet performance. But these V8-design diesels may surprise you. They're unusually smooth and quiet for diesels, especially at cruising speeds.

More miles per gallon...less cost per gallon...smooth, quiet performance. Too good to be true? Test-drive a diesel Olds today!

Oldsmobile

Have one built for you.

Follow-Through

The nonnewsstand Esquire

"What could Esquire without *Esquire* possibly be?" FORBES wondered 16 months ago *(Oct. 1, 1977)* when *New York* magazine ex-publisher Clay Felker and his angel, British oil and press lord Vere Harmsworth, purchased Esquire, Inc.'s *Esquire* magazine for $1.25 million. FORBES' answer: "a much healthier company."

Abe Blinder, the company's silver-haired, 69-year-old chairman, obviously knew what he was doing. Without the magazine (which most outsiders thought was the firm's only property), Blinder has spent over $10 million on acquisitions: a Palm Springs, Calif. TV station; an emergency lighting manufacturer and a producer of dimmer switches—the last two for Esquire's $34.8 million (revenues) lighting products division; and Belwin-Mills, the leading U.S. educational music publisher. The latter is a natural complement to the company's sensationally profitable educational division, which produces filmstrips and textbooks and will contribute an estimated 39% of Esquire, Inc.'s $85 million sales, 60% of its $5 million net in fiscal 1979.

In the 12 months ending this March, Esquire *sans Esquire* should clear $2.23 a share, nearly double the earnings of the prior 12 months. The stock climbed from a 1977 low of 8¼ to as high as 14¼, and Blinder has hiked the dividend thrice, to 50 cents. Another big winner on the stock's runup is Charles Bludhorn's Gulf & Western, which owns ("for investment only") 26% of Esquire's 2 million-plus shares.

"We're still on the move," Blinder says, "and we're looking for larger acquisitions, in the range of the $7 million we paid for Belwin-Mills." His target areas include education, lighting products, more California TV properties, specialized books—and, yes, magazines, to add to the company's robust *Gentlemen's Quarterly* (about 350,000 circulation). A definite nontarget: low-budget feature films, which Blinder cherished high hopes for a year ago but which produced only a dull thud.

"The sale of *Esquire* was a great emotional shock," Blinder says, "but in the last year and a half our progress has been so great as to compensate for that shock many times over."

End of an affair

His diamond ring flashing, the chairman of Dallas' Sam P. Wallace Co. told FORBES a year and a half ago *(Oct. 1, 1977)*: "With Ghaith Pharaon as a partner, we have more work than we can handle." Carl Wallace, grandson of the founder of the mechanical contracting firm—with enues then of $169 million from in ing plumbing, air-conditioning and trical systems—was rejoicing be Pharaon, a Saudi Arabian busines with strong links to his country's family, had bought more than 1 m of the company's 3 million sh 850,000 of them from Carl Wal brother Robert.

Pharaon, son of an economic ad to old King ibn Saud, founder of Arabia, owns a $1 billion develop firm in his own country, plus pa several construction-related U.S. co nies and two American banks. His

Report from GTE.

How these tiny glas computer at th

Is this the start of a major market? Optical fibers like these can even now carry the conversations of 2700 computers. Fiber cables have thousands of times the capacity of conventional cables of the same size.

ibers can let 2700 alk to each other same time.

hat's so important about that? Just this:
dinary telephone lines handle about 2400
" of computer talk a second. But computers
" to each other at 56,000 bits a second.
t enough computers together, all fighting
elephone time, and you could have a massive
c jam.
ere are several solutions to this. One of the
promising comes from glass technology.

er optics to the rescue.

etched very fine (five-thousandths of an
, a hair-like glass fiber can carry commu-
ions on a beam of light.
at light beam has extraordinary capacity.
ct, we have shown that one optical fiber can
more than 150,000,000 bits a second in one
tion. Two fibers would be able to handle the
ersations of 2700 computers at once.

er optics and GTE.

GTE, we have been involved with glass
s for communications for many years, both
e laboratory and in the field.

We were the first telephone company to install a fiber-optics system, using regular work crews, for regular telephone service. This installation, near Los Angeles, has been in continuous service for more than a year.

We are also installing two systems of different capacities in Belgium. When these two installations are brought to full operation, they will be able to carry over 173,000,000 bits a second.

And we are the first telephone company to field-test an all-data fiber-optics communications system.

It's only the beginning.

The real data log jam has not arrived yet. But, of all businesses, one of the fastest-growing is communications. And, within it, data communications is the fastest grower of all.

So GTE is working now, to prevent data paralysis in the future. We are trying to solve your data communications problems before they have a chance to become serious.

Fiber optics is one of the things we're doing.

Why is Cuesta-Rey #95 America's largest selling 60¢ cigar?

ANSWER:

- Made of all Natural Leaf tobacco
- Made of selected imported long leaf filler.
- Rolled with aged rare Cameroon English Market Selection Wrapper (ACW®)*
- Skillfully crafted in Tampa by cigar makers in the same tradition of quality since 1884.
- Hand packed with aged cedar in natural wood cabinets.
- Also hand packed in gold and black packets of 3 cigars with exclusive polyethylene liners to assure long lasting factory freshness.
- Choice of smokers who are accustomed to the taste and aroma of fine imported leaf.

Send for the special offer today so you too can soon enjoy the fine quality CUESTA-REY #95 cigar.

*African Cameroon Wrappers

60¢ each. Natural wood cabinet of 50—$27.00.† Cabinet of 25—$13.75.

Offered only by selected tobacconists

† Prices are approximate and subject to state and local taxes

Readers Say

Selective screams?

SIR: So another segment of U.S. Industry (international construction) cries foul over competition from foreign government/business duets *(Dec. 25)*. These U.S. firms are the first to scream against "big government" and for free enterprise when it comes to everything but their own interests.
—Douglass M. Domres
Brookline, Mass.

SIR: A sad footnote on the loss of international construction business by American firms is that the U.S. government has announced that certain foreign taxes typically imposed on American construction companies overseas will no longer be allowed to be credited against U.S. taxes on such income.

While, as you describe, other governments are offering tax breaks and tax holidays to their construction industries engaged in the international arena, the U.S. is now proposing double taxation of those profits.
—Maurice L. Mosier
President,
National Constructors Assn
Washington, D.C.

Methodists not to blame?

SIR: The lawyers for the United Methodist Church *("The Methodists and mammon," Dec. 25)* might well seek a judgment as to who is responsible for the unforeseen inflation which made those retirement community contracts undeliverable.
—Winston Trever, D.D.
Pacific Grove, Calif.

Wrong target

SIR: A group of South Carolina legislators has charged that "the rate of profit which the power companies in South Carolina [including Duke Power] are now making is unconscionable." This occurred while a rate increase is pending.

Incredibly, the cause of this reaction is your Jan. 8 Report on American Industry, the same report which ranked Duke Power Co. so low in profitability. The legislators selected a single statistic from your report—net profit margin—and used that to attack the utilities.

Net profit margin is not meaningful for electric utilities. [Among other things] it includes capitalized cost of funds for construction. Income from electric operations is a much lower figure than "net income" for a company like Duke, which has a large construction progr
—W.S. Lee
President,
Duke Power Co.
Charlotte, N.C.

Reader Lee makes a valid point. The important yardstick of a utility's finan health is its return on capital, and Duke's five-year average is substandard for a utility—ED.

Betting on Swiss franc

SIR: The low value of the U.S. dollar *absurd compliment to Switzerland," and Comment, Dec. 11)* is not due to Swiss nor any other country. This is tirely due to the U.S. itself. We balance our budgets; we print more m ey than we should; and we spend beyond our means.
—Traugott Rohner
Evanston, Ill

SIR: My bet is on the Swiss franc, spective of Malcolm S.' siren call.
—Larry F. Ferguson
Dallas, Tex.

Who's who

SIR: On page 54 of your story of West house *(Jan. 22)*, there is a picture man identified as Westinghouse Ch man Robert E. Kirby. The photo is n Kirby but rather of Westinghouse Chairman and Chief Operating Off Douglas D. Danforth.
—James Sheldon
New York, N.Y.

Reader Sheldon is correct—ED.

How to get on top of everything that's happening in risk management.

Get on the J&H computer network.

Tight insurance markets, surging premiums, and the cost of money have spurred senior executive interest in risk management.

However, some corporations are finding that the nearby office of the broker servicing their needs is totally dependent on some distant headquarters office for risk management analysis and direction.

Not at Johnson & Higgins. Our computer network can link any J&H office directly to our exclusive risk management software programs. These programs are invaluable support for our on-site risk management specialists, a combination that will help you reach sound and timely decisions.

For example, in a matter of minutes, J&H can compare a captive approach with a cash flow plan or self-insurance, or with a conventional cost-plus program. And if you wish, we can do it right in your own office.

J&H risk management sophistication. It's as close as your nearest J&H office. Why not call today?

Johnson & Higgins

The private insurance broker. We answer only to you.

A group of risk management specialists at a J&H computer network terminal: Richard E. Meyer, New York; L. John Goldberg, Philadelphia; James P. Lang, Los Angeles; and John E. Schroeder, Boston.

How do you build the first trade route from America to China?

Ask Chicago's Bank.

Ten new iron and steel complexes.
Eight new coal mines.
Ten new oil and gas fields.
Thirty new power stations.
Six new trunk railways.

That's only a small portion of China's eight year economic development plan. A plan that calls for the purchase of huge quantities of capital goods from abroad. The market potential is staggering.

Trouble is, up to now, trade with China has been fraught with delays, detours and dilemmas for U.S. companies. There was just no direct way to get there from here.

Things have changed.

In 1978, First Chicago established the first direct correspondent banking relationship between a U.S. owned bank and The Bank of China.

This special relationship gives you direct access to the enormous and virtually untapped Chinese market.

First Chicago can issue commercial letters of credit, make payments and collections, and handle the foreign exchange for your China transactions. With no third party involved.

To date we have 64 installations in 35 countries to expand your business world. Each one able to provide a broad spectrum of financial services. Besides fast processing for your foreign trade transactions, we can give you first hand knowledge of local business conditions and restrictions, help you locate customers, sources or partners for joint ventures. And we can provide local currency financing practically anywhere in the world.

China offers opportunity for businesses of all sizes. To put First Chicago's $21 billion financial force to work for you, call Gregory Tallas, Vice President, at (312) 732-8513.

In America, or anywhere else in the world, ask Chicago's Bank.

AND A THRIFTY SPECIAL ACCOUNT CAN SAVE YOU UP TO 48.7%. In order to "out-Thrifty" Thrifty, our major competitors would have to give you a discount of up to 48.7%. Maybe more. And our Special Account program gives your company a choice of ways to save. (1) With special low time and mileage rates, gasoline included. (2) With cost-cutting "dry" rates whereby you buy the gasoline and Thrifty throws in the first 100 miles per day.

We'll include $1 million combined single-limit BI/PD insurance in the bargain, plus collision protection with $100 deductible—as opposed to competition's $250 deductible.

We'll give you lots of extra Thrifty service, too. Like confirmed reservations on any size car, courtesy airport pickup and delivery and more.

And we'll provide it at nearly 400 destinations in all 50 States, Canada, Central America and Great Britain.

For details, send the coupon. We'll give it very special attention.

THE OFF-AIRPORT CAR RENTAL CENTERS.

ow to put five people to work comfortably where you now have four.

t them to work in the Westinghouse pen Office System.

The average traditional enclosed ice covers up to 120 square feet of floor ace. Which is about 20 more square t than most workers probably need.

Trouble is, you have to pay rent on se extra 20 square feet.

The average Westinghouse Open fice System work station covers only out 85 square feet. So it's smaller than raditional office. But it's just as mfortable.

That's because our work stations part of a system specifically designed fit *people* — and the work they have do.

So if your office is furnished with Westinghouse Open Office System, u can put more people in the same ace or the same number of people in s space than you have now.

How the Westinghouse Open Office System is helping one major company save 16 2/3% a year on rent.

A large Midwestern manufacturing company was about to lease six floors of a new building, until it discovered that with the Westinghouse Open Office System, it would only need five floors.

That saves 16 2/3% on rent each year. And because office workers like working in the new system, the company reports productivity has increased, too.

If these benefits interest you, we'd like a chance to explain the Westinghouse Open Office System to you in detail.

Write Westinghouse Architectural Systems Division, 4300 36th Street, S.E., Grand Rapids MI 49508. Or call toll-free **(800) 821-7700.** In Missouri (800) 892-7655. In Canada, call collect (416) 362-7796. In Geneva, Telex Westeast 27871.

Westinghouse ASD Open Office System

Making more people more productive in less space at lower cost.

The Mercedes-Benz 240 Diesel– is it the world's finest economy car, or is it the world's most economical fine car?

Best EPA mileage figures in its class, yet first-class finish inside and out. So frugal-minded that a manual shift is standard, yet so Mercedes-Benz that 4-wheel independent suspension, 4-wheel disc brakes, even a quartz-crystal chronometer are standard, too. The 240D may be hard to classify, but the following 12 sales points make its amazing worldwide success very easy to understand.

1. The 240 Diesel is the most *affordable* Mercedes-Benz sold in America, over $5,000 lower in price than the next model in the line. But no engineering corners cut; for your money, you get pure Mercedes-Benz.

2. Based on official used car prices over the past five years, Mercedes-Benz cars retain their value better than any fine car built in America. This includes the 240 Diesel.

You can buy or lease this car, warmed by the knowledge that Mercedes-Benz sedans over a three-year span have retained up to 80 percent of their value.

Estimated mpg: 30

3. The 240D's four-cylinder, 2.4-liter Diesel engine is a marvel of efficiency. It not only sips the cheapest automotive fuel you can buy, but sips it at the most miserly rate of any car in its EPA class.

The number: an estimated 30 mpg. This is the U.S. Environmental Protection Agency estimate for a 240D equipped with a 4-speed manual transmission. *Remember:* compare this estimate to the "estimated mpg" of other cars. You may get different mileage, depending on how fast you drive, weather conditions, and trip length.

To dramatize the benefit: you could actually think of tanking up in New York and driving the 233 miles to Washington, D.C. And back to New York again. And still have enough fuel left to ramble around town for a while.

The expenses that aren't there

4. As a Diesel, the 240D is designed to outflank many of those nickel-and-time repairs and adjustments that can bedevil a gasoline engine and drive its maintenance costs up.

Think of what you've spent over the years on carburetor adjustment, spark plug replacement, on points and distributors and condensers.

Then think about the 240D, which *has* no carburetor or spark plugs or points or distributor or condenser.

5. Like its engine, the 240D's body is designed and built with the long haul in mind.

Almost 80 pounds of the car's weight consists of anti-corrosion protection, including five coats of primer and paint.

None of the traditional Mercedes-Benz quality touches is skimped. *Examples:* the additional plasticized layer of primer, sprayed over the entire lower part of the body just to protect the paintwork from flying gravel; the special anti-corrosion wax, injected deep into body crevices.

The nuts & bolts that aren't there

6. On the intelligent theory that a well-made car is more likely to hold up in the long run, the 240D is built as a rigid, monocoque shell and welded at 4,786 points.

Body and frame are one. This helps save weight, which in turn can help save fuel. And monocoque construction also helps make the 240D notably strong and solid.

7. Unlike most fine cars today, the 240D doesn't force luxury extras on you. You can equip this car exactly as you want, from simple to sumptuous.

Mercedes-Benz thinks power-assisted steering and brakes are too vital in minimizing driver fatigue to be omitted. But air-conditioning, electric windows and other conveniences are up to you. Omit them if you insist on maximum fuel efficiency. Or order them as extra-cost options if you don't.

The 4-speed manual lives

8. The 240 Diesel is one of the very few cars in the "fine car" field that provides a 4-speed manual transmission as standard equipment.

The purpose is efficiency – less power lost between engine and rear wheels. And economy – lower initial cost.

If you don't choose to emphasize efficiency quite so much, a 4-speed automatic transmission is available at extra cost.

Tuned seat springs

9. Economy car or not, the 240D puts great stock in making you comfortable. The engineers think this helps make you more alert.

Those firmly upholstered front seats can be adjusted for height and fore-and-aft travel. You can angle the backs from near vertical to almost horizontal. Their springs are tuned to the suspension of the car – the aim, to help reduce fatiguing minor oscillations.

Lavish engineering, standard

10. The engineering expertise you admire in the costliest Mercedes-Benz models is not watered down in the 240 Diesel.

Carried over into the 240D is a fully independent suspension system, with zero-offset steering for straight-line stability in hard braking.

The shock absorbers are gas-pressurized to help muffle minor bumps, and four-wheel disc brakes are fitted as standard.

The costliest Mercedes-Benz models boast a central vacuum system that simultaneously locks or unlocks all four doors, the trunk lid and the fuel filler port with one twist of a key in the driver's door. And so does the 240 Diesel.

11. The 240 Diesel renders all its efficiencies and economies without depriving the driver of the performance needed for today's traffic conditions.

Last, but not least

12. The 240D comes equipped with no fewer than *120* built-in safety features.

This is precisely the number of safety features built into the costliest Mercedes-Benz models.

Engineered like no other car in the world

The Mercedes-Benz aim is doggedly single-minded. It is to build safe, comfortable, practical cars with as few imperfections as possible.

This philosophy puts engineering ahead of petty economies and precludes the mass production of inexpensive cars.

A Mercedes-Benz is engineered like no other car in the world.

Fact and Comment

By Malcolm S. Forbes, Editor-in-Chief

EVERYTHING'S NOT HUNKY-DORY IN RUSSIA EITHER

oo often too many Americans who should know better tend hink of Russia in exaggerated terms—monolithic, one ed voice, totally committed ideologically. Such nonsense seriously affect U.S. foreign policy, from SALT to irrational onses in other situations—Iran, the Middle East, Southeast , the African Horn, the Indian Ocean, ad infinitum.

Russia's as nervous about the outcome in Iran as we are. U.S.S.R. has a large Moslem minority, and it doesn't want e citizens ignited by renewed religious fervor.

The Russians are vastly more concerned—and with rea--over China than they are gleeful over their momentary ort with Ethiopia.

Anytime in the not-too-distant future in Poland or Rumaor again in Czechoslovakia peoples' revolutions could dump their U.S.S.R.-kowtowing Red regimes.

• Our inflationary problems come from too rapid economic growth. Russia's internal problems come from faltering agriculture and an inability to get at Siberian oil and minerals and get them to where they're usable or exportable.

• Except in missiles, their technology is woefully laggard. Illustrative of this: Factories can't preshrink clothing materials, because the relevant commissars would demand to know what happened to the yardage that "disappeared," why quotas weren't met.

We got problems.

All God's chillun got problems.

And the ungodly Red Russian government's got problems in spades.

NOW IS THE TIME TO BUY STOCKS

as we've been saying here for some time (including when they were selling higher than presently), and we get nearer to being right with every passing month.

RADICAL AMTRAK AMPUTATIONS

possibly now take place before endless, new, costly cash sfusions further drain our federal treasury sieve.

achieve Carter's federal-deficit goal of "only" $30 billion, nore painful cutbacks in spending are in prospect than this ff would be.

ending $billions to keep passenger trains running be-n prideful prairie towns and between suburban Toonerville was absurd from the beginning, and is now unaffordably so.

In recommending that now's the time for sensible decisive action on Amtrak, Dr. Frank Mulzey of Northeastern University, in a memorable piece of prose, pointed out: "It's also true that small towns are without subways, international airports or hospitals that can perform heart transplant operations."

WHICH REMINDS ME THAT THE PRESIDENT

t to be reminded that he's *not* powerless to knock the s off some of the "mandated" federal spending that *seems* rry legal limits to what he can put his hatchet to.

st as New York City discovered when hanging by its nails the bankruptcy cliff, there are plenty of ways, plenty of er, to chop spending when there ain't no more greenies able to spend.

me in Washington—and I honestly think this now in-es the President—realize that the dollar itself was nearly the brink, and is still at it.

To save our dollar and the Free World from economic catastrophe, we must bring our federal budget nearer to balance. We must bring our imports into balance with our exports. We must stop mandating "desirable" social objectives that skyrocket the price of everything and every service. We must simply stop printing money if the buck is not to go belly-up, and our freedoms with it.

The Administration should study what New York found possible to do when necessity dictated it, and do some of the same on the federal level.

HAVE YOU EVER HEARD OF A SHIP NAMED "THE MUNCHEN"?

In a time when everyone's intimately familiar with tragedies at sea—*Titanic, Lusitania, Morro Castle, Andrea Doria, Torrey Canyon*—you'd think we'd be aware of a very recent marine disaster that involves the largest single loss ever to have occurred at sea.

The Munchen, a six-year-old container ship, was last h of heading into a storm on Dec. 12 off the Azores. The was insured for $43 million, its cargo for $9 million. Witl crew of 28, the ship has simply totally disappeared. The eff on marine insurance will be a long time disappearing.

THE McGRAW IN McGRAW-HILL

is going great guns. Since Harold W. McGraw took the helm four years ago, its net income is up a towering 88% or more, with an average 17% yearly improvement. As one whose name, too, is the same as the company's, it's great to be able to applaud a nepot who's overcome his advantages.

Much as we don't like to acknowledge it, since this Mr. McGraw's headed McGraw-Hill, even *Business Week* has forged ahead in revenues.

Now let's not overdo things like *that*, Harold.

(Since I wrote the above editorial, it seems Am can Express has come to share the same view. T informal but formidable "bank" has lots of mor but much else is involved in a publishing busines the caliber of McGraw-Hill. I hope its stockhold opt for the independence of this great firm instead quick buck. . . . Now if we were trying the takeo my viewpoint might be a bit different of course.)

INVESTORS SELL TOO SOON

That's what the vice president of famed old British auction house Christie's told me in referring to those who set out to "invest" in art, antiques and artifacts of one sort or another.

"You need a collector's mentality if you are buying such things as investments. Those who approach their buying as investors sell too soon; they sell when they read or hear about a higher price for objects similar to theirs.

"A collector, one who buys because he really cares ab what he's collecting, keeps his things far longer, and far m often he turns out to make far more money from them."

Interesting point, don't you think, when so much is b made these days of art and antiques as investments.

READING SUGGESTIONS—WITH SAMPLINGS

Alice, Let's Eat—by Calvin Trillin

A super plum-pudding of a book, so rich in wit and words it's not to be devoured in one sitting. (Random House, $7.95)

Excerpts: *For a long time, I have had the suspicion that Alaska and Florida are providing each other's shorefront restaurants with bland frozen fish, in the way that some countries with cultural-exchange agreements provide each other with overly polite high school students. . . . One c we know who never seemed to go through any of the unfo nate phases is a friend of ours named Colette Rossant, wh dinner invitations I have always treated the way a savi and loan lobbyist might treat a note asking him to a sn poker game with Senate Banking Committee members.*

The Ann Landers Encyclopedia A to Z

With this engrossing, all-embracing volume, you will be able to do exactly what the subtitle suggests: "Improve your life Emotionally, Medically, Sexually, Socially, Spiritual (Doubleday, $17.50)

Fighters

photos by George Bennett, text by Pete Hamill

George Bennett's photographs pack the punches they depict, and Pete Hamill's pithfull paragraphs bring to this "sport" dimensions that most of us never knew it had. (A Doubleday Dolphin Book, $7.95)

Excerpt: *It doesn't matter what the gym is called. It is always on an upstairs floor, in a cheap loft in a bad neighborhood. And that first trip upstairs from the street has been described by many fighters as the longest journey of their lives.*

Eye of the Needle—by Ken Follett

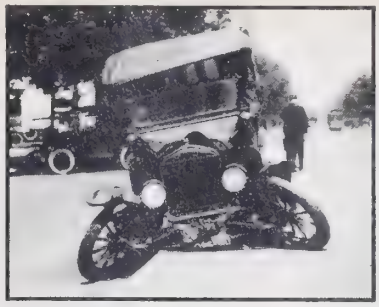
German superspy in World War II England. An unputdownable thriller. (Arbor House, $8.95)

Excerpt: *Her mother helped [Lucy] out of the wedding dress and said: "Now, my dear, I don't quite know what you're expecting tonight, but you ought to know—"*

"Oh mother, this is 1940, you know!" Her mother colo slightly. "Very well, dear," she said mildly. "But if there anything you want to talk about, later on . . ."

America's Yesterdays—by Oliver Jensen

liver Jensen is the nonpareil editor for king America's past a relevant and excit- part of its present. Under his tutelage, erican Heritage achieved its extraordi- success. In this volume of his discover- of mostly unexplored photographic de- ts, he's given his countrymen yet an- er treasure. (American Heritage lishing Co., $34.95)



xcerpt: *For all their odd hats, high collars, and impossi- clothes, these generations [from 1870 through the 1920s], young or old but now dust, seem as young or old and alive as we ourselves. To dig through the old boxes and turn the album pages, day after day in the library's stacks, is to pass through a ghostly door and begin to live among them. And coming out at closing time, past the guards and into bustling streets of the late twentieth century is like the shattering return of the time machine of H.G. Wells. Did it all happen? Did they all really exist?*

Russia in Revolution—by Harrison E. Salisbury

arrison Salisbury's story of Russia from Czar to Stalin is rbingly told, but the fusion of photos and art is even more natic. Together, a powerful combination that makes this k a compelling one. (Holt, Rinehart & Winston, $18.95)

xcerpt: *Sex equality was a plank in the Bolshevik plat- . But Lenin was a prude and fought women colleagues like Alexandra Kollontai who spoke for a woman's right to choose her sexual partners as she pleased on the theory that love was "just a glass of water." Lenin did not believe in free love. Nonetheless one of the most effective propaganda claims against his regime was the contention that the Bolsheviks had "nationalized women."*

LIVING WITHOUT LAUGHING isn't living.

IS THERE ANYTHING SADDER than a laugh that's bitter?

THE TRADITIONAL WAYS AREN'T ENOUGH

By M.S. Forbes Jr.

The labor strife that is now threat- ening Britain's anti-inflation program not to mention the incumbent La- bour government) provides a useful lesson to America's own inflation fighters.

For three years, Britain has had an informal incomes policy somewhat akin to President Carter's wage and price guidelines. Until recently, over- all compliance was rather good.

Britain has also followed the ortho- dox anti-inflation program in other ways. The rapid growth in government spending and in the creation of money was slowed. The balance of payments was markedly improved. Foreign debt was restructured and reduced.

Result: Inflation was chopped from an annual rate of 25% to less than 9%.

But Britain's economic prospects are not healthy. Real growth has been— and will be—anything but robust. Cap- tal investment remains sluggish. And now all those painfully wrought gains against inflation are threatened.

The lesson here is that it isn't enough to fight inflation by the tradi- tional methods alone.

The real cure for inflation is healthy economic growth, and you are not going to achieve that if taxes are too high. The signal that the tax burden in Britain (as well as in the U.S.) is too heavy is the rise of the cash or "sub- terranean" economy. The British have lowered tax rates in recent years, but those cuts were insignificant.

Unfortunately in Britain, as in Wash- ington, paring income levies across the board is regarded as "inflationary." Our economic Pooh-Bahs have yet to recog- nize that general income tax cuts which match or exceed the rate of inflation would stimulate production and savings, as well as demand.

Unless new tax cuts are enacted this year or next, the President's pro- gram to cure our economic woes will ultimately fail.

A BAD PROPOSAL

California Governor Jerry Brown has endorsed the idea of a constitu- tional amendment to force Washing- ton to balance the federal budget. Such a call may be good politics in the post-Proposition 13 era, but no one should take the idea seriously.

One of the beauties of the Constitu- tion is its brevity. There is no need to clutter it with stuff like this. If people really want a balanced budget, Con- gress can give it to them under exist- ing law.

Anyway, is it wise to put ourselves in such a fiscal straitjacket? Should we have sharply reduced our efforts to fight Germany and Japan during World War II in order to balance our books? Is a balanced budget the best way to fight a recession or depres- sion? (That's what Hoover thought.)

Such an amendment would also have to tackle the question of exactly what constitutes federal spending. Congress already extensively uses loan guarantees, an indirect form of spending (or more accurately, of cap- ital allocation). The government also forces considerable spending through issuance of rules and regulations, and these outlays don't show up in the budget either.

And what about independent federal agencies, such as the Federal Home Loan Bank Board, that tap the finan- cial markets but whose activities are not reflected in the budget? This year the borrowings of these agencies will be two-thirds that of the federal gov- ernment itself.

Then there is the question of how a projected deficit would be financed. For instance, raising federal taxes from their currently too high levels would burden the economy even more, thereby guaranteeing bigger deficit problems in the future.

The end result of a Brown-like amendment would be a scramble to find loopholes that would cheapen the Constitution and reduce the respect for law in the way the 18th amend- ment and Prohibition did several de- cades ago. If Brown ever does make it to the White House, let us hope he treats this idea the way Carter did his vow to cut defense spending.

Other Comments

Often comments by others stimulate, irritate, abuse or amuse this editor's mind.—MSF

Early Death

Averell Harriman, 87, was in Moscow to visit the gravesite of former Soviet President Mikoyan, his old friend and rival, who died at the age of 82. "It was a great shock and disappointment to hear of his early death," said Harriman.

Red Railroading

Are you aware that the government could buy an airline ticket for every Amtrak passenger traveling between Chicago and Miami—simply give them free rides on an airline—and that this would cost less than the money the government pours into subsidizing Amtrak between Chicago and Miami?

—Frank Borman, chairman, Eastern Air Lines, *Nation's Business*

On Abandoning "Democratic" Taiwan

I am a graduate student who recently returned from 14 months study in Taiwan. I am surprised at the omission, in all the discussions of portentous consequences to Taiwan [of the U.S. decision to recognize Peking], of any analysis in the press of President Chiang Ching-kuo's decision to cancel the Dec. 22 provincial and national government elections in order to "avoid unrest." This election would have been unique in the history of the Republic of China, promising increased liberalization and political diversity in a government much too dominated by the ruling Kuomintang. The KMT has long suppressed all political opposition, citing the need for "unity to fight the Communist bandits."

Taiwan is economically very stable and prosperous and in a good position to begin rectifying its untenable international situation. Under the current government public discussion of the question warrants a life prison term. Rapid industrialization has also brought problems of social disruption and uneven distribution of wealth. Yet unions and strikes remain illegal.

Candidates such as Chen Ku-ying, former National Taiwan University professor (fired for protesting government policy in 1971); Huang Tien-fu and Chen Wan-chen, former reporters for the *Taiwan Times* (a widely read daily paper which the KMT purchased from its editors recently on condition that these and other reporters be fired); the very popular writers Wang Tuo and Yang Ching-chu, whose stories are about current social issues and the conditions of workers in Taiwan (the former's books have been suppressed), and many others were committed to liberalizing the government from within. Candidates such as these won resoundingly during last November's elections despite widespread evidence of Kuomintang harassment and vote fraud.

It is extremely ironic that cries in the U.S. of abandoning "democratic Taiwan" in favor of "Communist China" should coincide with what all Taiwanese surely see as just the most recent example of the Kuomintang's thinly veiled maneuvers to maintain its dictatorial control.

—Deborah S. Davison, Woodbridge, Conn., in a letter to the editor of *The New York Times*

Deathbed Question & Answer

On her deathbed Gertrude Stein was asked, "What is the answer?"—to which she replied, sensibly enough, "What is the question?"

—William McPherson, *Washington Post*

Cost-Consciousless Senate

The Senate has decided not to stop construction on its new nine-story office building, overriding protests by some members that the project is overly ostentatious and self-indulgent. After due deliberation, the majority decided that there is nothing out of the ordinary in a nine-story building to house only 50 senators, or the 16-foot-high ceilings, or the two bathrooms for each office, or the rooftop restaurant for exclusive Senate use, or the marble atrium, or the gym sium, or the indoor tennis court, And the price tag, which has escalate $135 million from the original 1974 mate of $48 million, still sounds rea able, too.

GM

nerican businessmen would be wise not to pect too much soon from trade with China.

The China trade: a note of caution

By Norman Pearlstine and Flora S.H. Ling

RAN AND CHINA are far apart politically, economically and culturally, but the problems that brought down the n are not so different from those that new leadership of China faces in the s ahead. In a sense it was *hubris* that ed the Shah's rule—an overweening idence in his ability to transform a on overnight. In exile the Shah will ler what he realized too late: that bers in a five-year or ten-year plan easily be manipulated; human beings not be so easily.

he new leadership in Peking hopes to sform a talented but desperately poor ntry into a superpower by the turn of century. If it goes too slowly, it risks ly keeping up with population th. If it goes too fast, it risks stirring ense forces that could bring it down. ter years of self-imposed isolation, na's present ruling group has taken a r risk. It has finally opened its doors he U.S., Japan and Europe. Hardly a passes without the announcement of ultibillion-dollar trade agreement, a on-dollar steel mill, a massive min- project or some other project involv- China and the outside world. In the year China has agreed to import t and equipment worth more than billion from Japan and the West. 's more than nine times the level ed to between 1972 and 1977. In the year alone executives from hundreds merican firms traveled to China; and he weeks since Sino-U.S. diplomatic ions were normalized, the U.S. Commerce Department has been receiving about 250 calls a day from persons wanting to do business there.

Chinese Vice Premier Teng Hsiao-ping
A preference for cats that catch mice.

Back in the 19th century English cotton spinners thought they could get rich if only they could convince the Chinese masses to lengthen their shirttails by just one inch. Today it's not much different. "Any nation of over 950 million people growing at the rate of 18 million individuals a year is a tremendous market," enthuses Chairman Donald Regan of Merrill Lynch, following a recent visit to Peking. But before charging off to sell the Chinese stocks, bonds or whatever, American businessmen would be wise to hold onto their own shirttails for a while. Although the pronouncements from Peking reek of conviction, there's a lot to suggest that the China boom could soon become a China bubble.

Politically what is going on in China is of tremendous importance. It creates, moreover, significant opportunities for some American firms—especially those about to export high-technology items such as computers, aircraft, oil-drilling and mining equipment, agricultural equipment and entire plants, not to mention commodities. China's post-Mao leadership seeks to make the nation an economic and military superpower by the year 2000 and is intent on creating a solid economic base by 1985. To that end Chinese Chairman Hua Kuo-feng, in an address to the National People's Congress last March, detailed plans for modernizing the country's agriculture, industry, national defense and science and technology.

The leadership goals are ambitious. Among other things China wants to increase agricultural production by 4% to 5% a year between now and 1985; to increase industrial output by at least 10% a year; and to double steel production from its present level to 60 million tons a year by 1985. Overall, 120 major projects, including 10 steel plants, 9 nonferrous metal complexes, 10 oil and gas fields, 30 power stations, 6 new railways, 5 harbors and 8 coal mines, are to be under way or completed by then. "Over the next five to eight years, China is going to look like one huge construction site," says Arne J. de Keijzer, a New York-based consultant on China trade.

To meet these goals China says it expects to spend a staggering $600 billion, or $75 billion a year, between now and 1985. The National Council for U.S.-China Trade estimates "conservatively" that $43 billion will be spent on foreign technology between now and then. If China indeed spends that $600 billion, Nai Ruenn Chen, a China analyst with the Commerce Department's East-West trade bureau, figures total imports will grow by at least 15% a year and will total at least $140 billion between 1978 and 1985. Between $70 billion and $85 billion will be capital goods. He further estimates that China's exports will grow between 10% and 12% a year and will total between $114 billion and $123 billion during the eight-year period. The resulting trade gap will have to be filled by tourism, overseas remittances and heavy borrowing from American and other foreign banks, he suggests.

But all this is mere number-shuffling. Achieving these goals on a human level will require superhuman discipline and lots of luck. The risks, too, are tremendous. The exposure to the freedoms of the West, the glimmers of hope for a better life, the tremendous churning of

people—all will put strains on a society that has been tightly controlled. All this *could* lead to the downfall of the present ruling group. It was not—after all—his authoritarianism that brought down the Shah, but the social turmoil brought on by rapid industrialization.

The principal architect of China's growth plans is Teng Hsiao-ping, a twice-purged, 74-year-old pragmatist who sidesteps many of Mao Tse-tung's most cherished ideals. "It doesn't matter whether the cat is black or white, so long as it catches mice," says Teng. To that end, he has espoused material incentives, the export of natural resources and the reintroduction of an elitist system of education and promotion in the bureaucracy, the factories and on the farms.

Not everyone in China, however, shares Teng's views. It was less than three years ago that Teng and his views were in disgrace. Nor is this the first time that China has looked abroad for assistance in modernizing its economy. When past efforts have failed, they have been followed by increased repression and xenophobia. Most recently, in the early 1970s, the Chinese tried to expand foreign trade and outside involvement only to be hit by the worldwide recession in 1974. Almost immediately all but a few negotiations for plant imports were terminated, and China pulled back into itself. About half the Chinese Politburo, including Chairman Hua, came to power during the period when Teng's pragmatic policies were out of favor. Teng has tried to assure continuity for his policies by negotiating long-term trade agreements with Japan and the West. But should he die, or should his policies fail any time soon, his opponents would be quick to try to close China's doors to the outside as fast as Teng opened them.

Can China make it? At the macro level, a plausible case can be made for saying yes. After all, the country, which is slightly larger than the U.S., has abundant, largely untapped, natural resources. Its proud, nationalistic people seem to be disciplined and hard-working and, at least for now, they seem to support the government's goals and the prescribed means for achieving them. China has little foreign debt—about $2 billion—and despite a relatively low level of foreign exchange—about $5 billion—American, Japanese and European bankers are salivating at the chance to lend it as much money as it wants.

But as is so often true with macro estimates, China's goals for 1985—especially for agriculture and oil exports—look less attainable when analyzed piece by piece. China cannot meet its goals unless it can make rapid progress on all fronts at once. But its infrastructure is hardly able to accommodate the present low level of industrialization. Recent visitors to the massive Wuhan Iron and Steel Works report, for example, that a severe shortage of electricity has kept modern additions to the plant from operating anywhere near capacity. Similar stories abound from other plant sites throughout the country.

Chinese goods being readied for export

A solid economic base by 1985? A superpower by the year 2000?

Foreigners and the Chinese themselves seem to suffer from a serious lack of information about the country's economy. Bureaucrats are hard-pressed to do more than guess about such basic things as the size of China's population—estimates range from about 900 million to more than 1 billion—and without such information, rational planning is very difficult. What is known is that despite its grandiose plans, China remains a very poor country. Its gross national product is less than that of France—which has about 5% of China's population. Its per-capita income is only one-third as great as Taiwan's. Despite a reduction in population growth to about 1.5% a year from earlier levels of 2.8%, annual population increases can often wipe out any increases in the production of gr

Agriculture then is not only the ke China's growth plans but is also the tor where success is most difficult achieve. It is often forgotten that ab 80% of China's population is still on farm and that most farming is still v primitive. Experts today mostly a that you cannot have balanced econo development without an agricultural plus sufficient to feed a growing arm industrial workers; witness Russia's perpetual labor shortages. Develop economies cannot afford to import b machinery *and* food.

China wants to produce 400 mil tons of grain a year by 1985, up 4 from 1977 production. To do so, how er, annual production must rise by ab 4.5%—a very ambitious target consi ing that grain production increased only 2.8% a year between 1949 and 1 and by 2.4% a year in the 1970-76 per China claims 1978 grain production 3.5% above 1977 levels, but that's marily because production decreased 1977. In the meantime, China is imp ing more than $1 billion a year of gr using foreign exchange which might erwise help pay for industrial devel ment. "If results fall considerably sh of China's goals for agriculture, say recent U.S. Commerce Department port, the outlook for China's efforts modernize its economy "will be dim.

If agriculture is the key to dome development, then oil is the key to ports. But a close look at China's production indicates it is unlikely to come a major exporter of crude any t soon. Chairman Hua has said that Ch wants to develop ten oil and gas fie the size of its prime Taching field. A lysts say Taching yielded 43 million m ric tons of oil in 1976, suggesting that Chinese want to be producing about million metric tons annually, or abou million barrels a day, by 1985. Many U oilmen think China will be lucky if it reach that level of production by 19 Although China's oil reserves have b compared to those of Kuwait or Sa Arabia, they are really more like thos the U.S.—spread out across the coun in many different fields, some of wh are very difficult to explore. The m promising areas are offshore, but ma of them are in waters that are a claimed by China's neighbors. In a case, it will take many years and a lo money to develop its offshore reserve

China hasn't indicated how much it intends to export, perhaps because doesn't know how much will be left at meeting the country's increasing dom tic needs. But there are tradeoffs her as Mexico realizes (FORBES, *Jan. 22*). T faster you develop domestic industry, more oil you will need at home; by same token, a higher level of oil exp means less energy for domestic u

eover, while China's oil production by more than 20% a year between and 1975, it has recently been ing at only 10% to 12% a year. rt W. Scott, who edits the authorita trade magazine *World Oil* and who tly led a group of U.S. oilmen to a, says that "producing areas cur y responsible for perhaps two-thirds China's oil output—Taching and gli—appear to be approaching ma stages of life. Both already produce derable volumes of water, geology is lex and individual reservoirs are in ed to be relatively small."

sides its agriculture and oil prob China is also plagued by a shortage ined managers and scientists. With hem China may not be able to ab the foreign technology it seeks to ase or the funds it wants to borrow. to push the analogy too far, Iran, with a similar problem, brought in of thousands of foreign technicians, n turn led to domestic resentment n helped destroy the Shah's rule. tists and would-be scientists were r banished to agricultural com s or denied higher education during Cultural Revolution of the 1960s. a is trying to remedy this shortage nding thousands of students abroad, will be many years before they are to take charge of major projects. In neantime, the country is finding it to get some of the scientists who shunned in the 1960s to return to boratories. According to a report in espected Chinese publication, thou of scientists now holding menial don't want to return to their old either because they fear criticism local officials or because they are ed that another change in political ol could open the door to renewed sment of intellectuals.

ose U.S. firms that do have a ce to sign major deals may still find rd to do business, despite the Chi desire for more trade. Although the ese are agreeing to some deals— ding recent transactions involving s, a steel mill and some oil rigs— quickly than usual, many traders complain that most negotiations n arduous and that terms are still Firms boasting advanced technolo ay also express some concern that a has no patent law. Other traders lain that standard Chinese pur contracts include penalty clauses te shipment while standard Chi *sales* contracts contain no such es. The Chinese further insist on inspection of purchases *and* sales. *force majeure* usually includes of God," strikes or government vention, it doesn't when selling to a. The Chinese also try to avoid ation whenever possible, prefer nstead to settle any disagreements by means of "friendly discussions."

Teng Hsiao-ping's visit to America, scheduled to begin in late January, and follow-up visits by Treasury Secretary Blumenthal and Commerce Secretary Kreps may solve certain technical problems. Among these is the dispute over sequestered Chinese assets in the U.S. and sequestered U.S. assets in China—both dating back to the Chinese intervention in the Korean War. As long as this dispute is not settled, U.S. claimants can threaten to attach Chinese ships or airplanes and block Chinese trade shows. Yet other problems are China's lack of most-favored-nation status, its inability to get Export-Import Bank credits and the Pentagon's refusal to let the American firms sell weapons directly to China. The U.S. and China are likely to sign a bilateral trade agreement and to settle many of these problems during 1979.

Even if these matters are cleared up, however, increases in trade between the U.S. and China may be more gradual than many businessmen expect. Walter Hoadley, the Bank of America's chief economist, notes, for example, that the Chinese want many of the same goods that other trading partners are seeking—and in some cases these goods are in short supply. "We're already sold out in electronics, high technology, aerospace," he asserts. While "the potential for trade with China is enormous," it may take years to iron out problems and arrange financing, he adds. Don't be dazzled, either, by the announcement that Coca-Cola will soon be for sale in China; that deal was made chiefly for its publicity value, and the soft drink will mainly be sold to those foreign tourists the Chinese hope to attract. Although Pierre Cardin has been named a fashion coordinator for China, those consumer shirttails aren't likely to get longer any time soon.

In dealing with China, it is well to remember the old saw: There are no real China experts, only varying degrees of ignorance. To put it another way: Almost anything can happen in China—and probably will. ■

Polaroid and Kodak are slugging it out in instant photography, and—surprise—both of them seem to be winning. Meanwhile, back in 35mm territory. . . .

Bedlam in photoland

By James O'Hanlon

IN THE NEARLY $10 billion U.S. photography business it was billed as the fight of the century between two famous champs, and the crowd has been on its feet since the introductions. Quite a match. Heavyweight Eastman Kodak Co. (revenues: $6.8 billion) taking on nonpareil Polaroid Corp. (revenues: $1.4 billion).

At the bell two years ago Kodak moved to the center of the ring with its mass-marketed instant camera, The Handle, retailing at a low $40, while Polaroid stabbed away with its SX-70 standard-bearer, the Pronto!, at a much higher price. In round two Polaroid came out with its $40 OneStep, before Kodak dropped a nifty $6 rebate into the champ's gut and the two contestants wound up mixing it in nonstop action with prices falling as low as $20 for some older-type Polaroids.

The wise guys in the expensive chairs and the press boys marveled at the action. A lot of them were conceding Kodak points for sharper pictures, but Polaroid was hitting hard on prime-time TV, spending $8 million on those crowd-pleasing James Garner ads, and Kodak was stunned by reports that its instant pictures faded in sunlight.

By the end of 1978, both contestants were looking stronger than ever. Cambridge, Mass.-based Polaroid now has only 65% of the instant camera market instead of 100%, but in two years it has increased shipments from 6.3 million units a year to nearly 10 million. Be-

tween them, according to estimates by Merrill Lynch analyst Brenda Lee Landry, Kodak and Polaroid have raised the overall annual market for instant cameras from 7.4 million units to about 15 million since the end of 1976. That would put today's instant photography market (including film) at $1.7 billion, more than double its size in 1975.

Even without knocking Polaroid out of the ring, as a lot of people assumed it would, Kodak has cut itself out a 35% share of an expanding market and will begin to profit from its instant project early in 1979 after losing about 50 cents a share on it just two years ago. In fact, the Rochester, N.Y. giant is looking good again, thanks to an upswing in almost all facets of the photography business. With estimated earnings of $850 million, or $5.25 per share, on $6.8 billion sales expected for 1978, Kodak has moved out of the doldrums that caused five years of flat earnings, culminating in $3.99 per share on sales of $6 billion in 1977.

Polaroid, meanwhile, spent a good part of last year allocating tight supplies of its instant cameras to dealers. Still, it wound up the year with an estimated 40% earnings increase to $3.90 per share on sales of close to $1.4 billion, up from $1.1 billion in 1977.

How long can the tremendous growth in the U.S. instant camera market continue? Some analysts expect a peak this year, but 45% of all still cameras sold to amateurs here last year were instants—up from 25% in 1975—and many see no end in sight yet. Kodak pins the boom on the postwar baby bubble moving into the 25-to-40 family-forming age. Both companies seem to have Polaroid's well-spent $34 million U.S. ad budget going for them; Kodak has dropped the agency doing its instant network ads, probably because they seemed decidedly ineffective next to Polaroid's. One theory is that customers stimulated by Polaroid's ads went shopping for the frequently out-of-stock OneStep and got steered by savvy salesmen to Kodak's Handle. Says Kodak's general manager for consumer marketing, John R. Robertson: "The ruboff obviously works both ways."

Kodak's latest instant, Colorburst 300
Challenging Polaroid's OneStep.

A Fotomat film processing drive-in on a Manhattan street
Waiting for further developments now that U.S. amateurs are going 35mm.

For all the ambiguities of the instant camera war/boom there have been some clear-cut winners and losers on the edge of the fray. Growth of conventional cameras was surprisingly strong at about 10%, but most of it has gone to expensive 35mm single-lens reflex cameras instead of the much cheaper Instamatic-type 110 cameras. In two years, sales of Japanese-made, fully automated 35mm cameras have doubled, bringing shipments here from Japan to an estimated 2.4 million units and making the U.S. the world's biggest 35mm market—up from third best (after Europe and Japan) just two years ago.

The leading domestic 35mm manufacturer-marketer is Canon Inc., a $1 billion Japanese manufacturer of calculators and photography equipment that gets 67% of its U.S. sales from cameras. Canon was behind Minolta, Olympus and Pentax, all Japanese, four years ago, but spent its way to the top for its quality cameras through an expensive prime-time TV campaign here. With engaging Australian tennis ace John Newcombe explaining to a complex-camera-shy American public how easy 35mm picture-taking had become, thanks to automatic features, the Canon AE-1, according to one survey, was requested by over 50% of 35mm, single lens reflex shoppers by the end of 1977.

The AE-1 lists for about $450 but usually sells for only $279 in large metropolitan areas—only a 10% margin for the dealers. But, says one industry execut "The stores make their profit on ac sories like $150 wide-angle lenses, t photo lenses and gadget bags."

Of course, any boom in 35mm pho raphy is also a boon to the omnipres Kodak, which makes the film and sh its processing, along with the proces of 110 Instamatic-type film, the big segment of the market, with indep dents like Fotomat Corp. With so m activity there's got to be at least one guy. Sure enough, there is Fotomat (e mated 1978 sales: $197 million) some hapless beer hawker getting c bered in a balcony brawl. After grow rapidly through the Seventies Foto came to a virtual profit standstill in 1 when its net income leveled out (des 18% higher revenues) at $9.9 million $1.18 per share. The minimum wage crease raised its costs for the part-tim who run its drive-in kiosks, and it run into tough recent competition f discount chains like K mart and W green. The low-overhead discounters taking 110 processing prices to dep where Fotomat can't profitably follow

That leaves the public's romance w instant photography and 35mm cam as the only problem that Fotomat mi be able to correct. Says CEO Richard Irwin: "We've emphasized Instam finishing for so long in our advertis and marketing that the guy tak 35mm pictures doesn't think of us our service." So Irwin is starting a n keting program including spot TV ad convince the U.S. public, which too billion pictures last year. With 3,500 lets, Fotomat ought to be able to g better chunk of that market. Just in that doesn't help, Fotomat will soon s to peddle prerecorded videotape settes for that growing army of videot recorder users. ■

eing will be sharing a lot of wealth over the xt decade. It will be sharing more often h small companies than with large ones.

The Boeing bonanza

By John Merwin

ED SCHRADER, machine shop supervisor in Newbury Park, Calif., says until last year he and his wife had struggling financially, not unusual iddle-class Americans. But all of hanged in 1978. Schrader's employ- 5 years, the Talley Corp., suddenly wamped with orders from its aero- customers, especially from the g Co. Talley's backlog rose $1 mil- week in November. At year's end, od at $18 million, nearly double it had been 18 months before. ent Jim Talley says his family any's backlog will hit $25 million inter, and sales, which gained 40% ear, should increase about 30% for l more years.

nwhile Schrader is working 50 hours a week and last year picked up an extra $8,000 in overtime. He finally managed to purchase new furniture and carpeting for his two-bedroom condo in Port Hueneme, Calif. This year Schrader, 35, say he will deposit his overtime earnings in a now sizable savings account—"something I've never had before."

Schrader and Talley are two small examples of a million aerospace workers and hundreds of U.S. aerospace companies, large and small, being swept along by a financial tide rolling forth from Seattle's Boeing Co. Last year Boeing announced orders for 490 commercial jets valued at more than $11 billion, easily smashing the 1965 record of 418.

Boeing's prosperity is particularly apparent on the West Coast, home to an estimated 42% of America's aerospace workers. In the Seattle area alone Boeing's employment will reach 75,000 by late this year, up from 52,600 at year-end 1977. However, the real bonanza isn't so much with Boeing as it is with its subcontractors. Although Boeing coordinates, designs and assembles the 747 aircraft in its Everett, Wash. facilities, only two major structural parts, the nose and the wings, are produced by Boeing itself. Boeing buys most of its 747 components, perhaps $25 million for each aircraft, from 1,500 major subcontractors and thousands more minor ones from Boston to San Diego. Purchases include big-ticket items such as the $3 million main fuselage section, produced by California's Northrop Corp., and relatively inexpensive items, such as the 2.4 million rivets and bolts that hold a 747 together. In between are thousands of items, including landing gears, navigational equipment, lightning rods—even the 747's $30,000 worth of restrooms.

For the next several years Boeing's 747 jumbo jet sales ($4 billion last year) will give the principal lift to the Boeing bonanza. (Profits from subcontracts on the 177-passenger 757 program and the 208-passenger 767 program won't appear for several years, but many of the traditional Boeing subcontractors will be involved.) Not only is the dollar volume of 747 subcontracts enormous, the quality of the business is excellent. Most subcontractors have been stamping out 747 parts for years. Thus their design and engineering costs are behind them. Tooling expenses are minimal.

In sheer dollars, the largest 747 American subcontractors are corporate giants such as Rockwell, LTV, United Technologies and Northrop. Boeing's business represents a relatively small part of these companies' bottom lines. The Vought Corp. subsidiary of LTV, for instance, produces a $1.1 million tail section for Boeing. But Vought has been contributing only 10% of LTV's sales and will contribute even less now that LTV has merged with Lykes Corp.

Smaller, less diverse companies will benefit more dramatically from the 747 orders. But which ones?

Two such companies are Rohr Industries, Inc. and Aeronca Inc. Rohr, located in the San Diego area, manufactures the engine pods and struts which cover the 747's engines and attach them to the aircraft's wings. Currently 37% of Rohr's sales are going to Boeing. In the year ended Oct. 29, 1978 Rohr's backlog rose 38% to $511 million before Boeing announced its intention to give Rohr a $218 million order. Rohr doesn't know if Boeing intends to use Rohr pods and struts on the 757 or 767, due to roll off assembly lines in three or four years. If Boeing doesn't choose to produce them itself, Rohr is the likely winner.

Aeronca Inc., a moderate-sized aerospace company, is about as dependent on

Boeing as any subcontractor around. In good times that means skyrocketing sales and earnings for Aeronca. Aeronca Executive Vice President and Treasurer J.L. Miller estimates as much as 40% of the company's sales this year (engine and wing parts manufactured in Middletown, Ohio) will wind up in the 747. Last June Boeing placed a $42.5 million order with Aeronca, doubling the company's backlog and leading Crowell Weedon's John Simon to estimate 1979 earnings at $1.50 per share, including a 75-cent tax-loss carryforward. But the company's future with Boeing beyond the 747 is unclear. Already a Japanese consortium is slated to produce wing ribs for the 767, one of Aeronca's three major 747 products. Like most other potential subcontractors, Aeronca hasn't received word on its other 757 or 767 propos

One of the most impressive share the Boeing bonanza is going to Pneu Corp., owner of Cleveland Pneum Co., one of the country's largest land gear manufacturers. Pneumo had a v poor 1978—company officials estim $2.20 per share compared with 19 $3.30. But since last February its back has risen from $360 million to over $ million. Unlike Aeronca, moreo Pneumo recently received a Boeing order, and it's a beaut—for 300 set landing gears thought to be worth v over $1 billion spread between 1980 1985. Donaldson, Lufkin & Jenrette a lyst Lloyd Kanev believes Pneumo's will more than double in two years $4.75 a share. Pneumo Chairman Ge A. Fulham says one of Pneumo's p lems right now is finding enough ski workers in Cleveland to produce landing gears.

The most common item bought Boeing is a "fastener," a bolt or a ri Boeing buys specialized fasteners fr many different producers, but the most likely to benefit significantly fr Boeing's 1978 surge of orders are Corp., based in the Los Angeles area, Hi-Shear Industries, headquartered Long Island. About 30% of VSI's sales aerospace-related, with Boeing bein major customer. By Sept. 30, 1978, V aerospace backlog had tripled over previous year's total. Hi-Shear's a space backlog rose 50% during the months ending Nov. 30, 1978, and e ings have risen sharply since mid-197

About 20% of a Boeing aircraft's p is in the engines, which generally manufactured by United Technolog Pratt & Whitney Aircraft or by the craft Engine group of General Elect Neither United Technologies nor GE be sharply affected by Boeing alone, smaller companies selling engine part Pratt & Whitney or GE will.

One of the most important eng parts suppliers is Wyman-Gordon C Worcester, Mass. producer of forged gine parts. Wyman-Gordon's comm cial transportation division backlog g 34% this summer, before Boeing ceived many of the big orders. Precis Castparts Corp. of Portland, Ore. c jet engine parts and sells a large shar them to both Pratt & Whitney and The company's backlog grew 76% du the eight months ending last Novem Last summer Precision's work f grew so rapidly that margins drop nearly in half and earnings dipped sh ly. "Our new people are becoming be trained and we've added more spa says Chairman E.H. Cooley. "Precisi margins have improved since last su mer." Sutro & Co. analyst Kenn Golden estimates Precision will e $2.50 a share in fiscal 1980, a sharp crease over 1978's $1.20.

Custom Products partner Dan Davis in his Boeing 707 mock-up

Chic airplanes for presidents, kings and sheikhs

What self-respecting king wants a common seat in his personal 707 or 747? To whom can a king—or a prince, sheikh or elected head of state—turn for private bedrooms, vanities, conference tables, lounges or even a throne? Enter Custom Products of Sun Valley, Calif.

Since three partners set up Custom Products in 1963, it has catered to the whims of airborne aristocrats. In the late 1960s Custom began outfitting personal 707s and, later, 747s with almost anything a royal heart desires. Business has been good.

Boeing today has so much commercial business that it no longer encourages such special orders, but about 50% of Custom's business is still Boeing related. Custom Products works with other companies that secure used Boeing aircraft and sell them to the carriage trade. Custom's backlog, including regular Boeing orders for 747 lounge and crew seats, rose 76% last year to $5.3 million.

Customers come from almost anywhere, including the South Pacific Republic of Nauru, rich from guano sales. Partner Dan Davis says the most posh interiors have been ordered, predictably, by Middle East heads of state, especially from Iran, Saudi Arabia and Libya. Some have ordered gold-plated bathroom fixtures and several have ordered thrones; the president of Zaïre paid $3,000 for a white leather airborne throne.

The simplest interiors have been ordered for the Canadian Prime Minister's 707 and for several Air Force Ones. But plainness can be deceptive. "LBJ's plane was filled with push buttons and gadgets," Davis recalls. "He was really a gadget man."

Even well-heeled presold customers in the showroom, however, are not easy to please. Davis recalls the visit of a delegation representing an African head of state. "We *must* have Imperial Red carpet," they told Davis, who had no idea what red that might be. "After showing them a lot of red samples, I finally turned one over and scribbled 'Imperial Red' on the back. I showed it to them and they said, 'Oh, yes, that's it!' " Another satisfied emperor. **—J.M.**

ere is one special situation worth
attention in the Boeing bonanza—
itanium business. After aluminum
steel, titanium is the most common-
ed metal in commercial aircraft. But
ke aluminum and steel, the titanium
ket has relatively few producers. The
hat exist are producing at full speed.
ne sizable independent titanium pro-
r, Oregon Metallurgical Corp., with
ations in Albany, Ore., is sold out
early 1980. President H.F. Peters
nates that about 25% of his sales
tually wind up in a Boeing aircraft.
nother producer, Titanium Metals
. of America, is 50% owned by
burgh-based Allegheny Ludlum In-
ies, Inc. In the first three quarters of
Allegheny earned just 2.1% on
, but about one-fourth of its net from
nuing operations was from Titan-
Metals, one of the two largest titan-
producers. Allegheny's stake in
ng's prosperity is doubled by a sub-
ry, Special Metals, which makes al-
et engine parts. Although Allegheny
um itself has struggled for the last
years, these two parts of Allegheny,
ably headed for hefty earnings in-
es, could make a major difference in
arent company's profits.
with almost any boom, the Boeing
nza isn't without headaches. Some
e specialty steel manufacturers are
ied—for good reason—about sup-
of cobalt, a key alloy in jet engine
; 70% of the world's cobalt supply
es from strife-torn Zaïre.
e most urgent problem is wide-
d severe labor shortages, particular-
Southern California. Scott Avi-
-Sierra Products, which sells oxygen
s and hoses to Boeing, is struggling
nd enough manpower in suburban
Angeles to fill its orders. In 1977 it
tted two 747s a month. Now,
ng has asked if it could outfit ten a
h. Scott is offering its employees

rdered $300,000 more," Talley says.
if a guy walks in that door right
and says, 'I'm a Class A machinist,'
y, 'Fine, when can you start?' "
eing itself is hard up, especially for
neers. Recently Boeing Commercial
ane Co. President E.H. "Tex" Bul-
wrote about 40 potential major sub-
actors asking for engineering help
attle to work on its 757 and 767
ams, even before Boeing lets sub-
acts. For various reasons, including
will, most potential subcontractors,
g up for a piece of the Boeing bonan-
e sending a few engineers. ■

Why did Grumman Corp. sell its crown jewel? Partly because it couldn't afford the cost of keeping it.

Grumman: one d . . . d thing after another

BETHPAGE, N.Y.'s Grumman Corp. seems the Job of the aircraft industry, continuously plagued by bad luck. Listen to this catalog of woes:

Its current boss, Chairman John C. Bierwirth, a financial man, came to the company from National Distillers & Chemical Corp. because the former chairman, Llewellyn Evans, died suddenly of a heart attack in 1972.

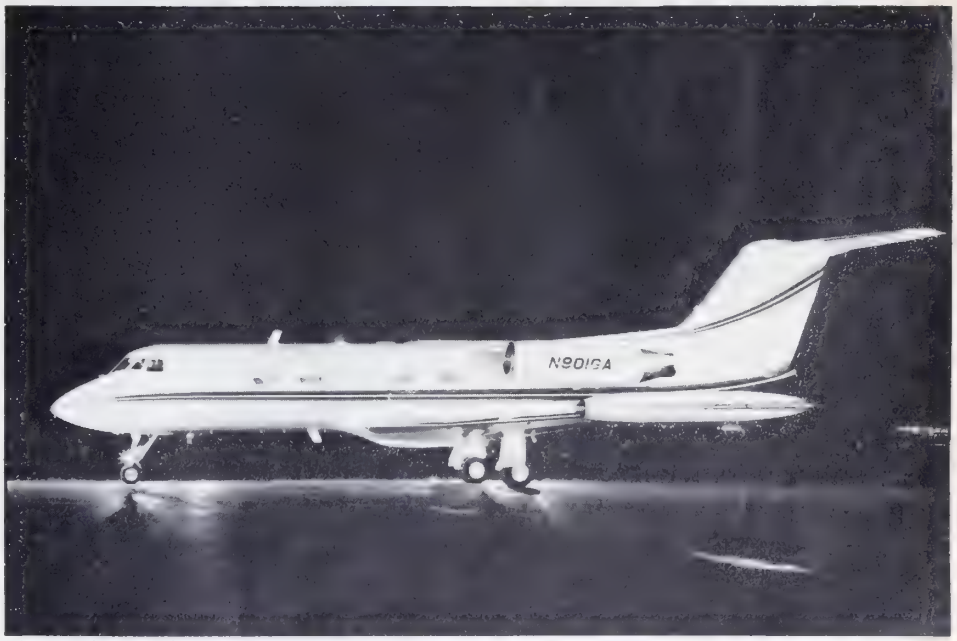
Grumman was hard hit with overseas payoff scandals.

Iran, the only foreign customer for its F-14 fighter plane, is collapsing.

Yet another setback passed almost unnoticed last year. This is what happened: Grumman sold Grumman American Aviation, its subsidiary that makes commercial aircraft, including the Gulfstream business jet. Normally, Grumman American accounted for only about 9% of Grumman's sales but twice that amount of its earnings. Grumman American was the most profitable subsidiary (pretax margin: 6.6%) and its chief diversification outside military aircraft. Why did Grumman let it go?

It all began, Jack Bierwirth explains, not long after he took over. "I'd been around a couple of days," he says, "when somebody gave me a file that had belonged to Lew Evans. In it, he concluded that we should acquire a small Ohio commercial airplanemaker called American Aviation and put it together with the Gulfstream II and the Ag-Cat crop-dusting planes we also built."

Bierwirth gave the go-ahead, and Grumman in 1973 bought the $5.7 million (sales) American Aviation and its line of light, inexpensive aircraft. Along with the company, Grumman got an $11.2 million tax-loss carryforward and a chief executive, Russell W. Meyer Jr.



The Gulfstream business jet

The Cadillac of general aviation is flying for a new owner.

What Grumman also got and wishes it hadn't was a group of partners. The old owners of American Aviation weren't interested in cash; they wanted stock. For combining their $4.8 million in assets with Grumman's $28 million they ended up with 20% of the new subsidiary's stock plus warrants to buy another 23% in 1977 or 1978 for $3.7 million. Why would Grumman give up so much? The tax-loss carryforward, says Bierwirth: "It created a $4.3 million Grumman tax benefit."

That was an expensive benefit. It set in motion a chain of events that would make it impossible for Grumman to keep the Gulfstream.

Grumman's new partners were three strong-minded men: Cleveland Browns owner Arthur Modell; David S. Ingalls Jr. of Cleveland and Duane Stranahan Jr. of the Champion Spark Plug family. There were 250 other stockholders, but these were the ones who counted.

Conflicts developed almost immediately. Meyer had been a CEO; now he felt like a division manager, compelled to clear everything with Grumman's Bethpage headquarters. In 1974 he left for Cessna, where he is now chairman, and Bierwirth replaced him with Corwin (Corky) Meyer—no relation—and a longtime Grumman man.

The minority shareholders were furious. "When Russ left," says Ingalls, "is when all the agitation started." With their man gone, Grumman's partners wanted greater say in running the company. When Bierwirth balked, the outside partners pressed to get out. Grumman's idea of a reasonable price was about $5 a share. The partners wanted $10—or $20 million in all.

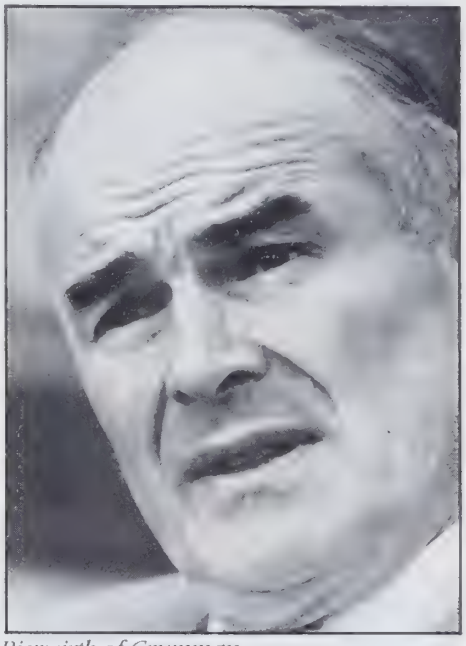
The conflicts festered for three years. Modell, Ingalls and Stranahan wanted to bring in outside bidders on the expensive development program for the new Gulfstream III, or alternately a consulting firm to be sure Grumman wasn't overcharging the subsidiary for engineering. (Meanwhile, G-III's development costs doubled over original estimates to $150 million and in the end its design was scrapped and replaced by what amounts to a modification of the G-II.) When the Securities & Exchange Commission began investigating Grumman's overseas payments on the Gulfstream (among other things) in 1976, Grumman did not, to the minority's further irritation, keep them well informed.

Bierwirth had some big gripes of his own. American Aviation's own light aircraft line—the planes for which he had saddled himself with these troublesome partners—had never made a profit, and has not to this day.

At the partners' behest, the two sides met at the Waldorf-Astoria in New York during a howling blizzard last February to try to resolve their differences. Modell, Stranahan and Ingalls demanded that Grumman either buy them out for $8.50 a share—$17 million—or agree to fire Corky Meyer and make the subsidiary more autonomous, with more outside directors and its own audit committee. They were prepared to sue if Grumman didn't go along.

Grumman capitulated. Two months later, Corky Meyer was out. But on July 18, with the search for a new CEO in progress, Grumman announced it would sell its 80% of Grumman American to American Jet Industries, a $35 million (revenues), privately owned general-aviation overhaul concern in Van Nuys, Calif. The price: $35.5 million in cash and nonconvertible preferred stock; and an estimated $15 million-plus in sales commissions on the first 200 Gulfstreams sold; plus a $34 million development contract. Stunned, Ingalls, Stranahan and Modell sold too.

Why did Grumman sell? Says Bierwirth: "We were caught in an impossible squeeze."



Bierwirth of Grumman
"We'll be all right, if. . . ."

Part of the squeeze seems to be that the price of keeping the Gulfstream was too much for Grumman. In January of last year, a month before the showdown meeting at the Waldorf-Astoria, Grumman had acquired Rohr Industries' Flxible bus subsidiary for $55 million in cash, most of it borrowed. Several months later its long-term debt had climbed to 87% of equity. Net working capital had fallen from $243 million in 1975 to $164 million. Cash flow was running at an annual rate of about $45 million—for a $1.5 billion company. Could it afford the capital its subsidiary needed?

Some analysts think the Gulfstream line had become an albatross. So far, R&D on the G-III, as it stands, is tagged at $43 million—but could be considerably higher, says Wolfgang Demisch, vice president at Smith Barney, Harris Upham. That's for a product which will have to fight for market share against new competitors like Canada's Canadair Challenger and Dassault's Falcon 50.

Ingalls, Stranahan and Modell divvied about $12 million among them, at best not much more than recouping their original investment.

Grumman American and its new owner, Allen Paulson, a former TWA flight engineer, may or may not have gotten a bargain. Gulfstream adds immediate status to his American Jet and gives it the Grumman American plant in Savannah, Ga. in which to build a new, small turboprop/turbofan twin, the Hustler (which American Jet was making in Van Nuys). Paulson has orders for more than 40 G-IIIs with all the trimmings, at $3 million apiece, for delivery beginning in March 1980. Overnight, the buyout made his company a $200 million (sales) operation (about half the size of Beech, one-third as large as Cessna); and he says his goal is to double again in five years. Time will tell.

Bierwirth is left with some temporary relief—some analysts calculate that removing the R&D burden of the G-III alone will mean $1 a share in earnings this year. But he has lost Grumman's most profitable subsidiary and all its immediate hopes of building a good business in the booming general-aviation market. "We'll be all right if our other diversifications pay off," he says. So far most of them haven't. They include buses, containers, yachts, canoes, ambulances, solar heaters and fire hose nozzles. Only one—electronic data processing services—is in the black. But, says Bierwirth, "in one or two years things will look better." He anticipates big gains from his containers for perishables and the Flxible bus division.

Bierwirth insists that giving up Grumman American was a sound business decision. Says he: "We really don't feel we've lost the Gulfstream. After the G-III there'll be a G-IV and we hope to get contracts to develop that. All in all, we're content with the new situation. It makes our souls happy."

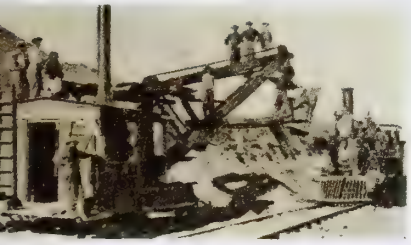
But all of this leaves Grumman a company in search of a future. Its principal product, the F-14, is on a falling curve. It delivered 56 F-14s last year, down from 72 in 1977, and by 1980 deliveries will drop to 36. Any new Iranian order seems out of the question. Earnings last year dropped about 24% from 1977's $3.5 fully diluted. Prospects for this year? Uncertain. At best Grumman can hope to offset the continued deterioration of its F-14 business only if its diversification proves itself. But Grumman's chance of becoming a significant competitor in the booming business of general aviation seems gone forever. ■

GREAT BUILDERS OF AMERICA

ay 10, 1869: A day of national jubilation. East meets West in the famous "Golden Spike" ceremony at Promontory, Utah.

Ever since the railroads opened up the West in 1869, hey've kept America growing. And there's still more to be done.

When the West's Central Pacific met the East's Union Pacific, he news was telegraphed instantly roughout America. Our first trans-



he Great Builders at work on the new railroad.

ontinental railroad was ready. And he nation could now expand westward.

With the driving of the Golden pike, America's railroads literally ecame the lifeline of our nation. nd helped develop U.S. commerce nd industry to the heights we enjoy oday.

Let's help the railroads build for the future.

or years, our railroads have met rowing freight demands smoothly. ut, in the future, these demands are ound to explode as the U.S. focuses n energy conservation.

To increase freight volume sigificantly, a number of steps must be aken soon. One is to relieve the railroads of government overregulation, as was suggested recently by the U.S. Secretary of Transportation. Another is to offer financial incentives for rebuilding and maintaining roadbeds wherever necessary. Which would serve the interests of national defense as well as commerce.

At ☆LONESTAR, we have the technology and capacity to help this country build its great projects.

Throughout history, America's important building projects have contributed to the growth and prosperity of our country. ☆LONESTAR believes it's time for more, and we believe we can help.

Of all the energy consumed by transportation, the railroads use only 3%.

☆LONESTAR is America's leading cement company and the cement industry's leading innovator. For example, ☆LONESTAR technology is helping energy producers in the development of new gas and oil fields. By using our highly sophisticated cement products, producers can now drill deeper and more efficiently than ever before.

☆LONESTAR—a thriving builder of America.

Besides being first in cement, ☆LONESTAR is one of the biggest and most successful building materials suppliers. In lumber, aggregate, and ready-mix concrete for construction. In home care centers for the do-it-yourselfer. Lone Star Industries, Inc., One Greenwich Plaza, Greenwich, Conn. 06830. An exciting company. A thriving company.

High-strength ☆LONESTAR cement is used in many of the nation's railroad structures.

A great American builder.

☆LONESTAR

A motor car of the years has a way of defying the passage of time.

Yesterday, today and tomorrow often appear to be separate worlds. But to the engineers and artisans of Rolls-Royce, they are forever intertwined.

It is in their marrow to revere the past, relish the present and welcome the future all at once, because the driving force behind a Rolls™ is not merely to come and go, but to go on and on.

Consider the Silver Wraith II.

The heritage of this motor car goes back to the original Rolls-Royce Wraith of 1952 and beyond. The evidence is everywhere, from the graceful lines of the steel monocoque shell to the elegant air of the spacious interior. And yet, for all its artistry, the Silver Wraith II is a machine of the moment, a masterpiece of literally hundreds of subtle innovations that were almost unthinkable years ago.

To cite but three examples, a unique automatic air-conditioning system maintains any temperature you desire at two levels of the interior; a sophisticated rack-and-pinion system turns the humble steering wheel into a thing of ease and precision; a self-leveling suspension system lets you forgive and forget the rudest of uneven roads.

And to assure you that the future can be looked serenely in the eye, a Silver Wraith II surrounds you with the strongest metals, the rarest Lombardian walnut, the deepest Wilton carpets and the richest Connolly leather, not to mention an electronic odometer designed to record your journeys to within one-tenth of a million miles.

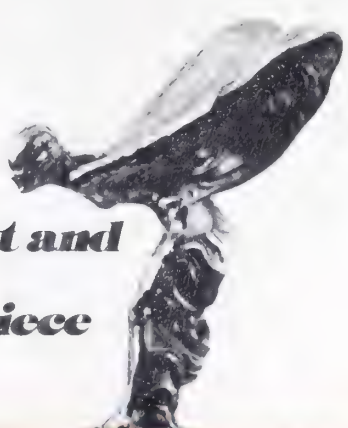
And while that may seem an incredible amount of driving for one motor car, you can rest assured that a Silver Wraith II can dare to improve with the miles and the years only because it takes at least four months to build.

This may explain why more than half the motor cars in Rolls-Royce history are still on the road, many of them climbing in value long after ordinary machines have faded from view.

And this may also explain why two of the joys of your lifetime may prove to be the timeless pleasure and the priceless asset of a Silver Wraith II.

A collection of Rolls-Royce masterpieces is waiting for you at any one of the select dealerships appointed by Rolls-Royce Motors. For further information, consult Rolls-Royce Motors Inc., Century Road, Paramus, New Jersey 07652.

The names "Rolls-Royce" and "Silver Wraith II" and the mascot, badge and radiator grille are registered trademarks.



The heart and soul of a masterpiece

As hard as it is to believe today, "ecology" hasn't always been a household word.

In fact, it wasn't until the U.S. Clean Air Act of 1970 that most Americans began to understand the importance of keeping the environment clean.

Fortunately, long before Uncle Sam stepped in to regulate pollution, Grace had already stepped up its efforts to stop it.

In 1964, for example, Grace's corporate researchers developed and produced the first auto emission control catalyst approved by the state of California.

And since then, Grace has led the way in emission control, providing both the research and the products automakers have needed to meet our environmental needs.

Chemicals – for industry, agriculture and packaging – are only one part of W.R. Grace & Co. Grace, in fact, is a $4 billion company with interests in chemicals, natural resources and consumer businesses.

Since 1968, the company's net income has grown by an average of 15% annually, and shareholders have been receiving cash dividends for 45 consecutive years.

Our annual report can tell you more. Send for it by writing to W.R. Grace & Co., Grace Plaza, 1114 Avenue of the Americas, New York, N.Y. 10036, Dept. FB-1.

One step ahead of a changing world.

et by high taxes, controversy
d a good bit of dehumanization,
charity business is in trouble.
t consider the alternative.

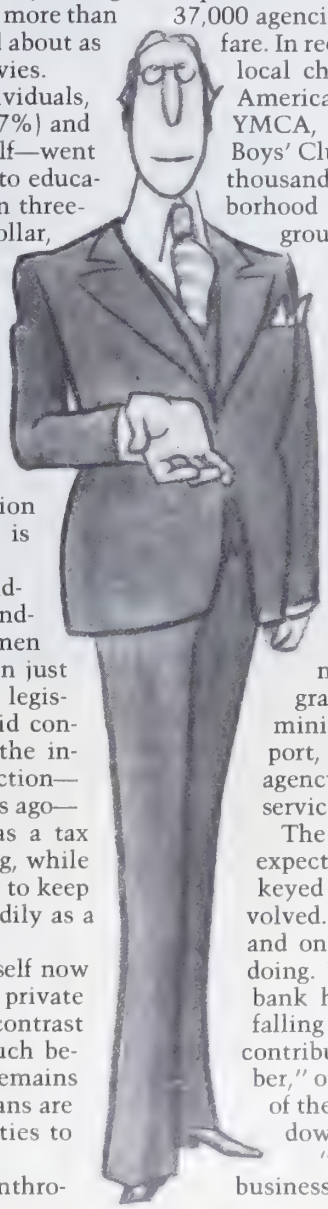
Is charity obsolete?

By James Cook

WHEN IT COMES to charity, Americans are not extravagantly generous these days. Perhaps they feel they are giving more than enough to the needy through the al Revenue Service. At any rate, last year, they indulged ir philanthropic feelings to the tune of little more than llion, 2.25% of their disposable income and about as as they spent on liquor, cosmetics and movies.
er 83% of that $35 billion came from individuals, ne rest from bequests (6%), foundations (5.7%) and rations (4.5%). Close to half—a declining half—went gious organizations, another quarter went to educaculture and the arts. Only 25%, or less than threeers of a cent on the disposable income dollar, to what most people think of as charity, health and social welfare agencies that funds mainly through community fundg campaigns.
society as superaffluent as ours, you can't, urse, dismiss that fraction of a penny. It up last year to a resounding $9 billion. makes charity a very substantial business, oying perhaps 5 million people and enlistne volunteer efforts of as many as 45 million It is also a business where a great deal is ning these days—not all of it good.
any people think charity is a racket and fundrs are crooks," confesses one professional fund- And as a result, among those congressmen eel that government should have a hand in just everything, there is growing sentiment for legisto put charitable organizations under rigid con- And that's hardly the worst of it. With the ind use by taxpayers of the standard deduction—now use it in contrast to 52% just eight years ago—able contributions have become useless as a tax for most Americans. Thus, charitable giving, while steadily in dollar terms, has not only failed to keep th inflation, it has also been dropping steadily as a ntage of disposable income.
ording to one estimate, the government itself now des very nearly as much of the funds used by private ies as private donors do. But for all that, in contrast Europe, where philanthropy has pretty much be- the province of the state, in the U.S. it remains y in private hands, a clear sign that Americans are et ready to hand over all their responsibilities to other.
e any industry with growth problems, philanthropy is experiencing intense competition and a good deal of infighting, some of it quite bitter. The outs—the new activist agencies concerned more with minority rights than with social service—are fighting to get in. The older charities are struggling to maintain or increase their share of the market. What raises the infighting to fever pitch is that, between inflation and changing social conditions, the traditional fundraising methods—direct mail and door-to-door solicitation—have become worrisomely costly or ineffective. The result is that more and more agencies have been looking for new approaches—to combined fundraising campaigns and to the payroll deduction plan in particular—as a means of reducing their costs.

This has inevitably brought them into conflict with the United Way of America, the biggest federated campaign organization of them all. In recent years various United Way organizations have been sued on grounds that, in any business activity, would amount to unfair competition, restraint of trade and conspiracy to violate the antitrust laws. But, legally at least, philanthropy is not a business, and the courts so far have dismissed such charges.

Headed by the brilliantly able William Aramony, United Way of America is the U.S.' largest and most visible charitable institution, an association of over 2,000 chapters, some dues-paying, some not. United Way in itself isn't a charity. It's a fundraising organization that raised $1.2 billion in 1977 and expects to have raised $1.3 billion in 1978 for no fewer than 37,000 agencies, services and programs, mostly for social welfare. In recent years, a good 45% of that money went to the local chapters of eight big national organizations: the American Red Cross, the Family Service Agency, YMCA, the Boy Scouts, the Salvation Army, YWCA, Boys' Clubs and the Girl Scouts. The rest went mainly to thousands of purely local institutions—hospitals, neighborhood centers, day-care programs, senior citizens groups, hostels and so on.



As a federated campaign organization, United Way got its start back in 1887 in Denver, Colo. raising money on a communitywide basis for ten charitable organizations in a single fundraising drive. Since 1949 it has narrowed its focus to the work place, so that today the bulk of its funds comes from employees, whether in government or business, under the payroll deduction plan.

For both business and labor, the notion of a combined campaign had the virtue of putting an end to the countless disruptions in the work schedule that a succession of fundraising campaigns had previously created. And United Way went about its business in a thoroughly businesslike way, setting rigorous financial and program standards for the agencies it supported, determining what programs it would and would not support, and gradually establishing itself as the chief agency for the planning and coordination of charitable services in the communities it served.

The system is highly effective. The employee is expected to give his Fair Share—on a sliding scale keyed to his salary. Corporate competition gets involved. Executives compete fiercely to meet their goals, and one corporation keeps an eye on how another is doing. Last fall, when the head of a large New Jersey bank holding company discovered his company was falling short of its goal, he demanded to see who had contributed so far and how much. "You have to remember," one high United Way man concedes, "the attitude of the higher level man is usually reflected all the way down in the amount of giving."

"United Way," says one fundraiser, "enabled big business to take credit for big gifts, half of which came

from their employees." From a fund-raiser's point of view, corporations contribute at a scandalously low rate—less than 0.91% of their pretax net overall, as against a 5% maximum permitted by law, and most of that comes from a relative handful of large corporations. But, then, in an era when corporate profits are barely adequate to support badly needed reinvestment, corporations can quite correctly respond that they "gave at the office": Well over half their pretax income is taxed away by the various governments that spend it, not always efficiently, for a wide range of things, including social welfare programs of their own. On the other hand, corporations as a group have been exceedingly generous in giving executive time to support the work of United Way and other charitable causes. In raising $4.3 million last year, for instance, New York Telephone probably contributed close to half a million dollars in lost time and wages to the United Way campaign.

Because it can call upon the unpaid services of such volunteers—corporation or welfare agency executives no less than the housewives who man the telephones or the solicitors who wander through the plant collecting pledge cards—United Way can keep its costs down. It is these "free" costs that explain why charitable giving is so cost-effective. Overall, close to 90 cents on the United Way dollar goes to the purpose for which it was raised, as against 78 cents for the major health agencies.

Of course, in mounting its corporate campaign, United Way usually ends up with exclusive access to the payroll deduction system, and this is what has brought charges from agencies not part of United Way and from competing federated systems—like the Combined Health Agencies Drive (CHAD) in California, or the National Black United Fund—that United Way is attempting to monopolize the payroll deduction process. Several agencies have gone into court in an attempt to break up this dominance. In Los Angeles, the Associated In-Group Donors (AID), a regional federated campaign organization, alleged that United Way threatened to cut off any of its member agencies that accepted funding from AID. In Palo Alto, CHAD alleged that United Way had illegally established a monopoly of the payroll deduction system in the Bay area and in Santa Clara County. And in Washington, D.C. 17 national health organizations went into court to force the Civil Service Commission to revise the formula whereby the proceeds of the Combined Federal Campaign are divided—a division that gives United Way the bulk of the spoils. So far the courts have supported United Way.

United Way has nonetheless been trying to consolidate its position by dra
ing into its fold the big health organiz
tions, most of which have traditional
held aloof. Not long ago, locals in Dall
Los Angeles, Minneapolis, Honolulu a
Cleveland worked out so-called "swe
heart" contracts with locals of both t
Heart Association and the Cancer So
ety to guarantee them a minimum tak
with the understanding that they wo
run competing campaigns. United Wa
Aramony also approached the Nation
Foundation/March of Dimes (MOD), b
was rebuffed. "The advantage for Unit
Way," says MOD Vice President Arth
Gallway, "is being able to say there a
no competing campaigns. You are liter
ly giving once for all."

Federated campaigns like CHAD c
probably take care of themselves agai
United Way. But some of the newer a
more controversial agencies—many
them black oriented—are often unable
unwilling to meet United Way's sta
dards for membership. United Way h
not offered to open the payroll deducti
to them, but ever since Bill Aramo
took over in 1970 after a career at t
chapter level, United Way has gone o
of its way to help many of these new
agencies, bending its standards for a
mission on a provisional basis, offeri
managerial and even financial assistan
to those that wish to join. But, co
plains Calvin Rolark, head of Washir
ton's United Black Fund: "There a
countless needs that are not being c
ered by the United Way concept, and
have documented that through the or
nizations we fund—50 agencies with
the United Black Fund."

United Black Fund tried both a boyc
and legal action before United W
would agree to a joint United Way-Un
ed Black Fund campaign back in 19
(see box, p. 48). And other agencies a
adopting UBF's tactics. In Detroit, t
Black United Fund has begun demandi
access to the payroll deductions in t
auto industry. In St. Louis, the Unit
Black Community Fund has refused
join United Way and gone into court
force Chrysler Corp. to grant it perm
sion to solicit through the payroll ded
tion plan. United Way bitterly rese
any charge of bias in its funding, a
$335 million goes into the black comm
nity every year through agencies Unit
Way funds. But the fact remains: On
$45 million of United Way funding
channeled through *black-run* agencies.

United Way denies it seeks a monop
ly. "The key to United Way's approac
says United Way Executive Vice Pre
dent George A. Shea, "is openness-
willingness to include all who meet co
mon standards of public accountabil
and cost-effectiveness and who are wi
ing to accept United Way's system
assessment of needs and allocation
funds." But those *are* rather limiting

FDR and March of Dimes President Basil O'Connor
For the first time, the fundraisers went after the mass market.

ctions: not simply to play the game the rules, but to play it United's way. Jnited Way's stranglehold on the cor- ate market is especially damaging, its ics say, insofar as the United Way is lined to support good gray establish- nt causes, like the Boy Scouts, the d Cross and the YMCA. "United ys," insists Robert Bothwell, head of Committee for Responsive Philan- opy, "have been very slow to recog- e the emergence of minority groups, recognize the emergence of the con- ner movement, to recognize anything v that has come along."

There is at least a grain of truth to the rge. But many of the newer, more troversial causes—desegregation, men's rights, environmental prob- s, the Indian and Hispanic move- nts, and so on—while symptomatic of ve social problems, have political and ological objectives rather than elee- synary ones. "Traditional charity," s James Joseph, a former National ck United Fund board member and v Under Secretary of the Interior, nds to be service oriented. But the ck community also needs social activ- , and the traditional charities have been interested in supporting poten- ly controversial social action."

Change is always difficult to effect in sort of public institution and United v is no exception. Take the Planned enthood Federation of America, the alytic force in the triumph of family nning in the U.S. Only 47 of Planned enthood's 191 affiliates are members Jnited Way. The number *was* 48. But en Planned Parenthood's Gary, Ind. iate decided to provide abortion ser- es a while back, United Way timidly ndrew its support—support that, in a e collar community like Gary, nned Parenthood had little hope of eloping elsewhere.

"The real problem," says Planned Par- nood's Winston Forrest, "isn't the troversy. It's how much local control United Way imposes on an agency's gram, whether it's Planned Parent- d, the Boy Scouts or whatever."

ecause of the local chapter's power, n in United Way and in the agencies v support, it is difficult for many ncies to move with the times. Take Girl Scouts, which diligently com- ted itself to affirmative action and al employment opportunity and had siderable success in adapting its pro- n to the needs of urban and minority ups, migrant workers, the rural poor. o years ago, the national board went ecord as supporting the controversial al Rights Amendment. Suddenly, the Scouts came under attack from the nt to Life movement. "When certain ups alleged that we have a merit ge on abortion," Girl Scout head nces Hesselbein says icily, "we have said clearly: 'We have never had and will not have a badge on abortion.' "

In this respect, United Way is in a situation not unlike that facing the churches. If it eschews controversy and tries to remain neutral on divisive issues it risks becoming irrelevant; if it wades into controversy it jeopardizes the consensus upon which its support rests.

Clearly, then, United Way's biggest problems are not simply financial ones.

Among these, Aramony worries especially about inflation, which threatens to erode United Way's ability to fund its present membership, let alone its ability to take on any new agencies. "When I took over in 1970," he says, "I thought we were in serious shape. We weren't beating inflation. We're a federation, and they can pull out. You've got to keep doing well enough so people aren't motivated to do their own thing on their own. What we had to do was create a common thrust. How else do you sell to the national market that television created? We were using 137 different names. We had to convince people to come together in a common name and a common logo." (The open hand, the rainbow, and the guy being held up by United Way is the way one fundraiser describes it.)

That common logo was the heart of the matter—getting 2,000-odd chapters to agree on certain common principles, systems, objectives, so United Way could function as a national unit with common procedures, common accounting principles, common goals—enabling Aramony to install a modern management system more akin to that governing large business enterprises than that of traditional charitable groups.

With its new structure and stance, Aramony and his board believe they have positioned the organization so it can grow at a level high enough both to offset inflation and to meet the growing need for additional funding—11% a year—a rate that in a decade could raise United Way's take from $1 billion to $3 billion. American Telephone & Telegraph's former chairman, John deButts, who helped draw up the program, thinks it's a reasonable expectation. "It amounts to only half of what United Way would raise if 75% of the employees gave the *lowest* nationally accepted minimum Fair Share standard," he grumbles.

But that 11% growth won't come simply from payroll deductions. It also will involve a considerable increase in corporate giving. To provide the benchmark for that, United Way has come up with the corporate equivalent of Fair Share—the Corporate Guidelines, which are keyed to a corporation's financial and operating record. So far 145 major companies have signed up with United Way's National Corporate Development program, agreeing not only to conduct and

United Way head William Aramony
"We have a moral obligation to use money wisely and well."

promote companywide employee campaigns but to accept United Way's Guidelines as well.

In putting United Way on a sound and businesslike basis, Aramony has gone a long way toward eliminating the emotion that lies behind much of charitable activity—the lachrymose appeal of whimpering puppies or crippled children and causes that justify themselves only by such emotional appeals. United Way itself decides how the funds it raises shall be divided and even on those rare occasions when givers designate their contributions to specific charities, every dollar designated means a dollar deducted from United Way's predetermined allocation, so that the integrity of the allocation process is maintained.

"One of the deficiencies of charitable endeavor—its charm, its virtue, its problem—is the fact that people deal from the heart," says Aramony. "What the United Way system provides is the rational review of how to *use* money. In every other circumstance, you're giving directly to the user. In the home-health area, the visiting nurse from the homemaker's service may not be as sexy as giving to Heart or Cancer, but in terms of real service—in going into the home and working with the cancer patient—that is where the action is. Giving to United Way is saying, 'I know that I don't know enough to be able to commit my money wisely.' It's not a passive decision, it's an active decision to let the allocation process work."

In setting United Way up as a combination Dun & Bradstreet and charitable mutual fund, Aramony puts it at loggerheads with much of the charitable establishment. The health agencies, in particular, have tended to be the creations of individuals who felt strongly about the cause they supported—Basil O'Connor (FDR's law partner) at the March of Dimes, Mary Lasker at American Cancer, Rome Betts at American Heart, Jerry Lewis at Muscular Dystrophy—and they have even today not entirely lost that emotional thrust.

But the very rationality of the United Way approach, as the health agencies see it, is in itself the reason why United Way cannot be the *only* way of charitable fundraising. For the health agencies, success has always rested on people who have some particular commitment to a cause, an ailing friend or relative, an unspoken fear for themselves. The 23 largest health agencies raised $560 million in 1977. United Way, which allocated less than $50 million to the national health agencies, could hardly have raised that $560 million for them if it campaigned in their behalf. This in part explains why the Dayton chapter of Planned Parenthood decided not to join United Way a few years ago, at a time when demand for Planned Parenthood's services went from $55,000 a year to $130,000. "We knew," says the Federation's President Faye Wattleton, "that United Way could not keep up with demands we were having to fund."

As it is, United Way contributes or 25% of the $4 billion or more that t 37,000 agencies under the United W aegis need to fund their operations. M of them generate supplementary fun on their own, generally from sources n competitive with United Way. The lo Girl Scouts councils get $33 million year from United Way, but they genera $57 million on their own, including $ million from activities like selling million boxes of cookies. The Salvati Army gets more than $38 million fr United Way, but it generates as mu from its direct mail and street cor campaigns. Other agencies live off g ernment grants, as Care and Save t Children do.

Compared with the 11 cents Unit Way spends for every $1 of revenue raises, the 18% average fundraising c of the big health agencies looks high. B the difference is largely a matter of met od, and direct mail is currently the pri method of raising funds. According the Direct Mail Marketing Associati a third of all contributions that nonpro groups get come from direct mail. N profit organizations send out roughly billion pieces of mail a year, and thou nonprofit mail moves at only a quar the commercial rate, direct mail has b come an expensive method of raisi funds and is becoming more expensi every year. Even so, most agencies ou side United Way—and that's the ov whelming majority—are worried abo their costs, partly because inflation h

Black is bountiful

"When you look at the charity system," says Calvin W. Rolark, "blacks supposedly have always been the recipients but never the policymakers. That's what we are trying to change." Rolark, 51, publisher of the Washington *Informer*, founded the United Black Fund in 1969 to do something about the situation. UBF couldn't do much on its own, but it finally pressured United Way into agreeing to a joint campaign in Washington, D.C., where about 72% of the population is black.

By the agreement, UBF became entitled to any funds designated to it by employees through the joint campaign, plus 12.5% of any funds in excess of the $14 million United Way was raising when the partnership was formed. Fundraising costs, which UBF shares with United Way, run around 7% of receipts, while administrative costs eat up another 3.5%. Of total 1977 United Way receipts of over $19 million, UBF netted only $865,000, which it dispenses to some 50 agencies of its own choosing, such as Deafpride, Efforts for Ex-Convicts, and the Howard University Center for Sickle Cell Disease. "We have no *permanent* agencies," Rolark says. "They have to come back every year to be accepted."

Rolark has ambitions of duplicating UBF's success across the U.S. With chapters already established in the Washington area and California, United Black Fund of America is helping to set up new ones in Alaska and Texas, and expects to move on into Michigan, Tennessee, Missouri, Illinois and Washington state. Rolark expects these locals will have to fight their way into the payroll deductions system just as he did. **—J.C.**

them especially vulnerable and partly ause politicians these days are look- over their shoulders.

he question is: What are reasonable draising costs—for direct mail or for thing else? Direct mail costs vary all r the lot, depending on how well wn the cause or the agency is, but it cost an agency 100% or even 150% he funds generated to acquire an initial list of donors, though 35% is more likely the average. Once that initial list is in hand, the return on subsequent mailings rises rapidly, solicitation costs drop sharply, and within three years or so, even today, direct mail costs should drop to around 15%. "That's why it's so hard to get a new agency off the ground," says fundraising consultant Edwin E. Steward *(see box, below)*. In 1976, for instance, American Kidney Fund found itself spending 50% of the resulting proceeds on a new donor acquisition campaign. At the same time, its renewal mailings cost it only 9%.

To increase the prospective donor's sense of obligation, a fair number of agencies have increased their direct mail costs even more by mailing unordered merchandise with their solicitations—

A gamble for high stakes

A bluff, balding man with a gift of gab and a smile like a Christmas tree, Edwin E. Steward, 58, is known in the fundraising business as a whiz of a wills-and-bequests man. The son of a Baptist minister and a former Baptist minister himself, Steward comes by his expertise naturally. "I got started in fundraising early," he says, "going to church meetings where I heard them lift the offering. As a minister, you're the executive of a voluntary agency, and you've got to raise money."

Thirty years ago Steward found himself ministering to souls and raising cash at a church in Buffalo, N.Y., a city with more than its share of alcoholics. There he got involved in setting up an alcoholics' rehabilitation center and has been shuttling back and forth between the church and the health agencies ever since. As he says, "You're welcome anywhere if you know how to raise money in large quantities." Steward has been welcomed by the American Baptist Churches-U.S.A., the American Cancer Society and the Memorial Sloan-Kettering Cancer Center, among others. Currently he's doing consulting work for a number of health agencies and is director of trusts and estates for the White Plains Medical Center.

"Health agencies are reluctant to get involved in wills and bequests," Steward says, "because they want results *now*. In this business you work your heart out for three years before you begin to see things happen, and all the while the fellow in the annual appeal is saying, 'Look, I'm trying to justify the expense to the board, and they're not seeing any money coming in.' What are you supposed to do—push the donor in front of a subway?"

Out of delicacy, a drive for bequests is called a "deferred gifts program," but the fact that the gift is "deferred"—the donor hopes for a long time—causes the beneficiary some problems. Ed Steward goes on: "The front-end cost of a deferred gift program may be $300,000, but by the time your fourth year comes around it begins to show a harvest. This is not a passive kind of job. You've got to keep in touch with your donors to be sure they don't change their minds. Fundraising boils down to a trained volunteer with a firm figure in mind asking for gifts from a prospect who has been cultivated. Most of the money comes from women. The husbands acquire, and the women dispose. They outlive their husbands. This is a terribly wearing job. The attrition on the emotions is tremendous."

Any way you cut it, Ed Steward is a first-class salesman. He could probably make more money selling life insurance or bonds, for example, than the $40,000 to $50,000 a year he makes from fundraising—a business where commissions are forbidden by a professional code of ethics. But, clearly, he gets psychic satisfaction from his job just as some of his elderly prospects get spiritual satisfaction from leaving money to charity rather than a favorite niece.

Steward's missionary zeal for his calling has been passed on to his sons. Son Bill, a botanist, is now development man for the New York Botanical Garden. Son Bob, after three years in the Peace Corps and six in graduate work and teaching at UCLA, wound up with the American Foundation for the Blind. Son John, with an M.B.A. in nonprofit finance, works for the Audubon Society.

As Steward sees it, philanthropy is alive and well. "Church budgets have been shrinking," he says, "but not health agency budgets. The American public have lost their otherworldliness in religion, but they haven't lost their in-this-worldliness. You may not believe in saving souls in Africa, but you'll believe in saving leukemic children, especially if you have grandchildren. Philanthropy today, more than in the past, fulfills a very basic emotional need. That's one reason we've been constantly growing.

"You don't see the exciting part of this business. Here's this fellow with a million dollars, and we've got him convinced he's going to do it. And here is his attorney, and here is my attorney, and this is me, you know. It's a gamble for high stakes, and all of us have a clutchy feeling in our stomachs." **—J.C.**

Wills & bequests man Ed Steward
You can't push a donor in front of a subway.

Getting and giving

How do you decide whether a charitable organization is expending its funds wisely and well? New York's National Information Bureau worries especially over what proportion of funds raised is absorbed by the cost of fundraising (col. 2, below). Washington's Philanthropic Advisory Service pays more attention to what proportion of total funds is committed to programs the funds were raised for in the first place (col. 3). Both worry about how much of the total funds an agency raises it actually spends on anything (col. 4).

Year	Name	1 Income (millions)	2 Fundraising expense	3 Program expense	4 Unexpended income

seals, pens, letter holders, plastic k chains, greeting cards, sweepstakes ti ets, postage stamps, return address bels. It's a promotional gimmick that t industry's two watchdog agencies—N York's National Information Bureau a Washington's Council of Better Busin Bureaus' Philanthropic Advisory S vice—consider unethical, as putting u due pressure on the recipients. And i helped keep American Lung Asso ation's fundraising costs at 28%, Eas Seals' at 24%, the Epilepsy Foundatio at 40% and Disabled American Vetera at 34%. But at least one agency, the Labre Mission School, which for 18 ye sent out plastic thermometers, let holders, and so on, found that when th stopped doing so two years ago th response dropped by 50%. Though Labre saved $2 million in labor and p mium costs, its total take dropped fr $6.4 million to $5.4 million.

Many of the big health agencies turn to direct mail a few years ago because t traditional door-to-door fundraisi method no longer worked. The March Dimes was built on the Mothe March—millions of women ringing do bells and asking for money—but th days people are afraid to open the do and besides, mother is probably worki So the yield from the Mothers' Mar dropped from nearly $15 million in 19 to $8.1 million last year. Now the subs tute, direct mail, is getting too cost Says MOD's Arthur Gallway: "It costs $26 a thousand to do a mailing, includi $7 for postage. In three years, we exp it will cost us $26 for postage alo That's why we're determined to devel another source of funding."

The March of Dimes has had consid able success with its Walkathon, raisi $17.5 million last year at an 8% cost, b many of the newer and more biza fundraising methods are either costly difficult to control: There's a verita *thon*-ic boom in fundraising these days readathons, skatethons, swimatho bikethons, dancethons, and so on. B those that reach for large markets—te thons, radiothons—sometimes run o of control *(see box, p. 51)*. And spec events—dinners, entertainments—a often more costly than they're worth.

"Telethon costs can run anywh from 45 to 60 cents, special events 30 35," says fundraiser Ernest M. Fro who's raised funds for the March Dimes, American Heart, Diabetes an currently, the National Energy Found tion. "Special gifts run around 10%, b 30% to 35% if you use direct mail. Wi and bequests are under 5%. A well-ru well-advertised campaign using a varie of methods will run 25%, and anybo who says he's doing it for less, I want see his books."

All the rules of thumb, the fundrais say, are no more than that. Any agen

can display puppies or crippled chil-
has an edge over agencies con-
ed with alcoholics, epileptics, syphi-
s or the mentally ill. Death-dealing
ses are easier to sell than lifelong

ns, bequests."

nerican Cancer, Heart, Easter Seals,
American Foundation for the Blind
the Arthritis Foundation have al-
begun to develop large gifts and bequests programs. But the Red Cross has long since gone them one better—by dabbling in a small way with university-style fundraising: the creation of a $90 million endowment that yields it over $5 million a year. This would seem a logical instrument for funding continuing charitable needs.

But when you boil it all down, it seems more than ever that United Way, with its increasing corporate support and payroll deduction scheme, is the wave of the future in charity. You can mount only so many spectacular events; direct mail is becoming prohibitively expensive; bequests, while growing, are not a mass market. Scandals in individual charities further enhance United Way's position because of its tight controls and businesslike supervision.

As against these strengths, United Way has serious weaknesses. One is that it seems to be part of the dehumanizing process that afflicts modern life. "As an employee," one fundraiser says, "I rebel at being told how much I should contribute as a Fair Share. Because who got together? The same bastards who were always telling me everything else in my life—either the boss or the union—and I'm going to say, 'Screw you both.' "

The pressures of rising costs and rising needs in the face of sluggish giving, however, have forced the philanthropy industry to emphasize efficiency—computers, rigid controls, mass media. This is giving charity the same kind of institutionalized image that is characteristic of business and government today. The human touch is missing, the personal contact; it is all machine-to-machine. How could it be otherwise when charities begin pushing their wares in the media much as others push soap and breakfast food, when they take to the courts to define their market shares, when they begin saying that giving is an obligation and not a responsibility?

Yet one can deplore this loss of the human touch and still rejoice that in the U.S.—unlike in a Europe that is fast turning such concerns over to Big Brother—charity still remains a private endeavor. Giving money to United Way may not be nearly so satisfying as personally presenting a new flag to a Boy Scout troop or watching the smile on a child's face when you hand her a badly needed pair of shoes. But it's a lot better than leaving the whole thing to Uncle Sam. ■

Wham! Pow! Telethon!

ast Labor Day weekend, Jerry Lewis, Ed McMahon and cores of other stars capered, cajoled and otherwise enranced a bedazzled television audience for 21½ hours, and ied up 213 television stations and 37 million television ets around the clock. When it was over, the tote board eoned a whopping $29.1 million raised for the Muscular ystrophy Association. So ended another Jerry Lewis Labor Day Telethon, probably the largest fundraising event—elethon or otherwise—in history.

Most professional fundraisers take a fairly dim view of elethons, where expenses often eat up 40%, 45% and ven 50% of costs, but MDA claims that its long experience with the method has reduced its costs to about 20%. Corporations like McDonald's and Southland begin hyping he event long before Labor Day weekend, building the rospective market, and MDA sloughs off its costs on thers wherever it can. For one thing, it lowers its costs by etworking—hooking many stations on one long line—nd sending the TV signals over the telephone line. Most f the TV time is donated by the stations, and the stars ppear for free, though MDA makes a mandatory contribuion to the actors' welfare fund, Theatre Authority. Far rom suffering one of the big problems of telethons—ledges defaulted on after second thought—MDA in 1977 edeemed 103% of the amount pledged.

The more serious problem for an organization that funds ver $39 million in programs on a continuing basis is that t has become dependent upon a single event for almost alf its support, and more than that, on a single individual, erry Lewis. What happens when Lewis dies? What if he ctually had committed suicide as he claimed he considred doing a while back?

"We think about that," says MDA Comptroller George ellner. "We investigated the possibility of insurance, but ecided against it. We would have to go to Lloyd's for omething like that, and the cost would be prohibitive."

—Christine Miles

Jerry Lewis' Muscular Dystrophy Telethon
All that sound and fury, signifying money.

In Texas, where they make their businessmen tough, there is none tougher than Harold Simmons—or more controversial.

PSA's unwelcome suitor

Dallas businessman Harold Simmons
It will take more than a shareholder resolution to make him go away.

HAROLD SIMMONS can read int balance sheet things that no else sees," says Jimmy Ling, deposed conglomerator who keeps an fice just one floor below Simmons in office tower overlooking downtown D las. What Simmons saw when he stud the balance sheet of Pacific Southw Airlines was a fleet of airplanes t could be worth a whale of a lot more th the California intrastate line was fet ing as the listed stock of a going conce So Simmons started buying the stock PSA, Inc., the holding company. By tober he owned 20% through Valhi, I a real estate subsidiary of Contran Co a Dallas-based holding company wh Simmons controls. "The stock was s ing for $19 a share," he recently sa "but the value of the aircraft on the o market was $50 a share."

Here were the numbers that so pealed to Simmons: PSA had 3.3 mill shares outstanding. It was also just sh of $51 million in debt. Total price: ab $120 million. Subtract some $20 mill in working capital and you had the wh company, aircraft, equipment and rou valued at around $100 million. As agai this, PSA owned 29 Boeing 727s. going price of a 727 is about $8 millio

Earnings? Nothing much to bo about. PSA, which until last year whe added routes to Nevada flew intrast only, has never earned a very good turn. Last year was exceptional for P nevertheless, not counting profits on posal of aircraft, it earned only ab $1.20 a share—6% on stockholders' eq ty—in the last reported 12 months. classic case of a company that would worth more dead than alive.

Simmons, 47, a native of Golden, T (pop. 200) with an M.A. in econom from the University of Texas, got start in business by building up a chai drugstores in the Southwest. He s them off in 1973 to Jack Eckerd Co and began to build up an empire throu Contran Corp. Simmons professes to an admirer of Pittsburgh tycoon Thon M. Evans, whose shrewd eye for va and tough tactics in pursuing it h built the Crane Co. into a major cor rate enterprise. Simmons still has a l way to go to match Evans. But no do about one thing: Like Evans, he is tou Simmons makes no bones about what has in mind for PSA if he gets contr break it up and turn it into hard cash is an old story with Simmons.

Jimmy Ling first got to know Si mons three years ago when Ling wa $250,000 consultant to Valhi, Inc., spin-off of Houston's $200-million-p conglomerate, Southdown Inc. Simm won a bloody court-and-proxy battle get control of Valhi, Inc., then headed Doyle Mize, who had ambitions to bu Valhi into a conglomerate as he had ea er done with Southdown.

alhi owned and operated large farm perties in California and Louisiana in t ventures with Prudential Life Insur- e Co. and a Prudential affiliate. After mons got control of the company he olved the partnerships and sold 00 acres of land at a profit of over million. Others saw Valhi as a busi- ; Simmons saw a potential pile of , some of which went to finance the stock purchase.

fter the Valhi deal, Ling and Sim- is became friends—for a time. Ling d Simmons into another deal, this involving the subordinated debt of krupt Omega-Alpha, Ling's own eback try. Ling knew the debt to be h considerably more than the 15 s on the dollar it was selling for on open market. He convinced Sim- is to buy up over 50% of the debt for it 35 cents on the dollar.

ng was right. The debt has already rned over 40 cents on the dollar— ig Simmons back his original invest- t—and both Ling and Simmons ex- it to return over 80 cents by the the final liquidation is made.

it Simmons and Ling didn't remain ds for long. Simmons had found out a subsidiary of Omega-Alpha, North erican Acceptance Corp., a finance pany in Atlanta, had a suit against and other former directors. Sim- s bought control of NAAC and is now suing Ling and other former directors of Omega-Alpha and NAAC for $75 million. "People in business are greedy," Simmons shrugs without an expression on his face. "And greedy is what makes the whole economy run."

PSA may or may not be worth more dead than alive, but like most people and most businesses it isn't eager to die—not even to help the economy run and make Harold Simmons richer.

To defend itself, PSA convinced its shareholders last December to vote an amendment that would require an 80% majority for a merger involving holders of at least 20% of PSA stock. Management has 14.6% of the outstanding stock, and a board member friendly to management, John P. Guerin, has another 7%. Simmons, whose drawl is low-key but who doesn't avoid a courtroom fight, says he spent $1.5 million last year in lawyers' fees. He has already spent over $300,000 fighting PSA in court to block the amendment change and has sued the company in both California and Delaware courts, charging that the amendment violates, among other things, stockholders' rights. Clearly, it is going to take a good deal more than a shareholder resolution to make Harold Simmons go away.

In proposing to liquidate PSA, Simmons bases his estimates of the profit potential on more than just the value of the aircraft. "PSA has a good feeder system," he says, "and would probably fit into some other transcontinental airline." It is not lost on Harold Simmons that National Airlines was selling at $15 a share less than a year ago, and that since then Eastern Airlines has offered $50 a share for it.

Now, let's see . . . National Airlines goes for roughly two times book value. PSA's 1978 year-end book value will be around $23 a share. Twice that is $46 a share. Simmons' companies own 700,000 shares. That would be a profit of $19 million. Not bad. This isn't what Simmons says. But this is probably the way he is thinking.

What about PSA's executives? Its 3,500 employees? That, quite clearly, is not Simmons' problem. Do they call Harold Simmons a scavenger? Do they rake up old stories about the indictment for mail fraud back in the Sixties that grew out of the bankruptcy of a couple of insurance companies Simmons controlled? He just shrugs and says, "I'm virtually immune to criticism. Some people are too sensitive to get involved in a pissing match. Not me."

At the moment, the market is betting against Harold Simmons and liquidation or sellout. PSA stock sells for no more than the average price his companies paid for it. But it doesn't look as though Simmons is just going to walk away. ■

"That's a Butler building?"

Yes, that is a Butler building. In fact, you probably see beautiful Butler buildings all the time and don't know it.

Because Butler buildings offer total design flexibility and can be as tasteful and dramatic as any building.

Yet, they also give you all the important time and money savings of systems construction.

To learn more, call the local independent contractor who can build one for you. See "Butler Mfg. Co. Builder" in the White Pages. Or write Butler Mfg. Co., Dept. B-397, BMA Tower, Kansas City, Mo. 64141. 71634

BUTLER

Black & Decker acts more like a soap or cosmetics company than a hard-goods manufacturer. Its basic product is new products.

Keep 'em comin'

Black & Decker President Francis (Frank) Lucier
Nearly 60% of his business is foreign—the most of any major U.S. manufacturer.

By Paul W. Sturm

In 1975 Francis (Frank) Lucier came chief executive of Black Decker, the world's largest po toolmaker. The first man outside founding families to run the Baltim based firm, he took over at a most a ward moment. During Lucier's inaug 12 months, he presided over a 22% ea ings decline—the first break since 1 in an enviable chain of 15% gains t made his company a growth stock l end. Suddenly B&D, awash in invent was laying off thousands of employee

But now Lucier, an erstwhile coll linebacker with a fondness for foot analogies, sees those dark days in a ferent light. "Don't blame 1975 on economy," he says. "It was all Black Decker. Power tool business in the U went up 10% that year, and we didn't any of the increase. It was very emb rassing—and that sure helped me get organization's attention."

In his first three years, in fact, Luc has made the most of that opportuni In fiscal 1978, which ended in Septe ber, B&D posted sales of $960 milli and profits of $66 million. The co pany's operating margins are back abo 18%; and return on equity, which dipp close to 10% three years ago, is now comfortable 16%. "We've almost ov come our decline already, and we've the discipline to keep our histo growth line moving," says Lucier.

Such growth, which amounts to do bling sales and profits every five yea came relatively easily when B&D w small. Just after World War II, the co pany practically created the consum market for power tools. They are now over 70% of all U.S. homes, and B& has a 50% market share. (Its chief co petitors: Rockwell International a Singer, maker of Sears, Roebuck's Craf man line.) Historically, recessio weren't a problem because hard tim forced home owners to make even mo of their own repairs; on top of that, pro uct demand responded well to B&D aggressive promotion. Its basic ¼-in drill sells now for as little as $8—or third what it went for 20 years ago. Eve time the price fell by 30%, the size of t market doubled.

What may be more important for t future, however, is Black & Decke geographical diversification. With plan (all nonunion) in 10 countries and dist bution subsidiaries in 45, the compa gets about 60% of its sales and earnin outside the U.S.—more than any oth big manufacturer. B&D's U.K. subsi iary, for example, has a 90% mark share, and "Black & Decker" in comm parlance there means "power tool," ju as "Hoover" means "vacuum cleane Total European tool business, in fa outstrips equivalent U.S. operations, a

ul Colony, managing vice president, tells how A&A works from a client's point of view:

We show clients how to maximize their product liability risk dollar."

"The cost of product liability surance continues to climb be-use claims costs continue to crease. The problem is finding e broadest coverage available for ch dollar of premium. The first ng we'll do is analyze the ex-sure and past losses. Our anal-s might suggest a self-insured ention or a deductible. Or it uld mean looking into the feasi-ity of a captive insurance com-ny. We're flexible in seeking the ht solution for each company's individual needs. From the client's point of view, it's the bottom line that we have to worry about."

Working from a client's point of view is our way. In Los Angeles, where Paul Colony is based. And in over 110 cities here and overseas. That means working as allies, solving business problems together. One of the biggest is the product liability area, and we have the talent and technology to develop programs for the greatest bottom line benefits.

We think our dedication to acting as an ally of the clients we represent is a big reason why A&A has become a worldwide leader in the insurance brokerage and financial services business. We have the facilities, expertise and strength to act as effective allies. We work from the client's point of view, whether the corporation is large or small.

it was the only major B&D segment that kept growing during the 1975 downturn. Part of the reason: Market penetration is lower abroad, the potential for growth via price-cutting greater. Bottom-line electric drills go for about $25 on the Continent, even more in the U.K.

Perhaps most remarkable, though, is Black & Decker's success in Asia. Its popular products are just the sort that usually appeal to the shrewd mass-marketers there, but so far B&D is the consumer market leader even in Japan—where the concept of home power tools is just catching on. At the moment, operations outside the U.S. and Europe account for 20% of net income and provide its fastest earnings growth.

The Japanese, of course, haven't ignored the power tool business. B&D's most aggressive international competitor is Makita Electric Works, a company that entered the field 20 years ago and now has sales that approach $250 million annually. But Makita—and huge European toolmakers like Germany's Robert Bosch and AEG-Telefunken—concentrate on the professional end of the market and minimize all-out battles with B&D in consumer products. The same goes for the U.S.; B&D's toughest fights are in commercial markets, where its share is just 30%. Competition comes from several smaller firms, including Skil Corp., which aggressive Emerson Electric plans to acquire, and Milwaukee Electric Tool, a division of Amstar Corp.

"I guess you could say we were tough on the ground but not so good on the passing," says Lucier of B&D's failure to match its consumer success on the assembly line and construction side of its business. Such commercial sales account for half the worldwide market for power tools, and gains here won't come easily.

Despite steady overseas expansion and a push for more nonconsumer sales, the bulk of B&D's anticipated earnings increases must come from new products. And here, the 1975 debacle taught Lucier a valuable lesson. In the late Sixties, B&D figured that market penetration in the U.S. for drills had peaked. For expansion, it moved into lawn care. Unlike its other wares, however, lawn mowers and hedge trimmers were subject to seasonal demand and weather conditions. Says Lucier, who came up through B&D's U.S. marketing side, "Business could collapse if it rained during the key buying months, and you can't use that as an excuse to your shareholders if you call yourself a growth company."

So B&D cut back sharply on outdoor products. Since 1975 its total U.S. sales have risen nearly 50%, but production of weather-sensitive items has dropped by half. Part of B&D's new domestic strategy is recycling old drill customers—first into two-speed and reversible models and then into hammer drills, which can cut through concrete. But much of expansion comes from other areas, a many of them are benefits of its dec tralized worldwide operating style.

To encourage shrewd planning, a B& country manager who beats his bud keeps the excess profit to reinvest hi self, and foreign subsidiaries do th own marketing and product devel ment work. By cannibalizing parts a tooling, managers can often hold star costs on a new line to under $150,000. such ingenuity B&D aims to launch p haps a score of new products yearly keep consumers interested.

Low investment costs minimize tential losses, and if an item sells it g heavy promotion. Consider Workma an $80 folding workbench that B&D U.K. subsidiary launched eight years a

B&D's size means it mu soon venture outside t basement and the garage meet Lucier's 15% annu growth goal. Soon to be intr duced in the U.S. is Dustbu er, a $30 hand-held recharg able vacuum cleaner.

with considerable misgivings. The pr uct, designed for home handymen cramped British apartments, was a hi success in the U.S. too, and sales n run $100 million a year.

Still, B&D's size means it must s venture outside the basement and garage to meet Lucier's 15% growth g Soon to be introduced in the U.S. Dustbuster, a $30 hand-held rechargea vacuum cleaner that comes close to p ting B&D in competition with appliar manufacturers. "The idea, of course, is keep churning out new items regularly they are never dependent on any blockbuster," says Alex. Brown & So Alfred Berkeley. "Nobody asks 3M or what their new products are, you j assume they'll have them."

What Black & Decker won't do, ho ever, is to repeat what Lucier terms "bet the company" acquisition. F years ago, when its revenues were rou ly $350 million, B&D paid $55 millior stock for McCulloch Corp., a privat owned manufacturer of chain saws t was losing money on sales of $80 m lion. That move into gasoline technol proved successful, and today McCull makes good money and has branched to supply moped engines for AMF Co But Lucier wants no more big ris Though Black & Decker's shares toc trade at less than half their pre-19 highs, they still command an 11-tim earnings multiple in a market that av ages 7 times. So Lucier can't afford other profit dip. Wall Street can forg one surprise. But not two. ■

usinessmen spent more time in jail for price-xing in 1978 than in the previous 89 years. amounts to a new occupational hazard.

The boss in the slammer

By Nick Galluccio

THIS MONTH Richard S. Wise, vice president of a Chicago sheet metal company, starts serving his term federal prison. His boss, Stanley B. lis, just got out. Both men had been ıvicted in a bid-rigging conspiracy to ide up the sheet metal work on gov- ment construction jobs.

f the staggered sentences indicate ıcern by the judge over who would be minding the store, that may well be one of the few instances of compassion business criminals should look for these days. The white collar is indeed tightening around the necks of the nation's business executives. Price-fixing, exploding gasoline tanks, collapsing scaffolds and a long list of small and large events are becoming major crimes. Punishment is being meted out to people so high up the corporate hierarchy they almost couldn't have known about the crimes. No matter, the statutes and the judges are saying: "Vicarious responsibility" makes them liable anyway.

When the Justice Department uncovered a major price-fixing conspiracy in the electrical equipment industry back in the 1950s, only the immediate participants went to jail. The top executives of General Electric, Westinghouse and Allis-Chalmers were not punished because they hadn't known about it. These days, it's conceivable that the people at the top would have wound up, if not behind bars, at least in country-club federal correctional facilities.

Consider this fact: Businessmen spent more time in jail for price-fixing in 1978 alone than in all the 89 years since the passage of the Sherman Antitrust Act. And how about this for a hair-raiser: The proposed Criminal Code Reform Act, now before Congress, would punish executives not for what they do but for "recklessly" failing to supervise subordinates. The Justice Department has some proposals of its own to punish securities, labor union, government and business fraud. And in March, the Food & Drug Administration will require drugmakers to assign an executive with personal liability for each new product they market. The FBI and Justice are running special task forces to crack down on white-collar crime. Meanwhile, a presidential commission wants to amend the antitrust laws to make it easier to prove attempts to monopolize markets.

With Senator Edward Kennedy now heading the Senate Judiciary Committee, the new populism is bound to come down hard on business in general, and that is sure to mean more liability.

Is all this zeal worthwhile? What degree of enforcement, if any, could have prevented the 1976 explosion at the Long Island City plant of the American Chicle division that killed six people and resulted in four Warner-Lambert Co. executives being indicted for manslaughter and criminally negligent homicide? Or the collapse of the cooling tower scaffolding in West Virginia that killed 51 workers? Or the 30 deaths and the millions in fines from rear-end collisions of Pintos?

In other words, how much money and effort should be spent to prevent what level of losses, injuries and deaths? Probably nobody is going to get to ultimate questions about the value of life. Instead, politics and economics will trade off to create compromise. "It is not clear whether tougher enforcement and increased regulation will be effective in curbing corporate crime," says S. Prakash Sethi, a professor at the University of Texas (Dallas) School of Management, who is writing a book on executive liability. "But it will certainly have other negative effects on social welfare: Senior executives will avoid taking risks with new products and processes, and society

will ultimately have to pay the price."

One thing is clear, however: Ignorance is a luxury a chief executive no longer can afford. To protect himself from the new liability, he must know every facet of his company's business and the regulations governing it.

Listen to Deputy U.S. Attorney General Benjamin Civiletti: "There is certainly an increased effort in not only the antitrust areas but in general criminal law to investigate and prosecute business crimes committed by executives."

Nowhere is the government's campaign more evident than in the Justice Department's antitrust division—especially since 1975, when it became a felony rather than a misdemeanor to violate the antitrust laws. Now, an executive can go to jail for antitrust violations for three years instead of one, and be fined up to $100,000 instead of $50,000. The maximum fine against a corporation was hiked from $50,000 to $1 million. Worse yet, the antitrust division is recommending that the penalty's severity be commensurate with the convicted executive's position in the corporate hierarchy. Then there's the Foreign Corrupt Practices Act of 1977, designed to curb overseas bribes and provide for penalties of up to $1 million for corporations, and $10,000 in fines and five years imprisonment for officers and directors.

No businessman was ever immune to outright fraud. A couple of months ago William E. Grace and Robert D. Rowan resigned their respective positions as chairman and president of Fruehauf Corp. after they were convicted, in 1975, of conspiring to defraud the U.S. government of excise taxes. Both men had originally received six-month jail sentences; now, instead, they will do court-ordered community service work until 1980.

But these days plain old price-fixing seems to be the crime most likely to get you into the slammer. Eleven executives of electric wiring device companies were sentenced recently to prison terms of up to 90 days and fined up to $40,000. In December, seven executives of J. Ray McDermott & Co. and Halliburton Co.'s Brown & Root, Inc. unit were indicted on price-fixing charges, including McDermott CEO Charles L. Graves and Delbert R. Ward, senior vice president at Brown & Root. If convicted they face up to three years in jail. The Justice Department also levied $1 million in fines against both companies, the largest yet in a price-fixing case.

Altogether, 31 people were sentenced to jail in 1978 for antitrust violations, compared with 26 in 1977, and 9 in 1976. Total individual fines in antitrust crime were over $1 million, up almost 40% from 1977, and total corporate fines rose fivefold to $13 million.

The SEC is getting a lot tougher too. The 174 convictions for securities crimes last year almost doubled the 1976 total. Not only officers are being held liable, but directors, auditors, lawyers, brokers and investment bankers as well.

You can now go to jail, too, for many things other than fraud, securities crimes or price-fixing. For violating the Occupational Safety & Health Act, for example. Or the Toxic Substances Control Act, passed in 1976.

Under most of these laws, an executive is liable even if he didn't know of the violation. In a 1975 decision upholding the conviction of John R. Park, president of Acme Markets, Inc., the Supreme Court said Park was responsible for rats in a warehouse because, "by reason of his *position* in the corporation, [he had] authority either to prevent or promptly rect the violation."

Are the courts going too far? Stai Sporkin, the SEC's relentless directo enforcement, doesn't think so. Says "I don't feel society treats the wh collar criminal with the kind of out that it should." But John M. Bray, a mer Justice Department attorney now defends executives, disagrees: " efforts to extend personal criminal lia ity are getting beyond the realm of sonal culpability."

However, Bray and his colleague the bar will be cutting up a huge growing melon in "preventive law." big increase in in-house legal staffs i obvious result of the new threats of fi and jail (FORBES, *Sept. 18, 1978*). Big fits like Du Pont and Dow are hi lawyers to specialize in such fields environmental law. And countless co rations are hiring staffers to do noth but keep them out of trouble.

No wonder. Federal agencies al have doubled their spending on busi regulation since 1974 to more than billion, forcing business to spend billi more to comply. Dow Chemical figu it lays out almost $200 million a y and General Motors has spent maybe billion since 1974.

Big corporate law firms—like Sh man & Sterling and Cravath, Swain Moore in New York—whose mem hardly knew where the criminal co were a few years ago, are hiring training courtroom lawyers. Staying of jail is worth a lot of money.

Now there's another new wrinl management consulting firms brough to run "risk management audits." In f years Booz, Allen & Hamilton's fee come for this service has climbed around $3 million a year. And Arthu Little's has quadrupled in five years.

Allied Chemical, for example, a having paid some $20 million in fi settlements and legal fees in the Kep case, has just undergone a six-month thur D. Little risk audit. In the last th years, Allied has tripled—to 40—its porate environmental staff to mon areas like occupational health and saf product safety and pollution control.

For years, social reformers and left argued that only poor people went jail—white-collar crime, except in most overt and invidious cases, w unpunished. Now the pendulum swinging the other way. Violent cri nals sometimes escape virtually scot-f while otherwise respectable busine men who bend the rules to make a bu are beginning to be severely punished the pendulum swinging too far? Is be overcharged as hurtful as being mugg To argue that it is not, is not to def white-collar crime but simply to r some basic questions about what kin society we want to live in. ■

How to stay out of court (jail?)

A checklist on the new liability for officers and directors from Joseph F. Johnston Jr., chairman of the Practicing Law Institute's seminar on director and officer liability:

- Know the business and financial statements of your company thoroughly. Insist on monthly profit-and-loss statements and comparisons with last year's figures. Appoint an active audit committee—and maybe serve on it.
- Don't let the chief executive "lead you around by the nose"—supervise the management. "This may make some CEOs uncomfortable," says Johnston, "but the board is no longer solely a mechanism for getting rid of an ineffective chief executive."
- Make sure agendas, past minutes, issue briefs and policy statements are sent to you before board meetings. And read them.
- Watch for conflict of interest and self-dealing. Appoint a committee to investigate any alleged misdealings, and get action.
- Develop a comprehensive education program for management, sales and marketing staff that goes beyond traditional antitrust topics to wage and price controls, and health and safety regulations. "Take each area of potential exposure and make sure people think before they act," says Johnston.
- Get insurance. Most directors put this *first* on their list. But it won't keep you out of jail. Policies can't cover fraud, fines and penalties, charges of personal profit and self-dealing. Many don't cover unsuccessful defense costs either.

Sums up Johnston: "In a lawsuit, diligence will still be your best defense." **—Christine Miles**

For nearly two centuries Dexter Corp. slumbered, until a seventh-generation descendant of the founder came along.

The first 200 years were a bit slow

By James O'Hanlon

WHEN 212-year-old Dexter Corp., the oldest company listed on the New York Stock Exchange, finally bumped itself onto the FORBES industry survey of the biggest U.S. corporations this year, the inevitable question was: What took Dexter so long?

Founded in 1767, when its Windsor Locks, Conn. headquarters was called Pine Meadow, Dexter has only in the last two decades changed substantially from colonial days when it ran a sawmill along the Connecticut River, scoured wool sheared from local flocks and sold cattle feed to farmers. After its first 191 years it could boast sales of only $9.5 million—glacial growth best. But Dexter was pushed into modern world by the return from W War II of young David L. Coffin seventh-generation descendant founder Seth Dexter, who could longer accept the horse-and-buggy p of the old family firm after the won of the wartime Navy. Says Coffin, 53 and chairman of the $350 mil (sales) corporation, "I saw what modern world was going to be like I wanted our company to be part of

The last 20 years have been quite ferent from the first 191. When the f figures for 1978 are in, Dexter will sh sales of better than $350 million and earnings of well over $20 million (ab $2.35 per share). Both figures repres 10% gains over 1977.

Today, in 100 manufacturing, resea and marketing facilities around world, Dexter makes and sells hundr of products ranging from coatings for insides of beer cans and adhesives for planes to cleaning systems for pou processors and tea bag paper. It is he quartered in a modern concrete and gl slab on the site of Seth Dexter's origi office. Across 129-year-old railr tracks sits the hulking Dexter paper nonwoven-fabric mill that spread up down the Connecticut River bank o two centuries.

Dexter concentrates on develop new materials—particularly specia chemicals—to be used for specific products by manufacturers such as B weiser, Lear Siegler and Thomas J. L ton, Inc. "The materials we produc says Coffin, who has been chairm since the death of his father, Dexter Coffin, in 1966, "generally perform a tal function in a wide variety of produ for a small percentage of their consur costs." That way Dexter finds it eas than, say, U.S. Steel does to pass on pr increases to its customers.

Most of the growth that has tak Dexter from midget status to a place the FORBES list has been internal, Coffin has also made a few key acqu tions. Early on, with the acquisition little Standard Insulation Co. of E Rutherford, N.J., he began Dexter's div sifying away from its dependence slow-growth, capital-intensive nonv ven manufacturing into more resear intensive, specialty manufacturing bu nesses. Says Coffin, "If Dexter had tr to grow purely through nonwovens would be out of business today, lo since absorbed by somebody else."

Coffin has emphasized close custon contact to bring in more busin through the development of new pr ucts. An ex-salesman himself, Cof sees to it that his more than 700 sal men are familiar enough with a custo er's needs to run the machines that D ter products are used on.

Dexter Corp. Chairman David L. Coffin
The seventh son leads an anachronism into the modern age.

plains Coffin, "We go to the market-
e. We find out what a customer
s us to invent, and then we come
to the lab and invent it." That way,
er's Midland division recently de-
ped a high-temperature exterior
ng called Micolon IV for a new line
okware manufactured by the Nordic
division of Northland Aluminum
ucts. Coffin says Micolon IV puts
er into competition with Du Pont's
n. And that's what brought Gates
ber Co. to Dexter's R&D labs last
for a new kind of glass-fiber separa-
paper for its revolutionary high-
ered appliance battery.

t Coffin also has a keen eye for
isitions that fit Dexter's marketing
such as Midland Industrial Finishes
in 1963 that got Dexter into the
strial coatings business, and the Hy-
Corp. of Industry, Calif. Its Hysol
ion recently pulled even with 3M
.'s adhesive bonding segment for
nd place behind American Cyana-
Co. for a share of the $20 million-
market for adhesives that join sup-
structures to jet aircraft.

out five years ago, Coffin and
er's president, Worth Loomis, 55,
rmer financial vice president at
usa Corp., deemphasized expan-
and began concentrating on a
er return on investment. To date,
two executives seem to have suc-
ed admirably, raising Dexter's re-
on investment from a so-so 12%
974 to a very respectable 19.6%
the 12 months ending in last
s third quarter.

FIDELITY GROUP Over $4 billion of assets under management

"What's it like when all of Madison Square Garden is screaming, 'Gondo, Gondo'? I wish I could bottle it and save it."

—Glen Gondrezick
Professional Basketball Player

"It's fabulous. They never even cheered for me like that in high school or college.

"It's really exciting. It turns me on, and I hope it turns the team on. I remember the time last year when I was at the foul line ready to shoot and, over the loudspeaker, the public-address announcer asked, 'Who's at the line?' and, in unison, everybody yelled, 'Gondo.' I stepped back and looked around to see who they were yelling for. I couldn't believe it was happening for me.

"I take a lot of stuff from my teammates because of the cheering for me, particularly when I'm on the bench and, all of a sudden, the fans start yelling for me to go into the game, but I love it.

"But I know the cheering's not going to last forever. And neither is the kind of money I'm making now. That's why, even though I'm only 23, I'm saving a big percentage of my salary and making the investments now, so that when my basketball career is over and I start my business career at the bottom, my wife and I won't have to face a drastic change in our lifestyle.

"Life is really a joy for Merry and me. We play tennis, snow and water ski, go hiking and backpacking. We buy good wine. We have a really quality stereo system. I have two motorcycles—one street-legal, one for dirt. We're looking at sports cars, an old Ferrari or a new Corvette. Kids are in our future. Merry wants three, I want two. So far we've compromised on two and a half. We travel a lot during the off-season. We spend a lot of time with my family in Boulder, Colorado, where I grew up. A lot of time because there's a lot of family. I have 12 sisters and brothers, and I'm very close to them.

"I guess we pretty much have everything we want. But we don't need that much to be happy. Also, I've seen money turn too many athletes' heads. I don't want it to affect me that way. I hope I never refuse to give a kid an autograph.

"I think what it really comes down to is that I've always felt good about myself and the money doesn't make any difference. I still think I'm a simple kid, and success isn't going to make me feel or act differently.

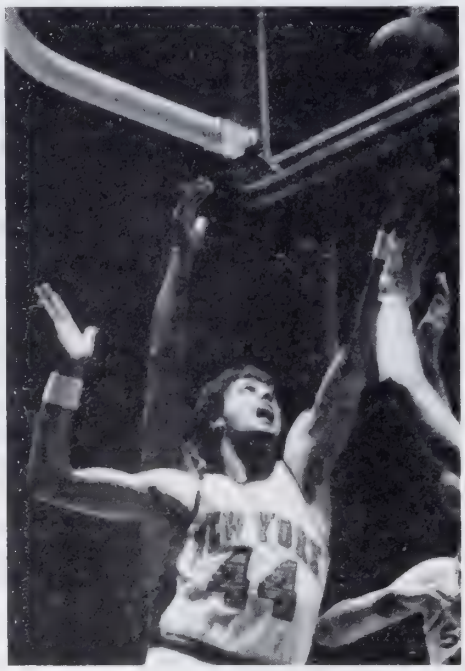
"Do I read PLAYBOY? Doesn't everybody? I've been looking at it for a long time and reading it for the last three years. I feel it's really worth reading. The in-depth interviews are terrific. I use PLAYBOY a lot to learn about products I'm interested in. PLAYBOY compares a lot of products, and that's really helpful. They're more away from the old PLAYBOY image now, more into information and I like that."

Everybody doesn't read PLAYBOY, Glen. But more than 14 million young men like you do every month. Like you because they have the same kind of lust for life and level head you have.

And that's what makes you—and them—one of the most powerful buying forces advertisers to men can find in any one place at any one time anywhere.

And advertisers can reach a lot more of your kind of men—for a lot fewer of their advertising dollars—in PLAYBOY than they can in Time or Newsweek.

A lot more men for a lot less money. That's a very high percentage shot.



The same kind of men who read Time and Newsweek read Playboy. Only a lot more of them read Playboy.

The Playboy reader. His lust is for life.

The game isn't over

tatistical Spotlight

HEN many people thought the take-ames were being doused by federal tion and by Teddy Kennedy's s to have bigness declared badness, comes $4 billion American Express ith a $830 million offer to buy aw-Hill, the giant publisher. Mean- the word from the Capitol was that Kennedy's antitakeover bill had scant chance of passing this session of Congress *(see Trends, p. 8)*. So, apparently, the game isn't over, and 1979 could be another great year for arbitrageurs and for ordinary investors lucky enough to find a takeover candidate before it gets propositioned. Although the Justice Department and FTC will make more trouble this year, the relative cheapness of most stocks remains a spur to tenders.

From management's point of view the best takeovers are the friendly ones. Stockholders do best in unfriendly takeovers because those are the ones where the bidding really gets interesting. However, unfriendly ones are riskier for investors to follow, lest the deal should fall through. For example, Mead Corp. stock dropped more than 20% when Mead management defeated Occidental Petroleum's takeover bid.

At any rate, the game is well worth playing. Last year, investors received premiums of $2 billion over the preoffer market price. The table below lists 40 of 1978's biggest takeovers. In one case, Greyhound's takeover of Verex the premium was way over 100%. Premiums of 40% and more are common. Also common, apparently, are leaks. Note how many of these stocks moved up substantially in the month prior to the announcement of the offer. ■

Here's a game only the brave will play. Eight stock pickers stick their necks out and choose a single stock for 1979.

If you could love only one

The Streetwalker

IF YOU COULD BUY just one stock—one only—which would it be? That was a question we put to a bunch of moneymen in 1976 and 1977. Truth to tell, we had trouble eliciting replies: Like everybody else, stock pickers prefer staying off partly sawed limbs. But we did find ten brave souls, and this seems like a good time to revisit their old predictions and elicit some new ones.

In May 1976, we had nine seers picking nine stocks.

Let's start with *Ronald Strauss,* now with Chicago's William Blair & Co. Strauss picked a conglomerate, Loews Corp. He liked Loews because he felt it would profit nicely from its then recent and cheap acquisition of CNA. Score one for Ron Strauss: Loews is up 48% in a market down by 18%.

Strauss' favorite now: Merry Cos. of Augusta, Ga., the third largest brick company. He looks for earnings of $3 in 1979 and $4 in 1980, as this onetime regional producer continues to expand nationally. At 11 a share o-t-c, Merry sells for just 3.7 times earnings.

Frank Parrish Jr. runs the income growth group of Boston's Fidelity Management. In 1976 he picked Missouri Pacific Corp. It's up 42%, not bad in a market decline of 18%. Parrish's choice this year is Financial Federation (NYSE). "Savings and loans are selling at low price/earnings ratios, have good yields and sell below book value." He thinks earnings will be $6.25 to $6.30 in 1979. At a current price of 24⅝, that's a multiple of only 4. An acquisition candidate, too.

Robert Wade Jr., formerly of Drexel Burnham Lambert, now president of San Francisco's Crocker Investment Management, picked IBM back in 1976. Not bad: up 21%. Wade says he still likes IBM but no longer has the stomach and heart to play the single stock game again. Sorry then, no Wade pick for 1979.

The same with *Kevin J. Bradley,* who has shifted from Bache to become chairman of Travelers Investment Management Co. He picked Data General, up 8%. "Gee, I was pretty smart," he says. "I'm not sure I'm that smart today." So no Bradley pick for 1979.

Leslie Pollack, Shearson Management Inc.'s chairman, picked Blue Bell, the apparel manufacturer, which he thought would double. Actually it dropped 10%. But to Pollack's credit, he's willing to try again. His 1979 pick—Syntex, traded on the American Stock Exchange. Formerly built around the Pill, now Syntex has become a broader drug company. For the fiscal year which ends July 31, 1979 Pollack estimates per-share earnings over $4. At the recent stock price of 35, that's a price/earnings ratio of 9—dirt cheap for a growth stock.

Robert M. Hanisee, director of institutional research at Los Angeles' Crowell, Weedon & Co., picked Hewlett-Packard at 106 and saw it decline 14%, to 91—no disaster but a disappointment all the same. He still likes Hewlett-Packard; however, Hanisee's favorite now is Watkins-Johnson, a smallish Big Board defense-related company with sales of about $108 million. He sees Watkins-Johnson's earnings recovering this year from a bad 1978—to $2.50, a multiple of 6.4 based on the current price of 16. By the way, don't hold H-P against Hanisee: He was one of the few bulls on Teledyne when nearly everyone else scorned it.

John Doherty is research director of San Francisco-based Sutro & Co. His now retired predecessor at Sutro picked Northern Telecom—alas, down 19%. Doherty likes IBM. "Why? Because the quality growth sector of the market is going to be the leader in 1979 and IBM is its leader. I look for $23.50 earnings in 1979 on the old stock, $5.88 on the new."

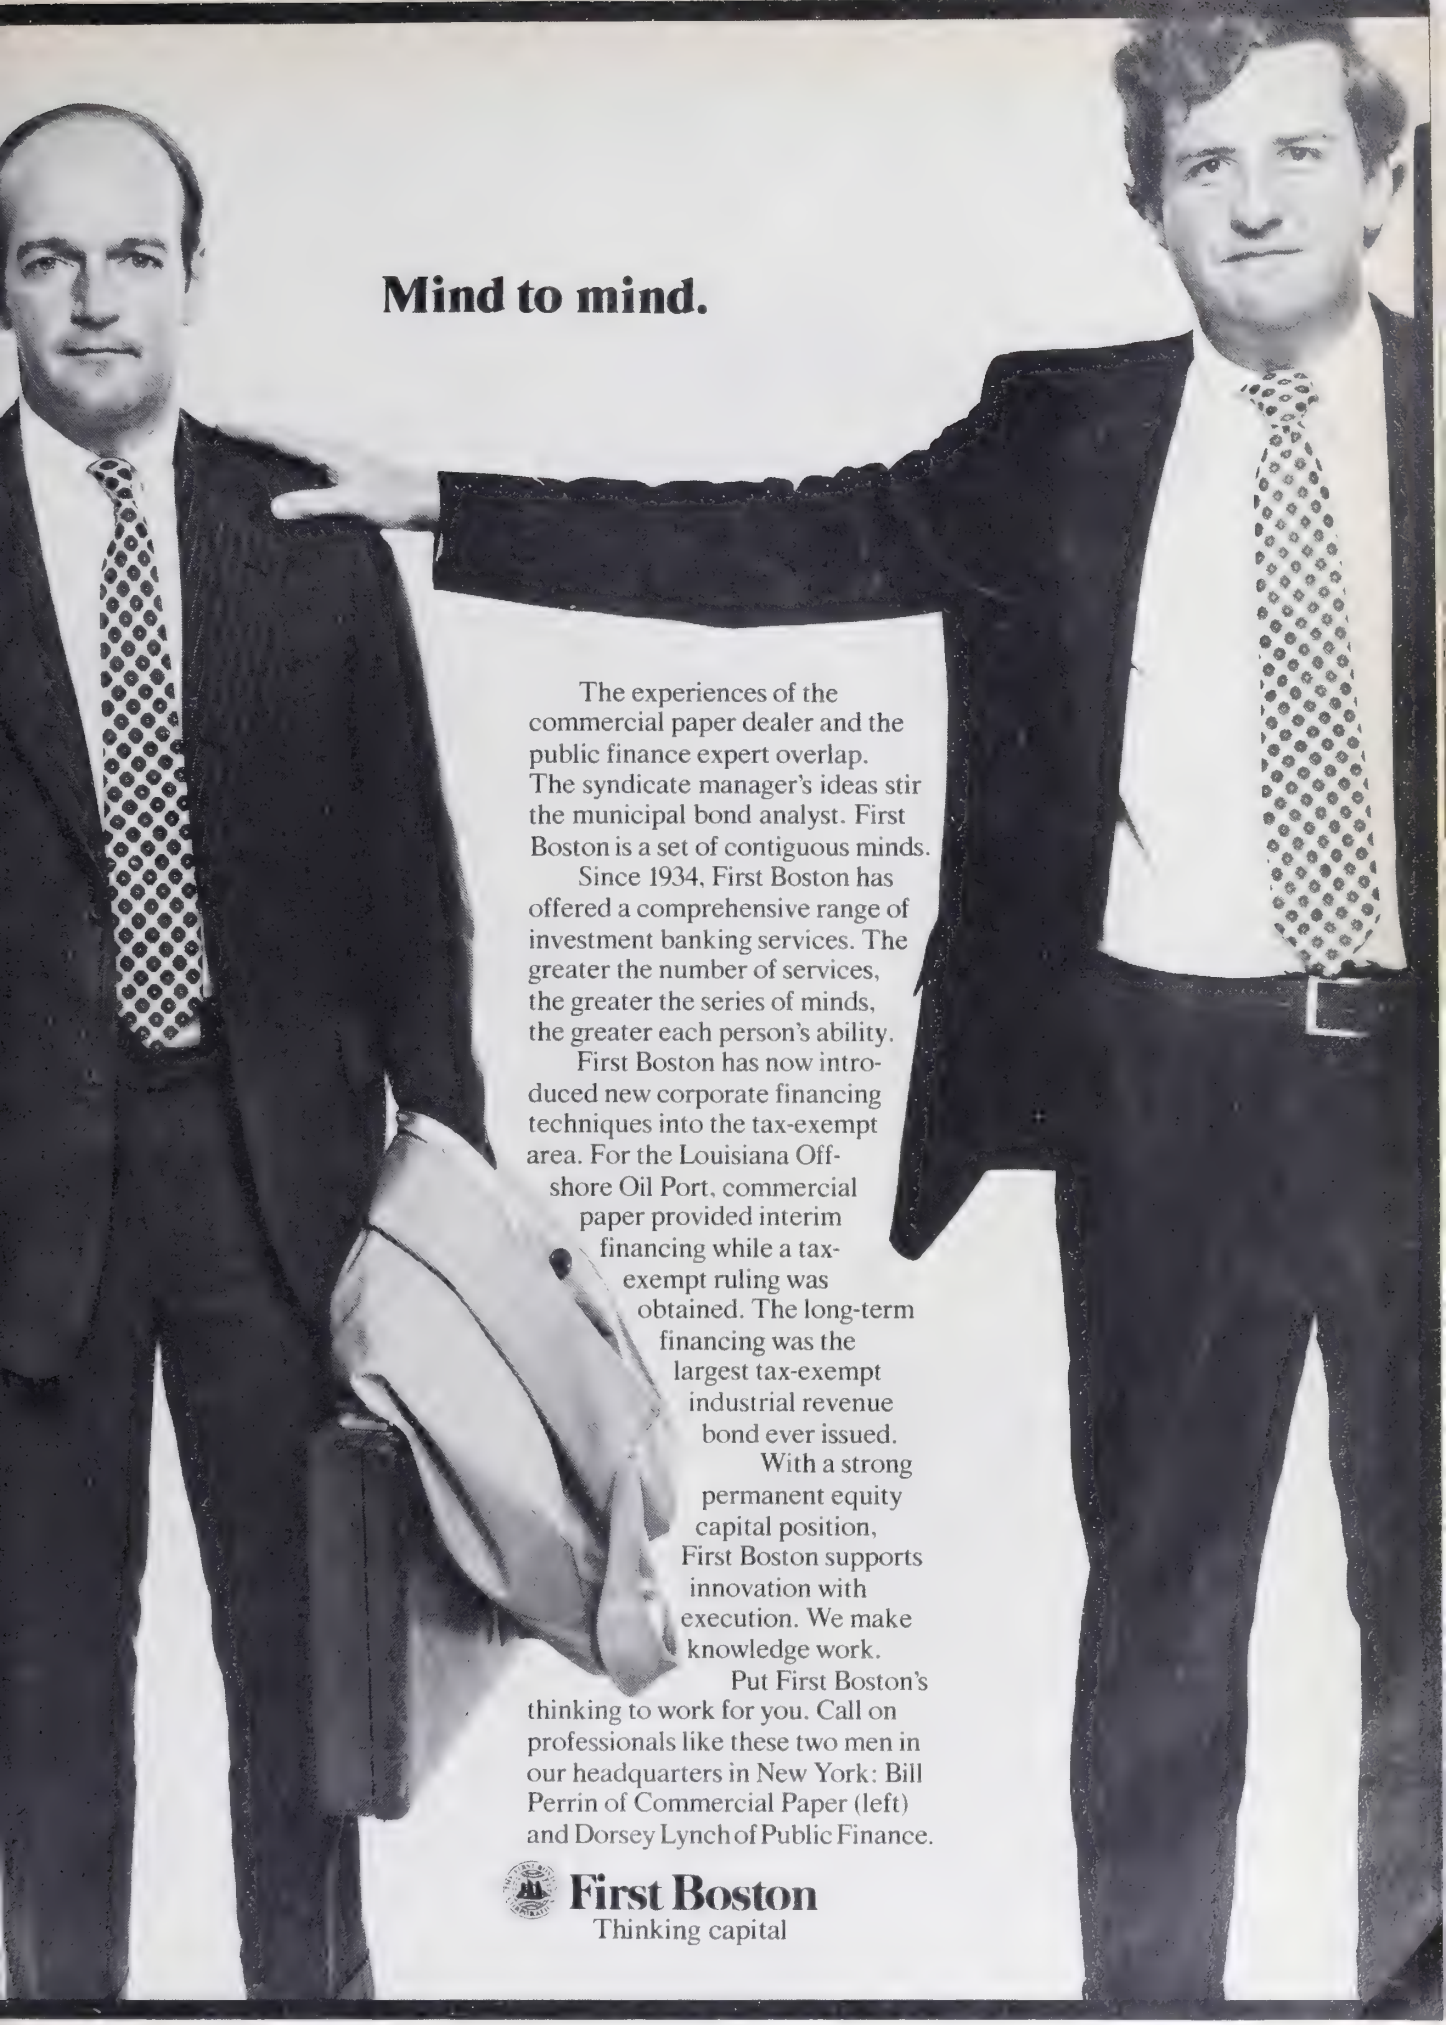
In 1976 *Robert H. Stovall,* director of investment policy for Dean Witter Reynolds, picked Merrill Lynch—down 36%. While Stovall still likes Merrill L (FORBES, *Dec. 25, 1978*), he choose his stock of this year Schering-Pl (NYSE). Schering, which should $4.05 in 1979, currently sells at 30 P/E is 7.4, the yield 4%. It's valued l cyclical company," Stovall says, "v in fact it's more like a defensive gr company."

The biggest loser among the stock pickers was *Robert Archibald* search director at Los Angeles' Bat Eichler, Hill Richards. Back in 197 chibald picked House of Fabrics, a fabric store operator. It was then now it is 5⅞, down 40%, and h longer thinks it's a buy. Undaunte has a favorite for 1979: Oak Industr Crystal Lake, Ill. electronics com Oak operates cable TV systems makes hardware for them. "Pay Archibald says, "has been aroun about 20 years and nobody has ever made it work before. Oak has com with a system that's superior to anyt available right now and they have financial resources to make it w They'll earn $1.85 this year but have the potential to earn upwards o a share by the mid-Eighties." At current price of 17¾ per share, would work out to 1.2 times th bucks—*if* Oak makes it.

We've saved for the last our fav moneyman, *John Templeton* (FORBES, *27, 1978*). In May 1977, Templeton played our game, when the Dow, at was 12% higher than today. He sel a Canadian construction company, West Development Corp. Ltd., then ing at a little over 5, adjusted for s splits. It recently sold at 14, a ga 180%. Pretty impressive.

Naturally, you'll want to know Templeton's favorite is today. Okay tachi, Ltd., the Japanese electronics pany. "In Japan," Templeton says, average stock has a price/earnings of 27 and Hitachi's is only 8." The re Hitachi lags the market, Templeto plains, is that it has been volunt consolidating its earnings, and Japa investors aren't accustomed to co dated earnings and don't know ho value them. Hitachi's American de tary receipts sell at 53 and will earn for the fiscal year which ends month. Templeton expects a move within a few months. Now other co nies are required to consolidate earnings too. At even *half* the ty Japanese P/E, Hitachi would sell higher than it does now.

Here's a thought. While it's true only half of the old favorites were ners, a bit of arithmetic produces interesting fact: Had you put $1,0 each of the ten favorites, your $1 would now be worth $11,664. The s amount invested in the DJI woul worth only $8,200. ■



Mind to mind.

The experiences of the commercial paper dealer and the public finance expert overlap. The syndicate manager's ideas stir the municipal bond analyst. First Boston is a set of contiguous minds.

Since 1934, First Boston has offered a comprehensive range of investment banking services. The greater the number of services, the greater the series of minds, the greater each person's ability.

First Boston has now introduced new corporate financing techniques into the tax-exempt area. For the Louisiana Offshore Oil Port, commercial paper provided interim financing while a tax-exempt ruling was obtained. The long-term financing was the largest tax-exempt industrial revenue bond ever issued.

With a strong permanent equity capital position, First Boston supports innovation with execution. We make knowledge work.

Put First Boston's thinking to work for you. Call on professionals like these two men in our headquarters in New York: Bill Perrin of Commercial Paper (left) and Dorsey Lynch of Public Finance.

First Boston
Thinking capital

What do you do after you've become the world's largest advertising company? In the case of Interpublic you regret that you still have only 3% of the market and go for more.

Mastering a difficult blend

INTERPUBLIC GROUP OF COS., INC. was an idea whose time had not yet come in the late Sixties. It was the brainchild of Marion Harper, a man of panache and vision, but little managerial ability. Harper wanted to do in advertising in the Sixties what General Motors founder William C. Durant achieved in autos in the Twenties: to build through countless mergers a company that would dominate its industry. Like Durant, Harper achieved it all except for one thing: He couldn't make it profitable. Accustomed to thinking in billions, in grand concepts, he tended to forget that payrolls had to be met, rents paid. By 1967 Interpublic was handling $700 million in advertising but was near insolvency.

Carl Spielvogel, now vice chairman of administration, recalls coming out of a meeting with investment bankers Wall Street who offered a paltry $5 i lion for half the company. "While were buying subway tokens for the back uptown," says Spielvogel, "we w dered whether the money would cc through fast enough to meet Frid payroll." The deal fell through. A months later Harper was ousted.

Interpublic could have been a Madi Avenue version of Penn Central. Onl wasn't and those who recognized t fact *(see box)* would profit handsomel decade later, under businesslike man ment, Harper's dream is working bea fully. Worldwide, Interpublic's com nent agencies placed $2 billion wort advertising last year, twice as muc each of its two biggest rivals, the U.S Walter Thompson and Japan's Den Interpublic's fee income hit $248 mil and net profits $14 million—$3.8 common share. These were numbers dreamed of in advertising a decade For investors who saw their stock se 5 as recently as 1974, the triumph sweet indeed. It now sells at around and pays $1.60 in annual dividends.

"This is no longer a country-club b ness," says Paul Foley, 64, Interpub balding, ruddy-faced chairman. "It

Paul Foley, left, and Philip Geier of Interpublic
They built a grand concept into advertising's General Motors instead of its Penn Central.

What is NCR up to now?

e're up to umber one in upermarket rminal ystems.

r groceries, very y, were checked this week on an R electronic cash ster. Since we sell more than one else with r 159,000 alled in 108 ntries, the s are in our r.

eader in nning—Perhaps r food items were ng up" automati- y, by an NCR scan- g system. The Food rket Institute Monthly wsletter verifies that NCR has largest customer base for versal Product Code nning systems.

NCR scanning systems are being alled at a faster rate than any other l. No wonder: according to Inter- onal Data Corporation, we have plied approximately 60% of all food e terminals which can be upgraded canning.

ailers depend on NCR systems— are we up to number one in super- ket terminal systems? Executives of npanies such as A & P, Lucky Stores, lix and Winn-Dixie helped put us there.

They depend on NCR systems for up-to-the-minute management reports, precise inventory levels and improved employee productivity.

Providing business equipment for 95 years—But helping supermarkets fight rising costs is nothing new for NCR. We've been doing it since the very beginning of self-service shopping. In fact, we've been in business for 95 years.

16,000 people in support—Supermarket owners look for this kind of experience when they choose an EDP system. And they look for support. NCR supplies it, with 16,000 highly trained field engineers around the world.

This global support network is especially important to companies with plans for expansion.

Retailing is just one of the fields where NCR is the leader. We're also up to management's most demanding requirements in financial, commercial, industrial, health-care, education and government markets.

Now you know why NCR is a world leader in general-purpose computer systems.

NCR
Complete Computer Systems

The Liability Thr

The attitude that the professional can do no wrong has been swept away by a tide of changing public opinion; by rising expectations about the quality and performance of services. As exposure to liability increases, professionals are re-examining their needs for broader insurance protection.

A brief review by INA of an insurance topic of current interest.

While the press and television have given wide coverage to the dramatic rise in medical malpractice cases, a less publicized—but equally serious—situation exists for professionals in other fields.

No longer immune from the threat of malpractice claims are such groups as attorneys, accountants, architects, engineers and building contractors. The last decade has also seen a marked increase in actions against real estate brokers, travel agents and many others providing personal services.

Underlying this trend is the growing public conviction—fostered in part by publicity and social pressure—that it is justifiable to "cash in" on a professional's alleged errors. And cash in heavily.

Attorneys under increasing pressure

The number of claims against attorneys and legal firms has doubled in the last 15 years. In 1977, it is estimated that approximately 15,000 malpractice cases came to trial or were settled out of court. And over the past two years the average award against lawyers has risen by 200%—to about $28,000.

One important factor in the growth of legal malpractice actions is the fact that lawyers themselves are suing and testifying against their fellow professionals—a phenomenon almost unheard-of a number of years ago.

This pattern of events not only affects the availability and cost of liability insurance for attorneys, but also has an impact on their fee structures. Defending litigation can now cost as much as $2,000 a day.

Other professions equally hard hit

In architecture and engineering, studies show a 20% annual increase in the number of malpractice suits. Awards for design and construction failures have tripled since 1960; from an average of about $5,000 each to

t to Professionals

ll over $16,000 in 1977.

Multi-million dollar judg-nts are no longer uncommon the building field. And a pro-eration of government regula-ns leaves the design and engi-ering professional exposed to ks that were not even imagin-e a decade ago.

Similar patterns exist in ac-unting, in tax work and in real ate—where agents have been ed by sellers who feel they did t get high enough prices. In the nployment-agency field, clients ve filed suit for the alleged "un-isfactory performance" of new nployees.

Loss-control steps

The safety procedures com-nly used by businesses and dustry can hardly be applied in st professional fields, but a mber of positive programs are der way. In the legal field, cial courses are available for orneys dealing with the com-xities of government regula-ns. Docket-control procedures used to assure compliance with court-calendar dates. In addition, the American Bar Association is studying increased litigiousness among attorneys—and is considering the possibility of legislative remedies to limit awards in malpractice cases.

Accounting firms are scrutinizing with greater care the financial practices of clients and the reports of their auditors and officers. New caution is being applied in tax-preparation, and in matters relating to the new ERISA law.

In design and engineering, greater stress is placed on evaluating the financial underpinnings of proposed projects—in order to avoid the "thin-money" deals where suits may be brought to deny the professional his fees.

Controlling insurance costs

Within most professional fields, concepts such as self-insuring and establishing captive insurance firms are only in the formative stages. However, a number of state bar associations sponsor liability insurance packages to individual attorneys and law firms. And there are instances of pooling and other cooperative action by accounting firms to secure lower premiums.

In recognition of the professional's increasing exposure to liability and financial loss, INA has formed a special division to handle their complex insurance needs. Through this division, INAX Underwriting Agency, coverage can be arranged for a wide range of individual practitioners and professional firms.

* * * * *

The Insurance Company of North America was founded in 1792 in Independence Hall, Philadelphia. Today it is the largest component of INA Corporation's international network of insurance and financial services companies. In property and casualty insurance and risk management services, life and group insurance, health care management, and investment banking, INA and its affiliated companies offer a unique combination of products and services to business and industry around the world.

INA insurance products and services are available through selected independent agents and brokers. For an informative booklet on current trends in professional liability, write INA Corporation, 1600 Arch Street, Philadelphia, Pa. 19101.

"Plumber" seeks $10,000,000 for lawyer's leaks

In a recent notable case, a convicted Watergate defendant sued his former lawyer for $10 million alleging that errors had been committed by leaking confidential material to "third parties." This would underline the growing need for law firms to make sure that evidentiary material is kept under tight security —even beyond the statute-of-limitations period for malpractice actions.

INA

The Professionals

Before long, lovers of macadamia nuts will have more to love.

Thanks to the green thumb of IU's C. Brewer and Company.

If you've ever tasted macadamia nuts at a party or on an airplane, you know they're deliciously distinctive. And although macadamias cost more than other nuts, nut lovers are consuming them faster than Hawaiian orchards can grow them.

C. Brewer and Company, the world's largest producer and marketer of macadamias, will more than double the size of its orchards during the next five years. Planting 88 trees per acre, Brewer will add another 5,000 acres to the 4,000 acres already devoted to macadamias.

To people everywhere, the crisp and delicately sweet flavor of macadamias makes them a welcome treat. And if you haven't tasted these exotic nuts, we invite you to try Brewer's Mauna Loa® brand.

Macadamia nuts are just one of the diversified businesses of C. Brewer, an agribusiness company whose products include sugar, spices, molasses, guava, rice, prawns and fertilizers. C. Brewer also aids many developing countries through agronomics consulting, engineering and management.

C. Brewer is another important part of IU International, a company with worldwide interests in land transportation, ocean shipping, utilities, industrial products and services, distribution and agribusiness that add up to $2.5 billion in annual revenues.

For further information about macadamia nuts, write Dennis A. Balint, Vice President-Marketing, Mauna Loa Macadamia Nuts, 875 Johnson Ferry Road, N.E., Atlanta, GA 30342. Or write John W. A. Buyers, President of C. Brewer and Company, 827 Fort Street, Honolulu, HI 96805.

To learn more about IU, write Corporate Affairs, IU International, 1500 Walnut Street, Philadelphia, PA 19102.

IU International

usiness now—where clients don't accounts on whim or because of ne relationships. Those days have eared."

er Robert E. Healy, Foley's prede- who was brought back from Gene- e pell-mell expansion was halted ne rescue launched. Interpublic's nployees loaned the company $3.5 n in return for convertible deben- This, along with $10 million in oans and prepayment of commis- by some of its clients, allowed In- lic to go public in 1971, raising an nal $7 million.

n profitability returning, Foley ver as chairman in 1973. A former ated Press newsman who had d his way up through the ranks at nn-Erickson Inc., Interpublic's big- gency, Foley started expanding and, so far, the old problems t recurred. Interpublic's pretax in- as a percentage of commissions rom 4% in 1970 to 13% last year. ok value per share has climbed 5.75 to $20.

Interpublic is a true international ny, not just a big home office with t executives in the field. With its ition this spring of the SSC&B (whose billings alone total over illion), Interpublic's five agencies ve 141 offices in 47 countries. In addition to SSC&B, its agencies include: McCann-Erickson Inc., Campbell-Ewald Inc., The Marschalk Co., Inc. and Erwin Wasey, Inc. Among their clients: Coca-Cola, Exxon and General Motors.

In many ways, the holding company concept does work like General Motors: Just as Chevrolet, Buick and Pontiac compete with each other, one of Interpublic's agencies can take on an account that competes with the client of another Interpublic agency. And Interpublic is big enough to service multinational clients on a global basis. So its growth has in some cases paralleled that of its clients: Exxon has been a McCann client for 67 years; Coca-Cola and Buick, more than 20 years. But the disadvantage of this structure has been higher overhead and thinner margins than competitors like Doyle Dane Bernbach, BBDO and Ogilvy & Mather. Foley is confident economies of scale eventually will prevail. But if that is to be so, the company must continue to grow. In fact, to meet his goal of a 15% annual increase in net income, revenues will have to increase by at least 12% annually, Foley says.

The $35 million SSC&B acquisition is part of this strategy. Its domestic client list includes American Brands, Bristol-Meyers, Johnson & Johnson and Sterling Drug. It owns 49% of the International Lintas network as well. The Interpublic deal will provide SSC&B the cash it needs to buy out the 51% of Lintas still owned by Unilever, the British-Dutch conglomerate. Raising the money is no problem. With little long-term debt, Interpublic went into 1978 with nearly $40 million in cash and probably came out with a great deal more.

Foley believes international markets offer the greatest potential, especially giant "emerging consumer societies" like Brazil. The acquisition of SSC&B—which gets about 60% of its revenues overseas—will substantially increase Interpublic's foreign business, which already accounts for over half its earnings.

Best of all, Interpublic still has plenty of room to grow. Worldwide advertising increased 20% last year to $85 billion (slightly more than double the dollars spent in the U.S.). Interpublic has only about 3% of the market so it can easily gain market share without frightening anybody's trustbusters.

Foley joined McCann-Erickson's Detroit office in 1955. He moved up the ranks to CEO of McCann in 1968 and of Interpublic in 1973. His heir apparent is Philip Geier, 43, a stocky numbers man, who places great emphasis on financial controls. Interpublic seems to have mastered the difficult blending of creativity and cost-accounting that it takes to manage great size in business. ■

Media buff

e many Americans, Warren E. Buffett is fascinated with the press. s fascination has made the already wealthy Nebraskan investor con- erably wealthier. After compiling a truly spectacular record between 7 and 1969, this latter-day disciple of Benjamin Graham quit: The rket was too high. But in the early Seventies, when media stocks were much in favor, Buffett began acquiring them in large quantities ough his insurance holding company, Berkshire Hathaway Inc., head- rtered in his hometown of Omaha. Buffett owns 47% of its stock.

Know what you own and own a lot of it," Buffett says, and for the last years he has followed his own advice so far as press, advertising and adcasting are concerned. First he bought his own newspaper, his local aha *Sun*. Berkshire Hathaway proceeded to invest 25% of its $300 lion portfolio in media stocks while Buffett began serving on the rd of the Washington Post Co. As he often does, Buffett hit a jackpot. ended up with 1.8 million shares of that company, 11% of the stock, as much as the controlling Graham family. He paid around 6 in 1973; shares split at about 40 and the new shares are at 26 now. He umulated 350,000 shares—or 8%— of advertising's Ogilvy & Mather rnational, Inc. at around 8 in 1974; current price, 22. He put chunks of n in Capital Cities Communications Inc., Knight-Ridder Newspapers, , Media General Inc., Multimedia Inc. and Affiliated Publications Inc. en these stocks were much cheaper than they are now. In 1977 he laid $32 million to buy the Buffalo *Evening News*.

nd Buffett's Berkshire Hathaway is, far and away, Interpublic's big- holder, with 16% of the stock.

there a conflict of interest here? The same man controlling big ad ncies and many of the media that ad agencies use at the same time? ett insists there's no conflict. "Aside from the Buffalo and Omaha ers," he says, "we never try to influence management decisions."

it about time for him to take some of those handsome profits? dently not. "We buy businesses with strong long-term prospects run nonest and competent people at prices we consider attractive and hold o them for a long time," Buffett says. Now that's the kind of stock- der every capable management loves.

Berkshire Hathaway's Warren E. Buffett
"Know what you own and own a lot of it."

There is nothing temporary about the $2 billion temporary person business. It seems to be here to stay. But it does have its ups a downs—and trouble may lie ahead.

A cushion for business

By Howard Rudnitsky

THEY TABULATE the votes in proxy fights. They check fish contamination in the Hudson River. They work as accountants, nurses, legal secretaries, telephone salespeople. Last Christmas you might have seen them dressed up like Santa Claus, demonstrating Polaroid's new instant movies.

They're temporary workers—part of the estimated 2 million persons annually, mostly women, placed in short-term jobs by temporary-help firms, a $2 billion business that may be the ultimate service industry. It has little fixed assets, capital investment or permanent commitments. It works well with franchising. It's as disconnected as a Fellini movie—the very model of the modern post-industrial business enterprise.

Fifteen years ago, the temporary firms grossed an estimated $160 million and employed under 400,000 people; since then, "temps" numbers have been growing over three times faster than overall U.S. employment rolls. Of course, a typical temp may make under $1,500 a year, since most work infrequently, and many do not put in a 40-hour week.

Interestingly, there is no real long-term shortage of potential help, especially with the influx of women and retirees into the work market.

Last year was an especially good one for the business, with revenue growth of about 17%, well ahead of normal. There are now more than 2,000 temporary-help offices around the country, ranging from domestic industry leaders like Kelly Services, Inc. and Manpower Inc., 85% owned by Parker Pen Co., to tiny local firms that an entrepreneur with a little cash can set up easily. Says one: "You just hang up a shingle, rent an office, get some telephones and a secretary, put out some ads, and you're in business."

Right now, nearly all of them are making money. The best estimates are that the industry earned about $100 million last year, up about 30% from 1977. Over 40% was from ten industry leaders.

Worldwide, Manpower (about $10 million net on $600 million sales) is number one. Number two is Kelly Services, a publicly owned company that will net around $13 million on sales of $265 million in its 1978 fiscal year. Olsten Corp. and Staff Builders are also public.

Return on total capital runs from 23% to 33%—more for privately owned firms—and the industry leaders have good balance sheets. For example, Olsten ($100 million sales) has nearly $10 million in cash and virtually no long-term debt. Kelly has $15 million and Manpower can lean on Parker's cash hoard of nearly $17 million. A number of sizable fortunes have been created by the temporary-help business, including the Kelly family's $30 million and over $15 million for Manpower's founding Scheinfeld and Winter families and its current president, former public relations agent Mitchell S. Fromstein.

Little wonder then that last August, another service-industry multimillionaire, Henry Bloch of H&R Block, paid $22 million in cash, notes and stock to acquire Personnel Pool of America, Inc. with 180 offices. Or that Greyhound Corp., Colonial Penn Corp. and Parker have all acquired temporary help companies over the last four years. One of Europe's largest temporaries, Adia Temporary Services, Inc., in 1975 and 1976 bought two firms with 85 U.S. offices; today Adia has 115 offices here.

This is a onetime cottage industry whose time has come. For businessmen, burdened with labor costs, it offers certain irresistible benefits. It enables them to handle peak demand without having to carry regular employees through slack periods. Why employ people on a year-round basis to handle seasonal or temporary bulges in the work load?

Then there is the matter of fringes, currently running around 40% of payrolls. A "temp" may make more on an hourly basis, but the total wage i quently less when the employer i lieved of fringe benefit costs. No leave. No pension costs. Argues the of one New York temporary firm: ing temporaries often can enable ar ployer to reduce expenses by more $1 an hour per employee—becau savings on payroll taxes and benefit

Take insurance companies like necticut General Insurance Corp., and Equitable Life Assurance So among others. Labor costs in gener soaring and turnover of lower ecl clerical help has accelerated from a erage three years to one year. Acco to one temporary-help top execu "That's one reason they are increas turning to temporary help as a cost trol measure."

Too, at a time when employmen bility is a major issue, temps can b on or laid off without causing r problems. Letting one go is not ex like zapping good old Joe who's with the company for 30 years. N pensive aftercosts, either, which m it attractive to multinationals. Say executive: "It's not that easy to le manent people go, especially al where you have to pay dearly in s ance." That's one reason a firm Manpower gets about half its p from outside the U.S., and Switzerl Adia is a true multinational itself.

Think of the manpower agencies kind of cushion for many busine Which, of course, makes the bus highly cyclical.

In a recession part-timers are the to be laid off. The last recession was says Manpower's Fromstein: "We c see it coming." The recession drove its down by 50% from the peak in 74, at just about the time Parker took over.

Manpower and its peers survived other companies have died like ma in a recession. So some are maki while they can. Though they don

for a large part of the industry, are some fly-by-nights practicing s creative ploys. For example: he bounty hunters. Once you have ted some temporary workers, offer cash payments for convincing oth- join the fold. Says one Miami tem- -help franchiser: "Some firms of- to 50 cents an hour in bounties, y taking it out of the new recruit's . He doesn't realize he's being d—and he can always get a bounty lf for bringing in someone else." he "liquidated damages" game. orary firms aren't supposed to op- like full-time employment agen- olacing people permanently in re- or a cut of their first few months' . But some do it anyway in periods ng employment, sometimes raid- her firms for bodies to replenish pleted manpower pool. he old bait and switch. Says Terry ard, 31, manager at one of Adia's in Cleveland: "I picked up the the other day and there was an ad temporary agency offering $8 an or key punch operators; the indus- e in Cleveland is $3.50 to $4 an Result: When the temporary r shows up he's told that all the nch jobs are filled, and switched to ning less remunerative. re is other hanky-panky. Says "Most people in this business are , but there are some who advertise ively, don't pay their people prop- ometimes they don't deduct the ind of wages or carry proper insur- r bonding." is seven years in the business, nas seen a lot. His employer prior joining Adia, Efficient Extras, fold- y last year. Says Ward: "They tried v the company too quickly—open- ices too soon, adding staff, bring- a computer that wasn't necessary. mpany got heavily into debt, and the bank refused to lend it any he firm couldn't meet the temps' and checks were bouncing all ne place." act, the treatment of the workers elves during a crunch is one of the esses of the industry. When a tem- -help firm folds, the workers elves sometimes don't get paid— trast to the bankruptcy of a com- vith permanent employees, which st pays them off before trying to ts other obligations. ry to combat some of these prob- nd burnish the industry's reputa- ne National Association of Tempo- ervices was founded in 1966. It ots, among other things, to moni- members and keep the industry lly free of scandal. Toward that s Cleveland chapter recently tried out some temps who weren't paid Ward's former firm folded. But there it faced a potential problem—by paying the workers directly, they might have had to pay other creditors as well. Instead they kicked a few dollars into a legal fund. In the meantime, the owner of the dissolved firm is trying to drum up business under another name.

Cost-cutting is a continual temptation to some smaller firms, which live in more or less perpetual insecurity because of the way the business works: The temporary-help firm typically pays its workers once a week but collects from its customers once a month. So, many have to finance their receivables. That's no particular problem for a company with a

Temporary success

Many of the 2,000 temporary-help offices are franchises of big chains like Manpower and Kelly Services. Two-thirds of such franchise offices are run by women who typically make about $25,000 to $30,000 a year.

But the real money is in owning your own franchise or starting your own firm. Here men predominate—considerably fewer than one in five women run their own show—a disparity that may narrow in the future as more women move into entrepreneurial ranks. Below, three who have made it in the temporary business.

Boom, bust and back

When Bill Tasillo started running his Manpower franchise in Miami, Fla. in the early 1960s, only two other firms were in the temp business in the area. For a while it appeared that was two too many and he figured he should have stayed up north in Hartford, Conn., trying his hand at selling office calculators or playing trumpet in a band, Tasillo's former vocations.

At first, Bill Tasillo recalls, business was lousy. Gradually, however, tourism and travel boomed. By the late 1960s Tasillo and a partner who had earlier made money in the insurance business started to earn good money. "Unfortunately our prosperity also brought competition," says Tasillo. "In one year alone, in 1968, some 24 firms started up."

Then business slumped in 1970 and there was a shakeout. "But that was mild compared with the way the Miami area got hit by the sharp 1975 recession," Tasillo recalls. "It was brutal. Some firms went out of business, while others shrank dramatically. I had to really tighten my belt, cut costs and I even had to let go of some of my permanent help."

Tasillo managed to ride out the recession and come up with enough money to buy out his "absentee" partner, who had had enough. Says Tasillo, "I gambled that the economy would recover." It did. Now Tasillo, 45, who originally bought in for about $10,000, owns all of the franchise, with three offices in Dade and Broward counties, worth about 15 times that.

And now Tasillo can afford to hire his own band. **—H.R.**

Just for a lark

Nineteen years ago Edith Silverman, a high school graduate, decided she had had enough of the working world and left her job as a legal secretary.

Today, she and her sister, Lee Silverman, are co-owners of Le-Gals, a temporary office-worker firm in Cleveland (which also does some permanent placement) that employs 11 full-time workers and one part-time worker of its own and does well enough to pay each sister $100,000 a year in salary.

Not bad for an enterprise that, according to Edith Silverman, began "more as a lark than anything else." After she retired, she occasionally filled in for sick or vacationing secretaries for her former employers. "I found myself being called more and more often," she recalls. "Eventually I was calling my friends and asking them to help out." Soon she was spending so much time at it that she decided she ought to be paid. Somewhat reluctantly, she opened an office.

One of the keys to Silverman's success has been specialization. "I deal primarily with legal secretaries and

that cuts down on many problems that afflict general-help temp agencies," she says. In addition, her specialized temps bring higher wages than most temps, averaging between $4 and $6 an hour—after Silverman has taken her cut. Not bad for a retired, and reluctant, legal secretary.

—Richard Greene

"I like the concept"

"I was bouncing all over the place—sales jobs, selling insurance—you name it," says Burtis J. Dolan, now 54, the first Olsten Temps franchisee in Chicago and one of the most successful in the country .

A Holy Cross graduate in business administration, Burt Dolan recalls, "I read an article about Culligan Corp. in a magazine. I became intrigued with the concept of franchises as a means for someone with little capital to become an entrepreneur."

After a series of flops and limited success, Dolan in 1961 decided to buy a Manpower or Kelly Services franchise: "I liked the concept of the temporary-help business. It didn't need much capital, there are no inventories or raw materials and no union problems." Unfortunately others had already gotten there first.

Then Dolan saw a 1-inch advertisement in the *Wall Street Journal* for Olsten, an eastern firm looking to franchise in the Midwest. "For around $20,000—partly borrowed," Dolan was in business in 1962.

"I hit the pavements," says Dolan, "and started looking for clients. Frankly I found out who my competitors were using and I sold them my services." Success presented a problem—lack of working capital to carry his receivables. So he went to Olsten again: "They financed my receivables until I could go it alone."

Now he doesn't need to be carried. His firm today grosses close to $6 million a year and employs 20 full-time employees. Dolan draws a salary of around $100,000 a year and in recent years has been pouring his excess capital into real estate. **—H.R.**

ow St. Regis made a two-by-four that's 2 ft. longer than the world's tallest tree.

The world's tallest tree is a 368 ft. redwood in a nal park near Eureka, California.
And yet we made a two-by-four that's 400 feet long– et longer than the world's tallest tree. Forty stories of nuous two-by-four.
How did we do it? Simple. We glued 60 off-sized s of two-by-four together with hot-glued finger joints. then got fifty men and women to carry it out into the above and intentionally break it against a tree.
Our tests show that the joints are stronger than the unding wood.
Of course, our speciality is not 400 footers but eight rs–the so called stud, the main support of the home ing industry. We're one of the largest makers of eight wo-by-fours.
And, as in any operation where the raw material is uniform, there's a certain amount of waste. That's why o out of our way to use the short leftover pieces. It's olicy to use the resource wisely. So we're out to use e log–100%.
What's the future of wood building products? Are they g replaced by synthetics?
Pound for pound wood has greater compression gth than steel. And it's certainly more workable.

But also we make a lot more building products than two-by-fours and dimension lumber.

We make prestressed concrete walls and floors. Insulation and vapor barrier papers. And even culverts.

All this reflects the marketing stance of St. Regis toward all our packaging, paper, lumber and construction products. To use the full weight of our technology in serving our markets and in renewing the forest resource our products come from.

St. Regis—serving Man and Nature.

"Just one more question for our files, Sir."

At what point do corporations' requests for personal information become an unwarranted invasion of our privacy?

How many of the questions they ask (and answers they demand) are really necessary? How much information do they already have about us? Where did they get it? How accurate is it? And how freely do they exchange it among themselves?

Because these questions worry so many Americans today, Ætna wants to tell you how we are committed to doing business when you come to an Ætna agent or broker for personal insurance:[1]

We'll ask you for the information we need, and no more. We'll tell you what data we're after, how we intend to get it and from whom. If we turn you down, we'll tell you *why.* (And we *won't* turn you down just because someone else has.)

If you think we have misinformation, just ask what we've got. We'll tell you the nature and substance of all underwriting information in your file. (Except medical information which we'll give your doctor.) If you say some part of it is wrong, we'll reinvestigate—and respond.[2]

And we'll go out of our way not to pass on information about you without permission.[3]

By openly discussing our policies on privacy, we hope to encourage action among governmental and private organizations. And to insure this, we support both voluntary and legislative measures as recommended by the federal government's Privacy Protection Study Commission.[4]

Today the burden of proof rests upon business and government to show that we deal fairly and openly with private citizens. Don't underestimate your own influence in helping to protect your personal privacy. Use it as we are trying to use ours.

Ætna is protecting your privacy.

---

hen any state law requires ct differently, naturally, we omply.

espond" means: If we are , we'll correct the error by ing our source and anye you request who received isinformation from us in st two years. If we conclude our information is correct, we'll tell you so. If you ask, we'll even put your disagreement in the record. We'll also distribute that statement of disagreement in the same way as we would correct an error.

3 Occasionally, sound business reasons dictate exceptions (and we let you know what they are in advance). For example, Ætna will provide information needed by those selling or servicing our policies, for fraud prevention, or when required by law.

4 The federal Privacy Act of 1974 which established controls over the federal government's use of personal information, also created the Commission to explore the need for similar restraints on local governments and businesses. Ætna's President, William O. Bailey, served on this commission and the conclusions it arrived at are the basis for Ætna's privacy policy.

LIFE & CASUALTY

Life & Casualty,
rmington Avenue,
rd, CT 06156

Not even Meshulam Riklis can hold off tomorrow. But you really have to admire the way he keeps trying to do it.

The numbers game: Putting off the inevitable

"WE'RE DOING BRILLIANTLY, absolutely brilliantly, this is the best year in our history. . . ." Stuart H. Aarons, secretary of $2.5 billion (sales) Rapid-American Corp. (and its public relations man on the side), wanted to make sure FORBES knew that Meshulam Riklis' liquor and ladies' wear conglomerate had some good numbers on display for 1978. But Aarons was less communicative about Riklis' latest setback. Here's the story, anyhow:

Meshulam Riklis has been a great one for paying for things with paper—debentures. The interest, after all, is a tax deduction and thus payable in 52-cent dollars; even less, if you factor in inflation. Of course, the principal eventually comes due. But that's way off in the misty future. Somebody else's problem, if problem it be. As a result of such thinking, Rapid-American's balance sheet moans under $720 million in long-term debt; every $1 in stockholders' equity supports $2.80 in debt. Rare is the U.S. company with a debt-to-equity ratio higher than 2:1 *(see* FORBES, *Jan. 8)*.

As we said, this debt load is no particular problem as long as the principal needn't be repaid. But the future eventually becomes the present. And that can be trouble if Riklis isn't careful.

Among that $720 million in long-term debt is (or until recently, was) $67 million worth of 7.5% debentures issued in 1971 and coming due in 1985. True, that's still six years in the future. But these are sinking fund debentures; their terms require Riklis to begin retiring that debt *this year*: $3.7 million in 1979; $5.2 million annually in 1980 and 1981; $11.4 million a year in the next three years; and the balance—$18.1 million—in 1985.

Meshulam Riklis hates to part with cash—constantly says so. So what does he do? He tries, in April 1978, to persuade holders of the 1985 debentures to trade their paper for the new sinking fund debentures due . . . in 1999. The sinking fund payments of the new notes begin in 1987, at a favorable (to Riklis) annual rate of $2 million.

Thus does Meshulam Riklis seek to push the present into the future.

Riklis is becoming something of a master at such paper-shuffling. In 1977, he was faced with $314 million in 6% sinking fund debentures coming due in 1988; payments to the sinking fund were to begin, in 1983, at $10.4 million per annum and escalate sharply. Riklis managed to swap $153 million worth of new 10.75% debentures due in 2003—when Riklis, 55, could well be dead or retired—for $204 million worth of the troublesome notes coming due. Consider the numbers: After taxes, Rapid-American's net interest burden rose by about $2.1 million a year; but the sinking fund requirement dropped far more sharply than net interest rose. Riklis would save tens of millions in precious cash. (A second offering that expired late last year brought in an additional $7 million.)

A happy by-product of the swap: Thanks to shilly-shallying by our accounting rulemakers, the face value difference between the old debentures and the new debentures issued to "retire" them was booked as "extraordinary" income and credited to stockholders' equity. Thus the 1977 debt swap was worth, after taxes, $30 million to Rapid's net income—over 63% of the conglomerate's reported bottom line.

Swapping debt is obviously a lot easier way to make money and build equity than selling liquor, ladies' dresses and golf and bowling bags.

Are Meshulam Riklis and his attorneys trying to pull the balance sheet over debentureholders' eyes? Not at all. The Exchange Offers' offering circulars spell it out clearly: "The purpose of the Exchange Offer is to strengthen Rapid's capital structure through (i) an extension of the maturity of a portion of outstanding debt, (ii) a reduction of long-term debt resulting from the lower principal amount of the New Debentures issu the Exchange Offer and (iii) an inc in stockholders' equity resulting the extraordinary gain on the excha

But who reads prospectuses? Th guage is forbiddingly murky. How people would stop smoking if the sage read: "The Surgeon General h termined that, under certain ci stances, there is a significant correl between the inhalation of to smoke and the incidence of *bronch carcinoma.*"

However, even bondholders are ing to read. When Riklis offered las to swap $55 million in new 12% si fund debentures due in 1999 for th million worth of old ones whose si fund payments begin this year, m creditor balked: Only $22 million old debentures were tendered. Th rejected the bait.

Rapid-American and its Mc Stores division have some $630 m in sinking fund debentures outstan Riklis will probably try again (and and again . . .) to roll these over int debt—push the present into the fut through exchange offers.

What if his creditors refuse, as may now be doing, to go along? then Riklis has them by the, ah, ea

Rapid's sinking fund debenture so-called indenture bonds—meanin Riklis has the option of meetin sinking fund payments either in (perish the thought!) *or* in the face-equivalent of debentures. Get th ture? If Riklis' creditors absolutely to swap, Riklis buys in the open m whatever face-value amount of d tures he needs to meet the sinking requirements—$3.7 million this $5.2 million next year, and so on pain of parting with cash is mitigat the fact that Riklis can buy the pap far less than its face value: The debentures, for example, have sold a as $33 on the $100 face value. The disgusted his bondholders become cheaper he can satisfy Rapid-Ameri sinking fund.

It is for such smarts, FORBES assu that Rapid-American (which is owned by Kenton Corp., which in t 52% controlled by Riklis, various ciates and family members) last yea Riklis $426,000.

Meshulam Riklis hasn't done very running his conglomerate. Granted, id-American's reported earnings climb last year. But even so the sells for around $15, as compared high of $46 in 1969. Future dividen severely circumscribed by a stri austerity plan imposed on Riklis in by 11 frightened banks and the Fe Deposit Insurance Corp. Noneth you *can* say this of Riklis: His pape not be so good as gold, but he cert doesn't lack for brass. ■

BELL HELPS TONY'S DELIVE
OVER FIFTY MILLION PIZZAS

PROBLEM:

When demand for their frozen products grew hotter than a pizza oven, Tony's Pizza Service saw a possible problem: keeping up their quality and customer service in the face of phenomenal growth.

Orders skyrocketed to over 50 million pizzas a year.

High-speed delivery, but low-speed orders.

The company already had 130 warehouses throughout 48 states, and they began to add 70 more while expanding their fleet of long distance refrigerated trailers.

But for the most part, warehouses continued to fill out order reports and inventory status forms manually and mail them to headquarters. Manual entry invited errors. Mail delays affected inventory levels and cash flow.

Mailing alone cost $500,000.

Management agreed to a system study by communications experts in package goods distribution—a team headed by their local Bell System Account Executive.

SOLUTION:

The Bell System team recommended a step-by-step integration of voice and data communications coast to coast. In short, a total system.

As a first step, 25 WATS lines were added in stages for phone orders and inventory status. Savings over mail: $300,000.

Step #2 is still going on. It involves conversion to data terminal entry of orders and inventory status reports via low cost VuSet* terminals—one in each of Tony's warehouses.

Already the new system has cut down lag time and virtually eliminated errors. Cash flow has improved through closer control of production, inventory and shipping. As for Tony's quality and customer service, they've never been better.

"Ordering 150,000 pepperoni pizzas to go."

Whatever your product or service, if you haven't talked systems with your problem-solving Bell Account Executive lately, you're missing something.

The system is the solution.

When you bury your head in the sand, you're already up to your neck in trouble.

Businessmen know that business is in trouble. Everywhere we turn, we are confronted by overzealous regulators and a hostile, uninformed public.

But how easy we find it to bury our heads and do nothing about it.

And, as a result our image has suffered.

Polluter of the air. Exploiter of the land. Payer of bribes. Illegal campaign contributor. Profiteer. Trampler of human dignity. Enemy of the common good.

Yet what can we expect when we allow both sides of every controversy to be presented by the opposition?

Let us rub the sand from our eyes, open our mouths and carry with candor the cause of free enterprise to the American public. Before we find ourselves not up to our necks, but over our heads in trouble.

Workmen put final touches on the lar[ge]-Warner & Swasey turning machine ever [pro]duced. This 30-foot slant bed SC-45 [was] custom built to machine wellhead hous[ings] one part of an undersea oil and gas dr[illing] structure.

k dollar? Inflation? OPEC? Recession? o things, Henry Zenzie argues, are merely t-term problems.

Poverty as an education

By Robert J. Flaherty

WANT a biblical theme for Henry s life and career, a good choice be, "As the twig is bent, so the nclined." The force that did the and the inclining, in Zenzie's as poverty—poverty that most readers have never even d, much less experienced. But the , realistic lessons he learned from helped him to become one of this 's shrewdest and most durable managers, a man who for two has made money regardless of ction of the stock market.

e's own experience with poverty he day of his birth in September hen he began life in Windsor, s the youngest of 12 children in an ant family from what is now the Union. He recalls his parents' sto- og cabins with sod floors, of tax rs who broke in and took every- He himself remembers the family h $7 cash per week, plus what food ld grow, during the Great Depres- was trapped in a job in a Bloom- nn. slaughterhouse.

d beyond Kansas State. He tried fer to snobbish Yale, but was down. More perceptive was the ity of Pennsylvania's Wharton where he took so many jobs

Henry Zenzie of Prescott, Ball & Turben
Inflation requires capital gains.

spurned by the middle-class students that he graduated with $1,000 more in his pockets than when he arrived. The next step was Harvard Business School, where he got an M.B.A. in 1956.

At age 27, Henry Zenzie was smarter than a lot of present-day M.B.A.s. He didn't think he knew it all. He set out methodically to learn three basic skills of Wall Street: 1) brokerage and research, including speculation; 2) money management and 3) corporate finance.

For the first he went to work for Burns Bros. & Co., Ltd. of Toronto, Canada, then boiling with speculation in penny mining, oil and uranium stocks. That taught him, says Zenzie, "the seamy side of the investment business—how speculative stocks are bought and sold." For the second, money management, Zenzie went to work for the great John M. Templeton (FORBES, *Nov. 27, 1978*). Templeton taught him not to predict the market; better to spend your time seeking out bargains—stocks selling at low multiples of potential earnings, companies in the hands of good managements.

Finally, for corporate finance, Zenzie worked at Lehman Bros. during the meticulous regime of Robert Lehman. There he learned the value of tireless delving; he recalls once having to redo a private placement memo five times.

Yes, this tale of a ragged immigrant's hardworking offspring has a happy ending with many lessons for investors.

Partly through listening to Zenzie, Chairman Albert H. Gordon of Kidder Peabody & Co., Inc. has built one of the great U.S. private fortunes. For ten years Zenzie acted as Gordon's personal assistant; he departed last year because Gordon had reached the age of 77. Since last January Zenzie has been a senior vice president in the New York office of Cleveland-based Prescott, Ball & Turben. PB&T's main thrust is in special situations, which is Zenzie's strong point.

His old client and mentor Al Gordon is almost fanatical in his dislike for the limelight; Zenzie therefore refuses to talk about his record in advising Gordon. But make no mistake, it was a spectacular performance. And Zenzie does have a scorecard he can show to outsiders in the special fund called Scientific Associates, set up for a group of friends and relatives on Jan. 1, 1969, soon after the Dow Jones industrial average had reached 943. The total value of the fund then was $350,000, the net asset value of each unit $5,000. Recently the value of each unit was nearly $20,000, not counting approximately $400 per unit paid out in dividends and capital gains—this in a period when the Dow was down 11%.

Over 80% of Scientific's value is in seven stocks—typical of Zenzie's belief in concentration—in what the late Gerald Loeb used to call putting all your eggs in a few baskets and watching those baskets carefully. Zenzie aims high: He looks for stocks he thinks can at least double in three years. He hopes half will do even better. His most spectacular winner at Scientific is Gearhart-Owen Industries, Inc., where $101,000 grew to $1.3 million; another star is Daniel Industries Inc., up nearly 2½ times in the last four years. Other winners include Palm Beach Co., up 368%, Ames Department Stores Inc., up 160%; and Gilford Instrument Laboratories, Inc., up 85%. Zenzie is especially proud that he chose his companies when many were tiny, under $20 million.

Surprisingly, the portofolio has no big losers, though 3 of the 20 stocks are down. The biggest loser—25%, or $43,000—in the last 2½ years is Amex-traded Burgess Industries Inc., an energy equipment company, bought because Zenzie likes marginal companies in a changing industry where he can help management. But he misread industry trends: Burgess' oil and gas pressure vessel business went down and manage-

ment insisted he remain a passive investor—a role he despises.

What are the criteria Zenzie uses in racking up such a record? They come over with the cool clarity of a man who, having lived intimately with poverty is able to recognize reality unhampered by illusion or wishful thinking:

- Forget well-covered companies, their prospects are already discounted.
- Invest in specialists that yield pure industry plays; skip conglomerates, whose very diversification damps any chance for major gains.
- Choose overlooked or unpopular industries and companies where technological change that will mean new potential is in prospect.
- Seek companies with a chance for a "kicker"—new product, favorable regulation, acquisition or the like that is hard to visualize now but that investors will pay for in a few years.
- Buy Sunbelt companies; they operate in a better environment with less featherbedding and unionism.
- Try to pay under book value, or try to estimate realistically if other companies would be willing to pay 30% over market, given a chance at acquisition.
- Buy thinly traded stocks with patience; he took three months to buy 60,000 shares of Gearhart at $2.50, adjusted for splits (recent price 37).
- Take your time choosing a company: Visit the company, call on competitors, even talk to fired executives. "I warm slowly and I cool slowly," he says.
- Don't reduce your holdings just because a stock doubles: "That's a cop-out for lack of work or diligence. If you really understand a company and its potential value, you should not be scared just because it is up 50% to 100%."

Having chosen a company, Zenzie tries to switch from the role of investor to that of partner. All companies with big potential have big problems, he feels, and smaller companies also don't have the information input of big ones. So he tries to give as much advice as the company head will accept. If he won't accept any, Zenzie remains a minor investor—or becomes an ex-investor.

Will the approach and techniques that served Zenzie so well in the past be productive in the future for him and for PB&T's customers? He thinks so, and is willing to nominate four stocks to test his view, stocks he thinks will at least double in the next three to five years.

Two are stocks his Scientific Associates fund already owns, Gearhart-Owen and Daniel, both in the energy service business. He sees both as $100 million companies destined to become $200 million and $300 million companies: "As oil and gas prices go up, these companies will mine the miners' pockets," he says. "As long as the price of oil and gas goes up, these companies are sure ways to play it." Gearhart-Owen, which has a growth rate of approximately 25% over the last ten years, recently sold at about 18 times last year's earnings; Daniel, growing at over 23%, sold at about 7.5 times. Zenzie thinks both are still reasonably priced, given those growth rates.

Zenzie also has two multibillion-dollar plays he thinks will double. One is Transco Companies, Inc., a pipeliner that now has a huge drilling program—so huge that it depressed 1978 earnings. Zenzie is buying a company with a dull image where reasonable exploration success could hike earnings sharply and change the image. There's also a kicker: Transco has part of Texaco's Block 598 in the Baltimore Canyon off New Jersey.

His other giant play is $5 billion (assets) American General Insurance Co., which sells around five times earnings at a time when he figures inflation will force people to buy more insurance. It's also underrated: "American is a better company than Wall Street believes," he says, now that the superannuated management that gave the company its bad name has been replaced by a good new group under 47-year-old Harold S. Hook. Zenzie, while a modest-seeming, soft-spoken man, does not lack for self-dence. One of the reasons he ad Hook is that the American Genera listens to Zenzie's advice.

While his basic approach require to stay away from predicting whe stock market is going, he does fee many stocks are exceptional barga this time. What about the weak d Inflation? Iran? OPEC? Rece Those, he feels, are short-term prob It may sound corny but Henry Z believes in America. "Things like tion here today may be rough, bu where near as bad as in other cou or other times," he asserts. Americans brought up in affluenc not to have that perspective; the only the flaws in their society. The lute ruler's secret police are a po counterargument.

As for inflation, Zenzie argues long term, it is a reason for invest stocks—not for staying out of them you realize," he asks, "that if our p inflation rate continues for two decades, anyone with a fortu $200,000 will be wiped out? You ne capital gains—not merely the in from bonds—just to stay even." ■

The nutrition business in the U.S. is boomi Guess which secretive company in Switz land is the big winner?

Body building at Hoffmann-La Roch

By Harold Seneker

URGED ON by the imperatives of the "Me" decade and nutrition gurus like Linus Pauling (as well as by discreet ad campaigns by Switzerland's Hoffmann-La Roche aimed at both consumers and doctors), Americans are on a vitamin binge. Many people have come to suspect that today's food industry, replete with fast food, junk food and highly industrialized food engineered mainly for convenience and eye appeal, is not the best source for those complex, delicate compounds essential to health, that can break down easily in the presence of light, heat, air or certain metals.

Many medical authorities argu packaged vitamins are unnecess have at best a placebo effect. mind. The public believes.

So at least a third of all adult higher percentages of college-ed adults) now buy vitamins in the ing search for health, vigor, lon and a more active sex life. Their n is rising. (There is also a brisk sid ket lately for inositol, an obscure ent sometimes classed with the plex vitamins: In powder form it's for cutting cocaine.)

280A

Additional tonnages go into livestock and poultry feed; to food processors, who put them in bread, cereal and fruit juice; and even into pet food. While the prime market is obviously American, the rest of the noncommunist world still absorbs about 60% of the tonnage produced.

In the U.S., about $1 billion of that consumer trade is synthetic product, the rest, so-called "natural vitamins" that often sell at twice the price. (This is one of the great triumphs of the will to believe: Synthetic vitamin molecules must be chemically identical to "natural" ones, as a matter of law, if they are sold to the public. Some pilltakers nevertheless insist "natural" means somehow "better." One marketing director explains what really happens: "Look, people want 'natural' and will pay a premium for it, so why not give it to them? If you made a whole vitamin C tablet from rose hips, say, either your cost to extract it would be prohibitive or the size of the pill would be too big to swallow. Marketers aren't stupid. They include a minor fraction of ascorbic acid from rose hips, give it a 'natural' sounding brand name, and put some brown flecks in so it looks like the stuff was just swept up off a dirt floor. Read the labels sometime.")

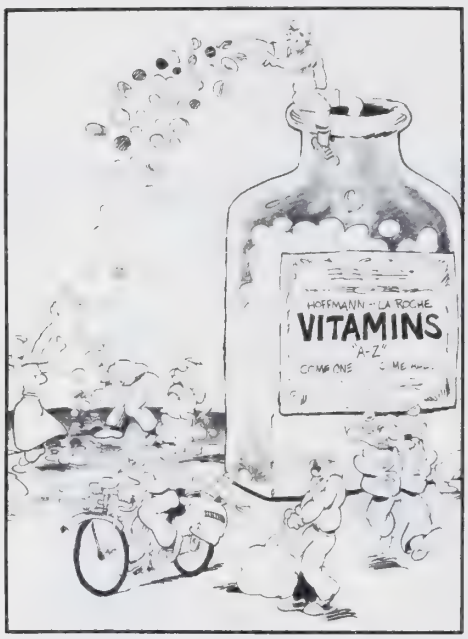
The eager consumers are supplied by tens of thousands of retail outlets, including drugstores and supermarkets who just love those 36% markups, as well as the mushrooming population of health-food stores. The outlets, in turn, are supplied by perhaps 500 formulators and distributors, who punch out the pills cheaply and put them up in nice, labeled bottles at very generous markups of their own. A big chunk of business is also moved by mail order.

But never mind all those labels. Behind the proliferation of names at retail, the actual bulk vitamins are made by only a handful of firms. Hoffmann-La Roche is by far the biggest of them. The Swiss-controlled pharmaceutical giant (total sales: $3.3 billion, and among other things it long enjoyed the patent monopoly on Librium and Valium) does not care to sell directly to the public. Instead, it quietly encourages the multiplication of the distributors the consumer sees—even acting as consultant to eager newcomers—while just as quietly dominating the bulk vitamin scene.

The company is characteristically very secretive about things like its own market share, but one knowledgeable industry source estimates that this global eminence either makes or sells 60% to possibly 70% of the bulk vitamins in the U.S. and the Free World. General Motors should have it so good! Another source elaborates: "Some vitamins Hoffmann-La Roche does not manufacture itself [notably niacin and vitamins B_{12} and D], but sells the majority of the production of another manufacturer under its own name. [That way] they either manufacture or have contracted for production on all major vitamins . . . and they have the exclusive rights in some vitamins."

Takeda Chemical Industries Ltd., a nearly $2 billion (sales) Japanese pharmaceuticals biggie, runs a distant world second to Hoffmann-La Roche, and West Germany's E. Merck (quite separate from the U.S.' Merck & Co.) an even more distant third. Altogether, there are fewer than 30 bulk producers in the Free World, most of them obviously very minor factors. And since no one, not even Hoffmann-La Roche, makes every vitamin, each of the ten or so major substances in the vitamin trade typically has only a handful of manufacturers.

The whole bulk industry is as secretive as the leader. One company, Vitamins, Inc. of Chicago, wouldn't even tell FORBES whether it manufactures any at all (it does: vitamin D_3). The important factors in this business, however, all



maintain major offices or operations, or both, in the New York metropolitan area, where they all stay in touch with each other while trying to make state secrets out of things like their own estimates of individual markets and their plant capacities. And they all have to live somehow with the giant in their midst, which through sheer size and market position effectively has power over the level of bulk prices.

But being Mr. Big doesn't seem to be enough for Hoffmann-La Roche, which needs a way to replace some of the immense profits from Librium and Valium—the patents have been expiring. There are plenty of signs that Hoffmann-La Roche is pushing to enlarge its position as the Saudi Arabia of the vitamin game, and its actions have some interesting implications.

Consider vitamin C, the biggest-volume item by far. Industry sources figure the players this way: Hoffma Roche's world capacity at 20,000 n tons a year, Takeda at 9,000 or 1(and the rest combined—E. Merck ir many, Syntetic in Denmark, Pliva i goslavia and Pfizer in the U.S.— equal to Takeda.

Demand is brisk, thanks to Linus ling. Takeda and Pfizer are runnin out and U.S. imports are rising. So bulk price. As low as $3.25 a kilo i 1960s, it has been jumping lately: $ kilo in 1976, and $9.90 to $10.00 making vitamin C, at bulk, a $40(lion business worldwide. Demand tonnage basis, is growing maybe 6 7% a year.

Hoffmann-La Roche, naturally, is ning a little expansion—a near dou of its already large vitamin C capac the mid-Eighties. That means it will be able to supply virtually a growth in vitamin C foreseeable f next six years. Okay, now look at it's paying for the privilege. Accord published reports, one plant alone mately to be a 40-tons-a-day mons Dalry, Scotland, will cost at least million, less about $90 million in a ed benefits and tax breaks from th ish. Think what kind of return you to justify investing $160 million or net of breaks, to get annual revenu current prices, of no more than million. Unless ascorbic acid is al fabulously profitable (probably no industry sources), Hoffmann-La I has to be banking on being able to the price.

Hoffmann-La Roche is not sta still in other vitamins, either. It is ing U.S. plants to make riboflavin mediates (Merck is the only othe riboflavin producer) and ingredien vitamins A and E (there are sev(producers, but BASF in Germany n the only other significant basic mai turer of vitamin A in the Free W and is deepening its penetration animal feed business as well.

All of which could add up to a for trouble as well as profit. One inc source, discussing Hoffmann-La I and asked about the industry's pen for secrecy, grew uncomfortable. "I want to trigger an antitrust inve tion," he said plaintively. "We have one now, and we don't need c

Presumably, neither does Hoffr La Roche, which has already had trust trouble with the European Ec ic Community over special reba "faithful" customers, and which is ing a low U.S. profile, well out consumer's sight. But as its hold o highly visible industry and its sh the total pie grow ever more overw ing—and its prices go ever higher- much longer can the mysterious g men from Basel hope to avoid the of the antitrusters in Washington?

FINANCIAL TIMES OF LONDON
World Business Weekly
A special report on JAPAN. Why they trade the way they do.
Volvo fails to go Dutch. British Steel's $1 billion loss.
Stock Market prices in 19 countries / Bonds / Currencies / Companies / Raw Materials.
YAMANI TURNS AWAY FROM DOLLAR

THE FINANCIAL TIMES OF LONDON
presents a fresh new resource for world-minded American business

It's brand new — but it offers you 90 years of the Financial Times' unchallenged authority and experience.

It's made for America – but it comes from, speaks for, reports and reflects the world.

It costs $2.50 on the news-stand – but you can read the first two issues free.

No one has to spell out for you what unsettling times these are for American business on the world scene.

That the bumps and slumps may well get worse. And the competition more fierce. That you've got to be more alert than ever to new markets, materials, methods, wherever they may emerge.

You need the news resources your overseas competitors depend on

Over 700,000 astute readers in 120 different countries read the Financial Times of London daily. (Some of them must be your customers, counterparts, bankers, suppliers abroad.) It's the surest way they have to keep up with events and developments that have an impact on their business.

Now we are publishing a once-a-week journal, the WORLD BUSINESS WEEKLY, distilled from the daily – and supplemented each week by cogent special reports, *focused and written for, sensitive to American needs.* And we urge you to examine it now

What you will get that's new, better, different

WORLD BUSINESS WEEKLY calls upon the largest network of business correspondents in the world, plus the most extensive business research facilities of any international magazine.

Every week, you will receive more news, earlier news, more exclusive news, in which foreign competition, foreign sales, foreign investments and foreign opportunities are seen as the heart of the matter rather than as a postscript.

Over the year, *every* important decision by the world's top companies will be reported.

Here's what you'll find:

- **International company news:** new ventures, new contracts, new experiments, new acquisitions.
- **Candid, first-hand views** of how American businesses – in the U.S. and overseas – appear to the rest of the world.
- **Industry updates:** a global view of steel, oil, mining, aircraft, shipping – every industry where a trend, an event, a discovery, merits your attention..
- **New product news:** techniques, inventions, innovations that you might want to borrow, purchase, franchise, represent yourself.
- **World report:** including economic and political news not ordinarily monitored by the U.S. press that you should know about.
- **Plus** statistics, analyses, forecasts on 19 different stock markets, bond markets, commodities, currencies, interest rates . . . and lots more.

Examine your first *two* issues with our compliments

We'll send you the first *two issues* without cost or obligation. If you like what you read, you may continue to receive WORLD BUSINESS WEEKLY at a Charter rate that will save you 50% of the price that future subscribers will pay. As a Charter Subscriber, you are also entitled to cancel at any time and receive a full refund on unmailed copies.

WORLD BUSINESS WEEKLY can help give you just the edge you need in these unsettling times. So mail your order today.

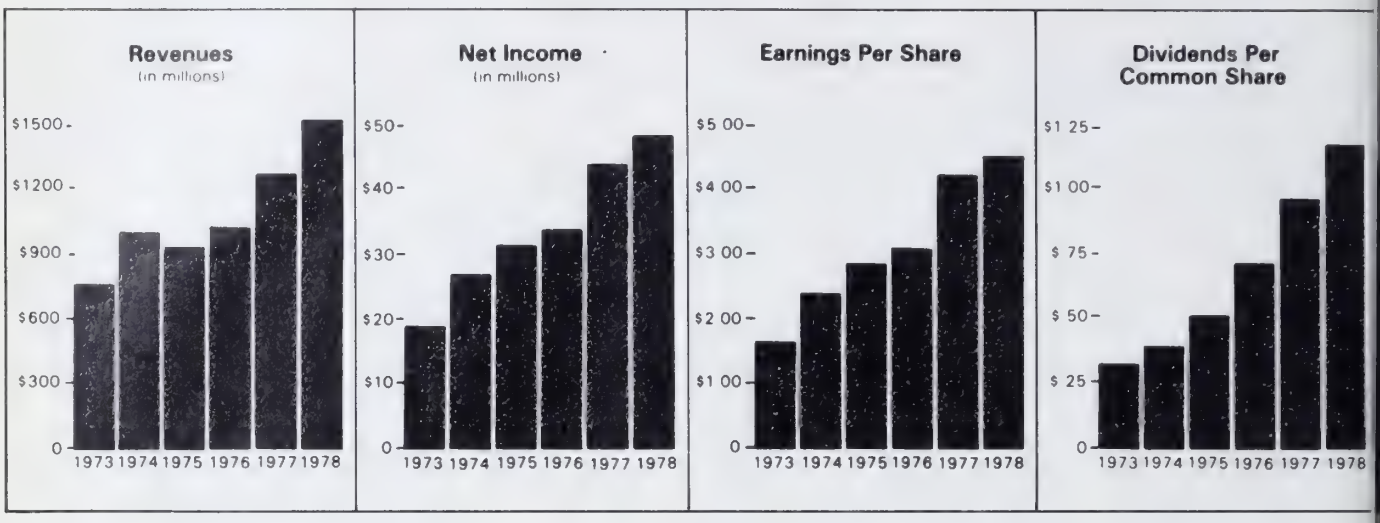
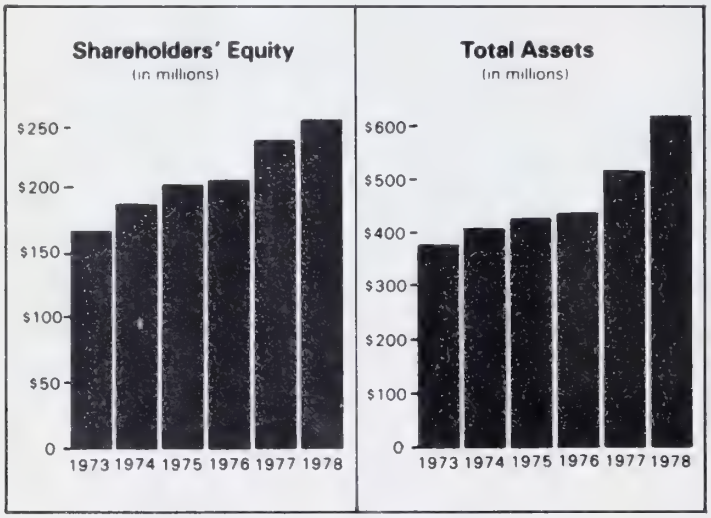
ANOTHER RECORD YEAR FOR ALCO STANDARD





FINANCIAL SUMMARY

	Year Ended September 30	
	1978	1977
Revenues	**$1,548,532,000**	$1,243,571,000
Income before taxes	**86,726,000**	75,959,000
Net income	**47,676,000**	43,866,000
Primary earnings per share	**$4.51**	$4.14
Dividends per share	**$1.16**	$ .96

Fiscal 1978 marked Alco Standard Corporation's 13th year in business. Revenues surpassed the $1.5 billion mark for the first time in the company's history. Net income and earnings per share increased for the sixth consecutive year. These records are the results of the diversification provided by Alco's three major operational areas — manufacturing, distribution and resources.

For the third consecutive year, Alco's board declared a year-end extra cash payout. For calendar 1978, this brought the total dividend payment to $1.16 per share — a 21% increase over the $1.01 per share paid in 1977.

To find out more about Alco Standard, write for a copy of our annual report. Alco Standard Corporation, Dept. FI, P.O. Box 22479, Cleveland, Ohio 44122

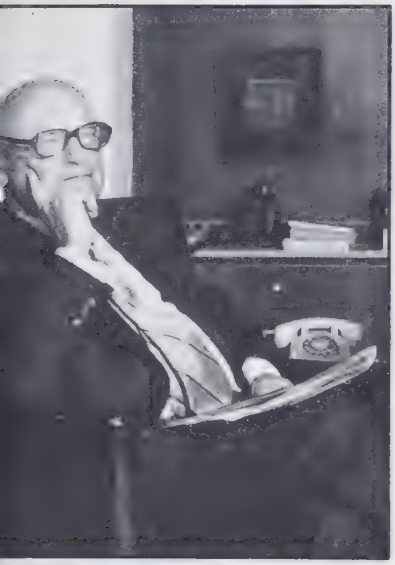
Faces
Behind The Figures



w-Hill stockholder Maxwell Geffen
ell out the McGraws at $40.

One man's opinion

argest single shareholder of hotly ed publisher McGraw-Hill, Inc.—e of the McGraw family itself—is ly Maxwell M. Geffen, 82. Various aw family members own about f the stock, and Geffen won't say nuch he now owns but at one time 500,000 shares, 6% of the outng. A publishing entrepreneur of egendary success, Geffen in the picked up $30 million worth of aw-Hill common by selling his in- in *Medical World News* and Stan- Poor's. He follows McGraw-Hill closely: "I owned a lot of it at 35," rs, "shorted it down to 6 in the Seventies; bought a lot of it last hen I saw the company was movward. . . ."

does he react to news that $3.5 (sales) American Express Co. is g a bid for McGraw-Hill? Vacag in Palm Beach, he replies: "I said elf that means they want to buy it which is about the right price in de—15 times earnings. Personally *very* interested by an offer at 40. he way the tender market is going, airman] Harold McGraw can get d bless him! But at 40 I think a lot estors would scream that this is ning that has to be considered if Harold McGraw says this is not genial marriage. People have reor American Express."

ok," he goes on, "McGraw-Hill is would call a Boston State Street investment. I don't see that McGraw-Hill can grow any other way than slowly over the next five years. There's no way you can turn a publishing company like this around and send its earnings from $2 to $5 a share without one hell of an injection of capital. American Express on the other hand can do anything.

"A good part of the [McGraw] family has only one interest at this moment: dollars," says Geffen. "Harold pushed them out of management and that side of the family owns all but half a million of the family holdings, which are somewhere between 2 million and 2.5 million shares. There was a time when it was 'We're all part of the same family and we love it.' That ain't true anymore."

Geffen thinks the proposed American Express offer may be a lot friendlier than generally supposed. "There's no doubt in my mind that there's more to it than appears," he says.

"Everything about this deal looks like a thing that will go through at about 40."

But even as Geffen spoke, a determined Harold McGraw was fighting back, apparently resisting the takeover bid with every resource at his command. The odds seemed stacked against McGraw—as Geffen suggested—but other determined managements have beaten the odds.

Out of the picture?

With the U.S. photography market softening for the pocket-sized 110 series, led by Eastman Kodak Co.'s Instamatic cameras and film *(see p. 35)*, Japan's Pentax Corp. would seem to be backing the worst possible horse with its own new entry into the U.S. 110 market.

The SLR System 10 camera that Pentax' parent, Asahi Optical Co., Ltd., is starting to market is a technical wonder. Weighing only six ounces, the device offers through-the-lens focusing, automatic exposure, motor-driven film advance and interchangeable lenses, features until now found only on 35mm cameras. And with a list price of around $200, it approaches the price range of the sophisticated 35mm products offered by Canon, Olympus—and Pentax.

But Koshiro Chiwata, 54, Pentax president, thinks the product is neither too little nor too late. With maybe 50 million 110 cameras already sold, mostly by Kodak, he says, "the 110 market in the U.S. is a very large one, so that if we wind up with a few percentage points, it would be very meaningful for us."

Pentax was one of the pioneers of 35mm single-lens-reflex cameras in the U.S., and boasted as much as 40% of that market throughout the 1960s. But by 1976, its share had dropped to 8% of the burgeoning market. Competition from other Japanese makers, including Canon and Olympus, had much to do with its decline. And though Chiwata doesn't actually blame Honeywell Inc., the company's U.S. marketer for years, he does say that his company's share of the 35mm SLR market has climbed back to 18% in the nearly two years since Pentax broke with Honeywell and set up its own U.S. distribution arm.

The big question facing Pentax, though, is whether the new little camera—probably on the drawing boards for years—came to market because Pentax designers and engineers were so intrigued by such features as a six-element glass lens (Kodak uses cast plastic lenses in its cheaper versions) that they overrode the marketing people. Chiwata isn't saying. But with a $4 million advertising and promotion budget, maybe the worst

Koshiro Chiwata with Pentax' minientry in a maximarket
A nifty engineering development or a savvy marketing tool?

Faces
Behind The Figures

that will happen is that U.S. retailers will use the camera as a lure to get consumers to trade up $100 or so to a full-fledged 35mm. And the best could be a nice skimming of the cream off the top of Kodak's 110 market.

Disco Dutchman

Phonograph record people play lots of games with numbers, so the answer to who's the biggest can be fudged a lot of ways. Warner Communications claims to be number one in the U.S., ahead of CBS, which had the edge worldwide, because of its vast international operation, etc., etc. But in the meantime, another contender seems to be walking off with the title: PolyGram Group, affiliated with N.V. Philips, the $12 billion Dutch electronics maker that markets products in the U.S. under the Norelco and Magnavox labels; and Siemens AG, the West German electronics firm.

Coen Solleveld, 59, PolyGram's president, doesn't actually claim the top spot, but with $1.25 billion in sales, not counting the unconsolidated volume from big pieces of two of the hottest selling independent companies operating in the U.S. market, he almost certainly could. And that's part of the reason he has moved his headquarters from the Netherlands to New York. With major interests in the Robert Stigwood Organization (records and films of alltime disco champs *Saturday Night Fever* and *Grease* among others) and Casablanca (the bizarre KISS group and the big movie *Midnight Express* among others), PolyGram is already a big winner here *(see* FORBES, *July 10, 1978).*

"We want to make American artists and executives feel this is a company that is not just an offshoot of a European company," says the Rotterdam native. But he's interested in more than artist relations. For one thing, the U.S., with only 5.1% of the world's population, consumes 50% of the record industry's products. For another, if the videodisc industry, in which Philips is heavily involved, ever takes off, it will start here.

Philips, like others in the hardware and software ends of the home videodisc market, has been playing stop-and-go for years now. It's natural that nobody wants to commit the huge investments in production and marketing until the business unscrambles itself a little more, though the Philips Magnavox system went into test markets in December. The home videotape industry has gotten off to a slower start than was expected at

PolyGram Group's Coen Solleveld
New champion of the record industry?

the launching by Sony and Matsushita, among others.

At about the same time, RCA announced it would begin marketing its videodisc system (it's not compatible with Philips') in 18 months or so. Both companies want to hit it big, not only to sell the hardware, but also the programs that both own and would love to sell on their own system's discs. But the industry is still in that chicken-egg stage of wondering just how many programs would have to be on $6-to-$15 discs before anyone would purchase a machine, and how many copies of, say, *Saturday Night Fever* they can sell to people who buy the $695 players.

Program marketing was not a problem with the videotape systems—most of the programming shown on those was taped off a home television. The disc players, however, can't record off home set the program people, like Solleveld, have their hands full until the chic and eggs become a market.

Instant gratification

"Not in our wildest dreams did any envision that we would do as well a have," says Raymond Zimmerman president of Nashville-based retailer vice Merchandise Company, Inc.

How well? From being small jobbe the dime store trade in the early Six Zimmerman and his parents, Harry Mary, are currently worth $60 millio paper. Service Merchandise, w grossed $1 million in 1960, netted $ million last year ($1.36 a share) on of $353 million. Sales are expecte exceed $500 million this year. Its s has gone from 50 cents a share to $2 in the past five years, making it th performer among the 1,000 largest licly traded corporations.

Here's how it started: Harold Ro berg of Modern Merchandising proached the Zimmermans, as he the Lewis family of Best Products (FORBES, *Sept. 4, 1978*), with an idea t costs by using a common catalo their individual catalog showroom was an idea made to order for th Spock Age, offering instant gratifica With other catalogs, the buyer ha wait days or weeks for the mercha to be delivered. With the new ca showrooms, the customer could ch his item and go to the back of the to pick it up. They sold, moreover, of-the-line, brand-name products a rate prices instead of private-label ucts (as Sears does). Timely offerin Wall Street provided the other ing ent: capital to open new showroom

For $5,000 his customers can play the syndicate game like the big boys.

who were caught unprepared to service that heavy sales volume. "The Strada is built with the U.S. market in mind—over 100 engineers worked on the emission and safety problems alone," he says enthusiastically.

After working his way up through the Fiat export division, Ferrari became managing director of Fiat in Switzerland in 1976. He came to New Jersey to head up the North American unit in March 1977. That's when things started changing for Fiat.

Ferrari hopes his new parts delivery system, beefed-up training for mechanics and quarterly surveys of owners and dealers will polish Fiat's tarnished image. He's also hiked the advertising budget 40%, changed advertising agencies and dangled this tempting carrot: financing for dealers and customers, the first by a foreign carmaker.

Fiat sold only 61,000 cars last year, 3% of the U.S. market. This year, Ferrari envisions sales of 85,000, with about half coming from subcompacts like Strada.

He's made all the right moves, but can he get the jump on the Rabbit?

A little leverage?

One day last summer, William G. Jennings got the idea that maybe some of the people his firm had been brokering homes for in Chicago's affluent northern suburbs might like to buy some real estate action above and beyond the residences they were acquiring. After all, practically everybody had discovered what a splendid inflation hedge the right real estate could be.

But real estate syndications were almost always split into such big pieces that limited partnerships were out of the reach of most home buyers.

Besides, the losses of so many REITs turned off a lot of would-be investors. So Jennings, who heads the 95-year-old real estate firm of Quinlan & Tyson, Inc., decided to set up a small-scale partnership that Q&T's sales force could offer to its home-buying customers.

Last September Q&T began offering $1,000 shares in a $2 million partnership to buy a shopping center in Chicago's western suburbs. Minimum sale, $5,000; maximum, $20,000. The offering is being made under Illinois securities law and is available only to state residents.

Considering the scale of the deal, you might have expected that Q&T would have sold out the offering in weeks, or even days. But Jennings knew very well from the start that it would take a lot of time and effort to sell real estate customers partnership shares, despite the reputation of the venerable $285 million-a-year broker. For one thing, aside from the bad publicity that a lot of real estate investments have acquired, house salespeople just didn't have the experience to peddle these investments to prospects who walked in off the street for a house.

The 50-year-old Harvard grad set up a training program to turn 24 of his 300 salespeople into securities sellers. A home buyer may well understand what a mortgage on his own dwelling means, but how do you explain the risks and rewards of shares in a partnership with the leverage of an 80% mortgage? With some difficulty, as it has turned out.

Jennings figures the first Q&T offering will be just about sold out this spring, which says something about the problem of converting your corner real estate sales office into a minisyndication business. Next time, says Jennings, "we know we'll have to get property with a higher mortgage to allow our customers a greater tax deduction." And next time is going to be in 1980. ■

You look like you just heard from Dean Witter.

Today, it takes a lot to make an investor happy.

It starts with a full-service investment firm that reall fulfills your needs. And people trained to recognize the

That's why, at Dean Witter, one of the biggest investments we make is in our people.

To begin with, we're much more than just stockbrokers. Which means we can advise you about your total financial plan.

And something else you should know is that Dean Witter account executives aren't alone when they work for you. We back them up with a complete team of financial experts. Experts whose knowledge covers everything from general business and economic trend to options, to commodities, to insurance.

But we don't stop there. Since holding onto your money is as important as making it, we offer a full rang of tax-saving programs, too.

It all adds up to a financial plan that's tailor-made f you. Because today, more than ever, we feel that each investment portfolio should reflect the needs and aims of the investor it was created for.

How do you feel when you hear from Dean Witter?

Your smile gives you away every time.

DEAN WITTER REYNOLDS

One investment firm
you'll be glad to hear from.

MONEY & INVESTMENTS

Over the hump

LAST ISSUE in this space we asked the question: "Did Santa bring us a recession?" and replied that he may well have done so; a good many signs were indicating that the long-awaited downturn had finally begun. We were in a distinct minority. Most of the experts were saying that Fed policy had failed to slow the boom. The year was ending on a strong note and nothing the Federal Reserve did in the way of raising interest rates seemed able to turn the upward pitch.

Suddenly we find we have more company. The signs multiply that the Fed has finally succeeded in slowing the economy to a crawl.

Item: The monetarists who look to the magic numbers of M-1 and M-2 to foretell the future were surprised the first week in January to find that there had been an actual decline in the narrowly defined money supply during the final quarter of 1978—contrary to almost all predictions. Then, the week-to-week money supply figures were flat when the experts had predicted multi-billion dollar gains.

Item: The second week in January, New York banks reported that their business loans had dropped a record $1.4 billion (to $38 billion). Regional banks have had declining loan volume (seasonally adjusted) since October. Clearly, the demand for business credit is slackening.

Item: The Commerce Department reported that business' capital spending plans for 1979 called for an increase of only 3%—adjusted for inflation—over 1978's, certainly not the makings of a new boom in capital spending. Most experts had looked for a 4% or 5% increase.

The Economy

Item: For December total employment in the U.S. increased by only 250,000 (*vs.* 400,000 in December of 1977). Since stores probably added more than 250,000 seasonal employees for the Christmas rush, this probably indicated a drop in basic employment.

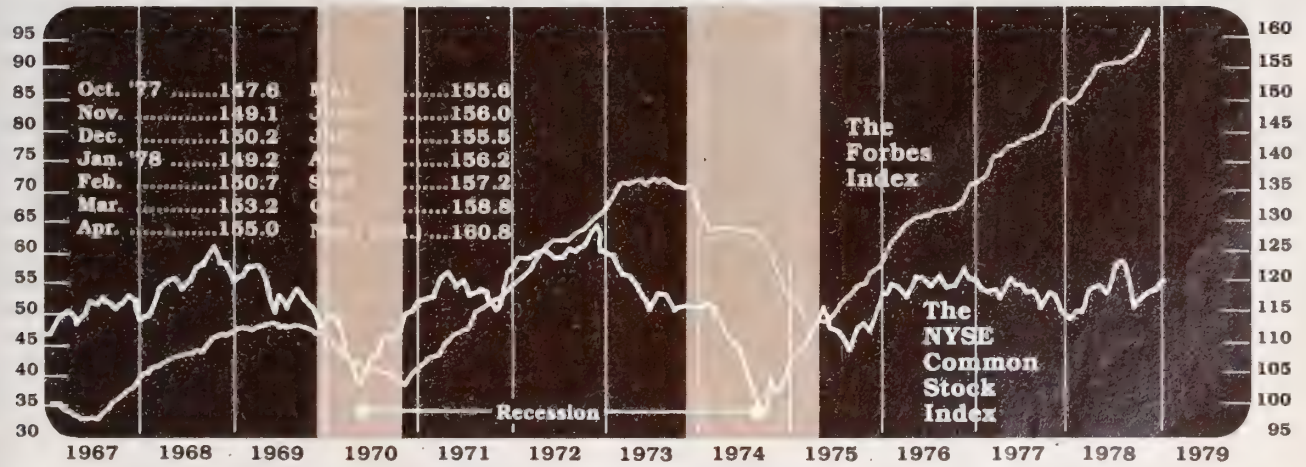
Item: The average factory workweek in December was cut to 40.6 hours, down from 40.7 in November.

Item: The oil workers union settled within the wage guidelines, accepting a pact that involved 8% the first year and 5% the second. The ball was now in the Teamsters' court, but a good precedent was set.

Item: Although consumers had not yet started paying down the mountain of debt accumulated in recent years, surveys suggest that they are becoming uneasy and will soon do so.

None of this suggests that we are heading into a deep recession. But it does suggest that Fed policy is starting to bite and that interest rates will not go substantially higher. In fact, the Fed may already have started worrying about when to start letting rates drop again. Act too soon and it risks having the economy overheat again. Act too late and it risks starting a really bad recession. At any rate, the boom has been checked and lower interest rates lie ahead. ■

The Forbes Index*



Composed of the following:

- How much are we producing? (Federal Reserve Board Index of Industrial Production)
- What volume of hard goods are we ordering? (Bureau of Census latest three months new orders of durable goods related to inventories)
- How intensively are we building? (Bureau of Census privately owned housing starts)
- How much are people spending? (Bureau of Census retail store sales)
- To what extent are consumers going into debt? (Federal Reserve net change in consumer installment debt)
- How costly are services? (U.S. Dept. of Labor service price index related to the consumer price index)
- How much are workers earning? (Dept. of Commerce personal income, wage and salary disimbursements)
- How many people have been laid off? (U.S. Dept. of Labor initial unemployment claims)

*Revised 9/78

In the first couple of years, the President fueled inflation by massive giveaways. Now he is appalled at the results.

BORN-AGAIN JIMMY

By Ben Weberman

IF YOU WANT to nail down some of today's juicy yields, it doesn't pay to accept lesser quality when terrific yields are available in the very best. A Treasury note due in December 1983 pays 9.31% as of late January. As rarely before, quality is the best policy. By moving to a federal agency issue, an issue of slightly lower quality, you improve your yield only by a paltry 0.2% and you sacrifice something in marketability.

What about tax exempts? I can't get excited about a 5.65% yield on Aaa-rated Wisconsin bonds vis-à-vis that 9.31% on medium-term Treasuries. For a couple in a 34% bracket the taxable equivalent yield is 8.56%; for a 49% bracket, the effective yield of the five-year Wisconsins is 11.1%. But you give up some marketability and quality. Wisconsin is great today but what about five years from now? Thirty years from now?

As we point out *(see p. 103)*, FORBES remains convinced that interest rates are near their peak. Nevertheless, we do not expect them to come down quickly—not until the economy has slowed sufficiently to convince the doubters that high interest rates have done their work in protecting the dollar and slowing inflation.

There is substantial distortion in the yield curve today. Normally, long-term bonds yield more than short-term ones; naturally, there is more risk—time risk—in the long-term bonds. A normal yield curve has yields rising as maturity lengthens. But today's yield curve has the highest yields in the short and medium maturities. The reason, of course, is that this is where the Fed is putting its pressure.

Ben Weberman is economics editor of FORBES *magazine.*

Under these circumstances, a sound tactic is to invest in high-yielding medium-term bonds due in four or five years and then, when the yield curve starts to resume a more normal shape, sell them, take the profits and invest in long-term bonds. The point is simply that once interest rates start to drop, they will drop fastest (that is, prices will rise fastest) in the short and medium maturities.

What makes me so certain that interest rates are coming down this year? I'll be frank with you: I am betting on President Jimmy Carter. I think he has become born-again so far as economics is concerned. In the first couple of years of his term he fueled inflation by massive giveaways to pressure groups: farmers, minorities, coal miners, steel magnates, professional urban advocates. Now he is appalled at the results, and so are his advisers who face a reelection campaign that will start in about 18 months. The Carterites know that inflation is a powerful interest issue and they scarcely want to run against an opponent who can pin inflation on Carter. They would prefer to run Jimmy in an environment where inflation has come down and the economy is beginning to recover from the drying-out period of high interest rates that the Fed has imposed. This will take some delicate timing.

John F. McGillicuddy, the very able president of Manufacturers Hanover Trust Co., recently said that he expects the bank prime rate to go a trifle higher—to 12¼% or so from the present 11¾%—hold there in the early months of 1979 and soften as the year goes on. This sounds to me like the most likely scenario. First Boston's brilliant economist, Albert Wojnilower, doesn't agree. He predicts much higher interest rates with Bell System bonds, now 9¼%, hitting 11% by year-end. But Wojnilower is, I think, looking at the economic factors without considering the politics of the situation.

Adding it all up, I can't think of more comfortable place to be right no than sitting with heaps of two-year t five-year Treasuries—totally risk fr and as marketable as cash—with yiel of 9.8% to 9.3%. Even if the intere rate trend should disappoint me and g up further, your loss exposure is min mal due to the short maturities.

A warning about the new savings bonds

Goodbye to Series E and Series U.S. savings bonds. Hello, Series E and Series HH, as of Jan. 2, 1980. Th announcement of the shift by Tre sury Secretary W. Michael Blume thal makes it sound as though he doing the public a great service. The bonds—of which $8 billion were so in 1978—yield only 6% over a fiv year period. The new bonds will hav a maturity of 11 years, 9 months ar will carry the same interest instead the 9.15% you can get today on a te year marketable Treasury.

Blumenthal says the new savin medium "provides Americans at a economy levels with an opportunit to save in a safe and convenient ma ner." Happily for truth-in-borrowir he doesn't say anything about the i terest rate.

The E bonds bought between 194 and April 1952 will not be extende when they fall due between 1981 ar April 1992—40 years after initial sal Those sold after April 1952 will r ceive a ten-year extension and the stop drawing interest.

Series H bonds will get no furth extension if purchased before Ma 1959. The H bonds bought after Jur 1959 get one more ten-year extensio and will come due between 20 and 3 years after initial purchase.

If you have been holding on to you E bonds because you wish to def taxes on accrued interest, be awa that you will have to pay taxes whe these bonds come due—with one m jor exception. The Treasury will allo one last ten-year deferral of accru interest if you choose to exchan your E holdings for H or HH curre income bonds.

Otherwise, the new HHs lack or of the main advantages of the old issues: Interest on them is not a crued but semi-annually paid by chec and immediately taxable. The only r maining advantage is the small d nomination, but for small savers savings account is more convenient.

Sorry, Secretary Blumenthal, but poor investment is a poor investmer no matter who issues it. ■

Why do people call the Chicago Mercantile Exchange the Super Market?

t works.

ere's a statement that's frank- hard to believe: futures trad- g on the Chicago Mercantile xchange tends to reduce osts to consumers while creasing profits to efficient roducers.

is, nevertheless, a statement fact. It's a textbook example free enterprise in action. The ility to provide more for sellers nd more for buyers is explained the incredible efficiency that a uly free, open and worldwide mar- et is capable of producing. Efficiency sults from intense competition. Sometimes, even in our society, there isn't enough competition to go around. But, on the hicago Mercantile Exchange there are literally thousands of buyers and sellers from over the world competing for the best possible price — on everything from U.S. easury bills to frozen pork bellies — every day of the week.

s about as competitive as you can get—and very efficient. The result of efficiency is ore for everyone. That's why the CME has become one of the world's leading nancial institutions.

veryone talks about free enterprise. At the Chicago Mercantile Exchange, we ractice it.

nd it works.

A Federally Licensed Contract Market

What can you do but buy something that gives you a chance to overcome the shrinkage of the dollar's buying power?

FAUTE DE MIEUX

By Heinz H. Biel

THE TURMOIL in Iran notwithstanding, record-high interest rates and various other problems, the stock market went blithely ahead after the turn of the year and enjoyed a broad, if unspectacular, rally. As I have said many times before, the stock market usually goes its own way. Although the writers of market letters and other instant commentators may think otherwise, the news of the day rarely gives a worthwhile hint as to the market's future course.

I have been buying some stocks lately. I have done so not because I am bullish on the economy or on corporate profit prospects this year, but because I can see no grounds for optimism on the future of the dollar. What else can you do with money but to buy something that gives you at least a chance to overcome the 7% to 10% annual shrinkage of the dollar's buying power? So, *faute de mieux*, you buy stocks. By and large they are more reasonably priced than other investment media.

The inflation hedge qualities of common stocks are controversial, and the more deeply you look into the question, the more inconclusive will be your answer. In preparing a talk on this subject, I picked some six stocks, more or less at random, that a conservative investment counselor might have suggested to a client in the late 1960s. Here they are:

	1968 Average	Year-end 1978
Avon Products	65	50¾
Coca-Cola	35⅞	43⅞
General Motors	81¼	53¾
R.J. Reynolds	43¾	56⅝
Sears, Roebuck	32⅛	19¾
Texaco	40⅜	23⅞

Standard & Poor's had given its top-quality rating of A+ to five of the six. Only General Motors was rated A. Taking 1968—the year in which inflation began to get really bad—as the starting point, the average 1968 high/low price of the six stocks was $49.73. Ten years later, at year-end 1978, the average price was down to $41.44, a decline of 16.7% during a period in which the Consumer Price Index doubled. Stocks were indeed a poor inflation hedge.

Then I made a few substitutions, but stayed in the same industry:

	1968 Average	Year-end 1978
Revlon	27⅛	51⅜
PepsiCo	15½	25⅝
Caterpillar Tractor	28¼	58¾
Philip Morris	14⅛	70½
S.S. Kresge*	12	22½
Phillips Petroleum	16⅜	31⅝

*now K mart

Only Phillips Petroleum had the S&P A+ rating. The others were rated A or A- and Kresge, a lowly B. Using the same method, the average 1968 price of $18.91 rose to $43.40 at year-end 1978, handily beating the rate of inflation with an advance of 129.5%. Does this not prove that stocks are a superb inflation hedge?

I leave it to the reader to draw his own conclusions about this. One point is obvious, however: Don't just look at the so-called quality ratings. A little oomph can make a great deal of difference.

I have always been intrigued by the choice of companies in which Mr. Singleton invests the surplus funds of Teledyne and its subsidiaries. None of them has been a sparkling success so far, and there are some, like Curtiss-Wright, for instance, where I just can't see the appeal. There is, however, one exception, *Eltra Corp.*, which reached a new alltime high last year and in which Teledyne has a smallish (8%) interest.

Eltra, whose sales topped the billion dollar mark last year for the first time, makes a variety of electrical products and its Mergenthaler division is a leading manufacturer of phototypesetting equipment. The company has a good record of growing earnings and rising dividends, currently at a new high of $4.20 a share and $1.34, respectively. The company's financial health seems sound.

The company has recently been subject to some vague takeover rumors, and since the stock (at 29) sells at a modest multiple of 7, and at a good discount from its book value of $34.18 a share, this might make sense. However, *American Manufacturing Co.* (34½ on the Amex), a small company (only about $40 million sales), which makes ropes and twine, industrial timers, counters, etc., already holds about 28% of Eltra stock. This would make an unfriendly takeover attempt rather difficult.

Some companies are extraordinarily successful in establishing for themselves a secure niche in the nation's economy, where they can be the big frog in a small pond. *Rubbermaid* (25) would seem to fit that description to a tee. The company makes an incredible variety of plastic and rubber products, and you would be surprised how many of those products you have in your kitchen, laundry room, car and elsewhere in the house. Presumably there is competition, but all one knows is Rubbermaid.

This is a little gem of a company with steadily rising sales, earnings and dividends. It is understandable that Rubbermaid has been pursued over the years by many suitors and marriage brokers who wanted to get hitched, but the company preferred to go it alone.

Earnings for 1978 are estimated to have been in the $2.40-to-$2.50 range, a new high, of course. Dividends have always been a bit skimpy in order to finance the growth of the business, but they have tripled in the past ten years to a present rate of 76 cents.

The price of the stock has come down quite sharply from last summer's high of 34½, where it was, let's say, somewhat generously priced. How the stock ever managed to get above 50 (in 1973) is one of the mysteries of Wall Street that I'll never be able to explain. At its present multiple of 10, Rubbermaid sells at an uninflated price. In my book this is a sound conservative investment. ■

Heinz H. Biel is a vice president of the NYS firm of Janney Montgomery Scott

In today's nervous stock market, should you. . .

Buy? Sell? Do Nothing?

More specifically, what should you do NOW about these (or 1700 other) fast-changing stocks?

AT&T	EASTMAN KODAK	RCA
BALLY MFG.	EXXON	RAMADA INNS
BOEING	GENERAL MOTORS	SEARS ROEBUCK
CHRYSLER	ITT	SONY
CITICORP	OCCIDENTAL PETRO.	TEXACO
DOW CHEMICAL	PAN AMER AIRLINES	UAL
EASTERN AIR LINES	POLAROID	WESTINGHOUSE

e've picked the 21 stocks above for illus-ation—from more than 1700 regularly vered by The Value Line Investment Sur-y—because each has recently been on the ost active" list and may therefore be of ecial interest.

e stock market, and the investment values erein, are now going through a great deal rapid change. *This is no time to sit on your nds.* It is urgent, we think, that you check thout delay every stock that interests or ncerns you to see if it currently offers the vestment credentials most important to u. To illustrate, let's look at the stocks ted above:

ERFORMANCE: Every one of these ocks—*at one time or another*—has offered e prospect of superior relative price per-rmance. Right now, however, Value Line tings suggest that 5 of these stocks ould be avoided for the time being. On e other hand, we estimate that 7 of the ocks above will clearly outperform most her stocks in the next 12 months.

AFETY: Eight of the stocks listed carry perior Value Line ratings for Safety, mean-g they have typically demonstrated great-price stability than the majority of stocks. e other stocks on the list rate only average lower on this score.

IELD: The dividend yields of these stocks timated by Value Line for the 12 months ead range all the way from 9.7% to Nil. an of the stocks offer yields below 4.9%. nly 6 stocks provide yields of 6.5% or gher.

PPRECIATION: Value Line's estimates Appreciation Potential in the next 3 to 5 ars for these stocks range all the way from paltry 25% up to more than 300%. Eight ocks offer long-term potentials of 175% higher.

he data above come from a recent issue The Value Line Survey. For actual invest-ent decisions, be sure to see the *latest* eekly Value Line edition.)

HERE ELSE CAN YOU ET ALL THIS?

lue Line gives you the key ratings out-ed above, updated every week, for EACH 1700 stocks—so you can make *coherent* mparisons of any stock against any others th respect to the investment attributes you re about. In addition, Value Line regularly esents comprehensive full-page Research eports, with 15-year vital statistics, for each 1700 stocks.

e apply the same quality and comprehen-veness of research and evaluation not only virtually every "big name" stock (like the es listed above) but also to more than a ousand "lesser" stocks—which make up a gnificant part of a great many portfolios.

We realize that when YOUR money is involved, an investment in U.S. FILTER can be just as important as the same amount in U.S. STEEL.

If you want to re-assess your stock portfolio with an eye to greater rewards and/or lower risks in today's unusual market. . . . if you want to make *rational* decisions about what stocks to hold, sell, or buy now. . . . we believe that no other source even comes close to providing the help that Value Line systematically gives you.

UPDATED EVERY WEEK

Every week, Value Line's new *Summary & Index* presents up-to-date ratings of EACH of 1700 stocks *relative* to all *the* others, as follows. . . .

a) Rank for Probable Price Performance in the Next 12 Months—ranging from 1 (Highest) down to 5 (Lowest). We urgently suggest you *stay away* from the 400 stocks now ranked 4 or 5.

b) Rank for investment Safety (from 1 down to 5). If Safety is important to you, we suggest you concentrate on stocks ranked 1 or 2 in this respect.

c) Estimated Yield in the Next 12 Months. Every week we also present a "screen" of the 100 stocks with the highest yields, which recently ranged from 9.6% to 20.9%.

d) Estimated Appreciation Potential in the Next 3 to 5 Years—showing the percentage change from the recent price. Every week we also present a "screen" of the 100 stocks with the highest potentials, which recently ranged from 235%to 575%.

e) P/E Ratio and current price, plus estimated annual earnings and dividends in the current 12 months. Also latest quarterly results vs. year ago.

PLUS FULL-PAGE REPORTS

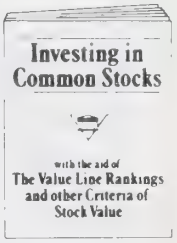
In addition to the weekly coverage above, each of the 1700 stocks is the subject of a comprehensive new full-page Research Report at least once every three months—including 22 series of vital financial and operating statistics going back 15 years and estimated 3 to 5 years ahead. About 130 new full-page Reports like this are issued each week. . . 1700 every 13 weeks.

SPECIAL INVITATION

You can receive the complete Value Line Investment Survey (with 30-day money-back guarantee) for the next 10 weeks for only $29—about HALF the regular rate—if no one in your household has subscribed in the past two years. And you get these two bonuses:

BONUS #1— Value Line's 2400-page *Investors Reference Service* including our latest full-page Reports on each of 1700 stocks—fully indexed and looseleaf-bound for easy reference, and systematically updated by new full-page Reports in the weeks ahead.

BONUS # 2— *Investing in Common Stocks*, the 64-page "classic" by Arnold Bernhard, Value Line's founder and research chief, revealing methods of stock evaluation that took decades to refine. You KEEP this book even if you return the other material for your money back.



This subscription is tax-deductible if utilized to aid in the management of your investments.

To accept this invitation, simply fill in and mail the attached coupon today.

THE DINES LETTER

Special ½ Price Trial Offer!!

In late 1968 **THE DINES LETTER** predicted a long and bitter bear market (concealed by the bloating effect of inflation) together with gold soaring from $35 to the $250-$400 area. While these predictions have not yet come true, **THE DINES LETTER has never stopped reaffirming them.** At this critical juncture, we simply want you to **see THE DINES LETTER** and we will not let price be an obstacle! So, we've cut our regular "trial package" price of $10 in half to $5! What harm could be done by merely examining a pro-gold point of view not found in Forbes? **THE DINES LETTER** specializes in gold. No math or special knowledge required. Send no messages. Merely forward this ad with your name, address and $5 to Dept. JF9M2. Do it now—we don't advertise in Forbes very often and you might not catch our next ad. Offer expires in one month.

Gold and gold stocks soared in 1978 at a time when many other stocks plunged. If your present sources of advice are negative on gold, maybe it's time to get a different point of view. Let **THE DINES LETTER** explain **"The Coming Gold Crisis and The Invisible Crash."**

THE DINES LETTER

If there's a market drop that justifies "panic," buy some more; and don't worry too much

A NEW YEAR'S RESOLUTION

By John Train

ONE OF MY CLIENTS (and friends), who is a keen yachtsman, made a very good buy several years ago of a Friendship Sloop, a charming type of cruising boat that's popular in Maine, where we both go summers.

What happened was that the previous owner of the vessel had traded up to a larger boat, and to pay for it had offered this one for sale at $25,000. He'd found a buyer, but the prospect evaporated just before the closing. So to raise cash for the new boat the unhappy seller had to make a fire sale of the old one at $21,500, at which point my client stepped in and made an outstanding buy.

He liked talking about it. He even told me that it made him feel better while sailing around to think what a good deal he'd made. (I told him this was a vulgar idea.)

Then came a surprise. An estate was liquidated and one of the assets, another Friendship of about the same vintage and finish as my client's boat, sold for even less than he had paid.

My client was disgruntled. "If only I'd waited," he wailed.

I told him he was being silly. He was as well off as he had been when he was so pleased. He had his same boat at his same bargain price.

There's an analogy here to the way people feel about securities they own. If you buy IBM today, you're getting a return of nearly 5%, with dividends likely to rise at 13% to 14% compounded (faster than the earnings, since the company is generating such a torrent of cash that it doesn't know what to do with it all). Dow Jones & Co., likewise. If you buy Marsh & McLennan you're getting well ov 5%, with similar growth prospec The same approach applies to a other company you buy an interest i You're acquiring a future stream earnings and dividends. If the de suits you at the price you pay, t business does well, and the earnin and dividends come through schedule, why worry all the tir about the possibility of a further c cline in the stock market? The quo tion on any given day doesn't chan the nature of what you own, any mo than my client's Friendship Sloop ro or fell in the water every time anoth such vessel sold at a different price although he almost seemed to feel did. And a lot of buying and selli will cost you more than you'll mak even without considering the wor and loss of time.

The nuttiest of all is to panic a sell just because prices go down.

Suppose my friend had bought h sloop at $23,000, then had heard th the most recent sale for a similar ve sel was at $21,000, and finally h gotten desperate and *sold* his perfect good boat at that price out of fear th it might "go still lower."

Crazy, right?

His boat was the same as befo still sitting in the water day after da It suited him, so why sell it?

But lots of small investors—spec lators, really—buy a stock at 23 b cause "it has been as high as 30," a then sell out in a panic if it goes down to 19, even though the thi they own is in no way changed, e cept that it's a better bargain.

This is most likely to happen if y don't understand what you're buyin The *investor* knows what he's buyin to the extent possible. If it fulfills h expectations as a business—that is, the earnings and dividends hold up he can view the market jiggles wi equanimity. Perhaps, indeed, the i vestor buys more if the market ev really collapses.

Of course, the same principle wor

Investing is a continuous chain of action and reaction oblivious to man-made conventions like weeks, months and years.

60 DAYS HATH DECEMBER

By Ann C. Brown

ANY INVESTOR who thinks 1978 was over with the playing of Auld Lang Syne, a glass of champagne and a couple of funny hats isn't playing with a full deck. While *calendar* 1978 may have ended at midnight the 31st, *economic* 1978 drags on, full of Christmas bills, income tax forms, state of the State and state of the Union messages and all manner of folk continuing to guess what 1979 will bring. What February is to groundhogs, January is to economists. They emerge briefly, make shadowy predictions and dive back into their econometric models praying that their listeners will have forgotten what they said by next year.

As far as I'm concerned, January is just another month, and should not be imbued with any special powers of divining the year as a whole. That the DJI was up 25 points the first week was nice but certainly not enough to suggest that you mortgage the house and throw all your money willy-nilly into the stock market. Too many things can happen in this fast-moving world of ours to bet all your chips on the outcome of any one week's numbers or any one month's numbers, for that matter. Investing is a continuous chain of action and reaction oblivious to man-made conventions like weeks, months and years. Make every decision to buy or sell on the merits of the situation as you perceive it, not on old adages or the calendar.

If there's one thing that makes me mad, it's recommending a stock whose price goes down when everything else about the company suggests it should go up. An excellent case in point is *United Inns* (11), which I suggested to readers (FORBES, *Oct. 1, 1978*) at 15. At that time, I estimated the earnings for fiscal 1978 to be anywhere from $2.10 to $2.50, up from $1.35 in 1977. Sure enough the earnings came in at $2.10 and the stock promptly dropped to the $8 level for some inexplicable reason. Since the with the tax-loss selling out of the way, United Inns has bounced back a bit but not anywhere near its 12-month high of 19⅛ even though the outlook continues to look bright. To refresh your memory, United Inns is a major licensee of Holiday Inns in the southern and southwestern U.S. Currently the company has over 8,000 rooms coast to coast and plans to add another 2,000-plus over the next three years. Since I'm inclined to think that the probability of gas rationing is slight and that the expected high gasoline prices will not sharply curb domestic automobile travel, I continue to recommend United Inns. At 3 to 4 times estimated 1979 earnings of $2.50 to $3, there would appear to be limited downside risk and considerable upside potential if the "gasoline jitters" turn out to be just that and nothing more.

Another stock that has had a recent attack of the vapors is *Santa Fe International* (30). Originally recommended at 25 (FORBES, *Jan. 9, 1978*), the stock shot up to over 40 before falling out of bed. Most of the disappointment came from the company's announcement that the oil production from the North Sea's Thistle Field would be only half of what was earlier expected. However, due to a little help from the recent OPEC price increase and the widening premium paid for light crude oil, Santa Fe International may be able to earn $3.70 in 1979, up from an estimated $2.80 for the year past. In addition, the Drilling division

Everything the sea touches, it destroys. Everything Grow Chemical touches, it protects.

Everything – from the largest supertanker to a child's pail and shovel – the sea eventually destroys . . . with rust, corrosion, rot and even manmade pollution.

That's why we depend on the protective coatings produced by Grow Chemical and its Devoe Marine Division.

Since 1754, Devoe People have fought successfully against the ravages of the sea, developing coatings to keep pace with the moves from wood to steel to aluminum and fiberglass. Today Devoe makes Devran® and Cathacoat.® High performance coatings that go outside, naturally. But, go inside, too, for cargo and ballast areas.

Devoe Marine Products protect them all, from the family sloop to the largest super tanker. We even protect the ships that protect us, from carriers to atomic subs.

People who live with the sea know Grow Chemical through Devoe Marine.

People who know investments know Grow. We've reported increases in sales, earnings, and earnings per share for each of the past 5 consecutive years. And, we're the company that, since 1964, has paid stock dividends totaling more than 78%. That, in addition to paying 58 consecutive quarterly cash dividends.

Shouldn't you know Grow, too. Write Grow Chemical Corp., 200 Park Avenue, New York 10017. We'll be happy to send you a corporate profile and our annual report.

GROW CHEMICAL

26 Smaller Companies With Special Attraction In Today's Stock Market.

Our new report singles out 26 interesting smaller companies and explains why our analysts feel they offer attractive investment possibilities in 1979.

You'll learn about:

- ☐ A leading controls maker whose new fuel optimization system could help double earnings in two years.
- ☐ A pioneer in modular office furniture systems whose earnings look as good as its product.
- ☐ A major installer of electric transmission facilities with near-record earnings and a stock price well below book value.

This is just a sampling. Our 40-page report gives unhedged opinions on all 26 companies. For your complimentary copy, simply mail the coupon or call

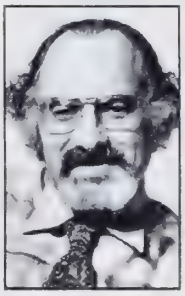
It will be the stupidity of the Federal Reserv Board that finally brakes the acceleratio of interest rates and inflation.

SAVING US FROM PROSPERITY

By Martin T. Sosnoff



THE UNIVERSAL belief that the American economy is bound for the mat means to me that it will happen later than sooner. A year ago all the economists expected business to poop out by the end of 1978 and nothing happened. Why should 1979 be any different? You say short-term interest rates are 300 basis points higher now and biting deeper, and housing prices have begun to peak out as mortgage money heads toward 11%? But, so far, the consumer keeps the pot boiling. Recession is still just around the corner.

Buy now! The middle-class rallying cry is heard all over. First-class airline seats are hard to come by. The lift lines at the ski resorts are a little longer. Vintage Bordeaux escalates 20% per annum. Everyone drinks it. The Concorde is sold out weeks in advance. You can breakfast in Zurich, lunch in London and dine in New York on the same day all at the same price. Why should the good life come cheap?

It is now time to judge the incumbent economic leadership of the country, and by all counts, they rate maybe two on a scale of ten. It has taken two years for the populist streak down Jimmy Carter's back to be erased by the realities of the dollar's demise and its contribution to domestic inflation. Meanwhile, the gradualist policy of the Federal Reserve Board got us nowhere. The Board couldn't even control money supply growth within reasonable bounds. The focus in Washington is no longer the energy czar but the inflation czar. And yet, the budget remains mildly inflatic ary for fiscal 1979.

It is unrealistic to expect the A ministration to pull us down from t inflationary spiral. Rather, it will the stupidity of the Federal Rese Board, not its perspicacity, that fin ly brakes the acceleration of inter rates and inflation. The law of unfo seen dynamics does not stem a cre crunch, but it will break the back the economic cycle. Housing is t sacrificial lamb.

The peak rate of new constructi will crumble from 2 million units c rently to below 1.5 million units at annual rate by late 1979. Assuming other sectors of the GNP hold u capital spending, consumer spendi inventories, the federal budget, *et a* it will leave only housing, a politica diffused industry, as the safety val Obviously, if the Administration cides on selective credit controls, c sumer spending will be crushed. T automobile industry is the loser, a the yowl from General Motors a George Meany will be heard 'rou the world. I doubt the Administrat is ready to take them on.

How does the housing industry from 2 million units to 1.5 milli Everyone has made money on housing stock. Valuations in aggreg have risen $400 billion in the past f years. This is the equivalent of a point move in the Dow industr and is the only reason why the co try has a strong sense of its own af ence. Actually, if you adjust for in tion there has been no real gain personal wealth. By now, everyone alizes the real cost of mortgage mo is next to nothing. If you pay 10% inflation cranks out at an 8%-to- rate, you have lucked out. Not high cost of mortgage money, but limited availability will destroy r construction activity.

An enormous new money mar instrument was created under the a

"I couldn't believe that just walking could be such good exercise. But it's true."

Will and Tish Grant have discovered that there is a way to get in shape and stay in shape that is simple and fun. More important—it works. They follow these rules:

1. Start gradually. When you begin, just walk briskly for 15 minutes or so each day. (That's right, just walking will improve your circulation and muscle tone.)
2. After a week or two, increase your level of activity a little bit each day. Soon you'll be up to a half an hour a day. Then, when you're ready (your body will tell you when), jog, ride a bike, or swim. Follow one routine or a variety; do whatever you enjoy the most.
3. Set a specific time each day. Perhaps at lunch time or after work. Make exercise a part of your daily routine.
4. Get a friend to join you. Someone to talk to. Make it fun, not a chore.
5. Most important, stay with it.

In the long run, you'll be the winner.

PRESIDENT'S COUNCIL ON PHYSICAL FITNESS & SPORTS

Last year was the first since 1973 that Free World copper consumption exceeded production by a sizable amount.

A CAPER IN COPPER

By Stanley W. Angrist

SUCCESSFUL commodity traders know that the seasons can provide them with the edge that can turn a losing year into a profitable year. That is, certain commodities exhibit price patterns that repeat each year more often than not. Copper is one of those commodities that frequently exhibits seasonality.

The chart below shows what has happened to the price of copper for the nearest futures contract from 1974 through 1978. Copper seems to increase in price at least a few cents a pound at the beginning of every year dating back to 1969 (1978 was the exception). I believe that copper could undergo such a price rise this year for a number of reasons. There is also one big reason why copper might not rise.

First, the negative. Copper is a very important industrial commodity. It is widely used in the manufacture of electrical goods, and in all types of construction for wiring and plumbing. How can one make a bullish case for copper in the face of a recession that many economists have assured us is 99% certain? Well, it's not easy but it's not impossible either. Let's look at the fundamentals.

U.S. and foreign output of crude and refined metal is about unchanged from year-ago levels. Furthermore, Canadian output was down for 1978. (Canada's average cost of production is even higher than that of the U.S.) Zambia's military/political situation has created serious transportation problems for producers there. Intermittent labor problems in Peru have interrupted production. Chile, second only to the U.S. as a producer, has low costs and its output during 1978 was running at normal levels.

Shearson Hayden Stone, Inc. in a recent report states that 1978 was the first year since 1973 that Free World copper consumption exceeded production by a sizable amount. This condition has begun to eat into the huge overhang of supplies that have burdened the market in recent years. For example, in January 1978 there were 640,000 tons at the London Metal Exchange (LME); in recent weeks LME stocks have dropped to less than 374,000 tons.

A look at the demand side is also instructive. Copper consumption, as measured by deliveries to fabricators in Europe, has been running well ahead of a year ago. Both European and Japanese demand is expected to remain good. There is some talk now of the U.S. creating a stockpile of between 150,000 and 200,000 tons for use in the event of a national emergency. While it's true that a recession is expected by almost everyone, which would, of course, be bearish for copper, no one expects it to be very long or deep if for no other reason than that 1980 is an election year.

The People's Republic of China has recently bought copper for prompt delivery on the LME. Trade sources view China's large-scale drive toward industrialization as a new source of demand for the red metal. China is also negotiating with Japan to build smelters so that domestic copper ore can be processed. However, it will take several years for such projects to be completed.

There are two ways that one can trade a rise in copper prices. One would be to simply go long the May contract at current levels; I would not risk more than 3 cents per pound ($750 per contract) on this trade. The margin would be about $1,000.

The other method would be to buy a Mocatta copper option. (See my column in the Jan. 22 issue for a fuller explanation of the advantages and disadvantages of options.) Keep in mind that these options are the right to buy 50,000 pounds of copper so that each option is equivalent to two futures contracts. Recently, a March 1979 option with a strike price of 72 cents was quoted at $740, while a July with the same strike price was offered at $2,960. On a rise to 82 cents, the 72 cent options would have a minimum value of $5,000 and substantially more if the option had several months of life left. If the May futures contract were to move up 6 cents per pound, a profit of $1,500 would be generated. Both the futures calculation and option calculation ignore commissions.

Will copper stage its (almost) annual rally in the face of high interest rates and a slowing economy? We'll know the answer in July, but then it won't be nearly as interesting a question. ■

Stanley W. Angrist is a professor at Carnegie-Mellon University, and the author of Sensible Speculating in Commodities.

Ups and downs in copper

As the dotted lines below show, copper has tended to rise in price at the beginning of the year. An exception is 1978. The price should resume its upward trend in 1979.

Thoughts on the Business of Life

It is a grand mistake
to think of being great without
goodness; and I pronounce it as
certain that there was never yet
a truly great man that was not
at the same time truly virtuous.
BENJAMIN FRANKLIN

Greatness lies not in being strong,
but in the right use of strength.
HENRY WARD BEECHER

There are some jobs
in which it is impossible
for a man to be virtuous.
ARISTOTLE

I found that the men and women
who got to the top were those who
did the jobs they had in hand, with
everything they had of energy and
enthusiasm and hard work.
HARRY S TRUMAN

Success is the one unpardonable
sin against one's fellows.
AMBROSE BIERCE

A Text . . .

Execute true judgment, and shew mercy and compassions every man to his brother.
ZECHARIAH 7:9

Sent in by H. E. Stivers Jr., Orlando, Fla. What's your favorite text? The Forbes Scrapbook of Thoughts on the Business of Life is presented to senders of texts used.

Do to others as you would have
others do to you, inspires all men
with that other maxim of natural
goodness a great deal less perfect,
but perhaps more useful: Do good
to yourself with as little
prejudice as you can to others.
JEAN-JACQUES ROUSSEAU

A nice man is a man of nasty ideas.
JONATHAN SWIFT

Contrary to the cliché,
genuinely nice guys most often
finish first or very near it.

There are no exceptions
to the rule that everybody likes
*to be an exception to the rule.**
MALCOLM FORBES

Your levelers wish to level down
as far as themselves, but they can-
not bear leveling up to themselves.
SAMUEL JOHNSON

Seem not greater than thou art.
SAMUEL BURTON

No one is safe from slander. The
best way is to pay no attention,
but live in innocence and let
the world talk.
MOLIÈRE

Nature makes merit, but
fortune sets it to work.
LA ROCHEFOUCAULD

This is the age of the common
man, they tell us—a title which
any man may claim to the extent
of such distinction as he has
managed not to achieve.
AYN RAND

No good deed goes unpunished.
JOHN P. GRIER

Between them—literally—Brazil and Paraguay are building the largest hydroelectric power plant in the world. Worldwide Citibank helps

On the Paraná River, at Itaipu, Brazil and Paraguay are jointly creating a generating station whose 12.6-million-kw. capacity will exceed by 30% that of the U.S.'s Grand Coulee Dam.

The river itself is being diverted into the mammoth, man-made channel, 2,000 meters long and 90 meters deep, that appears at left in the photograph. Purpose: to bypass the original riverbed while the massive Itaipu Dam, with its battery of 700,000-kw. turbines, is completed across it.

"Citibankers have recognized a special responsibility"

In financing this almost $9-billion project, Citibank, through Citicorp International Group, is to date one of the most important private-sector providers of funds.

Says Citibank Vice President Ivo Tonin: "Citibankers have recognized a special responsibility—not just to supply Citibank funds, but to stimulate and arrange participation by other financing sources, in other countries,

Right and left: General José Costa Cavalcanti and Sr. Enzo Debernardi of Itaipu Binacional. Center: Citibanker Ivo Tonin.

We're American Airlines. Doing what we do best.

American has something for everyone this Winter.

For pleasure fliers: a new improved SuperSaver.
For business fliers: a money-saving way to take someone along.
For everyone: the convenience of pre-reserved seats, one-stop check-in, round-trip boarding passes and all the other courteous, efficient services you've come to expect from American.

Our new SuperSaver

SAVE 55%

The biggest discounts and easiest restrictions we've ever offered.

During February and March, if you can reserve 14 days ahead,* you can save 35% to 55% off the daycoach fare to any city we fly to in the continental U.S. and Canada, depending on when you fly, and where you're going. You can stay through Saturday night, or up to 60 days. Some restrictions apply, and seats are limited.

* 7 days to and from Florida cities.

Our Companion Fare

SAVE 50%

You pay regular daycoach fare and take someone else along for half fare.

And you don't have to reserve early. From Feb. 13 thru March 31, you can just buy your tickets and go—to any American Airlines city in the continental U.S. Stay as long as 7 days, or return home as early as the first Sunday after your departure. For all the details on all our discount fares, call your Travel Agent or us.

Special check-in services available at most airports.

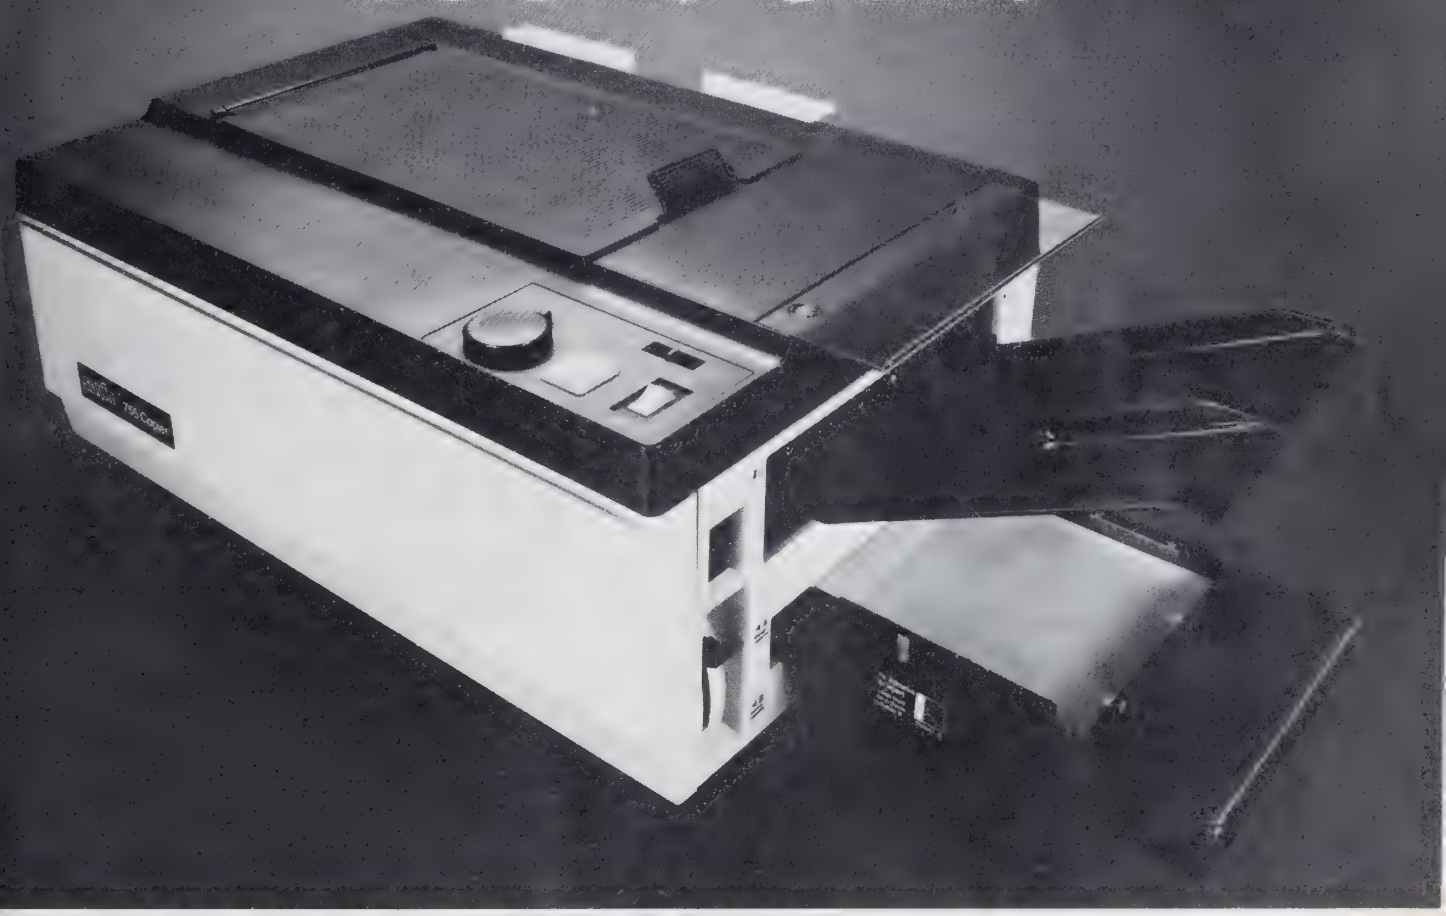
THE SAVIN 755.™
IT COSTS LESS NEW THAN THE XEROX 3100 COSTS OLD.



You can spend under $4300 for e new Savin 755.™

But if you're interested in a bit nostalgia, a remanufactured erox 3100 can be bought for a mere 455 more.

Actually, even when the Xerox 00 was new it would have been no atch for the Savin 755.

More of what Savin's famous r. For less. The 755 may be our west priced copier, but that doesn't ean we've lowered our standards.

You get our refreshing reliability. ur crisp, clean copies, thanks to liq- l toner technology.

First copy time is 7 seconds; ditional copies follow at 15 per min- e. And the 755 shuts off automati- lly when you've finished copying.

That may seem like a detail, but it's not on Monday morning when you find your copier's been on all weekend!

Another reason to connect with the 755 is that it plugs into a standard 110-volt outlet.

It's a machine made for the small office. Or the large office to put where needed.

Don't turn your office into a museum. The same technology that brings you these features also makes them possible at a low price.

The passé machines our competition is touting do less of a job, for more money. So the choice is clear: between a copier that's making history– and copiers that are already part of history.

To learn more, send in the coupon or call (914) 769-8805. Monday–Friday, 9:00 am–5:00 pm E.S.T.

Guaranteed overnight package service.

It doesn't just mean you can get your money back. It means you won't have to.

Next Day Express Mail guarantees* overnight service by 10 a.m. Or your money back. All of it.

But we know you really want to get your package there on time. Not to get your money back.

This guarantee is our straightforward demonstration of confidence. After all, we handle millions of packages that have this guarantee. So you better believe we're going to be on time.

All you have to do is to get your package to an Express Mail Post Office before 5 p.m. Anything mailable, up to 70 pounds.

We'll get it to the destination Express Mail Post Office ready to be picked up as early as 10 a.m. the next business day.

City to city, Post Office to Post Office, by 10 a.m. Guaranteed.

What does it cost? A lot less than you'd think. For example, it's only $8.50 to get a 5-lb. package from N.Y. to L.A.

For about two dollars more, we'll deliver it right to their door by 3 p.m. If not earlier. Weekends and holidays, too.

We've got over 1,600 Express Mail Post Offices in over 1,000 cities. Look in the Yellow Pages under Air Cargo for the Express Mail Post Office nearest you.

Got something to ship in a hurry? Ship it Express Mail.

With our guarantee, we have to be tough on ourselves. And that makes it easier on you.

EXPRESS MAIL®
NEXT DAY SERVICE

*Our guarantee: 100% refund of Express Mail postage upon application at origin if mailed by 5 p.m. at an Express Mail Post Office and not available for claim at a destination Express Mail Post Office by 10 a.m. next business day or delivery not attempted to addressee by 3 p.m. of the next day (unless delayed by strike or work stoppage). ©1978

U.S. Postal Service

Here today, maybe tomorrow

Your best salesman may be striding right out of your life. Your customers see him more than you do, and since he *is* good, it's quite likely one of them has made him a flattering offer by now.

Does he really know that you appreciate him?

In a close decision, a Hamilton Awards Program might just make the vital difference. Hamilton fine watches and heirloom clocks, in a skillfully designed program, are helping many firms to establish a sensitive rapport with their most valued employees — not only in sales and management, but in production, accounting, and other areas as well. And at a level of cost effectiveness infinitely more attractive than recruiting and training new personnel.

You'll be interested in our full-color catalog, and in our highly informative brochure, "Hamilton Awards . . . An Investment in People."

Call our toll-free number for complete details . . . without obligation, of course.
Dial 1-800-233-0283 or
1-800-233-0284.

HAMILTON

Hamilton Watch Company, Lancaster, PA 17604

Routine miracles

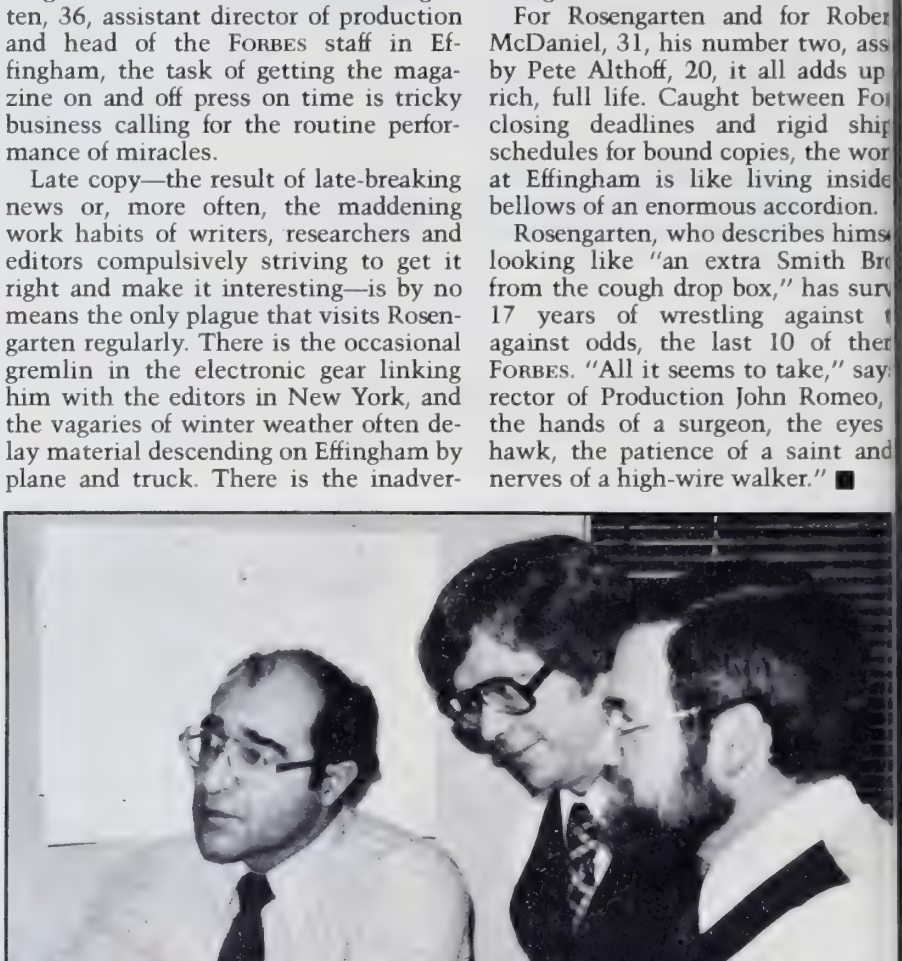
After FORBES' editors in New York had finally stopped fussing over the last deck, caption, kill and fill for this issue; after the copy editors had caught the last dangling participle and vaguely anchored relative pronoun; after the art department had adjusted the last hairline rule; and after our photocompositors had keyed all these changes into the computer and pulled, by electronic wizardry, the final proof of the last page of editorial matter—in short, after the magazine had "closed" in New York, a team of Forbesmen 900 miles away at World Color Press in Effingham, Ill. were only beginning to hit full stride. For Bob Rosengarten, 36, assistant director of production and head of the FORBES staff in Effingham, the task of getting the magazine on and off press on time is tricky business calling for the routine performance of miracles.

Late copy—the result of late-breaking news or, more often, the maddening work habits of writers, researchers and editors compulsively striving to get it right and make it interesting—is by no means the only plague that visits Rosengarten regularly. There is the occasional gremlin in the electronic gear linking him with the editors in New York, and the vagaries of winter weather often delay material descending on Effingham by plane and truck. There is the inadvertently "flopped halftone" (reversed tograph) and the mysteriously a line drawing, the missing page nu and the page dummied twice.

These, of course, are only a few things that can go wrong on the edi side. Keeping track of advertising c a separate care. By the time the n zine is on press, Rosengarten an staff have seen every page at leas times. And after the signatures (16 32-page press forms) start comin presses longer than basketball cou the rate of 18,000 per hour, the York staff is at it again, refreshed night's sleep, updating for impo news breaks and significant changes.

For Rosengarten and for Robe McDaniel, 31, his number two, ass by Pete Althoff, 20, it all adds up rich, full life. Caught between Fo closing deadlines and rigid shi schedules for bound copies, the wor at Effingham is like living inside bellows of an enormous accordion.

Rosengarten, who describes hims looking like "an extra Smith Br from the cough drop box," has sur 17 years of wrestling against against odds, the last 10 of the FORBES. "All it seems to take," say rector of Production John Romeo, the hands of a surgeon, the eyes hawk, the patience of a saint and nerves of a high-wire walker." ■



Director of Production Romeo (left), *McDaniel and Rosengarten*
Like living inside the bellows of an enormous accordion.

SEE EVERY BEAT OF YOUR HEART.

Checking your heart rate is ow as easy as grasping a glass of range juice, thanks to the remark- ble Insta-Pulse™ heart rate onitor from Biosig, Inc.

When held in your hands, it eads your heart rate function from he tiny electrical impulses in your nger tips. Insta-Pulse works on the ame principle as a hospital elec- ocardiograph (EKG). Yet it weighs mere 10 ounces, measures 11″ × ½″ and is fully portable. It runs for p to one full year (over 100,000 eadings) on a single 9-volt battery.

o waiting required.

Once Insta-Pulse is in your ands, its microcomputer chip egins to monitor every heart uscle contraction. And instan- aneously translates that into heart- eats per minute—showing it with bright, always changing LED isplay.

(Flash) 075 (beats per minute) . . .
(Flash) 078 (beats per minute) . . .
(Flash) 074 (beats per minute) . . . and so on.

As long as its nickel hand grips re between your fingers, ulse data continues; put sta-Pulse down, and it rns itself off auto- atically.

Watch both heartbeats and heart rate patterns.

You're free to monitor your heart rate anywhere with Insta-Pulse. During a workout or after one. At home, at the gym or on the track.

Instantly, you will see how the most critical organ of your body responds to exertion. And how long it takes to return to its normal at-rest rate.

This picture of your heart recovering from activity is something you can never get with conventional pulse readings.

In seconds you can also see the effects of psychological stress, overeating, alcohol, caffeine and cigarettes. You'll learn just how valuable to your heart a short nap can be. Or check the benefits of a morning's meditation. Here, too, is an excellent tool for use in biofeedback work; with practice, you can actually develop the ability to alter your heart rate—at will.

Not a toy. Not a toy's price.

The cost of Insta-Pulse through The Sharper Image is $149.00. It's not the only heart rate monitor available to you for about that price. However, others with their cumbersome clips and wires do not provide the accuracy of Insta-Pulse, the world's first instant heart rate monitor.

And it's shock resistant as well. Insta-Pulse contains no moving parts, is 100% solid state and its circuitry is shielded from damage by a thick, clear lucite shell. A hand lanyard provides additional security. The battery is included.

Insta-Pulse comes with a ninety-day warranty from its manufacturer, and the Sharper Image's own guarantee of satisfaction: if you are not completely delighted with it, send it back within two weeks for a full refund.

Order an Insta-Pulse now, and watch your heart function as you never could before.

ORDER TOLL-FREE

The toll-free bell

Those toll-free "800" telephone numbers, handling no-charge traffic to hotels, motels, airlines, stores, etc., are ringing bells for AT&T to the tune of $700 million annually. Since the service began in 1967, "800" customers have been increasing at a 20%-a-year clip and now number close to 40,000, accounting for 900 million calls a year. Charges are based on the geographic area covered. The most popular includes 48 states (all but Alaska and Hawaii) at a cost of $245 a month for 10 hours of calls, $1,675 a month for 240 hours. The "800" numbers are part of Bell's "Wide Area Telecommunications Service" (WATS), now worth about $2.2 billion a year to AT&T. The big "800" users are retailers, manufacturers such as the auto companies, transportation firms and data processors. Washington government agencies are buying numbers for taxpayer calls. For whistle-blowers with reports of fraud or waste, for example, the General Accounting Office, Congress' watchdog, has a toll-free hot line—800-424-5454.

The face is familiar

Ever since Eve persuaded Adam that apples would be good for him, the celebrity endorsement has been a surefire selling tool. Today, an estimated three of every five commercials on prime time TV use big names to deliver the pitch with, naturally, prices to match the star's rank. A onetime Hollywood agent, 31-year-old Ron Smith, has built a thriving business on the basis that since the familiarity of the face was the secret, why pay celebrity prices? For a fraction of the tab for the genuine article, Smith can muster a look-alike for anyone from Queen Elizabeth II to Laurel and Hardy. The idea for his company, Ron Smith's Celebrity Look-Alikes, came about when Smith used a Jimmy Carter-Gerald Ford look-alike contest as a promotion stunt for a 1976 Halloween stage show. Today he has 250 famous faces in his gallery, with backups for such in-demand stars as Burt Reynolds and Rosalynn Carter, and he boasts two Barbra Streisands, one for each coast. ("The one in the West sings, the other doesn't," he says.) Top price for a Smith carbon copy is for his Jimmy Carter, his two Streisands and his Farrah Fawcett-Majors. Besides commercials, Smith will provide a face for everything from a big-ticket movie (he supplied the Jimmy Carter for the thriller *Black Sunday*) to a store opening.

Tax holiday

Major tax legislation looks like a nonstarter for 1979. The trial balloons for a value-added tax—a sort of national sales tax—are not expected to get beyond the hot-air stage. Another push may come—and go—for the so-called "son-of-Sam" proposal, fostered by and named for Senator Sam Nunn (D–Ga.) and getting some Republican support. Nunn wants to tie federal tax cuts to reductions in spending and a balanced budget. He offered this last year as an alternative to the Kemp-Roth bill—named for Representative Jack F. Kemp (R–N.Y.) and Senator William V. Roth Jr. (R–Del.)—which called for a 33% slash in taxes over three years with no ties to lower spending. Neither son-of-Sam nor Kemp-Roth made it into the final 1978 tax legislation. The forces behind lowering taxes on capital gains, another hardy perennial, lost a powerful sponsor with the death of Representative William A. Steiger (R–Wis.), who championed the idea in the last Congress.

A director puts "Ford," "Kissinger" and "Fawcett-Majors" through their paces
It's not whom you see but whom you think you see that counts.

The SEC's new enforce

Expect Securities & Exchange Com sion Chairman Harold Williams to b lifting the 19-month freeze on expan listed stock options any week now additions had been made to the numb options listed for trading (219 buy an sell options) since mid-1977, pen completion of a special study of the tions market ordered by Williams. report is now on his desk. No new opt will be added, however, until Willian satisfied that the exchanges have ado the report's recommendations, a pro that could take six months.

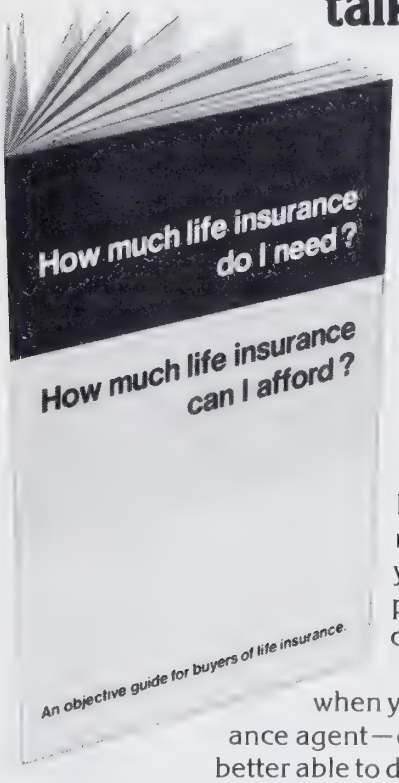
The new rules should cause brokers to smile. One recommenda for example, would require them to on each customer's statement mon gains and losses, commissions paid the account's value, market by ma (Commodities brokers got similar or some time ago.) The report and the of the moratorium, however, are onl starters. Williams has been accuse being soft on the industry and appare wants to dispel that impression. word is that he has marshaled a crack member troop of vigilantes headed Thomas Loughran, an ex-Marine scribed as a clone of Stanley Sporkin, SEC's feared and fearsome chief en er. Loughran, who worked on the tions report, is supposed to patrol only the options markets but all th curities exchanges and the National sociation of Securities Dealers.

A taxman's lament

Any red-blooded federal tax colle must cry a little when toting up the ures for the "tax expenditure" table the President's budget that Congress creed in 1974. The lawmakers defi "expenditures" as revenue losses att utable to provisions of the federal laws which allow "a special exclus exemption or deduction from gross come. . . ." If all itemized deducti were eliminated, the Treasury estima it would rake in an additional $41 bil in revenues, enough to eclipse Presi Carter's anticipated 1980 deficit of billion and match the Congressio Budget Committee's gloomier forecas $41 billion. Here are some of the b individuals are spared: Home owner ductions for mortgage interest during cal 1980 will cost Uncle Sam $9.3 bil in potential revenue; deductions property taxes, $6.6 billion; and for in est on consumer credit, almost $3 lion. Credits allowed on capital g "save" taxpayers $10.1 billion breaks on capital gains at death m

If you don't know how much life insurance you need and can afford...

read this booklet before you talk to any agent... even ours.



Most people would probably feel more comfortable if they knew approximately how much life insurance they really needed and about how much it would cost.

Because so few people know how to arrive at these figures, The Bankers Life of Des Moines has prepared an impartial booklet that will help you approach the problem in a logical fashion. Offered as a public service, the booklet doesn't quote prices or recommend policies—ours or anyone else's. But, since individual needs vary greatly, it does provide the guidelines that can help you determine the amount of protection your family requires and what proportion of your current income it will take to pay for it.

Read this booklet now so that when you're ready to talk to a life insurance agent—ours or anyone else's—you'll be better able to discuss your needs and, between the two of you, arrive at a wise decision.

The coupon brings you this booklet free by mail. Unless you ask, we promise no one will call now or later.

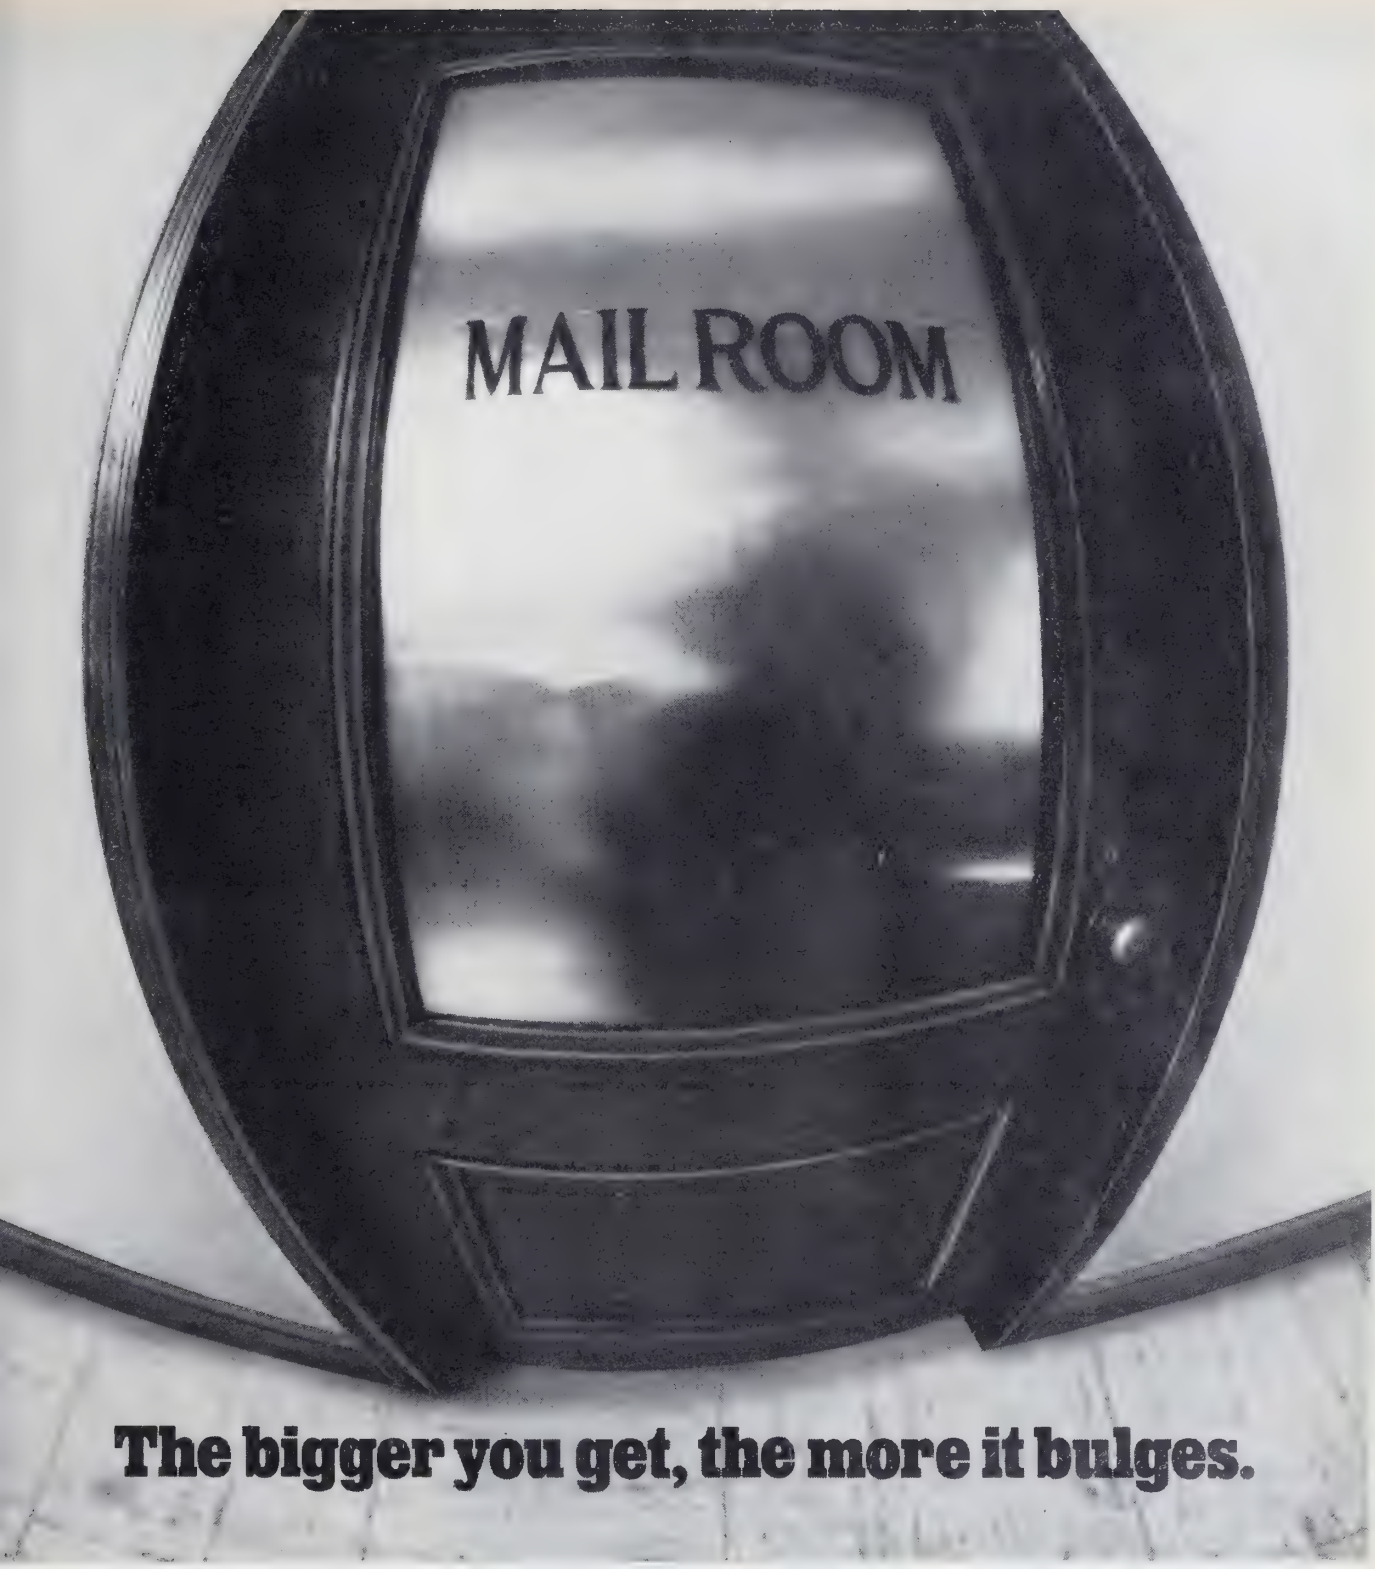
another $10 billion. Worker benef swell the total: Untaxed unemployme benefits will rule out $1.9 billion in 19 revenues; no taxes on pension contrib tions and earnings costs $12.9 billion employer plans and another $2.2 billi on those for self-employed and othe Investment credits will save corpo tions $15.4 billion in 1980 taxes, indiv uals more than $3 billion. The tables "Special Analysis G" of the budget t White House sent to Capitol Hill are none-too-subtle reminder that t moans of the taxpayers next April wou be deafening if the Congress decided close any more "loopholes."

Up in smoke

College women—but not their ma counterparts—appear almost immune the government's 15-year-old campai to curb cigarette smoking. The latest a nual national survey by UCLA and t American Council on Education sho that frequent smoking among freshm coeds has gone up "substantially" sin the first canvass in 1966. That ye 13.2% of first-year women consider themselves frequent smokers; the 19 figure is 17.1%. Male freshmen traced exactly opposite curve. Among mal the percentage of frequent smoke dropped from 19.4% in 1966 to 10.6 today. The survey, run by UCLA Profe sor Alexander W. Astin, covered 289,0 freshmen on 566 campuses. It helps e plain why cigarettes keep growing c spite 15 years of dire health warnings every pack, relegation of smokers backseat ghettos on airplanes, and oth restrictions. True, adult per capita co sumption dropped from 209 packs a ye to 200 and only a third of adults no smoke compared with 41% ten yea ago. Still, Americans puffed away 605.5 billion cigarettes last year, co pared with 510 billion or so in 1967.

Roses from the right

Many liberal allies may be lambasting h new budget, but Jimmy Carter is drawi bouquets from the other side of the p litical fence. The 1980 Carter budge according to Rudy Penner, tax expert f the conservative American Enterpri Institute, is "an eminently reasonab document." It tends to protect the poo he thinks, while asking middle-incon taxpayers to give up some benefits. Th American Enterprise man also agre with the President that there should l no tax cut in 1980, but he wants one 1981 to offset bigger tax bites as wa earners are forced into higher bracke by cost-of-living raises. ■



The bigger you get, the more it bulges.

It can come to this.

A company that's grown in every department but one. The mailroom. And that oversight can lead to log-jams, which can cost you money.

The truth is, the more efficient your mailroom, the quicker your bills go out and your cash receipts come in. A modern, mechanized mailroom can expedite your orders, invoices, all your correspondence and improve your cash flow.

At Pitney Bowes, we know how to help you get your mail moving faster and more efficiently than it's moving now. We have machines that copy, count, collate, fold, insert, meter-stamp, address and a whole lot more. All many times faster than you could do by hand.

So if your mailroom is becoming sluggish, Pitney Bowes can get it in shape in no time.

The zinc-lined dream

Dreams die hard in Ireland. Last year FORBES *(Apr. 3, 1978)* reported on the "phantom smelter" that the Irish hoped to build to exploit the huge zinc ore body discovered in the early 1970s not far from the Hill of Tara, where Saint Patrick delivered the word on Christianity to the pagan king who ruled from its 510-foot eminence. In 1978 a Gulf & Western subsidiary, New Jersey Zinc, was in the picture, though steadily sinking zinc prices were rapidly cooling its ardor. To thicken the stew, the Russians, of all people, were hinting that they might like to build a smelter for Ireland, too. FORBES' conclusion then was that the dreamed-of smelter "doesn't exist, probably won't for many years."

The zinc was real enough. Discovered by Canadian-backed Irish businessmen, the lode, near Navan in County Meath northwest of Dublin, was the biggest in Western Europe and the fifth largest in the world. The smelter was important because refined zinc metal would be worth at least twice as much as the raw ore. As 1978 wore on, however, the dream began to fade. The Russians' talk came to nothing, and the Irish suspect that the whole Moscow approach was nothing more than a feeler for possible sales of technology and not actual ownership in the project. New Jersey Zinc, presumably discouraged by the continuing erosion of zinc prices, halted the feasibility studies it had worked on with the Irish and shelved the smelter.

Saint Patrick on Tara's Hill
If one dream won't work, try another.

According to the Irish, the Americ promised to reexamine the proj sometime in the 1980s, but New Jer Zinc says now it has no plans fo future return to Ireland.

The Irish, meanwhile, have for ahead on their own. Dublin's devel ment promoters have found a new s for the smelter, across the island at Bal longford on the southern side of Shannon River estuary. If all goes w they hope to get the nod from local pl. ning authorities for permission to buil $200 million plant to turn 190,000 t of Navan's ore concentrate into 100,0 tons of zinc annually. In terms of job the overriding goal of the Irish Devel ment Authority—the Shannon refin project is expected to keep 650 Irish c struction workers busy for two and a h years building it. Once on stream, it counted on to create about 500 jobs operating personnel.

Still in the dream stage is the forei partner that the IDA seeks to assum majority interest in the new plant. D lin is prepared to pick up 20%, and t two companies now mining the Nav ore deposit have expressed interest picking up the rest. These are T Mines, associated with Canada's N anda Mines, and an Irish firm, Bula L Meanwhile, the first shipments of from the mine began to move to Weste Europe last year.

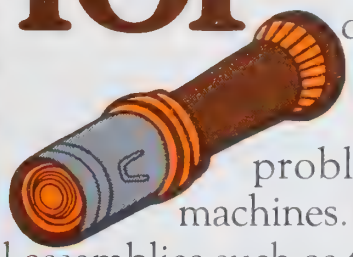
The focus has shifted far from Tar hill, but the Irish will still stand in ne of Saint Patrick's help. Perhaps they getting it—zinc prices have at last slow begun to rise again.

East is East

"I am not worried by *anything* I see Japan," Jonathan Mason, chairman the Japan Fund, told FORBES over a y ago *(Dec. 1, 1977)*. "As I look around t world, I see no place I would rather inv in than Japan." At that point, the close end fund had $155 million in assets, all it Japanese securities, and it had run u stunning record. An initial $10,000 sta in the fund in 1962, the year it w launched, was worth more th $100,000 at the end of 1977. Despi those rising-sun figures, however, the pan Fund was selling on the New Yo Stock Exchange at a stiff 27% discou Since then, the discount has gone as hi as 31%, as low as 15%, and stands cu rently at about 21%.

Mason bridles at those discounts. "C all logical bases," he says, "the Jap Fund over the last 12 to 18 mont should be selling at a premium." He is f from unhappy about his other numbe The fund's assets increased to $222 m

The machine that pays for itself



When you're in the business of assembling parts, you're in the business of holding costs down while keeping quality up. Which is a tricky business these days. Manufacturers have found the answer to the problem. Bodine in-line assembly machines. ■ Bodine modular machines have produced millions of small assemblies such as those shown here, products made in high volume to rigid specifications and yet at considerable savings. ■ With today's skyrocketing labor costs, both direct and indirect, managers hardly have to be persuaded of the wage-saving advantages of automated assembly systems. But they also must look hard at the possibility of long delays in changing over to new equipment, and they must worry about sacrificing quality control in their products. ■ Conversion even from a completely manual operation can be made swiftly and with a minimum of de-bugging time. ■ As for quality control, the simplicity of the Bodine drive system eliminates much of the need for monitoring and adjustment. Most of the motions of the system are timed and driven by the main drive shaft, and these include self-inspection features that keep constant tabs on output. ■ All of this adds up to higher production rates, fewer returns, and the elimination of costly major retooling for product changes. Which means savings added to savings. A Bodine assembly machine pays for itself. And then it starts to pay for itself all over again. ■ Write or phone Frank J. Riley, Vice President, The Bodine Corporation, 317 Mountain Grove Street, Bridgeport, Conn. 06605, (203) 334-3107.

Follow-Through

lion last year. Net asset value per sh $11.91 on Nov. 1, 1977, climbed to $1 by the end of 1978. Market price, 8¾ Nov. 1, 1977, stood at 11¾ a year l and hit 13 in January 1979.

Measured against another yardstic Japan's own securities market—Ma & Co. also look stronger than they d the discounters on New York's Board. During 1978 net asset value share went up by an impressive 58. after adjustment for the distributio capital gains. During that same per the Tokyo Stock Exchange index gai 23.5% while the yen rose 23.1% agai the dollar. And in the last decade asset value per share rose 632% wh the Tokyo exchange index was climb 242% and the yen went up 85%.

Those results help explain both M son's resentment—and his resignatio toward the fact that the Japan Fund c tinues to sell at a substantial disco below net asset value. "We here d regard it as a problem," he says, "beca most of our shareholders bought stock at a discount in the first place. mysterious Wall Street syndrome, in view, explains the discounts. "There simply something in U.S. securi firms' research departments," he thin "that doesn't respond to Japanese opp tunities. The amount of investm they've directed there over the last cade is minuscule. My contention is t they have failed their customers by paying more attention to Japan."

The anomalies are not confined to New York end of the line. A few ye ago the conventional wisdom was t Americans didn't invest in the Japan market because they thought it was risky, and that Japanese investors sta away from Wall Street because they c sidered U.S. securities too expensi Now the points of view seem to h reversed, at least partially. Mason gra that most Americans probably th that Japanese stock prices are too h (when they think of them at all). T Japanese, Mason says, are coming i the American market but they have g reason to be wary. "When Japanese vestors first got permission from th government to buy U.S. securities," points out, "the market promptly w down. When they made their next the dollar went into its skid."

Mason's own feelings about Japan main as bullish as ever. "We don't any fundamental changes in the lo term favorable conditions about the Ja nese economy which made us inv originally in Japan. There's no reason shift elsewhere; we examine it every months and keep coming up with same answers." ■

Now—the no-rent, no up-keep branch office from the Bell System.

You can do business in a distant city for only $16* a month.

hanks to the new miracle of Remote ll Forwarding—RCF—you can open "branch office" in a distant city where ere is potential business for your firm. ithout investing in office space, equip- ent or additional help.

our cost? Only $16* a month.

ow RCF works.

he Bell System will assign your firm local telephone number in the city here you want to develop new roots. nd to establish your identity in this y, your company will be listed in both e white and yellow-page directories. *no additional cost.*

our customer in the remote city sim- dials your local number, and the ll is automatically forwarded *directly you... with no waiting and without erator assistance.*

l you pay for your new "branch ice" is the low monthly service charge $16* plus the low direct dial rate for ch incoming call. Since your RCF mber is connected to your regular siness phone, *no telephone is needed the distant city.*

CF—fast, convenient, inexpensive.

CF establishes your identity in another city. Your customers and field representatives can call you locally and directly.

Though you're physically located in a distant city, to your customers you're only a local phone call away.

Now you can grow with your market.

RCF offers you the opportunity to explore new markets—practically without investment.

To begin, you may only want to start out with RCF service in a single market. Later, you may want to open additional markets. No problem. You simply add RCF as you need it.

As you'll find out from a Bell Account Executive, there are countless applications for RCF.

Find out from the Bell System how we can help your business grow.

Your business has special needs. This is why you should talk to a Bell Account Executive. We can tailor service to *your* specific needs.

*$16 is the typical monthly rate for your first RCF number, with slight rate variances in some locations. In addition, a nominal service connection charge usually applies. Each call forwarded is charged at low direct dial rates and is applied to your RCF bill. Your Bell Account Executive will advise you on the availability of RCF in the market area you choose.

There's no obligation of course. Call our toll-free number right now—while you're thinking about RCF.

Announcing Trans World Corporation. A new corporation holding three familiar companies.

Trans World Corporation is now the parent company of Trans World Airlines, Canteen Corporation and Hilton International Company.

This new corporate identity reflects the company's growing involvement in fields outside as well as within air transportation.

You may be surprised to know that over 50% of the total corporate profit is from non-airline sources.

Each of its three subsidiaries is large enough to be among the Fortune 500 on its own.

In fact, if the combination of the three companies were compared to the Fortune 500 list of industrial corporations, it would have ranked 71st.

Trans World Corporation has over $3½ billion in sales and a net worth of over half a billion dollars.

Total preliminary corporate profits in 1978 were $86 million and that's an improvement of more than 50% over 1977's restated results.

The new stock exchange symbol replacing TWA will be **TW.** It's a little shorter, but a lot broader.

TRANS WORLD CORPORATION

Introducing the Xerox 2600 copier.

If you copy a little, you'll like it a lot.

Now, just because your copying needs are small doesn't mean you have to be shortchanged when it comes to copiers.

The new Xerox 2600 copier is compact enough to fit on a table top. But although it's small, it doesn't act it.

It makes clear, crisp Xerox-quality copies on regular paper, colored stock, transparencies and even letterheads in seconds.

It can even copy from bulky bound volumes.

But best of all, it's the least expensive new Xerox copier you can get.

So now copying a little doesn't have to cost you a lot.

Tough on Energy Costs

It's not uncommon for an American building owner to save several thousand dollars annually in fuel savings. Our buildings are designed that way.

When compared to other kinds of construction, the American wall and roof system is up to five times more energy efficient. That means lower utility bills. Less wear and tear on heating and cooling equipment.

With our systems approach to construction, the local American builder can provide time and money savings for you. And our Standing Seam Roof System* is unique in both design and application. It can save you problems and money in the years ahead.

For good-looks, construction economy and energy-savings contact the American builder. He's in the Yellow Pages under "Buildings - Metal". Or American Buildings Company, Box 800-A, Eufaula, Ala. 36027, (205) 687-2032.

Inflationary gas

SIR: Pricing gas at $1 to $1.50 per gall *(Fact and Comment, Jan. 22)* would hav dramatic impact on the millions of pla Joes and Janes that drive to work. Th will do the same thing that you do wh costs rise. They will increase the price their goods and services and you w write editorials bemoaning inflation.
—Lester Stoller
Gahanna, Ohio

The complete computers.

Burroughs not only offers a choice of small computers, but also the application solutions, training and support essential for maximum performance.

Our family of small computers includes the B 80 (shown below), the B 800 and the B 1800. They are advanced computers that are easy to use. You don't have to be a computer expert to take advantage of their power.

We also offer application solutions for all major lines of business, each designed to handle your specific accounting and management information needs. So if you run a wholesale company or a bank, we can supply the complete software to fit your operation.

Training is another Burroughs plus. Our customer training centers throughout the world provide professional, comprehensive instruction in the operation and management of computers and applications.

Then there's Burroughs customer service. Some 30,000 Burroughs people in our sales and customer support organization provide you with expert installation and maintenance support.

And Burroughs small computers make growth easier. Application programs can be transferred from one size system to the next. From the smallest B 80 up to the largest B 1800. Without reprogramming. Without recompilation.

When you buy a Burroughs business system — you get more than just a computer. You get the bonus of dealing with a total capability company with over 90 years' experience. And the security of knowing the whole Burroughs organization is behind you.

We call it "Total System Support." Hardware, system software, application programs, customer training, system maintenance — even the business forms and supplies you need.

For additional information, call your local Burroughs office or write Burroughs Corporation, Department FRB-3, Burroughs Place, Detroit, Michigan 48232.

THE TASTE BEYOND PREMIUM SCOTCH

Fact and Comment

By Malcolm S. Forbes, Editor-in-Chief

RETURN TO THE SPOILS SYSTEM

hortly after President James Garfield was shot dead by a ppointed job seeker in 1881, the event triggered demand a reform of the spoils system, under which the winning tical party rewarded its workers in the precincts with ernment jobs largely held by losing incumbents.

o, new laws and a new bureaucracy were born. Civil Service. o, as always with legalized do-gooding, the remedy even- ly proves a worse evil than the affliction. Now, about the y way we'll cure that paralyzing Cure, Civil Service, will be a return to the spoils system. Then those holding government positions up and down the line will know for a fact that their job security depends on actually pleasing the public they're supposed to be serving. If they don't, their party will blow the election and they'll be blown back to working like taxpayers. They'll be held accountable, just like elected officials.

Is that such a bad idea?

And my tongue's not all that far in cheek.

NEGOTIATING INCREASED U.S. FARM EXPORTS

r easier urged than accomplished, as Robert Strauss and umerable predecessors at the effort can testify. We seem to e made some progress in getting promises about squeezing e orange juice and putting more meat on the plates of the nese, but in Europe and the Common Market it's a far e difficult sale.

every land, as much as in ours, there's a deep feeling that a ntry's farms and farmers must be preserved no matter what cost of food to the consumer. In France as well as in Britain; in a Germany that we starved out in WWI; in a Denmark proud of its dairy products and in The Netherlands rich in food produced. In every Land, those who till their land have a significance beyond their number and a clout beyond the reach of simple economics. To expect any country—no matter what the basis in logic, no matter what the economic pluses—to let its farming go is to ask for something that will never happen.

If Strauss or anyone else expects to change this, he's a Texan whistling Dixie.

CARTER'S BUDGET & STATE OF UNION ADDRESS

being hammered at from the Left and the Right. Which of confirms our feeling that both Budget and Message are ty much alright. By no means *all* right, and perhaps based rojections that will turn out to be too sanguine.

on't you get a kick out of those commentators and critics plaining that neither Budget nor Address "had any surpris- . . . as if they were Crackerjack boxes with no prizes? t a wonderful surprise to have no headlining gimmicks, no contrivances, no Tablet-like prose!

eally amusing are some of the pouting Republican reactors plaining that Carter has stolen their lines, is singing their . Thank goodness! we'd say.

ranted, Carter can't Publicspeak with the rhetorical flour- s of a stumping Kennedy spouting tired clichés about ng the Poor from ravaging by the savage Rich. While er can't orate, in both Budget and State of the Union sage he says much that's sound, much that reads sensibly. Senator Proxmire (D–Wis.), who's—sometimes—right on, made some pertinent suggestions as to where the budget could be further cut, which would be one way to allow increases in areas where pressure groups are likely to pound through more spending than the Administration recommends.

On the other hand, Teddy Kennedy's distortions about the budget-bloating Arms Barons, cruelly snatching alms from the palsied hands of withering widows, is pure political bull.

On balance, the President's Budget is as big a step toward balance as any president of either party could feasibly take to the eventual goal of a balanced budget. While there'll be some things upped and some things cut, the total—we should hope—won't eventually be much different.

Carter's Budget is more in touch with the prevailing sentiments of most people in this country than are his countless critics. And a majority of Congress, a majority of the time, will concur.

PUBLIC TV—MISNOMER OF THE TV AGE

Public TV provides the elitist stuff available on the tube. It probably appeals to the most educated, intellectual audiences in the country—all 2% of them.

The television that the public wants to see is exactly what they get on Nielsenized networks and the other privately owned TV stations. All stations but "public" ones get the most bucks by attracting the most viewers, and the most viewers constitute what's called the public.

Most of us, I'm sure, think it's great that there is a channel for the highly educated, a channel that often puts on programs appealing to tiny minorities who love to see the cultural best, the exotic ethnic show and the highbrow. It's nice to have it available to the public, although the audience is overwhelmingly elite, made up of the rich in money or the culturally rich (occasion some of them are one and the same). Many of these viewers c contribute to public TV station support, while the fed government generously provides most of the rest of the fu The Carnegie Commission, in a current report, recomm that $1 billion be made available to public television.

But "public" TV it ain't.

★ ★ ★

And speaking of ratings that determine what the pu watches—did you know that during the morning hours, w only 8% of the television sets are normally in use, a mere Nielsen-wired sets determine who and what gets time on air for the whole nation?!

ANTI KEMP-ROTH IS TURNING OUT

to be politically unKempt.

PUTTING THINGS IN PERSPECTIVE

In his book *Inside India Today*, Dilip Hiro quotes a laborer: "My wish in life is just to get enough to eat, nothing more."

The President's mother, Lillian Carter, sitting down to a hefty campaign breakfast, announced to the assembled spent two years in India, and I want to see every p cleaned."

WHOEVER THOUGHT WE'D BE SHORT OF THE STUFF

There are a number of shorter words for it, but manure is the one that nice people use (usually).

Now it turns out that chemicalless farms, relying on the by-product of horses and cows, can grow as much and as well as those using more expensive chemical fertilizers.

There's only one problem—there isn't enough of the natural er . . . uh . . . stuff to meet the need.

Further evidence of the mounting manure mania was provided in New York by the Ringling Brothers and Barnum & Bailey Circus when it offered ten-pound plastic bags of "Pachyderm Poop" to any in the audience who might w it for their gardens. Said a circus spokesman, "You wo think it was a precious commodity the way people gath round for it. No matter how fast we shoveled, we wer fast enough."

Actually, that's the reason that old-fashioned manure is threat to the chemical fertilizer makers—there just i enough to go around. Gee, what an opening for unemploye and moonlighting—journalists. After all, most people th shoveling it is our business.

IT'S ALL IN ONE'S VIEWPOINT

Each year FORBES sponsors an invitational International Ballooning Meet to further the support and growth of the International Ballooning Museum at its Chateau de Balleroy in Normandy, France. Someone recently sent me some pictures taken just after our completion of a flight during last June's gathering, and I couldn't help chuckling over the contrasting expressions in the two pictures shown here.

The four-legged critter looks as though he's about to vent his ire at what he'd probably describe as "bull-ooning." Thank goodness our balloon was gold and blue and not red, or we might have taken another quick trip—on the end of a horn.

In keeping with the aeronaut tradition, the presentation of a bottle of champagne to the wife, kids and friends of the farmer on whose land we dropped was greeted with a bit more enthusiasm.

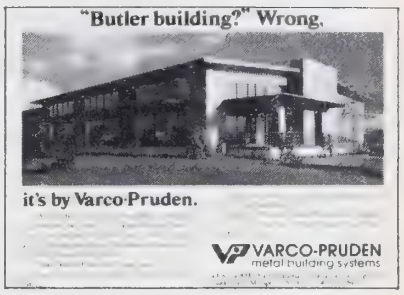
As they say, reactions always depend on whose ox is gored.

PROOF POSITIVE

that featuring the competition in advertising—in this instance, in the headline yet!—is usually the antithesis of wise.

At the left there's a sample of the long-running Butler campaign that's made its mark on those in the marketplace for buildings.

And, judging from the ad on the right, the Butler campaign has made its mark on the competition. I'd be willing to bet that Butler gets more benefit from being the headlined message by the competition than from its own advertisements.



THREE OBSERVATIONS

nce the publication of *The Sayings of Chairman Malcolm* mber of people have sent in their own sayings and those thers. Among them, this selection from Dick Wilson, ier chairman of Avco, taken from his *Dartmouth Class thly News:*

- The chance of bread falling buttered side down is directly proportional to the cost of the carpet.
- When in doubt, mumble.
- A man with one watch knows what time it is. A man with two watches is never sure.

FOR THE ULTIMATE

ANYONE CAN HAVE KIDS

but it takes someone—preferably two—to raise 'em properly.

IF YOU HAVE ANY MONEY LEFT

By M.S. Forbes Jr.

now is the time to put it into the stock market, according to several reiable indicators.

Book value. For the fourth time since World War II, stocks are selling below their net worth. In each previous instance, a powerful bull market followed. In late 1974, the last time stocks could be bought below book value, the market subsequently zoomed more than 75%, as measured by the Dow Jones industrial average.

The January barometer. The *Stock Trader's Almanac* shows that, in 25 of the past 28 years, what the stock market did in January ended up being the trend of the market for the year. If Standard & Poor's composite index was up in January, it was up for the year. And vice versa. The index finished January positively.

Third-year indicator. Granger & Co.'s investment strategist Bill LeFevre has found that, since 1939, the third year of a presidential term has been good for stocks. In the third year of Ike's second term, for example, the Dow had a 15% gain. The third year of Nixon's second term (which he never completed) saw the Dow going up 38%. President Carter, of course, is now in the third year of his first term.

Finally, we have the *Super Bowl predictor*. When an original National Football League team won the Super Bowl, the Standard & Poor's 500 was up for the year. When an old American Football League team triumphed, the market was a downer. The only exception in 12 years was 1970 when an AFL team was victorious. Instead of declining, the market finished the year up a mighty one-tenth of 1%. This year's Super Bowl was a no-lose situation: Both Pittsburgh and Dallas are original NFL teams.

Convinced of better times for the stock market? A caveat: No indicator or group of indicators is infallible. Also keep in mind when reading advice what this "expert's" grandfather liked to say: "We make more money selling advice than following it."

BIG YIELD FROM BIG APPLE

One investment that is virtually risk free (as well as tax free) is those New York City notes that were recently sold to the public.

The notes have a life of only five months and are backed by state-aid payments that will be placed under the supervision of the State Comptroller, not the city. Moreover, the federal government's four-year bailout program makes it extremely unlikely that the Big Apple will go financially sour in the next few months.

Nonetheless, New York paid a stiff rate of interest, 8% tax free, to attract buyers. Because of the sale's success, city officials may decide to hasten Gotham's return to the bond market, now scheduled to begin next year.

But don't be fooled. Short-term paper is one thing, bonds quite another.

New York is a long way from financial solvency. The projected budget gap for the next fiscal year is over $400 million and will increase to more than $1 billion by fiscal 1982. Moreover, those numbers assume that city workers will win no raises in 1980's labor negotiations. If they gain, say, a 4% increase, New York will be in the hole over another $150 million.

The real test will come when the federal government's loan guarantees end in June 1982. The law requires New York to have a truly balanced budget by then, and achieving that goal will be a monumental task, especially as federal programs that aid cities are being cut back.

Under these circumstances, only speculators would buy New York paper that matured beyond 1982.

Other Comments

Often comments by others stimulate, irritate, abuse or amuse this editor's mind.—MSF

British Politicians Lost

Lady Diana Cooper finds British politicians less inspiring than their counterparts in France or the U.S. Too many "new blood" politicians lack the sense of tradition and principle of men like Sir Winston, Harold MacMillan (another old friend) and her husband, Duff. "Politicians here nowadays tend to react, often to the wrong things, without measuring their actions [says she]. They have little sense of history and they can be rash. They're really lost and they're dragging us right along with them."

—Patrick McCarthy, *W*

Clap Ye Not

People applaud the weirdest things. A young man stood up and asked, "How old are you?" and I responded, "I'm 51." I nearly got a standing ovation.

Since when did 51 become a vintage year, for crying out loud? Where were they when I reached 40 and needed them!

—Erma Bombeck,
The Atlanta Constitution

Cycle-Noise Overkill

The [proposed New York] law [would have permitted] local jurisdictions to ban motorcycles from the streets between the hours of 9 p.m. and 8 a.m. in order to deliver householders from the detested music of open exhaust pipes.

This struck us as blatant legislative overkill. . . .

Today, punitive action against malefactors is a no-no; instead, social ends are achieved by restrictive ordinances on entire classes of innocent citizens.

Deploying the entire state legislature to control all motorcyclists to deal with a handful of hoodlums is by no means unusual. It appears that those people who want us to stop being punitive and to use impossibly complicated due process are the same people who advocate increased state power over all of us.

—*Wall Street Journal* editorial

Cancer vs. Aging

Only about 5-10% of cancers appear to be job-related, not the much-cited larger percentages approaching 80-90%. The public should not be misled into believing that if the environment is purified, cancer will vanish. The eradication of cancer would add only one to two years to human life expectancy as compared with about ten years for all forms of arteriosclerosis. The potential gain in life expectancy if the rate of aging could be slowed has not even received serious consideration. For every $2 we spend on cancer research, only about 3 cents funds research on aging.

PRESENTING JAGUAR FOR 1979.

THE LATEST AND THE BEST IN A LONG AND ARISTOCRATIC LINE.

e 1979 Jaguars are the finest expression to e of our uncommon and uncompromis- approach to building great luxury cars. The luxury is deep and so well thought-out t the Jaguars come to you complete: there no factory options whatever. Real leath- seats, thermostatically-controlled heating d cooling, stereo AM/FM radio and tape tem: it's all there, adding to the notable ue inherent in all Jaguar cars.

But, as ever, the finest expression of any uar motorcar is the way it moves.

The 1979 Jaguars have the incredible re- nse of electronic fuel injection teamed h either the double overhead-cam Six in the XJ6 sedan, or the aluminum V-12 in the XJ12 sedan and the S-type. And Jaguars have the surefootedness of four-wheel independent suspension and power disc brakes on all four wheels. They have power-assisted rack and pinion steering and an overall feel for the road that is rare, indeed, in luxury cars.

Another uncommon feature of the 1979 Jaguar is its warranty: for 12 months, regardless of mileage, your Jaguar dealer will replace or repair any part of the car that is defective or that simply wears out, provided only that the car is properly maintained. The only exceptions are the tires, which are warranted by the tire manufacturer, and the spark plugs and filters, which are routine replacement items. Even then, if the plugs or filters are defective, Jaguar will replace them.

There has never been a better time for you to own a Jaguar, for the simple reason that there has never been a better Jaguar than our 1979 edition.

For the name of the Jaguar dealer nearest you, call these numbers toll-free: (800) 447-4700, or, in Illinois, (800) 322-4400.

British Leyland Motors Inc., Leonia, NJ 07605

JAGUAR

Between them—literally—Brazil and Paraguay are building the largest hydroelectric power plant in the world. Worldwide Citibank helps.

On the Paraná River, between Brazil and Paraguay, the two countries are jointly creating, at Itaipu, a giant generating station —whose 12.6-million-kw. capacity will exceed by 30% that of its largest predecessor, the U.S.'s Grand Coulee Dam.

To make it possible, the river itself is being diverted into the parallel channel, 2,000 meters long, 150 meters wide and 90 meters deep, that appears at left in the photograph. Via this mammoth, man-made waterway, which has taken almost three years to carve through solid rock, the Paraná will bypass its natural course until the massive Itaipu Dam, with its battery of 700,000-kw. turbines, has been completed across the original riverbed.

"Citibankers have recognized a special responsibility"

In financing this almost $9-billion project, Citibank, through Citicorp International Group, is to date one of the most important private-sector providers of funds.

Says Citibank Vice President Ivo Tonin: "From the outset, Citibankers have recognized a special respon-

Citibank, N.A. Member FDIC

Right and left: General José Costa Cavalcanti and Sr. Enzo Debernardi of Itaipu Binacional. Center: Citibanker Ivo Tonin.

sibility—not simply to supply Citibank funds, but to stimulate and arrange participation by other financing sources, in other countries, in this major international undertaking."

Citibank's worldwide commitment

General José Costa Cavalcanti, of Brazil, Managing Director of Itaipu Binacional, and Adjunct Managing Director Engineer Enzo Debernardi, of Paraguay, have expressed appreciation for the combination of Citibank financing capability and the specialized skills Citibankers are contributing to the project.

That contribution can be measured in terms of production—the 75-billion kilowatt-hours of energy this new plant will be capable of producing each year.

It can be measured even more meaningfully in terms of *progress*—the economic and industrial progress Citibankers work innovatively to foster. In Brazil, in Paraguay—and around the globe, through the worldwide offices and facilities of this leading international bank.

nderachieving Zapata Corp.'s boss faces a areholder challenge, but by a lucky maneu- r he averted a greater threat to his tenure.

Saved by the bell

By James Flanigan

WHAT LUCK for Chairman William H. Flynn of Zapata Corp.! The afternoon before an irate holder 00,000 Zapata shares files a formal l demand for the company's share- ler list to solicit support for replacing nagement, a holder of 600,000-odd es—not at all irate but potentially e dangerous to Flynn's job security— nes and offers to sell his block to ata at two dollars above market. n and Zapata's five other directors pt, and the private transaction is summated in the five-business-day od when a company is legally enti- to stall off the seeker of a sharehold- st. Zapata management thus averts a ible combination of hostile forces.

nat's how it happened according to n, the gaunt 52-year-old boss of Za- , the underachieving offshore drilling glomerate. The 600,000-share man Crane Co. Chairman Thomas Mel- Evans, a shrewd maker and threaten- acquisitions. Evans had bought over 000 Zapata shares a year earlier, hop- to attract a takeover candidate to ata, a company with almost $1 bil- in assets that has earned less than million in the last two fiscal years bined. That's a return on those as- of one-half of 1%. Zapata bought ns' remaining stock—he had sold 000 shares last August on the open ket—for $15 a share, a breakeven e for Evans counting his dividends, a premium of $1.13 to $2 over the

Zapata Chairman William Flynn
But where is his shareholders' luck?

market price on the day of purchase.

The irate shareholder is Houston millionaire John F. Maher, former president of Reed Roller Bit Co. (now part of Baker International) and involved with Zapata since its acquisition of a dredging company in 1973. Maher, 70, has been buying Zapata stock for years, sensing an opportunity of sorts in the woeful record of a company that has gone from earnings of $30.3 million, or $2.89 a share, in 1975 (on $351 million revenues) to a mere $5.6 million, or 59 cents a share, last year on $521 million revenues.

Flynn attributes those poor earnings, disarmingly, to his own wrong decisions. Back in 1973, after Zapata had sold its international shipping fleet and got its debt and equity in equilibrium, Flynn committed the company to a $650 million capital expansion program, all of it based on his anticipation of U.S. responses to the energy crisis.

Flynn, a 1947 Annapolis graduate, predicted that the U.S. would accelerate exploration of its continental shelf, and so ordered four semisubmersible drilling rigs at $38 million each, specifically designed for East Coast waters. The U.S. didn't comply with his vision and the semisubmersibles are now working, at a loss, in the calmer waters of the Gulf of Mexico. He ordered eight powerful offshore service vessels for the Atlantic, but work there was insufficient, so three of them are working in the Caribbean and Latin America. He ordered a U.S. flag, 380,000-ton oil tanker in the belief that Congress would pass a tanker protection act. It didn't. Last year Flynn canceled construction and Zapata took a $10 million aftertax loss.

Zapata's debt ballooned to $652 million by the end of 1977, falling back to $515 million at the end of fiscal 1978 after the tanker cancellation. That's still more than double the company's equity of $248 million. Interest cost of $46 million last year ate up good earnings from fishing and from Zapata's one-third interest in a North Sea pipe-laying barge which brought in $16 million net. The barge was not Flynn's idea but Exxon's, which allowed Zapata to buy into and operate the vessel. Its job completed, the barge has been sold.

For such a record the chief executive of many another company would be contemplating a golf course somewhere while the board sent out for a successor. But not at Zapata, where the six-man board obligingly pays Flynn $325,000 a year (double the top salary at SEDCO Inc., reputed to be the best-managed drilling contractor). The board, whose members are elected two at a time to three-year terms, also approved back in 1974 a unique method of retaining the services of present management: interest-free loans. The loans, including $575,000 to Flynn, total $1.3 million and went to six top officers who had to pay capital gains taxes after exercising their

stock options. The board originally tried to lend both the cost of the options and the tax coverage, but the Federal Reserve would not allow that. The officers, whom Flynn calls "exceedingly competent, hard-nosed, hands-on management," remain with the company.

Elsewhere in Houston and the Gulf Coast oil business, Zapata's reputation as an operator is very poor. That doesn't seem to faze Flynn, whose office is a gabled aerie atop Houston's landmark Pennzoil Place building. Stockholder Maher, who has now brought suit, presents a challenge, but Flynn defused the greater danger when he bought Thomas Evan's stock. Of course, it was truly lucky that Evans called Flynn because, under law, Flynn could not have called Evans to solicit the sale of the shares. How happy for Flynn that Evans called him "on the afternoon of Tuesday, January 16th, the day before Maher came with his request for the shareholde list," says Flynn in his slow-speaki precise way.

"I was in San Diego," says Flynn, "I I knew what he was calling about, kn intuitively what he was calling abou talked to him Wednesday morning a agreed to buy the shares at $15." Za ta's 11,000-odd common shareholde have not been so lucky. ■

Cancer-causing substances have acquired a satanic quality among regulators. But the courts and Congress may save us from . . .

Diseased regulation

EVERY SCHOOLCHILD can come up with a list of common, household products that cause cancer: the saccharin in a soft drink, the nitrites in a hot dog, the asbestos in insulation, the red dye in a maraschino cherry and of course the tar in a cigarette. The Occupational Safety and Health Administration has in hand a list of more than 1,500 potential cancer-causing substances. Unfortunately, it now appears that, under the "right" circumstances, any substance that can excite a cell physically can start cancerous growth. Or, as a new bumper sticker puts it: "Life Causes Cancer."

That piece of folk wisdom comes a lot closer to the enormity of the problem than OSHA's attempt to classify as carcinogens substances that have caused tumors (even nonmalignant ones) in two animal tests and to require that exposure to them at workplaces be reduced to the "lowest feasible levels"—at any cost.

Consider what that would mean for just one of these substances—benzene. Richard Wilson, acting director of the Energy and Environmental Policy Center at Harvard University, figures that complying with OSHA's benzene regulations would cost $150 million a year, and that, he says, would save just one half of a hypothetical life. Even that saving is not guaranteed, because in making the control equipment, he estimates, one life would be lost for every $75 million worth produced—thus risking two lives to save one half life.

Comparisons like these, if nothing else, show the quixotic nature of OSHA's anticarcinogen campaign. When President Carter launched his anti-inflation program last year, he told regulatory agencies to prepare studies of the relationship between the money spent on regulation and the potential benefits.

But OSHA head Eula Bingham insists the law she is required to enforce says nothing about considering costs and benefits, so she won't do it: "I have the law to uphold. That is my mandate." When an appeals court threw out OSHA's proposed standards on benzene exposure because they didn't balance costs and benefits, she appealed to the Supreme Court. If she should win, the Administration will probably try to amend the laws.

A study commissioned by the trade-supported American Industrial Health Council estimates that compliance with OSHA's generic cancer policy would cost up to $88 billion. And, says Dr. Elizabeth Whelan, executive director of the independent, nonprofit American Council on Science and Health, occupational chemicals are suspected in only 1% of cancer deaths in developed countries.

Any equation that includes dollars and human lives tends to sound callous. "But we live in a world full of risks," says Ron Lang, director of the American Industrial Health Council. "By dropping the sp limit to 55, we are saving thousands lives. If we dropped the speed limit to we would save even more lives." Bu that reasonable?

That's what industry is asking OSHA—to be reasonable. The Cour on Wage and Price Stability has as OSHA to adopt a policy like the Envir mental Protection Agency's approach toxic substances—that regulators t into account costs of compliance a social benefits in setting standards.

But the Food and Drug Administrat can't change its cancer rules. Under Delaney amendment, the FDA must b food additives that cause cancer in a animal in any dosage—even though study has ever implicated food additi in a single case of human cancer. Whelan calls the Delaney clause a "re lator's dream—no weighing of cost a benefit, no scientific inquiries ab what the animal study means and how interpret it—just regulatory action."

One of the biggest problems in try to keep us free of carcinogens is unreliability of animal tests. Eggs a lactose, which produce tumors in a mals, don't seem to affect people. A nic and benzene are human carcinoge but don't seem to cause cancer in a mals. Worse yet, to speed up exp ments, huge doses of substances are u on animals, which can distort results

Says Dr. Michael Halberstam, edito *Modern Medicine Monthly*: "Many peo view cancer the way they viewed sex the old Broadway melodramas: As s as a woman had her first sexual exp ence, she was pregnant. One whiff c carcinogen and you have cancer. T risk comes with repeated exposure."

No matter what single-minded regu tors like OSHA's Bingham may thi risk can't be eliminated from life. T idea of balancing risks may offend so regulators and lawmakers. Senat Charles Percy (R–Ill.) and Abraham Ri coff (D–Conn.) plan to introduce a requiring an economic impact statem before any regulation goes into eff "How do we value in dollars," they a "preventing asbestos from slowly kill workers in our shipyards?"

With great care, we hope. How c can regulation be made rational? ■

tching the old-line brokerage houses asleep, icago's ContiCommodity has bitten off a g chunk of the commodity trading business.

"We snuck up on 'em"

By Bob Tamarkin

COMMODITIES BROKER Andrew Good recently roused himself out of bed at 2 a.m. Bleary-eyed but cleared, he placed a call to London to e coffee for a customer. "You have to out that extra effort. That's how petitive the business has become," es Good, 26, a salesman in the Los eles office of ContiCommodity Ser-, Inc. This competitive attitude has ed make Conti the fastest-growing modity broker in the industry.

unded in 1970 as a subsidiary of York's huge, privately owned Con-ntal Grain Co., ContiCommodity idden the bull market in commodity ng to near the top, breathing down neck of the leader, Merrill Lynch, ce, Fenner & Smith. Last Year, Con-evenues amounted to $52 million, e Merrill Lynch's climbed to an esti-ed $65 million. Conti's growth, how-seems all the more impressive con-ing that nine years ago, when Conti just born, Merrill Lynch's commod-evenues were already about $40 mil-"I think we snuck up on the major es," says Neil Aslin, Conti's 40-old senior vice president of market-Walter Goldschmidt, Conti's presi-puts it another way: "Our timing very good, securities firms were cut-back in 1970."

stead of catering exclusively to the mercial interests as do most of the ine commodities-only houses, Conti ded to compete with stockbrokers ne commodity trades of the dentist es Moines as well. "From the begin-we were going after the specula-" says the soft-spoken, silver-haired lschmidt, who began as a runner for cinental on the Chicago Board of e in 1939. Conti immediately set up ot line" linking the exchange trading s and its research centers (New , Chicago and Memphis) to its ch offices. It was the industry's first hot line, whereby a broker phoned every order—regardless of size—directly to the floor of an exchange. (The large brokerage houses *wire* their orders unless the position taken is an unusually large one.) Conti also began pitching the public through an intense institutional campaign of full-page ads in the *Wall Street Journal* on the risks ("Why most commodity traders lose money") and rewards ("Should you speculate in commodities?") in trading commodities.

Conti provided the usual educational seminars around the country and encouraged its brokers to become expert in one commodity rather than to spread themselves too thin. And always to promote that expertise. One zealous broker in its Chicago office solicits customers through an introductory letter coupled with a detailed resume of his experience, education, family status, military background. It all builds up credibility. And through its in-house "Yacht Club," management gives a week-long expenses-paid trip to its top producers—not on the basis of how much they made over the year in commissions, but on how much they made for their customers.

From its Chicago office and a dozen salesmen in 1970, ContiCommodity has spread to 30 branches in five countries, employing 250 salesmen. Merrill Lynch has some 300 branches, but only 300 of its 1,000 brokers sell commodities exclusively, according to Jerome Spielman, vice president of commodities marketing at Merrill Lynch. Commodity revenues account for less than 10% of the firm's overall volume.

Conti's success reflects the boom in commodity trading spurred by concern over inflation and the growing use among commercial interests of commodities as a monetary hedge against the dollar's decline. In 1978 commodity trades on the nation's 11 futures exchanges totaled a record 58.5 million contracts valued at $1.5 trillion, three times greater than the number of contracts traded in 1973. Trading in financial futures—GNMA mortgage-backed certificates, Treasury bills, Treasury bonds, commercial paper—had the fastest start in securities history in the past two years, while volume in all futures contracts rose 30%. A seat on the Chicago Mercantile Exchange, which trades everything from pork bellies to Japanese yen, changed hands in mid-January at a record $285,000 compared with the Jan. 18 sale of a New York Stock Exchange seat at $100,000.

Wall Street, too, has done its share to fire up the commodities markets. Brokerage houses began pushing commodities in 1974 to offset then sharply declining stock market commissions. At Shearson, Hayden Stone, Inc., for example, commodities account for nearly 20% of the firm's revenues. For its fiscal year

ContiCommodity's Neil Aslin (left) and Walter Goldschmidt
Going after the dentist in Des Moines with an intelligent pitch.

ended June 30, Shearson's commodity revenues totaled $44.3 million, a 325% increase from the $9.8 million commodity volume in 1973. Others doing sizable commodities business include E.F. Hutton (an estimated $35 million) and Dean Witter Reynolds ($25 million to $30 million). And there are the newcomers: Blyth Eastman Dillon is set to do business after hiring three commodity specialists away from Loeb Rhoades Hornblower to head up its newly formed department. Even investment banker Goldman, Sachs & Co. is about to jump on the bandwagon. It intends to offer commodity trading—mainly in financial instruments and precious metals—to its customers. Goldman recently hired Daniel Amstutz, 47, away from the presidency of Cargill Investor Services, subsidiary of giant grain merchant Cargill, Inc., to set up Goldman's commodity division. The lure: a general partnership rarely offered to an outsider.

It all adds up to a competitive scramble for customers and salesmen who understand something about commodities. For fast-growing firms like Conti, which prefers its new salesmen to have three to five years' experience, pirating talent has become a way of life. For instance, nine of the ten brokers in its Los Angeles office came from other brokerage houses. The pickings over the years have been especially good at Merrill Lynch. Says Spielman: "We were the target with the most talent." Talent, he admits, that was underpaid compared with the other commodity houses. But, he adds, "Two years ago we did what was necessary to reassert our position." Merrill Lynch paid a bigger salary plus commission to its salesmen. (Commissions, once standard, are now unfixed in the industry. A commodities broker generally gets anywhere from 25% to 40% of each commission.) Merrill Lynch expects to add some 100 new commodities brokers to its force this year.

With all of this momentum, Conti is not yet a big moneymaker, according to Goldschmidt. "We make a *little* money," he says. The reason, of course, is that most of Conti's earnings have been plowed back into the company for new offices, research, promotion, training and an in-house computer that provides instant customer account information. It eats up most of the profits. But once it stops its superrapid growth, ContiCommodity promises to make Michel Fribourg, Continental Grain's sole owner, even richer than he already is.

Like Merrill Lynch and E.F. Hutton, Conti is trying to lure new speculators with risk-spreading propositions like computer-managed commodities portfolios. But it is the commercial area rather than the speculative where Conti's future lies.

Today a three-year-old subsidiary, ContiCurrency, counsels more than 50 clients, including Abbott Laboratories, Richardson-Merrell, Sunbeam and Allis-Chalmers. And ContiFinancial counsels some 300 clients on currency hedging and speculation and on the relatively new interest-rate futures. "The open interest in Ginnie Mae contracts is bigger than silver, soybeans and corn," says Richard Sandor, ContiFinancial's boss. "The results in the last three years were goals expected in ten years."

For a broker, ContiCommodity is unusually frank in making public the results achieved by its customers. Vice President Aslin says its customers have n $220 million and lost $155 million the past five years, for a net gain of million. This sounds good in a busi where the odds are stacked against ordinary speculator, but "between and 75% of Conti's customers d make money," Aslin concedes. Of ti's 7,000 accounts, about 60% are sp lators and 40% commercial hedgers little less than half of our brokers made money for their accounts," A says—another way of saying that n than half the brokers *lost* money for customers. Refreshing frankness, tha

Booze in the gas tank? Some key congressme think it's the only way to meet the impendi oil crisis of the late 1980s.

Pay now? Or pay later?

TO HEAR SOME people tell it, the answer to all the world's energy problems is gasohol, conventionally refined gasoline spiked with at least 10% alcohol, either ethanol or methanol. Gasoholics say gasohol will save us when world oil production peaks out in the late 1980s. It will eradicate urban sewage and allow taxpayers to stop paying farmers *not* to grow food. It will lower pollution and ease the slow-death "greenhouse effect" occurring on the planet. Our cars will have more zip, automakers will be able to meet government mileage standards and Americans will be able to drive big cars again.

Sounds wonderful, but for a single problem: Gasohol is not yet economic—and may never be. Ethanol costs three times more than gasoline; methanol, though competitively priced, cannot be used in today's cars without engine modification. But the drawbacks have not prevented a boom in gasohol.

In farm states like Iowa and Nebraska, which have lowered their state taxes on gasohol, it already sells at a price competitive with unleaded premium. It's popular throughout the Midwest: The few stations that sell it in Illinois often have long lines; in Iowa, the 200-plus stations that carry gasohol, all of t independents or farm cooperatives, 2.6 million gallons in December, up f nothing last year. In all, about 500 vice stations sell gasohol nationw with growth limited by scarce supply

There is considerable foreign inte in gasohol, too. Brazil has embarked the world's most ambitious progr striving to have all its cars running 20% gasohol blend by 1985. The cou makes ethanol from its large sugar c crop. To help implement the progran has the help of Volkswagen, whic making special cars for Brazilian New Zealand is also interested; it h to turn its glut of natural gas into alc for use in gasohol.

Gasohol is very popular on Cap Hill: A rare alliance of farmers, tim interests, environmentalists, minori and people worried about the U.S. t balance and the dollar has won the s port of such influential senators as Ba Javits, Church, Dole, McGovern and cy. The American Automobile Ass ation likes it too.

The support is wide because alc can be made from just about anyth grain, grain by-products like corn hu contaminated grains, sugar cane, po

ings, cheese whey, wood and wood roducts, garbage, sewage and coal, as as synthetically from the petroleum ion ethylene. Gulf Oil is working on y to make ethanol from cellulose, a c chemical building block of all plant Each group hopes gasohol will be a market for its product: Some 14 on pounds of cheese whey, for exam- sit in Wisconsin storage bins.

ne most influential faction is the lobby, which propagandized for gas- last year when farmers brought tractors to Washington. The result: energy bill includes a 4-cent-a-gallon waiver for gasohol at the pump—ch, assuming a 10% alcohol content, ciplies out to an effective 40-cent-a-n subsidy to alcohol manufacturers.

ohol will soon sell in most parts of country at the same as unleaded premi- gasoline, giving com- ble efficiency.

help things along, Department of Agri- ure is awarding $15 on loan guarantees new alcohol distill- . Senator Church has oduced legislation that ld mandate a gradual chover to gasohol by .

ith burgeoning de- d in the Midwest and ressional backing, aren't companies ing to build new alco- lants?

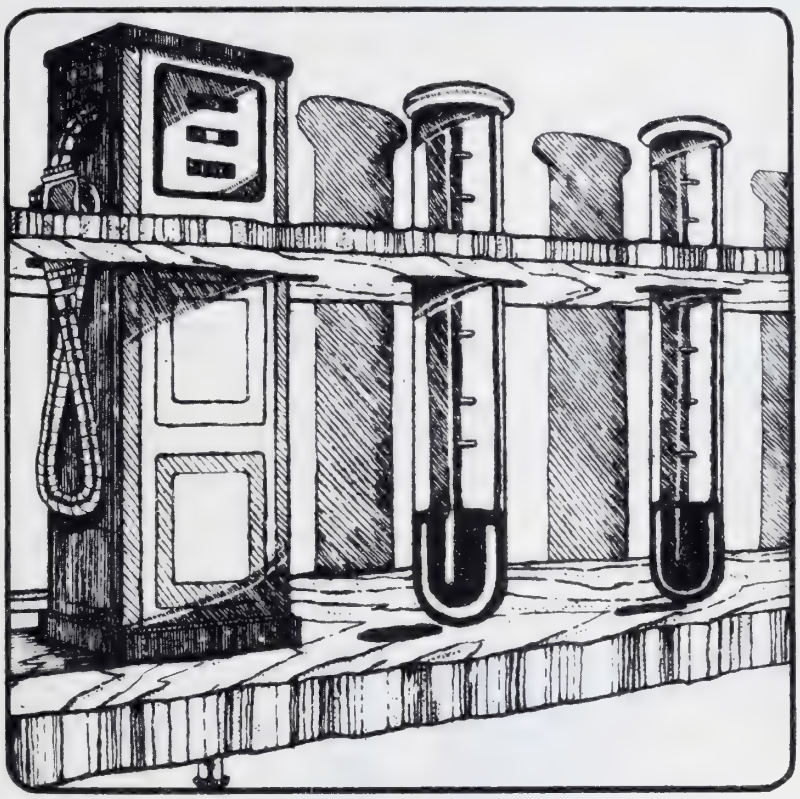
ne hard-line gasoho- contend that it's a h-22 situation: The ket is small because ly of gasohol is limit- he supply is limited use the market is l. And once investors the first risk, so their ning goes, the snow- ng effect will begin.

sinessmen are wary because with- government subsidies, alcohol isn't -competitive with gasoline, which ently sells for about 40 cents a gallon ne refinery. Before committing the million the Cincinnati consultant neering firm of Raphael Katzen As- tes estimates it would cost for a 50-million-gallon-a-year ethanol , they want to be sure that the mar- won't collapse under them if the sub- s are withdrawn (the tax waiver in nergy bill expires in 1984).

nother concern is that raw materials become too costly. Grain prices are riously volatile, and without a pric- nechanism future gasohol prices are edictable. A major gasohol program t well drive up farm prices—good ne farmer, bad for everyone else.

Finally, a filling station must have separate tanks for gasohol, which would mean that a whole new distribution network would have to be built at great expense. This doesn't sit well with the oil industry, which has battled hard against gasohol. Automakers, too, have withheld their support. "We want to be sure this grass roots gasohol movement isn't just a flash in the pan," says Dr. Wayne Brehob, chief engineer at Ford's fuel economy division. The automakers are concerned because gasohol with more than 15% ethanol requires major auto modification; they could become enthusiastic quickly, however, if the Department of Transportation allows them to meet their mileage standards based on gasoline content only.

Although most existing suppliers to gasohol markets—among them, Georgia-Pacific and Archer Daniels Midland—are making a profit off their businesses, they say gasohol figures only partly in their decision to make ethanol; they also rely on the proven markets in cosmetics, aerosols and food additives. One supplier, $7 million privately owned Milbrew, Inc., got into the business as a way of disposing of cheese whey, which it has been storing in bins because the Environmental Protection Agency won't let it be dumped anywhere. Both Milbrew and ADM say they are expanding their capacity—but cautiously. "If we knew for sure what was coming down the road, we'd expand more quickly," says Richard Burket, vice president at ADM. "We're waiting for the Departments of Energy and Transportation to come out with something more substantive."



Gasoholics argue that although gasohol on its own isn't competitive with gasoline now, it soon will be. The cutoff of supply from Iran, the eventual decontrol of domestic oil and the continued upward pressure on oil prices as world supplies dwindle ensure gasohol's future competitiveness with gasoline.

Or do they? "I'm sure alcohol is going to go up in price as petroleum goes up," says Eugene Ecklund, chief of the alternative fuels division of the Department of Energy. "Probably all energy will go up because of the competitive aspects. Our analysis of what price petroleum will have to reach before liquid fuels from coal and oil shale become competitive seems to show that as petroleum goes up, so do the alternatives. The trend lines look like they're not going to converge—the same may hold true for alcohol."

DOE is also cautious because, unless alcohol is made from by-products or waste, most standard processes require more BTUs than they turn out—although, significantly, they are domestic BTUs *vs.* oil BTUs that the U.S. would otherwise have to import.

Is there any viable market, then, for alcohol fuels at today's prices? Possibly. It might be used as an octane booster. Since the EPA outlawed lead and other additives, gasoline has suffered from a lack of octane points, which has reduced performance. Alcohol adds octane points and it meets EPA emission standards, so ARCO is now marketing an alcohol-type additive that could become popular throughout the industry.

But the strongest argument favoring the growth of gasohol is that the alternative may be worse. The oil industry's process of making synthetic crude from coal is still in the research state and won't be ready in significant amounts for the crunch in the late 1980s when world oil output begins to fall off.

"It's not likely we'll have sufficient quantities of liquid fuel from coal or oil shale for transportation until the turn of the century," says the Department of Energy's Ecklund. "We're down to the point then, that if we want to or have to substitute fuels for transportation by 1990, about the only choice we have left is alcohol."

With the alternative being 20 more years at the mercy of OPEC, it may be smarter, in the long run, to pay the higher prices now rather than later. ■

Every time René Lévesque opens his mouth, the Canadian dollar sinks further. Which is why the Bank of Montreal is turning itself into one of the biggest retail banks in the U.S.

Ici on parle argent

PROVINCIAL PREMIER René Lévesque, who wants to make Quebec a sovereign nation, has directed, under a new law, that all business signs in the province be in French rather than in English. But the $32 billion Bank of Montreal, whose head office is in Quebec, will continue to have dual bronze signs proudly bearing its name in English as well as French. It can do so because in Canada banks are chartered under federal law rather than provincial law.

But the Bank of Montreal is taking no chances. Against the day when it may be faced with U.S. banking competition in its home area, the bank is expanding aggressively in the U.S. Hence the announcement last November that it had made a deal to buy 89 of the 104 Bankers Trust Co. branches in the metropolitan New York area. If the New York State banking authorities approve, Bank of Montreal would become overnight one of the biggest retail banks in the U.S.

The Bank of Montreal is not alone. All of the "big 5" of Canada's 12 chartered banks are moving aggressively into the American market. These are giant operations, comparable in size to the biggest U.S. banks. The biggest, Royal Bank of Canada, has assets of $41 billion. It is less interested in retail expansion but plans to enlarge its U.S. wholesale operations. The others are Canadian Imperial Bank ($38 billion assets), Bank of Nova Scotia ($28 billion) and Toronto-Dominion Bank ($24 billion).

The Canadian dollar was recently quoted at 83.97 cents (U.S.), the result of a massive flight of capital. Since 1976 when the Parti Québecois won political control of the province, individuals and businesses have been shifting funds to other parts of the country and to the U.S.

The U.S. dollar was falling 12% against other currencies, but the Canadian dollar was dropping faster. From a high of $1 (U.S.) in early 1976, the value has drop to below 84 cents. Its value would be e lower if the Canadian government had spent about $6 billion in little more t two years to support its dollar. It wo have been much lower, too, if Canada not blessed with valuable natural reso es such as timber, copper and oil which exported in substantial amounts and b in more than $45 billion of foreign change annually.

The banks are following their cust ers—and their customers' mone south. Quebec policies have cre many problems for the province and the country. The economy had b slowing prior to the November 1976 e tions. The French victory, however, celerated the move. Most of the shift been subtle. Corporate officials will talk about it on the record. But t concede that many manufacturing c panies have quietly reduced the w force in the Province of Quebec and creased output elsewhere. Furtherm many are initiating or expanding production.

The way things are going Léves will inherit a badly depleted econo The fault will mostly be his and his lowers' but he will, of course, place al the blame on the federalists.

In Florida, Arizona or Southern C fornia, anywhere in the U.S. Sunbelt, will find a large Canadian populati Ever since World War II, prosper Canadians have wintered here. N however, many have become year-ro residents. They are frightened not c by Lévesque, but by socialist tenden evident elsewhere in Canada.

The Bank of Montreal owns 9% of Royal Trust Co.—a Canadian mo

Canada's banks are running south after their customers to offset an uncertain future in Quebec.

nager not related to the Royal Bank ch has several successful commercial ks in Florida, where much Canadian ney is handled.

Villiam D. Mulholland, president and O of the Bank of Montreal, empha- s that his organization already has a e chartered bank in New York at 2 l Street and another in San Francisco 25 California Street. In addition there representative offices of the parent k in Chicago and Houston as well as ncy operations in New York and San ncisco. Mulholland is himself a U.S. zen, born in Albany, N.Y. A partner Morgan Stanley & Co., he resigned to o Canada in 1969 to become presi- t of the multibillion-dollar Churchill s power project. There he attracted attention of the Bank of Montreal became its president in 1974 (he had n a board member for several years).

he southern expansion of Canadian king institutions has created a major aratus, already in place, for handling transactions of Canadian and U.S. tinational corporations. Many Cana- n corporations are American owned American affiliated. It has been natu- for the Canadian banks to establish rations here to make loans and facili- corporate deposits.

ut purchase of the Bankers Trust aches would break new ground. It ld bring a Canadian bank with $32 on in assets (Bankers Trust has $26 on) and over 1,200 retail offices wled from coast to coast in Canada head-on competition with Citibank, nufacturers Hanover, Chemical and se. Carrying only the Master Charge it card now, the Bank of Montreal not yet decided if it will buy the kers Trust Visa card operation or t its own. Either way, it will certainly me a factor in retail credit.

terms of mechanization, the big adian bank is probably second only Citibank in this hemisphere. "Our need would be to get the Bankers st branch system into a shape that forms to Bank of Montreal stan- s," says Mulholland.

Will the New York State Banking De- ment approve the deal? State Bank- Superintendent Muriel Siebert will no opinion until papers covering proposed branches' sale are present- Why? Because U.S. banks are given limited rights to operate in Canada Siebert would like to see a little procity. Section 202A of the New k State law, in fact, makes reciproc- a condition of approval. A banking rm bill that would open the door er to foreign banks is now before the adian Parliament. Its progress there, ever, is almost invisible.

eanwhile, the outflow of capital n Canada has slowed considerably, rding to Richard M. Thomson, chairman and CEO of the Toronto-Dominion Bank. So much capital is below the border, he added, that there is a need for Canadian banks to move south following their longtime customers. More Canadian companies are moving into the U.S. "As they become bigger they look upon North America as their natural market, rather than just, say, Canada. We also do business with many companies in Canada—about 350 of the top 500 are owned by foreigners—which are subsidiaries of U.S. companies."

However, Lévesque says he will demand a provincial referendum on independence for Quebec as soon as the national elections are over. Timing of elections has not yet been announced by Prime Minister Pierre Trudeau. Lévesque is counting on a backlash among English-speaking Canadians to defeat the moderate government of Prime Minister Trudeau—a backlash which he hopes will strengthen his claims that French-speaking Canadians are second-class citizens. As the date of the proposed referendum approaches and Lévesque's fanaticism becomes ever more threatening, the outflow could easily reach flood proportions. In that case, the Canadian dollar could fall well below the present low state—in spite of the boost it will get next year from increased exports of natural gas to the U.S. If that happens, the Canadian banks want to be here to receive their share of it. ■

While Jimmy Carter flirts with controls, France moves toward decontrol. What's going on here?

New cure for the French disease

By Barbara Ellis

"When a pot is boiling over, you don't stop it by sitting on the lid," says French Economics Minister René Monory, taking an implied jab at Jimmy Carter's current economics. "Price control is not the way to fight inflation. Look at West Germany. They don't have . . . controls and their rate of inflation is one of the lowest in Europe."

Monory is no academic parading a pet theory. Since last March's electoral defeat of the left-wing parties, working out of a high-ceilinged Paris office in his palatial ministry built during Napoleon III's reign, he has spearheaded a program to restore freer market conditions after more than 30 years of economic management from Paris. His strategy: Move away from the so-called *dirigisme* that put price controls on everything from croissants to champagne.

Economists were skeptical and predicted soaring prices, but—helped, admittedly, by a weaker dollar which cheapened imports—inflation held steady at just under 10% for 1978, with 9% forecast for 1979. Somewhat hesitantly, like a patient walking again after a long illness, France is learning to live again with a relatively free economy.

A surprise appointee to his high-level job, Monory, 55, is what the French call *un self-made man*. Lacking a high school diploma, let alone the college degrees that are usual for most French politicians, he started work at age 16 in his father's small garage in a country town 200 miles south of Paris. Eventually, it became one of France's most successful Massey-Ferguson dealerships. It is quite a switch for France, traditionally led by intellectuals and technocrats, to take its economic medicine from a practical businessman. His aim is fundamentally the same as that of the deposed planners—to enable French industry to stand on its own—but his methods are entirely different. Where they chose rigid planning, Monory prefers to let unleashed natural competitive forces do the work.

"We have to give chief executives back the full responsibility for running their companies," he explains, "and we have

France's Economics Minister René Monory
Promoting decentralization from an office built in an age of centralism.

to ensure they have the means to develop by financing their investments in a healthier way than by borrowing. . . ." So, last July, a new "Monory" law went on the books to entice small savers into the stock market (FORBES, *Dec. 25, 1978*). By year-end, over 1 million investors responded; new capital issues were double the 1977 figure.

Monory, who started his political career 20 years ago as mayor of his hometown of Loudun in south central France, outlines the thinking behind his strategy: "We had it easy for years," he says, "privileged relationships with poor countries [colonies] which supplied us with raw materials; a domestic market protected from international competition; and secure export markets. That's all over. As of now, we are paying the full price for raw materials. The price won't be going down, and we shall have to meet industrialized, advanced-technology countries on equal terms. It won't be easy. French companies will have to win or die. Winning is being competitive—in the domestic market as well as in exports. Freeing prices is just the start."

Wages, though, have not been freed. With only about 25% of France's work force unionized and the opposition political parties split, keeping this lid on has been unexpectedly workable. Monory has insisted that purchasing power should not get out of step with the rate of increase in consumer prices. As the largest employer, the government can make his wishes felt. One in every five French workers is a state employee, excluding the mostly nationalized banking system and Renault. Private companies that don't restrain wages find they lose out on export credits or government contracts.

Monory's soft-on-companies-hard-on-wages line has gained him a conservative image he characterizes as "disastrous." What his left-wing critics seem to forget—like some American "liberals"—is that business profits are not some kind of skimming by the rich but rather the chief form of savings to pay for business expansion and modernization. "I'm the opposite of right wing," he says, "have been for 20 years. I'm for giving people responsibility for their own future. . . . In an economic system where international competition is going to get tougher, we have to redistribute power—decentralize. That's what I have done in my own business. Three of my executives now own 22% of it. That is why there was no problem when I took on political office." In short, Monory does not regard himself as a conservative but as an old-fashioned liberal.

According to Monory, this redistribution of power will not mean the selling off of France's many state-run businesses, though observers think that, especially in banking, private companies will gain substantial market share. ' course, we don't want any further ext sion of state control either," he adds.

The biggest potential threat to Mon and his experiment with economic fr dom is the unemployment rate. " problem number one," he admits. L month's figure of 5.7% is on a level w the U.S. December total, but high France. Monory sees no quick fix h Though he opposes keeping sick bu nesses alive to protect jobs, he has ready been forced into a virtual natio ization of steel and some patchy aid p grams for depressed areas. A more iro problem: protest from businessmen w fear competition and loss of protecti Fortunately for Monory, however, th won't be a major election until 1981.

What's next for France's most pow ful small businessman? "With my ba ground, I never expected to be Econ ics Minister. That's quite enough for moment," he says, but others say he more far-reaching ambitions if his p gram produces results. He cannot h forgotten the late Ludwig Erhard, German economics minister. Erh made his name as the architect of German miracle by adopting many of measures that Monory now espouses. hard later became chancellor of G many. What could be a greater honor a former tractor dealer than to beco one day president of France? ■

1979 Caprice Sedan in Silver Classic Custom Two-Tone.

If you can take your eyes off this handsome car long enough to go ride in one, you'll surely come away with a clearer understanding of why America has driven it to the top.

The quiet zone.

One of the most pleasing aspects of The New Chevrolet is the quiet way it moves. Why so quiet?

For one thing, its tightly welded Body by Fisher rests snugly atop a sturdy full-perimeter frame, joined by 16 strategically placed rubber mounts to help muffle road noise and vibration.

Inside, the ceiling is actually an "acoustical sandwich," with a thick layer of sound-absorbing polyfoam backed by hardboard and finished in fine fabric.

Oh so comfortable.

The ride is impressively smooth and comfortable.

Large coil springs at all four wheels help soak up the bumps, while a front stabilizer bar helps control sway.

And to add to your comfort, The New Chevrolet surrounds you with generous space. It's a 6-passenger car, with more head room and rear-seat leg room than the 1976 full-size Chevrolet it replaced.

An accomplished car.

No other new generation full-size car can match The New Chevrolet's record of success and accomplishment.

It became America's best-selling car within weeks of its introduction, in the fall of 1976.

It attracted more than a million buyers during its first two years.

And now, in its third big year, it is still clearly America's favorite car and the pacesetter for all other cars of its kind.

The New Chevrolet has paid its dues under diverse driving conditions on virtually every kind of road. Yet for all its success and experience, it is still one of the newest new cars on the market today.

Own it, love it.

Our feedback indicates a high level of owner satisfaction with The New Chevrolet.

What pleases the people the most? Things like ride, comfort, and ease of handling. Things you can easily check out for yourself when you test drive a New Chevrolet Caprice or Impala.

Do it soon, at your Chevrolet dealer.

America has driven it to the top. Chevrolet

The Budd

"After 40 years of gloom, now there's

"All but forgotten since World War II, passenger rail transportation is making a strong comeback. The reasons—modern railcars and fuel-efficient systems."

In the words of Gilbert F. Richards, Chairman of the Board and Chief Executive Officer, The Budd Company, "We've been designing and building stainless steel railcars since the early 1930's. And while others may have abandoned the rail business, we've never lost sight of our commitment. So, today, rail passengers have something to cheer about."

Our newest railcar is a good example. The Budd SPV-2000 is the railcar of tomorrow that's here today. Made of stainless steel, this energy-efficient rail vehicle

is self-propelled by diesel engines. And it's adaptable to move people efficiently, comfortably, reliably in nearly every type of service: commuter, inter-city, shuttle, branch line, you name it.

The SPV-2000 has been successfully tested in revenue service in Boston, and also demonstrated successfully in Washington, D.C., Philadelphia, New York, Hartford/Springfield and Chicago.

Budd built the original Metroliners that operate between New York City and Washington, D.C. We're helping to revitalize the national railway system by supplying Amtrak with modern Amfleet cars.

Rails and roadbeds, too, are high on our list of priorities. Budd is one of the world's leading suppliers of rail anchors and tools for helping to upgrade tracks to accommodate our faster, more comfortable and fuel-efficient railcars.

Mass transit today is nothing like mass transit used to be. It's clean, fast, pleasant, efficient. Interiors are tastefully decorated, aisles are spacious, seats are comfortable.

Alternative:

some good news for rail passengers."

And down the track, Budd has recently introduced the stainless steel Budd International Railcar to help countries anywhere in the world upgrade passenger rail transit, or to help emerging nations who wish to link the people of their country with a modern, up-to-the-minute rail system.

The stainless steel Budd International Railcars are shipped knocked-down in crates to the rail site. Then, they can be assembled and custom-finished by hand in a matter of days using local semi-skilled or unskilled workers.

Throughout the world, Budd and its affiliated companies have built more than 10,000 railcars in all, for the world's most progressive rail lines and transit systems. Everywhere from the modern, beautiful São Paulo Subway System cars to our contract to provide the Chicago metropolitan area with modern, bi-level gallery cars.

The Budd Company pioneered *modern* transportation with the development of the first stainless steel passenger railcars like the Burlington Zephyr, and with many other significant "firsts." Since then, Budd has produced enough railcars to stretch one-third of the way across America.

So, today, now that our country is ready for the efficiencies and economics of mass transit, Budd isn't standing still.

If you'd like to know more about what's new and good in passenger rail transportation, write The Budd Co., 3155 West Big Beaver Rd., Troy, Michigan 48084.

THE PROBLEM SOLVERS FROM BUDD.

THE Budd COMPANY

The revolution in divorce laws has changed "'Til death do us part" to "'Til somebody wants out," and the lawyer and the accountant are becoming more important to matrimony than the matchmaker or the minister.

The high cost of leaving

By Kathleen K. Wiegner

Is that enough to keep you happy? Is that enough? . . . You just love that expensive stuff. You got a flair for style. . . . What could I do? The judge said "She got to keep on livin' the way she 'customed to." She's tryin' to break a man. I don't understand. Somebody tell me please. Tell me please why do I have to pay attorney fees? This is a joke. I need a smoke. Wait a minute. . . .

—from *Is That Enough* by Marvin Gaye

POP SINGER Marvin Gaye, whose latest two-record album, *Here, My Dear,* is devoted entirely to his recent divorce, knows whereof he speaks. Under the terms of his settlement, wife Anna will get $60,000 plus up to $540,000 in royalties on the album. As for Gaye, he's up to his neck in debts and in bankruptcy.

For better or worse, there is a new freedom in our society—a freedom to change mates that in the past was confined almost entirely to the very rich. But it doesn't come cheaply. Americans are spending billions of dollars a year for divorce services from such assorted professionals as lawyers, judges, accountants, psychiatrists, writers and private eyes.

Last year over a million couples called it quits, doubling the figures of a decade ago. Should present trends continue, the number of divorces may well reach 1.6 million by 1990. If so, the number of couples getting divorced would *exceed* the number making their first trip to the altar.

As with any other major change in our society, some people are making a lot of money out of the switch from 'til-death-do-us-part to it's-time-to-split. Take the book business. Books such as *The Fighter's Guide to Divorce, How to Avoid Alimony, Creative Divorce* and *What Every Man Should Know About Divorce* sell briskly. So do the do-your-own-divorce books and kits. Divorce clinics, divorce counseling services and self-help groups—such as Fathers for Equal Rights, Organization of Women for Legal Awareness (OWLA) and American Divorce Assn. for Men (ADAM)—are springing up everywhere. The effects of divorce are felt even outside the divorce business. Glencoe, Ill. real estate agent Jane Davis, for example, says that "divorce is one of the prime reasons for selling homes today."

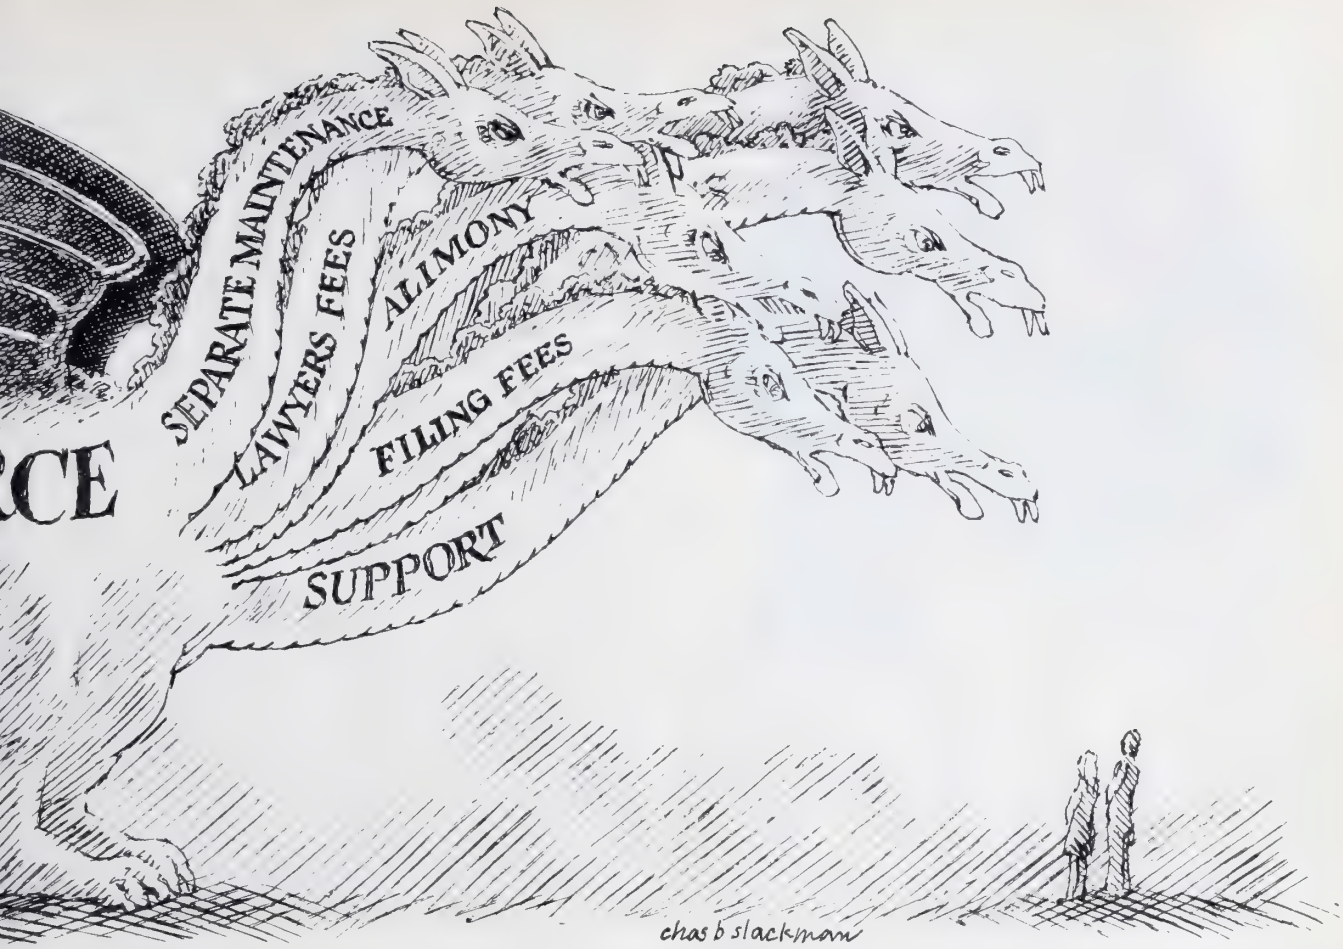
Add it all up, it works out to about $3,000 per divorce and makes divorce a $3 billion industry. (Some successful divorce lawyers can earn as much as $400,000 a year.) All this divorce activity has left family courts clogged with cases. Estimates are that over 50% of the civil cases heard in New York City are family law cases—divorce, separation and annulment—and this figure does not include the cases that come into the family courts for custody or support modifications once couples are divorced. In Chicago 26 judges are assigned to hear matrimonial cases, and lawyers complain that because of the crowded courts, divorces drag on and on, at emotional and financial cost, and that judgments are often hurried and thus unfair.

One step toward alleviating this pressure began this year in California. A new law permits couples who meet certain criteria such as a short marriage, no children, few debts or assets, to obtain a divorce without making a court appearance. Simply fill out some forms, wait six months and then inform the court that you want the divorce finalized.

Financially speaking, there are two divergent trends. On the one hand, courts are far less generous to former wives than they once were; no longer is the lady treated as a tender flower to be protected from the cruel world with a lifelong share in the husband's income. But on the other hand, she is more likely to get a good-size chunk of the family property.

For instance, California, a community property state, can be especially rough on propertied husbands.

Consider Dr. K. After years of medical school training, internship and residency in orthopedic surgery, he is now



list in Beverly Hills, making more money than he ever ed possible. Perhaps because of his affluence, by age 40 tired of the wife and kids and files for divorce. His wife his first settlement and off they go to court. Both sides g-time divorce lawyers. The $125 an hour they pay for uxury is just the beginning. Their home is in Beverly where property values seem to appreciate almost daily, ppraiser must be brought in—at $60 an hour plus $500 a he testifies in court—to evaluate the house and furnish- A fine arts appraiser will be needed for the Chippendale op art in which the couple has been lovingly investing. a business appraiser will be needed to estimate the 's practice, including not only his receivables and equip- but also the goodwill. The bill for that could run as high ,000 if the appraiser has to testify and if his opinion is ted by a second appraiser representing Mrs. K, who es the doctor is worth a lot more than he admits.

r. K has also invested money in apartment houses or oil- g leases, these too will have to be appraised. Perhaps an y will be brought in to evaluate the worth of his pension nd other expectancies, such as retirement benefits or life nce. Finally, a tax expert will be asked to give his opinion consequences of each transfer of property once the court s who gets what.

re he's finished, Dr. K could shell out as much as 0 in fees, not to mention what he eventually pays his This sum excludes the psychiatrists' bills. Without psy- c help, Dr. K and his wife would probably not make it h the months and even years it sometimes takes to get a e through the courts.

ny clients come in and say, 'My husband and I have d out a simple little agreement. We just want you to t down,' " recalls Beverly Hills attorney Arlene Colman- mmer. "She brings in a disorganized carton of financial documents and this 'little agreement' is a multimillion dollar estate. In order even to put together an agreement you have to have a total inventory of assets. How can you distribute if you can't 'value'?"

Only seven other states are so-called "community property" states like California. Thirty-six states that used to follow English common law—that is, whoever holds title to property gets it after a divorce—now allow the courts to divide property "equitably." That doesn't mean a 50-50 split; the court does what it considers economically fair to both parties.

Only seven states (Florida, Mississippi, Pennsylvania, Tennessee, Virginia, West Virginia and New York) still are what is known as "title only" states, where the person who holds title to property gets it following a divorce.

As the case of Dr. K graphically illustrates, a key question in divorce now is, What is an asset? Answering that question is what keeps the specialists' meters clicking. In some states, pensions, retirement benefits and life insurance expectancies are considered assets, and many lawyers feel that by logical extension Social Security benefits may soon be added to the pot. California courts will accept business valuations which include something extra for goodwill in a doctor's or lawyer's practice; Texas courts will not. Sometimes a single asset can have several parts—*i.e.*, part of it belongs to the couple and part to the individual. When best-selling author Robert Ringer got divorced, his wife claimed that part of his book *Winning Through Intimidation* had been written during their marriage and claimed her share of the royalties. The wife of a man who designs games claimed future royalties because the games were developed during their marriage. In this way, the line between property and income often becomes blurred. The principle that the efforts of a person during marriage belong to the marriage applies to songwriters, novelists and even real estate developers (even if the deal was only in the planning stages before the

Don't get so involved in the rightness of the issues that you can't reach a settlement. Don't go to court just because the appraiser says the house is worth $400,000 and you say it's $350,000. The difference can vanish in legal fees.

split-up) in that expected future income becomes a kind of property. Legal theorists worry over the question of how much of a person's future another person can own after a divorce. But at the same time one of the hottest ideas circulating in law offices is whether or not there can be something called "the right of publicity"—meaning that the money spent to make a celebrity well known was like an appreciating asset and therefore the celebrity's spouse should be able to claim some percentage of the money his fame now brings in.

Even "simple" assets are never quite that simple. Suppose a man is a majority stockholder in a closely held family-owned corporation. Other family members own the minority interest. Should the stock value be discounted because by splitting the stock with his wife the man no longer has a controlling interest in the corporation? But what will the stock really be worth to the wife, who now finds herself a minority shareholder in a corporation controlled by her ex-husband's family? Finally, what are the tax consequences of the stock transfer once a value has been decided upon? No wonder lawyers and accountants keep getting fatter and sleeker!

In some instances corporate "perks" can be taken into consideration in determining fair spousal support, since some courts have ruled that one person is not supposed to live better than another after a divorce. If a husband gets the use of a company-owned car and has a travel and entertainment budget, a pension and profit-sharing plan, bonus plan, medical and life insurance as a part of his job, his wife may be given extra money to compensate.

If a wife can prove her husband's secretary is really his mistress and that the secretary's salary is not going for typing, that salary will be added back into the company's inc when the business is evaluated. The same holds true relatives if their salary is not being earned. An internist private practice is earning $100,000, approximately $30, more than an internist employed by the county hospi Those excess earnings may become the basis for a good valuation when his practice is appraised.

Not all the assets couples fight over, however, are subst tive. One couple's property settlement bogged down w they could not agree on who got the slides of Africa they taken on a vacation. The case went to court where the ju pointed out that for around $40, well below what they spent by fighting, they could have had the slides duplica Another woman in Wisconsin won the right to use the c ple's season tickets to the Green Bay Packers football ga for two years before they reverted back to her husband. A among the items noted in Johnny Carson's second divo along with $200,000 in cash, an equal amount of property $100,000 per year in alimony he paid to the second ex-M Carson—as long as she didn't remarry—was her right to cu dy of their Yorkshire terrier.

Terriers and slides, of course, are property. Earning powe something else again. Alimony was a means of giving woman, considered to be helpless in a man's world, a shar her ex-husband's income. But if the courts are getting m generous in giving the wife a share of the property, they being less generous in awarding her a share of her ex-husba future earnings. With the advent of more equitable prope distribution—and a dash of women's liberation—alimon increasingly being awarded for limited periods of time, if at where the woman is young and the marriage is not a long c In most states it is not even called alimony, but "spou support," and is being given in lieu of tangible assets (si some assets simply cannot be split down the middle) or a short-term "fix" until a person receiving it can learn a skill become self-supporting.

"The woman who comes into court saying, 'I have intention of working or going to school,' is usually given most limited kind of support for the most limited perio time," says Arlene Colman-Schwimmer. "So I encour women to come into court with a plan of some kind, e frankly if it's not a plan she intends to follow very long

Given women's increasing earning power, alimony is longer the sole province of women. In 40 states, incl ing Massachusetts and Colorado, either a husband wife can receive it, and a case before the U.S. Supreme Co could end the it's-the-man-who-must-pay bias in the rest the states. Already states like Texas and Pennsylvania do allow courts ever to give alimony permanently. And in ot states, like Indiana and Nevada, permanent alimony is give a spouse only if she is handicapped or physically unfit support herself. Women, in short, are no longer treated dependents who could not survive without male help.

"Alimony is not that big an issue anymore," concedes Lo Filczer, president of ADAM, the militant men's rights gro "Only 10% get alimony, and it can be limited now like couldn't before." Under the new thinking, courts seldom c sider moral or social conduct but concentrate on econor issues such as occupation, amount and sources of incor vocational skills, liabilities and earning opportunity in mak alimony awards. Florida and Maine are among the 22 sta that include the homemaker's contribution as parent a housekeeper in their figuring.

Sexual conduct does play a role, however, in the right c person after a divorce to go back to court and ask for a cust modificaton or for a decrease in alimony payments. In Cali nia, for example, if a woman receiving money from her husband lets her lover move in with her, the ex-husband c ask the court to reduce his payments just as if she had rem ried, which is usually when alimony stops. Private detectiv who used to do most of their work uncovering grounds

rce, now do surveillance for husbands who want to reduce
nony payments.
omplexity is piled upon complexity. There is a vast gray
between what is property and what is income, as in the
when a court decides that a medical practice is an asset or
future royalties are present property. The more this be-
es a matter of legal hairsplitting, the more money the
yers and other experts make out of divorce.
ll this profitable—for lawyers—complexity is quite new.

Before the 20th century, divorce was rare. The rich, both men and women, usually took lovers and the middle class and poor suffered—though rarely in silence. The e was still the major unit of economic production when ple raised their own food and made their own clothes. ping the family intact was an economic necessity; women little opportunity to work outside the home, where big ilies and few appliances kept them too busy to do more dream of a better mate. Only when the factory and the oration began to take over the family's former economic could divorce become more than a luxury. In recent years, nore women have entered the work force, the divorce rate risen (statistics bear out that the probability of a marriage ng in divorce is higher when the wife works). Often ng both spouses working seems to put additional stress on rriage, and women now have the same economic freedom have to bail out of bad marriages.

ntil 1970 you couldn't get a divorce without grounds, such dultery or mental cruelty. The courts were primarily con-ed with determining which party was "innocent and in-d," and thus rewarded, and who was "guilty" and had to But in that year California, which, as in so many other s, has been the social wave of the future, became the first e to eliminate traditional grounds for divorce. California tituted a "no-fault" theory which allowed divorce when-it was determined that a marriage was "irremediably ken." If a person wanted a divorce, that was all the proof court needed to declare the marriage over. Today, all but e states (Illinois, South Dakota and Pennsylvania) allow ault divorce, though not all states have followed Califor-lead in making "no-fault" the *only* ground.

ne result was to stand the divorce business on its head. "In -fault divorce, the courts really have little or no interest tever in what brought about the divorce," says Manley d, a Los Angeles attorney. Instead, "they're primarily inter-d in the financial aspects. This has caused a shifting of the yer's specialization from that of quasipsychiatrist to ac-nting expert." Adds California certified public accountant Gursey, "Before 1970 the knock on the door meant a ate investigator with his camera. Now he's been replaced ne accountant with his calculator."

the same time California instituted no-fault divorce, it decided that the best way to distribute the couple's assets through a 50-50 split, no matter who filed for the divorce who had been most responsible for creating the assets. w when you go into court after a 15-year marriage," ains Los Angeles divorce attorney Sidney Traxler, "it n't matter whether the lady did anything or not. She's tled to half the property. You tell her, 'Madam, it doesn't ter whether you have been drunk on Wilshire Boulevard all long.' She's still going to get 50%." Fifty percent of what? many angels dance on the head of a pin? If California munity property law spreads across the country, divorces going to become more and more complex and litigious.

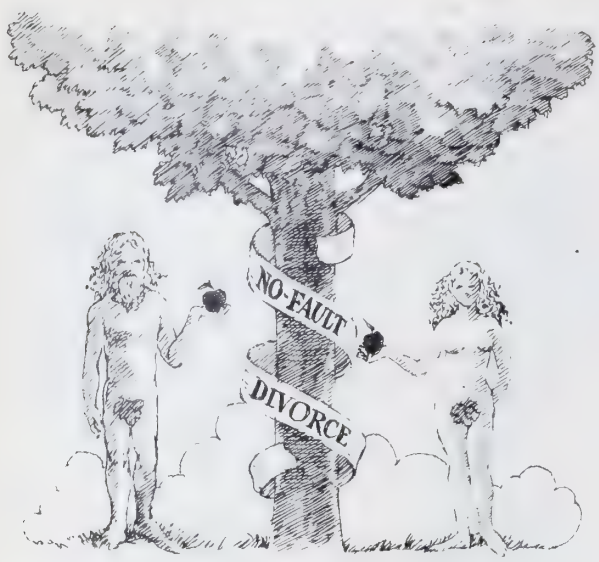
is clear, then, that no-fault divorce is a far cry from no-ver divorce. If it is a big, messy divorce you may want the dful of top matrimonial lawyers who practice in all major s. Perhaps the most famous are those in New York City, ost affectionately known as the "bombers." If your net th is $1 million or more, if you can afford the $5,000-to-00 up-front retainer and if you think of your divorce as an ut war and your lawyer as a lethal B-52, you want someone like Raoul Lionel Felder, William G. Mulligan, Irving I. Erdheim or Morris H. (for "Happy") Halpern. "For many people we're the only game in town," says Felder. "It's a lot like musical chairs."

If yours is an amicable divorce, you don't need a bomber. It is a bomber's job to see to it that his or her client scores points against the alienated mate. Sometimes it is a matter of simple haggling. In other cases, the pair are so embittered that what they want is revenge. Such people regard their lawyers as hired guns—literally bombers. Says one bomber, when asked why he chose adultery as the grounds for a client's divorce, "When you need to crush a fly with a sledge hammer, use adultery."

The real change in the game is that divorce law—once regarded as a slightly distasteful fringe of the profession—is fast becoming respectable. While many big-name law firms still refer their corporate clients down the street to a divorce "specialist," a number of them are beginning to take another look at the divorce business. Irving Erdheim admits that he is coming up against more people from the Wall Street firms: "They are taking a second look. They now understand that the practice of matrimonial law is very substantial." Says one accountant with Ernst & Ernst's New York office: "The big [law] firms used to have a prohibition against matrimonial law when it was dirty business. But now they seem to think the stigma is gone."

If it is revenge you want—punishing the other person—then you will still need a bomber; a cheap divorce is, by definition, an amicable divorce. Where the divorce *is* relatively amicable but where there are substantial assets, your accountant may be more important than your lawyer. A twice-divorced Holly-

Private investigators can be hired if a parent decides to take a child and run. Childnapping, as it is called, is a parent's last resort. Some estimates place the number of children abducted by their own parents last year as high as 100,000.



Divorce talk

As with any profound fact of life, discussions of divorce are conducted in a rich, constantly evolving vocabulary. Below, a glossary of some current terms.

No-fault divorce: To get a divorce it is no longer necessary for one spouse to prove the other was at fault—no more love nests invaded by flash-popping photographers. Incompatability, irreconcilable difference or an irretrievable breakdown of the marriage are cited instead of grounds like adultery or mental cruelty. The grounds are liberally interpreted. One judge defined an irreconcilable difference as one person wanting a divorce and the other not wanting one.

Dissolution: Divorce, in no-fault states.

Spousal support: Used to be called alimony.

Rehabilitative maintenance: Spousal support given for a short time to allow the recipient to become self-supporting. Learn a trade, for example.

Peace of mind surveillance: Hiring a private detective to spy on your spouse to determine whether you should be considering a divorce. The peace of mind comes from knowing that your spouse *was* working late when he said he was.

Modification of spousal support: Request by one spouse either to reduce or to augment the spousal support set at the time of the divorce.

Marvinizing: "In" term for what used to be called living in sin; after the Lee Marvin case.

Bombers: Top divorce lawyers who can convert your anger with your ex into assets. Instruments of revenge as well as of defense.

Childnapping: When parents take their children and run rather than face losing custody. Often used by a parent as leverage to force the other parent into making a better deal in a divorce settlement.

Community property: In community property states, that property which belongs to both husband and wife and must be split evenly at the time of divorce. Earnings, for example, are community property, as is anything bought with those earnings.

Pro se: Legal term for someone representing himself without benefit of a lawyer. People filing their own no-fault divorce do so "pro se." Also called do-it-yourself divorce. **—K.K.W.**

wood producer, who openly mourns the loss of his childr two houses and three baby grand pianos as a result of matrimonial mistakes, is adamant when asked about divor "Divorce should be handled by accountants. Who needs la yers?" Says Donald Gursey, a C.P.A. who spends 90% of time on divorce accounting and tax matters: "I find fault w a lawyer who thinks he's an accountant, because you ca effectively practice any two professions. And there's alwa the threat of malpractice. I remember a case where, to hel client out, an attorney sent his client a bill for legal fees l called them tax services because tax advice is deductible. La on, the client sued him because he claimed he'd gotten bad advice." Says Manley Freid: "Even when you have a sim situation involving one asset, say the family residence, and wife keeps the residence and buys the husband out of his sh of the residence, that alone creates a taxable event, and in m cases the general practitioner lawyer is not even aware of The complication in most divorces is to a large extent beca of tax problems that even the IRS has not recognized bef and now they're recognizing and trying to fill in the gaps."

"While we rarely get involved in divorce cases," says Pe Frank, a Price, Waterhouse partner in Los Angeles, "we do involved where there's something unique or something wh our particular kind of expertise would be extremely valuabl That particular kind of expertise, of course, doesn't co cheaply. Typically a firm like Price, Waterhouse charges fr $15,000 to $25,000 for its work, and the bill could go as high $50,000 or higher, depending on the time spent in cou "Divorce was considered the proctology field of law," s Gursey, "but it isn't now, and I think the big firms beginning to see that there is some value in the business."

Valuation experts, too, are increasingly in dema "There's been a tremendous increase in busines agrees Robert Schultz, whose firm, IBAR Inc., a does consulting in business valuations. Schultz and brother Raymond, two Ph.D.s in economics, were profess doing part-time consultation until 1976 when the busin began to interfere with their teaching. They have worked Dean Martin's wife and are currently doing work for M Jack Kent Cook in her divorce from the Los Angeles spo entrepreneur, whose assets include the Los Angeles Lak basketball team and Kings hockey team. They have a been retained by Lee Marvin's lawyer in Marvin's fight contest the claims of his ex-live-in girlfriend.

Laurence Sommer, vice president of Federal Appraisal S vice in Tarzana, Calif., estimates that 65% of his appraisals real property (houses, furnishings, business machinery) con from divorce cases.

The medical profession also gets a piece of the action. Go are the days when women were automatically given the kids a father decides he wants custody of his children, the o thing to prevent him will be a judge's own preferences, since all but 12 states the so-called "tender years doctrine," wh held that a mother was the fittest custodian of a child, has be abrogated. Now more and more men are seeking custody. T percentage of men winning is still small but has been risi Thus psychologists and psychiatrists must be brought in give opinions on which parent should keep the child, soc workers evaluate the respective home atmospheres and cou will sometimes even appoint a lawyer for the child to ma sure his rights are protected. Private investigators, who adv tise as "custody consultants," can be hired to keep track c parent's sexual habits, how well little Jane is being fed a clothed, and who her friends are, even if it means rummag in trash cans to see if she eats TV dinners every night.

The same private investigators can be hired if a parent j decides to take a child and run. Childnapping, as it is called a parent's last resort to keep his child, and some estima place the number of children abducted by their own pare last year as high as 100,000. Thus far, 28 states have adop the Uniform Child Custody Jurisdiction Act, which provi

erstate cooperation in returning a child to a parent with a ful custody order, and imposes stiff penalties (since child- ping has been ruled not to fall under the Lindbergh kidnap- g laws). But detectives claim that the police are often uctant to cooperate or are just not interested in helping a ent track down his or her child.

uch child-custody laws might also put an end to the career Eugene Austin, known as "Mean Gene," who became al- st a folk hero in his work to help divorced fathers recover ldren in the custody of their mothers. Austin, who calls nself a "custody vigilante" and claims to have snatched well r 200 children, has been written up in the national press has appeared on television in his one-man crusade to rm custody laws.

s all this costly haggling really necessary? The divorce olution has made things more complex for people with stantial assets. But for the couple that has little to lose ept each other—the couple with a house, a car and a few ster Charge debts—divorce can be *less* costly. For a few ndred dollars, they can take advantage of the growing num- of legal clinics that have sprung up in the 1970s. As the ne implies, these clinics offer one-stop shopping for the l problems of middle-income people.

The first, and still largest, of these legal clinics are the Jacoby Meyers Legal Clinics in Southern California, which were nded by two young lawyers in 1972. About 50% of the iness that comes through the doors of their 17 offices ny of them situated in small shopping centers) is divorce k. Since the Supreme Court ruling allowed lawyers to ertise, clinics like Jacoby & Meyers advertise heavily on vision and even take credit cards. In fact, last month Jacoby Meyers opened 12 offices in New York. "We're talking about systems approach to things," says Stephen Meyers. "Our nts are mostly wage earners. Wealthy people don't come to or a divorce. After all, a banker just doesn't go to Household nce."

Divorce can be even cheaper if you choose to do it yourself. ew bucks for a book, such as Charles Sherman's popular *to Do Your Own Divorce in California*, and some legal forms s around $75—and a no-fault divorce can be yours. Or you buy a kit with instructions and forms for less than $100. ome estimates, about 25% of divorces in Southern Califor- last year were do-it-yourself, and in Arizona the figure is eved to be closer to 50%. In fact, John Bates, who brought landmark lawsuit to legalize advertising for lawyers, has e left the legal clinic he cofounded and is selling do-it- rself kits in Arizona.

nfortunately, divorce, involving a rupture of one of the est of human relationships, almost invariably arouses in- se emotions. Since spouses rarely fight duels, they frequent- hoose the courtroom as an arena for enlarging a fight that an in the bedroom or living room. Since this is probably inevitable, lawyers and accountants are beginning to get involved in what might be called predivorce divorce planning. For example, they suggest, particularly if you live in a community property state, that you draw up a premarital agreement. A separate bank account and a separate checking account should be established for each person's separate property. And *after* marriage, establish a community account. Never mix the money in these accounts, because once money enters the community account it becomes the property of the community. Thus, if Uncle Harry dies and leaves you $100,000 and you use that money to buy a house for your family, it could become subject to division at the time of your divorce. If you put it in your separate account, it is yours.

Unfortunately, comments Price, Waterhouse's Peter Frank, even the hardheaded businessman is a romantic when it comes to marriage. "The executive gets into bad situations because he's a good businessman and he's creating assets," says Frank. "But the thing he doesn't do well is take good care of his own financial affairs. He's concerned not about property but about this person he's marrying." That is, he forgets that love and hate are intimately connected.

If divorce becomes inevitable, probably the best advice that anyone can get is: Don't get so involved in the rightness and wrongness of the issues that you can't reach a settlement that will be in your best long-run interest. Don't go to court just because your spouse's appraiser says the house is worth $400,000 and you know it's only worth $350,000. The difference can quickly vanish in legal fees. Divorces settled out of court are less costly, so think of what is happening as a negotiated business settlement. Finally, hire a good tax attorney the first year *after* your divorce to make sure you are taking the proper deductions. And watch out for traps. A New York woman went to court to force her ex-husband to pay her lawyer's fee. He paid it with a check made out to his ex-wife; it became taxable income to her. She protested, but it was too late.

Oscar Wilde said, "Remarriage is the triumph of hope over experience." Will more and more Americans come to agree with him by remaining unmarried and thus no longer enrich the lawyers, accountants and other divorce experts? Forget it. The rate of remarriage among divorced people is rising—even though the probability of subsequent divorce goes up with each remarriage. Anyhow, avoiding marriage is no guarantee that you can stay out of the courts. In 1976 Michelle Marvin won the right to sue actor Lee Marvin for half of the $1 million she claims he earned while they were living together in unwedded bliss. The Marvin case is now being tried, as are a number of other cases involving what used to be called "living in sin" and is now known as "Marvinizing." In California, a San Diego court recently went so far as to give the ex-lover of a lesbian temporary support pending a trial.

The lawyers and accountants have followed Americans into the bedroom, and there seems no way to get them out. ■

P-1420D

The outstanding 14 digit, 2 memory **printer/display.** Item counter, mark-up mark-down key, broad percentage function, reverse and non-add print key.

CP-1231D

12 digit, **printer/display** with 3 memory versatility. Performs four column totaling. Dual functioning item count, mark up key, delta percentage, shift key and sign change.

CP-1212D

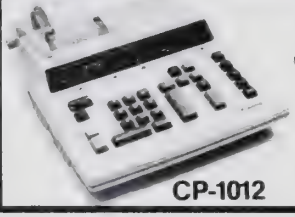
Advanced 12 digit **printer/display** with automatic or selective accumulation. Mark up and delta percentage keys, two-key rollover and buffered keyboard for quick operation.

CP-1200

The perfect 12 digit **printer** with touch of adding machine to work with large numbers. Features include Grand Total key, buffered keyboard with two-key rollover.

CD-1210

A versatile 12 digit, 1 memory **display** calculator. Features include mark up key, delta percentage key, percentage add-on and discount key.



CP-1012

Reliable, economical, 10 digit, 1 memory **printer.** Features quieter, faster Canon Magnetic Printer, line-of dashes selector key to separate your calculations, fixed or floating decimals.

Calculators have come a long way in a short time.

They've gotten smaller. More sophisticated. More economical. And more reliable.

And since the beginning, Canon has been a leader in the calculator revolution.

In 1964, we introduced the world's first 10 key desktop calculator. Since then a continuous research and development program has enabled us to hold our position as a leader in the calculator industry. And with our improved calculators, in reliability as well.

Representing this development has been a line of advanced printing calculators that combine advanced electronic technology with simple adding machine-like keyboard.

Our display calculators have large, easy-to-read displays, fatigue-free keyboards, and are unique in their class for reliability. And our line of printer/display calculators is the perfect combination of digital display convenience and tape printout precision.

Through the years Canon has continually expanded its technological and manufacturing capability at its Costa Mesa, California plant to meet the growing needs of the American consumer. And is producing the most advanced calculators—display, printe and printer/display—at this modern produc tion complex.

Research. Features. Reliability. Value. Now all from one reliable calculator source...Canon.

Call your local Canon dealer about the full line of more than 20 Canon commercia calculators.

Get it from a reliable source. Canon.

The world shipping market is in deep depression. And look who's buying the distressed merchandise!

The scrutable Chinese sea lords

By Paul Sturm

MAKE NO MISTAKE about it: World shipping is in as horrible a recession as the oldest hand can remember. And who's taking advantage of depressed shipping prices to buy in? Would you believe the Chinese, both communist and capitalist?

The trouble began in 1973 when oil price hikes led to a sharp falloff in international trade, curbing demand both for tankers and for other cargo carriers. But new vessels ordered during the boom years of the early Seventies kept gliding down the slipways, prolonging the shipping slump even after other sectors of the global economy had begun to recover. Experts at H.P. Drewry, London-based consultants, estimate that there is nearly a 20% overcapacity in dry bulk carriers and perhaps 30% in tankers, which comprise nearly half of all tonnage.

At the moment, only 1 tanker in 12 is idle, but that doesn't tell the whole story: Hundreds of ships are steaming slowly or carrying partial cargoes. Maritime freight rates are calculated under a system called Worldscale: A 250,000-ton tanker needs a charter at about 50 points Worldscale to cover operating expenses and capital costs. The market rose above that briefly late last year for two special reasons: heavy traffic before the OPEC price rise and a rush of vessels to load Iranian crude. Now rates are again just above 30, where they have hovered for nearly two years—barely enough to pay fuel and port charges, much less ot operating and capital costs.

Those figures, which also apply i lesser degree to liners and ore or g carriers, mean that many of the wor ships are operating at a loss. A few lu owners, of course, still have money-m ing long-term charters made during bo years. But as those end, renewals mus hammered out in today's depressed n ket. Even getting out isn't cheap: It ta about 15 Worldscale points to cover l up costs, so most operators minim their cash drain by staying active.

Some nations have fared far wo than others in the present crisis. Am the biggest losers have been old-l shipping companies in traditional cr trading areas like Scandinavia and U.K. Five years ago, for example, N way, Sweden and the U.K. accounted some 21% of the world's fleet; today t figure has dropped to 14%. In 1978 alo U.K. shipping lines such as P&O Cunard led a disposal effort that redu that country's tonnage by 10%.

As these comparatively high-cost erators were selling into a weak marl who was buying? Greek entreprene of course, traditionally wheel and dea used ships. But the major expanders h been a few savvy Hong Kong owners the economic planners in the Peop Republic of China.

What lures both groups are the incr ble bargains available during the shipp slump. Recently, for example, a fi year-old 250,000-ton tanker with a g 15 years of useful life could be bought as little as $8 million—*vs.* $50 millio build new today. Similar good deals be had for other types of vessels.

Hong Kong operators like Y.K. P C.Y. Tung and T.Y. Chao have so managed to blunt the impact of slump by having much of their tonn out on profitable long-term charter. Sc 1978, according to brokers Lamb Bros. Ltd., Hong Kong investors sp nearly $300 million on 74 second-ha vessels. Y.K. Pao's Worldwide Shipp is now the world's largest carrier, w 171 ships—more capacity than the cc bined Danish and Dutch fleets.

Meanwhile, buyers acting for ma land China have moved too. Over past two years, they have quietly bou $500 million worth of used tonna Heavy on commodity carriers instead tankers, the Chinese fleet is now half size of the U.S. merchant marine. Ma potential competitors worry lest Pek may soon try price-cutting in the b trades, much as the Soviets star recent liner-trade price wars to obt foreign exchange.

The current shipping crisis, of cou makes waves far beyond traditio maritime centers. Bankers are obviou affected: Total shipping debt approacl $50 billion, with U.S. lenders hold

A tanker's ups and downs

This 300,000-ton tanker is six years old, and the wild swings in its market value explain why shipping is such a risky business. New building cost was about $40 million, but buyers were paying 50% premiums during 1973's tanker boom. Since then, its market value has fallen fast—to perhaps $10 million now.

e 10% of it—a problem portfolio that early as large as their loans to real te investment trusts once were. Few ping borrowers are current in their ments today—though nearly half of maritime credits are backed by gov- nent guarantees.

Norway, for example, the govern- t's Guaranty Institute stands behind 0 million in loans to over a score of ers, including the once-high-flying nar Reksten group. That minimizes problems of London's Hambros k, now engaged in refinancing $100 ion worth of loans to Reksten. Simi- ail-out mechanisms exist elsewhere Europe. And in Japan, where union s prevent shipowners from laying off r crews, the government helped out nother way: Last summer it char- d 20 big tankers to float offshore fully ed as the nation's strategic petro- n reserve.

rewd people that they are, the Chi- have chosen this dismal moment to nd their holdings. It's the old wis- : Buy when everybody else wants In fact, many economists expect the er market, worst hit of all, to begin ing around by 1982, and rising tank- tes should lift other shipping rates g with them. If Hong Kong's capital- can scrape through by running cheap making their still profitable long- charters carry them until then, they have pulled off a coup that will per- ently change the balance of world ping. Peking, on the other hand, has et ready to carry its share of soon-to- n trade with the West.

ontrast this with what happened to Arabs, recent newcomers to world ping. Five years ago, when scheming to spend petrodollars became a major dle East pastime, nine Arab govern- ts launched Arab Maritime Petro- n Transport Co. with $100 million in t money and plans to up that quickly to illion. If the oil cartel could build a nterpart in tankers, the group rea- d, they could capture a slice of the oil stry's then huge profits from trans- ation. AMPT's early backers talked nsively of owning 20% of the world's er fleet and of forcing giants like on and Shell to charter from them.

MPT and other would-be Arab ship- moguls ran afoul of the law of supply demand. Their current tanker fleet of llion deadweight tons is less than 2% orld capacity, and one-third of their els are now idle. So far, the $350 ion that AMPT alone has spent on s had yielded operating losses of over million, enough to bankrupt less thy operators. And the current mar- value of AMPT's fleet, nearly all under years old, is only 40% of its cost—a r loss of another $200 million.

though they bought their tanker new at top-of-the-market prices, making their cost base among the industry's highest, the Arabs seem grimly determined to stay in shipping for the future. Besides AMPT, their governments have bankrolled United Arab Shipping Co., which aims to carry 40% of the Middle East's liner trade, and they are spending some $15 million a year on a network of maritime training schools. "A ship is one capital asset that's hard to nationalize," says a London broker. "That's appealing to rich sheikhs."

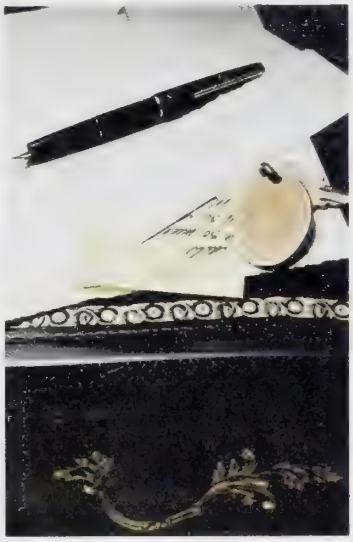
The Arabs are not the only newcomers determined to make a splash in world shipping. Developing countries like Brazil, India and South Korea own some of the world's fastest growing fleets. Brazil's tonnage, for example, is roughly equal to that of Sweden and Denmark—double its size five years ago. Like the Chinese, these countries benefit from low wage costs for crews, but as major commodity exporters they are getting political help too: Recent United Nations guidelines say that the trade they generate should be divided 40% each between ships of the exporting and importing countries, with only 20% left for the traditional middlemen like the Scandinavians and the British.

The Arabs are not the only newcomers to shipping. Developing countries like Brazil, India and South Korea own some of the world's fastest growing fleets.

No one can be sure how long the current shipping crisis will last; but its end is certain to be complicated, and perhaps delayed, by the political concern that has led to loan guarantees and subsidies for shipowners and shipyards alike. Consider a recent deal by U.K. shipbuilders with Poland: Out of a $230 million order for 24 bulk carriers and barges, the "gift" element (consisting of direct grants and low-cost financing) amounts to a price reduction of nearly 50%. That provides cheap new capacity for the Polish fleet—which is already taking business away from British shipping on many routes.

Ship operators and builders are trying on their own to limit capacity. The latest proposal, by an industrywide organization that also includes bankers, is for a massive scrap-and-build program that would offer extra-low credit terms for new ships, provided owners junked two tons of old capacity for every ton of new. The problem? Steel mills can't absorb that much incremental scrap, and it would cost $12 per ton—an average of some $2 million per tanker—just to underwrite demolition.

All in all, then, things couldn't look darker for world shipping. Which seems—no surprise—just the time for the Chinese to buy. ■



Everything to write home about.

Survival of the fittest.

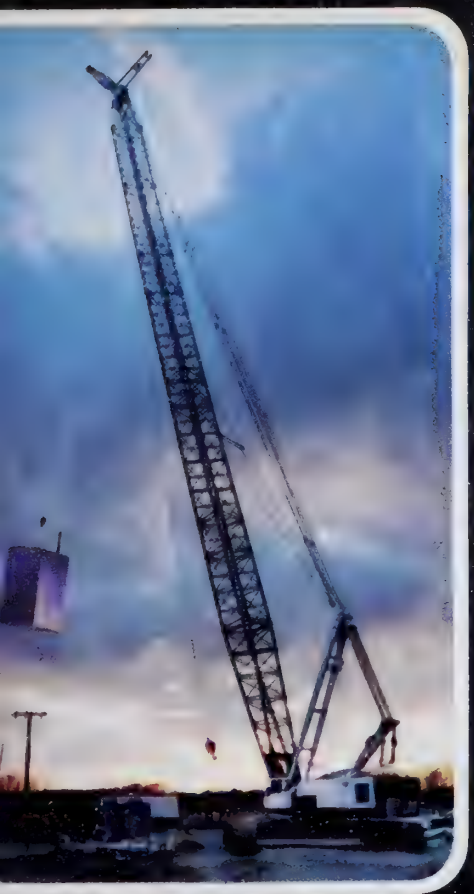
We build machinery for an unforgiving world. A world where freezing temperatures, or abrasive dust, or an unexpected gullywasher are no excuse for a wasted hour. A world where the stakes are high and you seldom get a second chance to meet a deadline.

So we build Clark products with rough conditions in mind. Then back them with a worldwide network of dealers who know how to keep them fit. With factory-trained mechanics. Healthy parts inventories. Everything it takes to keep our customers up and running.

In our world, only the fittest survive. That's why, year after year, the tough jobs come to Clark.

Clark Equipment Company, Buchanan, MI 49107.

Clark gets it done.



Clark crane delivers the world's largest ectric motor.

Blocks of frozen orange juice get a lift from Clark.

Clark lift truck works around the ock unloading ships.

Clark's Melroe Bobcat loader maneuvers a big load in tight quarters.

Underground marble mining—a dusty job for a Clark 125B loader.

The world's largest planetary axle gets a pre-installation checkup.

CLARK

LOVE LETTERS TO A CAR COMPANY?

You'd probably never dream of writing a love letter to the company that built your car. Yet at Volvo, we get them all the time.

Maybe because 9 out of 10 people who buy new Volvos are happy.

But some people who own Volvos aren't merely happy. They're absolutely ecstatic.

People like Orv Jacobson of Ocean Shores, Washington: "Now that it's at the 200,000 mile mark, I figure it has another 200,000 more miles in it...you just don't trade in members of your family."

Mary Howard of West Trenton, New Jersey: "This is the first time in my life that I still had a good car after it was paid for."

Or, The Reverend Ernest G. Olsen of Westfield, New Jersey who, after 225,000 trouble-free miles, says simply: "Love that Volvo."

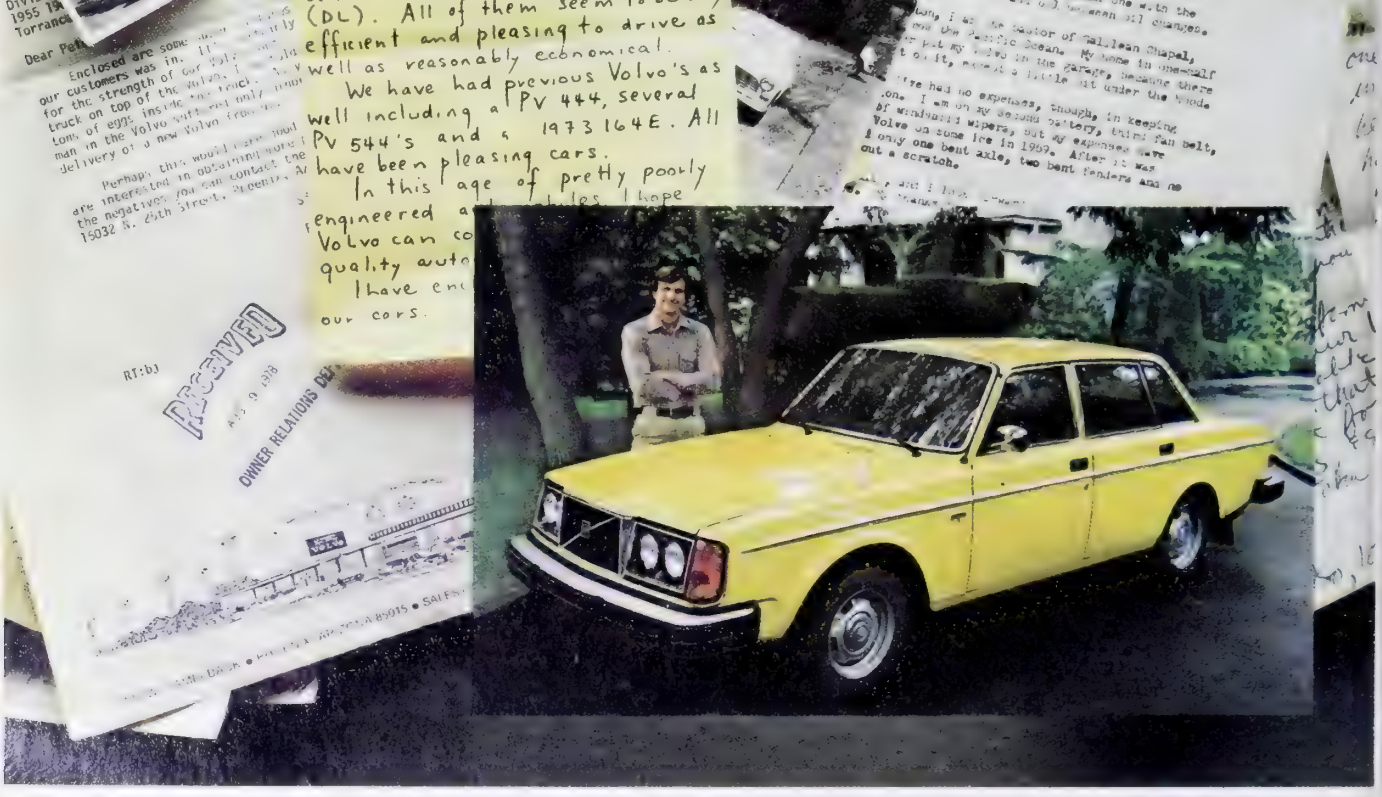
If you can't think of any love stories to write about your present car, maybe your next car should be a Volvo.

After all, why buy a car you might regret? When with a Volvo, you'll probably end up never having to say you're sorry.

VOLVO

A car you can believe in.

© 1979 VOLVO OF AMERICA CORPORATION
LEASING AVAILABLE



Mark Sturbs Box 66

In five months of constant rough driving I've been very pleased with how tough the Volvo's have been. Our current fleet consists of: 1964 122S Station wagon, 1966 122S automatic station wagon, 1967 122S Sedan and 1976 265 automatic, (DL). All of them seem to be very efficient and pleasing to drive as well as reasonably economical.

We have had previous Volvo's as well including a PV 444, several PV 544's and a 1973 164E. All have been pleasing cars.

In this age of pretty poorly engineered a... Volvo can co... quality auto... I have en... our cars.

ew York, with Broadway booming, gets only 0% of the American theater's take. Aesthetically, too, its heart is in the heartland.

Enter struggling—the theater's remarkable revival

By Jefferson Grigsby and William Harris

ON A CLEAR, crisp day last October, a 20-foot van loaded with 4 tons of lights and scenery pulled into chikan, Alaska (pop.: 11,000), after eling 2,000 miles through Alaska and Canadian Yukon and spending a day a half at sea.

he next night, 3,084 miles from dway, actors Mitchell Edmonds and Tanny McDonald stepped on stage at the Ketchikan High School auditorium to present *The Fourposter.*

Edmonds and McDonald are professional actors, and Ketchikan was the last stop of the 1978 statewide tour of the Alaska Repertory Theatre. Barely two years old, it has a budget of $1.2 million and puts on nearly 80 performances a year. It operates two theaters and draws more than 40,000 in attendance, equivalent to 13% of the state's population.

a Repertory Theatre's production of The Fourposter
y Alaskans are seeing professional theater for the first time.

Live theater, which scholars trace back to ancient fertility rites, has had a new birth in the U.S. Admittedly, theater isn't big business in an economy where a single movie can gross $100 million. Last year total box-office take of the live theater was just $600 million. This was dwarfed by TV's $9 billion, the record industry's $3.3 billion or the movies' $2.8 billion. But the vitality is out of all proportion to the dollars involved.

This will not be the theater's first comeback. It has often been pronounced dead. Oliver Cromwell closed the English theaters, which had attracted mass audiences; he thought them immoral and frivolous. The movies, with more expansive range and 10- and 25-cent admissions, virtually killed theater as mass entertainment in the U.S.; television supposedly delivered the coup de grace.

What is behind the current comeback no one quite knows. It almost certainly has something to do with today's yearning for flesh-and-blood in an age of electronic-everything. Twice as many new plays were produced in 1978 as in 1969, and the U.S. government estimates that one out of every ten adults in the country attended a live performance last year. The U.S. now boasts approximately 1,500 professional theaters.

Broadway itself, in the doldrums since the late Sixties, attracted 9.6 million patrons last season and had a record box-office gross of $113.4 million. It's running 30% ahead of that pace so far this year. But the 39 theaters between 41st and 53rd streets on Manhattan's West Side known as "Broadway" are no longer the font of live dramatic art in America. In fact, New York City accounts for only about 20% of the American theater's audience. Now Broadway is as much taker as giver. The growing non-Broadway theater has become a farm system for the whole entertainment industry. Of the 29 plays currently running on Broadway, 12 began somewhere else, including *Da* and *Ain't Misbehavin'*, 1978 Tony Award winners for best play and best musical. *Annie* came out of a converted opera house in East Haddam, Conn. *Grease*, now the fourth longest-running play in Broadway history, started as an amateur production in a Chicago basement.

The Honolulu Theatre for Youth mixes classical repertory like *Hamlet* and *Faust* with original plays fashioned out of Hawaiian native legends. The Roadside Theater in Lexington, Ky. turns rural folklore into plays. The San Francisco Mime Troupe has been mixing political satire with borscht-belt schtick in the parks of San Francisco for almost 20 years. There's a feminist theater in Omaha. On New York's Lower East Side, the New Federal Theatre puts on black, Hispanic and Jewish plays, all free.

Out in Sinclair Lewis country, the 16-year-old Guthrie Theater brings first-

class touring repertory to a huge area of the country between the Rocky Mountains and Chicago, and grosses $60,000 a week in its 1,441-seat main auditorium in Minneapolis. Its audience is right out of the TV generation—average age: 30. In San Francisco, the American Conservatory Theatre operates on a $5 million annual budget and draws more than 300,000 annually. In Los Angeles, the Mark Taper Forum operates two theaters and recently bought an old Hollywood nightclub to convert to two more.

In Washington, D.C., the Arena Stage, one of the first of the new regional companies, was the only resident professional theater in the nation's capital when it opened in 1950. Now it operates two theaters and a cabaret and faces vigorous competition from several other theaters including the $70 million John F. Kennedy Center for the Performing Arts.

In New York, Joseph Papp's New York Shakespeare Festival has become a $30 million theatrical miniconglomerate, and Papp is now the biggest producer in America—an "heir" to the magic names of Ziegfeld and Shubert. In the Shakespeare Festival's Public Theater headquarters in lower Manhattan, as many as four plays a night are presented, often free of charge—while uptown on Broadway, Papp's superhit, *A Chorus Line*, brings in the money at up to $24 a ticket to support the whole thing.

Along with the renaissance have come campaigns to save historic theater buildings from the wrecker's ball or the indignity of pornographic movies or cheap strip shows. Gene A. Chesley, a University of California professor and professional theater designer, estimates that at least 35 old theaters have been or are being restored. The cost can be steep; in Kansas City, Mrs. Joan Dillon, wife of Butler Manufacturing Co. Chairman George C. Dillon, and a group of historic-theater buffs have raised nearly $2 million of the $3 million cost of restoring the 79-year-old Folly Theater. Others: the 108-year-old Wilmington, Del. Grand Opera House; Chicago's Auditorium Theater; and East Haddam, Conn.'s century-old Goodspeed Opera House.

The theater is a crazy business, though. It is highly labor-intensive, yet you can see a performance in one of New York City's hundreds of Off Off Broadway theaters for less than a cinema ticket costs. How is this possible? In large part because of subsidies. The National Endowment for the Arts came up with $6.3 million last year; several state and local governments also chipped in, as did various foundations and private or corporate donors. In all, subsidies provided about a third of the non-Broadway theater's operating funds.

But, putting Broadway aside, the biggest subsidy comes from the theater people themselves, who frequently provide

American Conservatory Theatre's Executive Producer James B. McKenzie

Resident theater—healthy but hard up

There are 65 large resident regional theaters in the U.S.; almost every city of over 750,000 population now has one. Usually located in decaying downtown areas, these theaters add to the local cultural life; they also often serve to revive their aging neighborhoods by drawing educated and well-heeled people to them, particularly in the evening.

Perhaps the most elaborate of the resident theaters is the American Conservatory Theatre in downtown San Francisco. This theater had a budget of $450,000, when it was started in Pittsburgh 15 years ago; its budget is now over $5 million. Over 75% is earned income, mostly from ticket sales—the prices range from $3.50 to $11. The $1.5 million or so in unearned income was provided equally by government funding and private contributions.

San Francisco is unusual in that it levies a special tax on hotels—a tourist tax—which is divided up among the city's cultural enterprises. The tax last year provided $200,000 for ACT, second only to the $295,000 from the National Endowment for the Arts. The tax makes sense: ACT is itself a major tourist attraction and a real service to the local tourist business. Yet another organization, the private California Association for ACT, raised $450,000 last year to help ACT put on 20 productions.

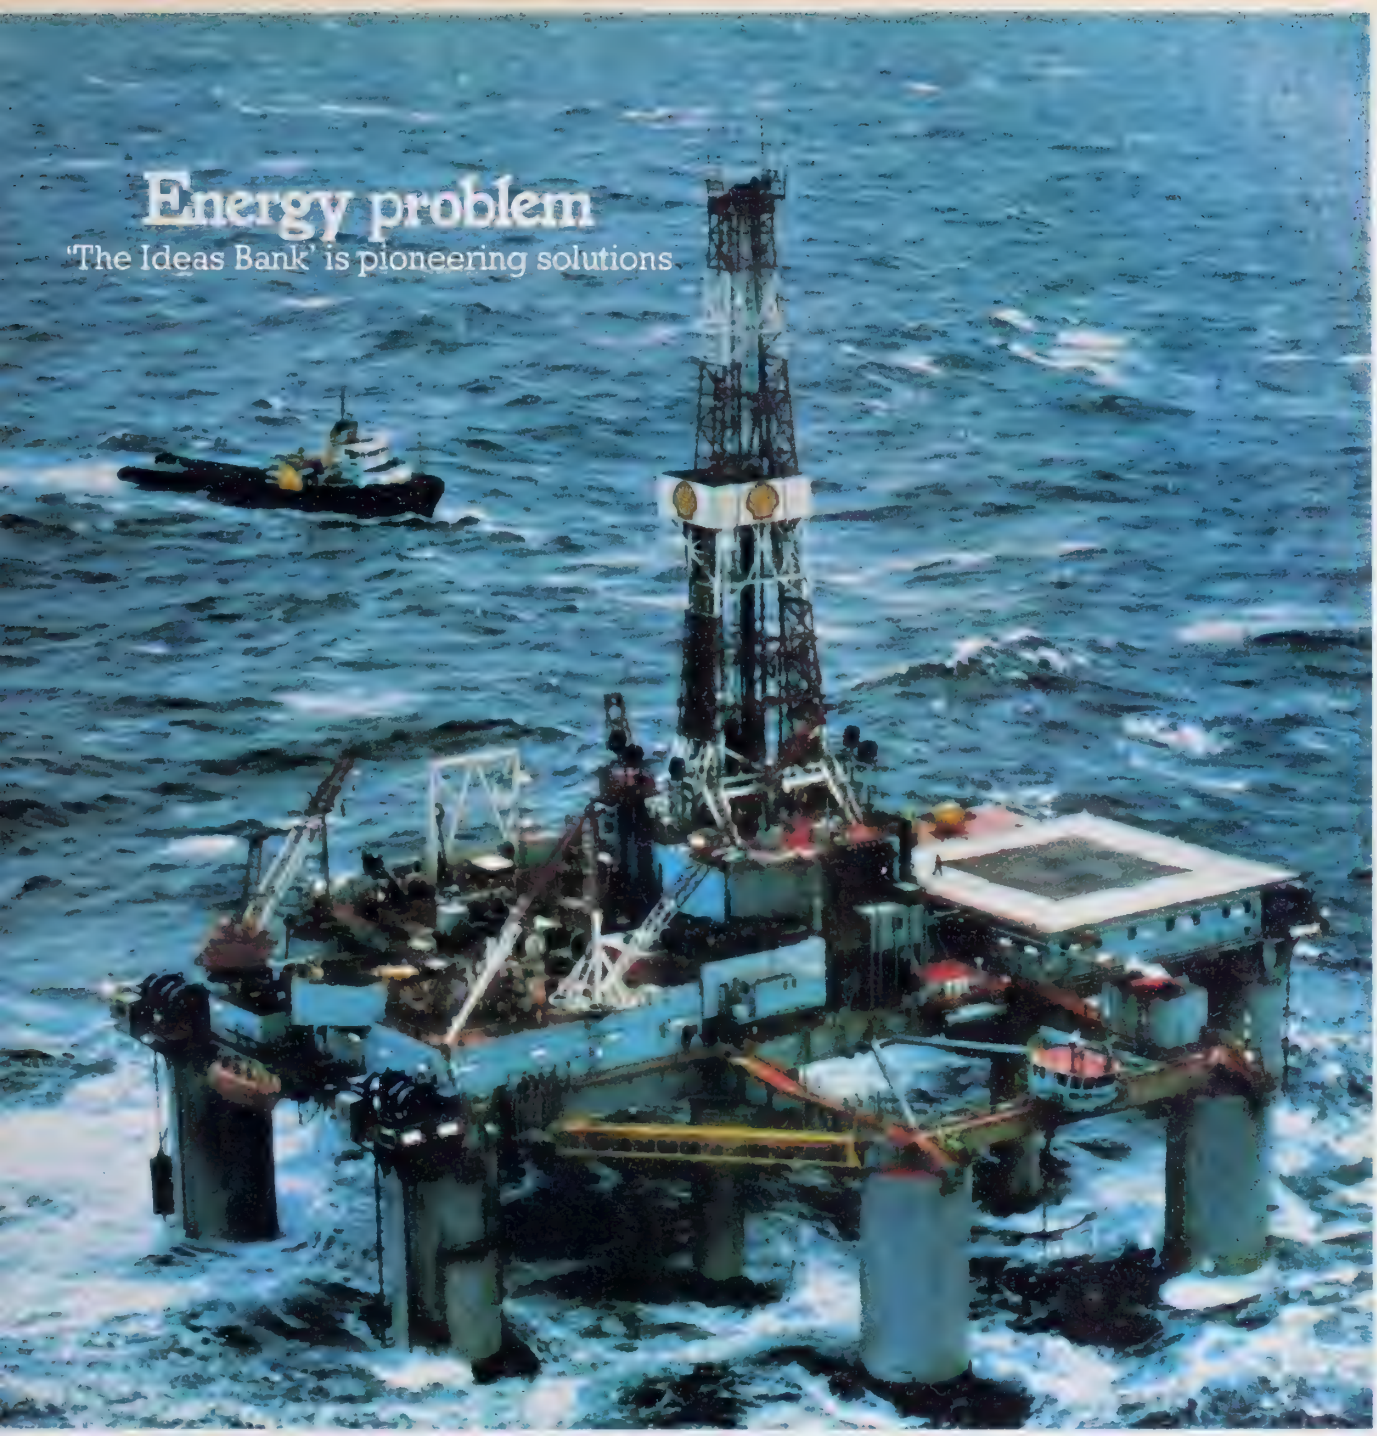
ACT has three major theater spaces: a 1,400-seat theater that houses a revolving repertory of nine plays, a 640-seat theater that last season mounted six plays and an experimental 49-seat house that last season staged five productions. On the main stage plays cost an average of $200,000; each runs for 22 to 34 performances. Half the theater's 40-member acting company received a full 44 weeks of employment. The average salary: $275 per week.

Thus, thanks to ACT, San Francisco can support a small full-time population of professional actors; they needn't all emigrate to New York or Los Angeles. ACT spent 51% of its $5 million on salaries.

The Trinity Square Repertory Co in Providence, R.I. is typical of the more modest resident theater in the U.S. Last season's budget was $956,000, and the theater ended its fiscal year with a deficit of $60,000. The largest portion of resident theaters operate within budgets of $600,000 to $1.1 million and end up with deficits.

Trinity Square operates two theaters, with 500 and 300 seats, respectively. Ticket prices range from $5 to $8. Last season the box office supplied over 50% of the operating budget for ten plays and 333 performances.

Trinity's three largest angels were the federal and state governments ($234,000), private foundations ($128,000) and individual contributors ($69,000). Administrator G. David Black admits the theater is lagging in community support—less than 7% of Trinity's budget. Providence, are you listening? **—William Harris**



There are no easy answers to the worldwide energy problem. But one fact is obvious: any long-term solution will require massive and imaginative investment.

Canadian Imperial Bank of Commerce – over $38 billion (Canadian) strong – has been involved in worldwide energy development for years. And we are stepping up our involvement.

We participated in the formation of the International Energy Bank, whose shareholders and associates have combined assets of over $200 billion. This bank's purpose is to finance energy development worldwide, beginning with the North Sea. It's a sound idea. But it's only one of many which we are considering.

We have evaluated energy proposals ranging from nuclear power plants to hydro-electric complexes, from Norway to the Near East. As 'The Ideas Bank,' good ideas are our stock in trade. So if you have an idea in the energy business, call your nearest Canadian Imperial Bank of Commerce office.

CANADIAN IMPERIAL
BANK OF COMMERCE

Head Office – Commerce Court, Toronto M5L 1A2, Canada New York Agency 22 William St., N.Y. 10005 • (212) 825-7000
Over 1,700 branches in Canada, branches or banking offices in major business centres worldwide

their services either for free or for not much more than a token wage. This is almost unheard of in an era when members of almost every other profession—including doctors and teachers—are pushing for every penny they can get. Star Tammy Grimes, who commands a substantial five-figure salary on Broadway, recently worked Off Off Broadway in *Molly* for $35 a week.

Grimes is no anomaly.

Nancy Haffner is a 29-year-old actress who lives in New York year-round on the income derived from appearing in television commercials. You've probably seen her pushing Pampers or Kentucky Fried Chicken. Last year Haffner earned $12,000 in TV commercials from what amounted to one week's work.

During the rest of the year, Haffner knocks on endless doors, auditioning for the innumerable Off Off Broadway productions. The most she's ever been paid for her stage work is $50 a week.

"To be in the theater is a gift from the devil," says Academy Award-winning actress Estelle Parsons. "You have to keep doing it because it's in your blood." Parsons spends four to six weeks each year working in television or films, and devotes the rest of her time to the stage. Currently directing an Off Off Broadway production of *Antony and Cleopatra,* she will receive $150 for four weeks of rehearsals, four weeks of performances and the planning of the production, which began last November. She's doing it simply because she wants to.

Parsons tries to earn $35,000 a year to support her two children. She can make at least 70% of that in those four to six weeks set aside for TV work. She says: "I plan what I want to do and take other jobs to make up the difference."

Like nearly everyone, stage actors have a union, Actors' Equity Association. Its wage scale is byzantine in its intricacies. The Broadway minimum is now $355 per week. Off Broadway minimums are determined by seating capacity. An actor performing in a 150-seat theater makes $138.58, while the same actor in the same play in a 250-seat house earns $170.56. There is a similar tiered structure for regional theaters, though the pay is related to the theater's potential box-office gross. The minimum ranges from $202.30 to $257.

That's *when* the actor works. The average earnings of Equity members in New York last year was under $8,000. Hardly a living wage. Those that can't supplement stage earnings with TV or film work are often part-time waiters and waitresses (now you know why so many attractive young people wait on tables in Greenwich Village restaurants).

In an age when a drink at a fancy bar costs $2 and up and a moderately priced meal for two goes for $40, non-Broadway theater, with the average top ticket ing for $8, is one of the last bargains

Why, then, is Broadway so relati expensive—up to $25 for a ticket musical? In part because it occupies pensive real estate and indulges in ex sive advertising; also because it is scene of considerable trade union fe erbedding. Broadway—as opposed to regional and Off Broadway theater unionized down to the janitors.

Take the stagehands, the people change the scenery, run the lights,

The biggest subsidy com from theater people who j quently provide their servi free or for a token wage.

Their minimum hourly rate is $1 (which includes a built-in 7% vacat increment). There is a second fee st ture for performances, $42.48 per sh For the typical 2½-hour show, comes to $17 per hour. Union reg tions require that at least four stageha be employed—others are added depe ing on the technical demands. For musicals an average of 16 stagehands backstage. *Annie* has over 30. The m mum the lowliest stagehand earns week is $364. A department head, h ever, earns $475. Add it up and *Ann*

kly stagehand bill alone comes to $12,000—the equivalent of the pro- s from 615 $19.50 seats.

en there are the musicians. They a minimum $425 a week (not in- ng a 6% vacation pay increment). he real stranglehold Local 802 of the rican Federation of Musicians has roadway is the "complement" sys- The union determines how many cians are required for a theater. Six es, for instance, have a complement musicians. Even if a musical's or- ration requires fewer than the com- ent, the producer must pay the total nated. Although the extra musi- are technically understudies, they alled "walkers" because the only they perform involves walking to ank with their paychecks.

th its heavy overhead structure, lway is a risky investment—now expensive than ever. It costs be- n $250,000 and $375,000 to mount a ight" play and up to $2 million for a cal; both figures have doubled in the ecade. Two out of every three musi- nd three out of every four plays are cial failures; and Robert J. Anderson Mathtech, the Princeton, N.J. re- h company, has calculated that on the *successes,* the average Broad- "angel" stands only to recoup his ey. That's why New York State's al theatrical securities law requires Broadway prospectuses to warn: "Investors should be prepared for the possibility of total loss."

Those prospectuses make interesting reading. Most Broadway shows are financed by limited partnerships. The producers, or general partners, put up no money and assume most of the liability. The angels, or limited partners, put up all the money and split any profits with the general partners. Theoretically, a $20,000 investment in a $1 million musical will get you 1% of the profits.

But there are often no profits to split, even on "successful" shows. To begin, the general partners often take 1% or 2% of the box-office gross (as well as a weekly charge of $400 to $500 for "office services"). The theater takes 25% to 30% for rent. Directors, authors and composers get 2% to 5% royalties, depending on their stature. A star gets 10% of the gross—Jack Lemmon recently broke that barrier by taking 12½% of *Tribute.*

Little wonder, then, that *The Shadow Box,* which ran on Broadway for nine months in 1977, won the Pulitzer Prize and the Tony Award, and never showed a profit.

In fact, the wonder is that those backers keep coming back for more—particularly on the track record of some producers. Take Barry M. Brown, Fritz Holt and Gladys Rackmill, the general partners of *Platinum,* starring Alexis Smith. Brown and Holt had produced five plays previously, only one of which—*Gypsy*—made money for their limited partners. Rackmill's producing record was worse.

Nevertheless, Brown, Holt and Rackmill raised $1.25 million (including $325,000 from Paramount Pictures Corp.). *Platinum* opened to negative reviews, ran for 45 performances and closed, losing every penny.

Thus, just as the players subsidize much of the noncommercial theater, Broadway is heavily subsidized by investors. Why do many continue to play a losing game? Partly for the long-shot chance of backing a really big hit (*Same Time, Next Year*'s backers have so far received $7 for every $1 they've put up, and it's still coming), but more likely for the sheer thrill of participating in the theater. Here is one of the last businesses where the main coin is glamour, not gold. In fact, there are usually more investors than there is product.

With the movie companies, however, theatrical investing makes sense. In the last five years, in addition to the $25 million or so the major film companies have spent for rights to Broadway shows, they've put about $3 million into direct backing of untested plays. Twentieth Century-Fox Film Corp. invested more than $1 million in *The Wiz* on Broadway when its future was far from assured, and

Off Off economics

Three-fourths of the Off Off Broadway theaters and their regional equivalents nationwide operate on budgets of under $50,000 a year. Typical is the WPA Theatre, located in a run-down office building on lower Fifth Avenue. Last year the WPA presented six productions in its 98-seat house at a cost of $36,000. Of that, 47% came from sales of $3 tickets. The rest was made up from government grants, a beverage concession and rental fees (theaters often sublet their spaces during the summer months to visiting troupes). Private contributions—money generated through fundraising efforts aimed at corporations and individuals—were the bulk of unearned income.

The WPA spent $13,000 just to maintain its space—electric bills, rent, telephone, insurance, etc. Actors were paid $50 for the eight weeks of rehearsal and performance time, or about $1 a day. The theater administrators drew no salary.

One of WPA's productions, *Gorey Stories,* was moved to Broadway this past fall on the strength of its reviews. The WPA's contract with the Broadway producer entitled it to ½% of the gross. Alas, *Gorey Stories* closed on its opening night. What the WPA had mounted for $3,000 cost about 100 times that on Broadway.

The Lion Theatre is relatively affluent among Off Off Broadway theaters, operating last year with a budget of $80,000. Less than half that money was earned income, a good portion of which—$24,000—came from the theater's share of the profits of *Vanities,* the Off Broadway hit which Lion originally coproduced. The theater filled only 33% of its seats, which managing director Larry Carpenter attributes mainly to the theater's bad location (42nd Street and Tenth Avenue), and bad weather coupled with a broken boiler (which meant there was no heat).

Like the WPA, the Lion last year spent much of its money on overhead—21%. About a quarter of the total was spent on artists' salaries: Actors at Lion are paid $50 per week during both rehearsal and performance periods. Three people, the producing director, the managing director and the administrative assistant, are salaried, earning $125 a week. Try living in New York on $125 a week before taxes. All have other jobs to supplement their incomes.

—William Harris

made a nice profit on it—even without picking up the film rights. Columbia Pictures Industries, Inc. has $500,000 in *Dancin'* and owns a small piece of *I Love My Wife.* Paramount isn't dissuaded by its $325,000 loss on *Platinum.* "We still think it has movie potential, and we're going to negotiate for the movie rights," says Paramount Vice President Francis O'Brien.

Warner Communications Inc. has formed a joint venture, Warner/Regency Productions, to put on at least three new Broadway plays this spring.

Universal Pictures is the sole investor and sole producer of *The Best Little Whorehouse in Texas,* a musical based on a *Playboy* magazine story about a famed Texas bordello. If Universal gets back its $800,000 investment, says Vice President Stevie Phillips, it could lead to a full-fledged theatrical division "to commission and produce plays." Already, Universal has followed up *Whorehouse* by investing $625,000—or half the capitalization—in a musical version of *I Remember Mama,* which is scheduled to open on Broadway in April.

Hits like *Same Time, Next Year,* however, are few and far between, and the best of the theater is often too sophisticated, too special to have movie potential. The hard fact is that there is no source of big money for the regional theater, and that's where most of the action is.

"It took all of us a while," says Iris F. Siff, managing director of Houston's Alley Theatre, "but we have finally lost the illusion that the resident professional theater could make it on its own. The opera and symphony folks knew that all along. We're just learning it." If you can't make it in moneyed Houston, you probably can't make it anywhere.

Moreover, the foundation and government support that fostered resident theater's spectacular growth has not kept pace. The Ford Foundation put about $3.2 million a year into theater grants in the late Sixties and early Seventies; since 1973 the figure has averaged about three-quarters of that. The National Endowment will distribute about $7.3 million of its $140 million in grants to nonprofit theaters this year; but in real dollars, that amounts to less than the $5.2 million the NEA gave in 1975.

In the current taxpayer climate, additional government help seems unlikely. And although private and corporate contributions have increased, they haven't filled the gap. "We're surrounded by big corporations up here but the amount they give is minuscule," grumbles M. Edgar Rosenblum, executive director of the Long Wharf Theatre in New Haven, Conn., another major regional theater.

What's the answer? "The fact is," says William P. Wingate, the Harvard-M.B.A. general manager of the Mark Taper, "we're either going to have to raise most of the money ourselves in the future find ways to earn it."

How? One way is by getting b some money from Broadway in ret for the product on which Broadway creasingly depends. The tiny Manhat Theatre Club, which created *Ain't Mis havin',* will receive at least $100,000, about 15% of its $715,000 operating b get, from Broadway royalties this y But others will get much less. Buffal Studio Arena Theatre will collect roug $50,000 from its three exports, *Platinu Semmelweiss* and *Crucifer of Blood;* t doesn't go far to cover a $600,000 defi The Actors Studio, the high temple the profession for a generation of U actors, staged the first "showcase" p duction of *The Best Little Whorehouse Texas* in 1977 but has received less th its $10,000 production costs.

Actress Alison Fraser
Her "normal" job supports her caree

Papp's Shakespeare Festival so far h had the most success; when *A Chorus L* moved to Broadway, the Shakespe Festival retained its ownership, reapi $22 million a year in revenues. This h caused a problem of another kind: Pa gives *A Chorus Line* about a year and a h more, and he knows there's no turni back. "We can't get smaller without stroying the whole operation," he sa The answer seems clear, although Pa doesn't like to say so: He may have find more hits in the future. Either th or convince the government fundi agencies that "we're at least as imp tant as garbage collection."

That the theater has made the com back it has with limited financial a therefore, is largely a tribute to the de cation and ambition of the men a women who write, act, direct and sta the shows. The danger is that the com back will founder on inflation and t indifference of potential money peop Surely a nation with a gross natio product of more than $2 trillion can fi some extra cash to keep this healt aspect of popular culture from languis ing and dying again.■

City Investing has impressive assets, but it has its money problems.

The best-laid plans . . .

City Investing's Scharffenberger
Away from the office collecting honey from his bees.

CITY INVESTING CO., as it exists day, is a child of the 1960s, a cd glomerate-conglomerate, the c ation of a Litton Industries alumn George T. Scharffenberger. It is in ins ance, magazine printing, air-conditic ing, metal fabricating, real estate, s ings and loans, motels and mob homes. Recently, it added vending a fast food and is about to buy its way ir printed forms. Scharffenberger, the m who put it together and holds it togeth takes as his inspiration not Alfred Slo the guru of management techniques, Benjamin Graham, the guru of asset-c ented investing. City Investing owns less than $5 billion of assets pyramid on about $470 million in common stoc holders' equity. Its revenues this y should hit $5 billion—nearly $220 common share. The leverage is terrific

Does this kind of conglomerate ma sense? The results so far are mixed Scharffenberger, 59, is determined make it work. For some time he has be talking of early retirement and now sa he plans to bow out in May. No questi he has his hands full dealing both wi the problems that afflict City and t potential that lies ahead of it.

A major problem is the stock mark In the late Sixties City Investing co mon sold at close to $40 a share. Sin then fully diluted earnings have go from $1.13 a share to $3.06 last year a may hit $3.35 this year; dividends ha increased from 15 cents a share to But the stock languishes at 14½.

Tall, trim and tanned by winter skiir Scharffenberger, despite having lived the West Coast's casual environment 18 years, still comes on as a sober-suit eastern banker descended from a lo line of English gentlemen. (The oil pai ing "The Strawberry Girl" in his offi anteroom is by Sir Joshua Reynolds, maternal ancestor.)

Given an opportunity, Scharffenberg turns philosophical, saying: "Compani are 100-year creatures, that's their n ture. This is a story where you people the media, after you've written all t good things about a company, say 'a only time will tell.' "

It is still too early to write it. Even the late Sixties Scharffenberger public announced his intention of bowing o early from City. His hobby is beekeepi and for years Scharffenberger has ke four hives at his 17-acre property beautiful Palos Verdes Peninsula ju south of Los Angeles, anticipating t day when he could have more time f leisure. Scharffenberger even anticipat his exit as early as 1972 by appointir two joint presidents at City. Explain Scharffenberger at the time: "A ma who is involved in the building of a co pany tends to defend himself after while rather than to innovate."

Now Scharffenberger would like h

"As admirable as the Riviera's roadability may be, the car's most outstanding aspect is its interior environment."

"...it is an excellent example of the capability of American design and technology..."

"...the Riviera S is well within the tradition that made the original Riviera a classic."

"The Riviera S offers luxury with taste, and performance with comfort."

"Throughout, the Riviera exhibited a high degree of workmanship and attention to detail."

"The turbo provides a smooth, progressive application of power that belies the engine's small size."

Motor Trend Magazine calls the Buick Riviera S The Car of the Year.

(We think you'll come to the same conclusion.)

BUICK

After all, life is to enjoy.

GM

successor named at a board of directors meeting in May. "I still hope to bow out completely," he says, "but in some of the discussions there's the question of whether I shouldn't really stay on." What people don't understand, Scharffenberger continues, "is that I can hardly afford to stop earning a living." Translated: I don't want to leave until my stock sells at a more respectable price. Five times earnings is not good enough.

Scharffenberger is not what you would call a poor man. His personal real estate holdings are estimated to be worth several millions, and when he's 65 his pension will be at least $300,000 annually. But Scharffenberger has six children and perhaps is not as wealthy as he expected. With his wife he owns some 400,000 shares of City's stock. He puts his money where his mouth is.

Besides the problems common to all conglomerates, City has some special ones of its own. This is a complex tale. It begins back in May 1977 when Scharffenberger in effect turned Florida land developer General Development into a holding company, GDV, Inc., with City Investing as its major stockholder (59%) and himself as chairman. The idea, said Scharffenberger, was to ease diversification and to lessen General Development's dependence on community development and housing. Its real estate is immensely valuable but environmental awareness and accounting rule changes have reduced its appeal.

In the first half of 1978 GDV bought two of City's subsidiaries—Wood Bros. Homes, a Denver-based builder of single-family houses, and Guerdon Industries, a Louisville, Ky.-headquartered mobile-home manufacturer. The deals increased, not lessened, GDV's dependence on housing and place responsibility directly on GDV for servicing the debt of its new subsidiaries. To some outsiders Wood's acquisition in exchange for a promissory note looked like a clever way to eventually upstream cash from GDV's coffers to City. A group of GDV's minority stockholders have gone to court, claiming the deal is unfair.

Unperturbed, Scharffenberger and GDV went on making other deals. Also in 1978 GDV invested $15.1 million to buy over 8% in each of two large equipment manufacturers, Lamson & Sessions Co. and Chicago Pneumatic Tool Co. One hope was that somebody else would eventually make a takeover offer so GDV could make a fat capital gain. Instead, with the stock market down GDV can claim only a small profit on its investment. But, in the best Ben Graham tradition, it acquired an ownership in solid assets.

Then GDV outbid Liggett Group for Servomation Corp., a food service and vending company, and in December City outbid Daylin, Inc. for UARCO Inc., a printed-forms manufacturer, 2 of some 200 takeover candidates studied for GDV. To get UARCO, City is paying 73% above book and almost twice its market value of only a few weeks earlier. UARCO ranks a poor second in its industry, but Scharffenberger sees faster growth ahead plus some undervalued assets. "We will use our Home Insurance group to buy UARCO," he explains, "because we have used all of GDV's credit and don't want to unbalance its neatly balanced cash flow."

Buying Servomation is costing GDV $200 million, virtually all in cash. To finance the deal, GDV initially borrowed heavily from its New York bankers with its loans guaranteed by City. Twice last fall it tried refinancing the loans with public offerings, but in a bad market both issues were withdrawn.

The banks are charging GDV almost 14% for their loans. GDV will pay them about $28 million this year. As a hold company GDV's only income sources the dividends and federal income payments it collects from subsidiaries last year's first half GDV reported a ne tive cash flow, but the situation is proving. "There has been a remarka change of circumstances at Wood Guerdon," Scharffenberger says.

Last month he admitted to FORBES fore the Servomation deal went throu that he was "like a man walking eggs." One slip and he could have had Securities & Exchange Commiss around his neck, not to mention the F eral Reserve Board, which again is c ing a bleak eye on loans m solely to finance takeovers.

"I have to be careful ab this because if I say too mu the SEC will say, 'Call off shareholders' meeting [to c firm the Servomation takeo and redo the prospectus,'" said at the time. Then purs his lips: "We are not having a problem with finance. Unfor nately you are going to have wait for the benefit of hindsi to let us show you how it will happen."

Although he cannot say Scharffenberger may be look to Servomation to solve his nancial problems. Servomati has a plentiful cash positi ($27 million), few long-term ligations ($20 million) and conservative approach (in past) to dividends. According City Investing Treasurer Jo Quirk, after GDV acquired rest of Servomation last mon it would probably raise Ser mation's dividend payout r from the current 30% to 50 So where Servomation in fis 1978 paid $5.5 million in di dends, it could pay at least million this year.

In a period of inflation there much to be said for buying sets with borrowed money. E borrowing has its hazards.

No question about it, the sets are there. GDV owns over 100,0 acres of valuable undeveloped Flori property. Home Insurance is a solid op ation and the savings and loan throws a nice piece of cash every year. T printing operation is first-rate. Nearly of City's subsidiaries are profitable. Th $5 billion or so worth of possibly und valued assets—some $140 a fully dilut share—is not to be sneezed at.

"Now," says Scharffenberger, "we moving from the formative period where we should achieve good balan sheet ratios. We will be going into period of debt reduction." But the peri just ahead is going to be busy. ■

Scharffenberger at work

Stung by the stock market while shuffling his assets.

Now that our new blast furnace is on stream at Sparrows Point, what's to stop us from building more?

The price tag. This new blast furnace at our Sparrows Point Plant in Maryland cost more than $200 million. That's one of the largest single capital investments Bethlehem has ever made. We'd like to build other modern steelmaking facilities, but our resources are limited.

In recent years, the steel industry has found it difficult to generate sufficient funds to invest in all the newer and more productive facilities desired. Steel imports dumped into our country, soaring costs, and heavy environmental demands have all taken their toll on profits.

Solutions to these and other problems will help us generate additional funds for capital investment... help us adopt new technology wherever practical to cut our costs and improve our profitability. Bethlehem will continue to seek those solutions.

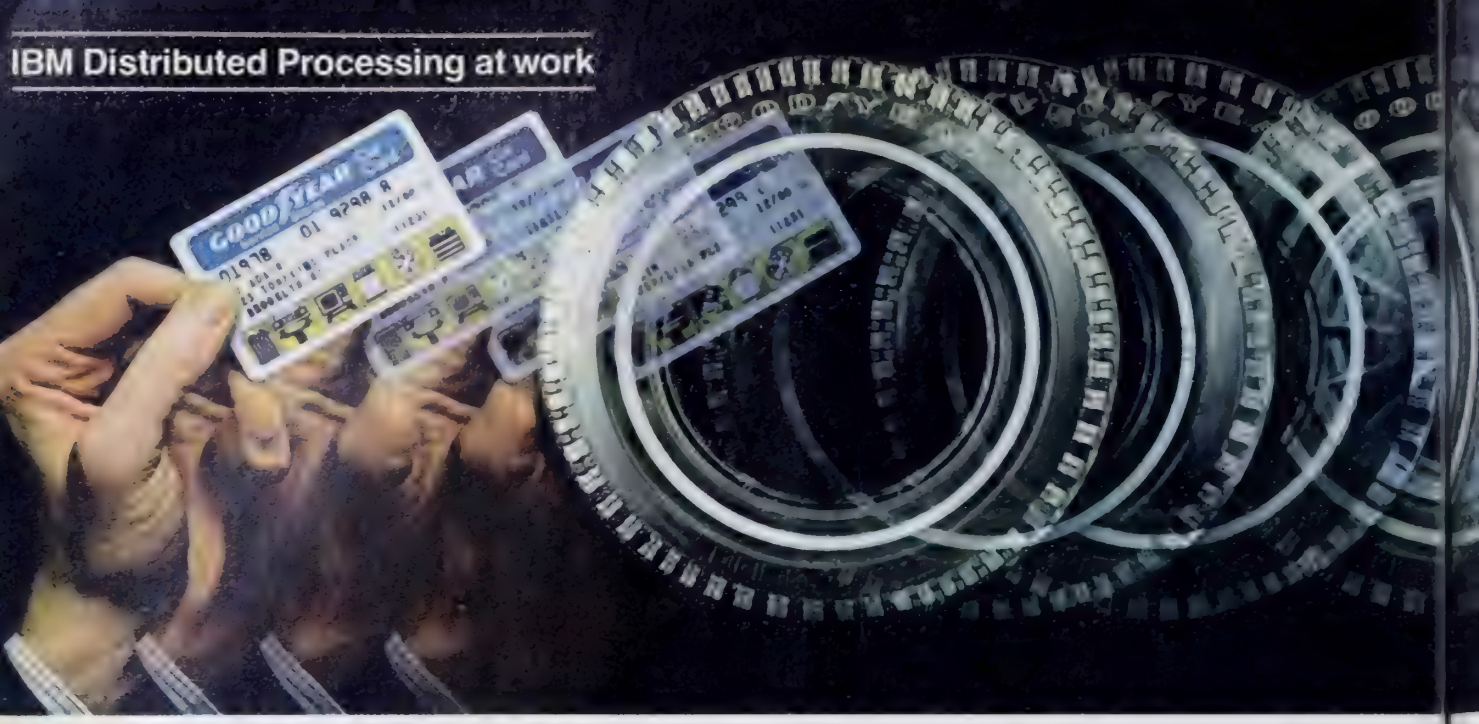
IBM Distributed Processing at work



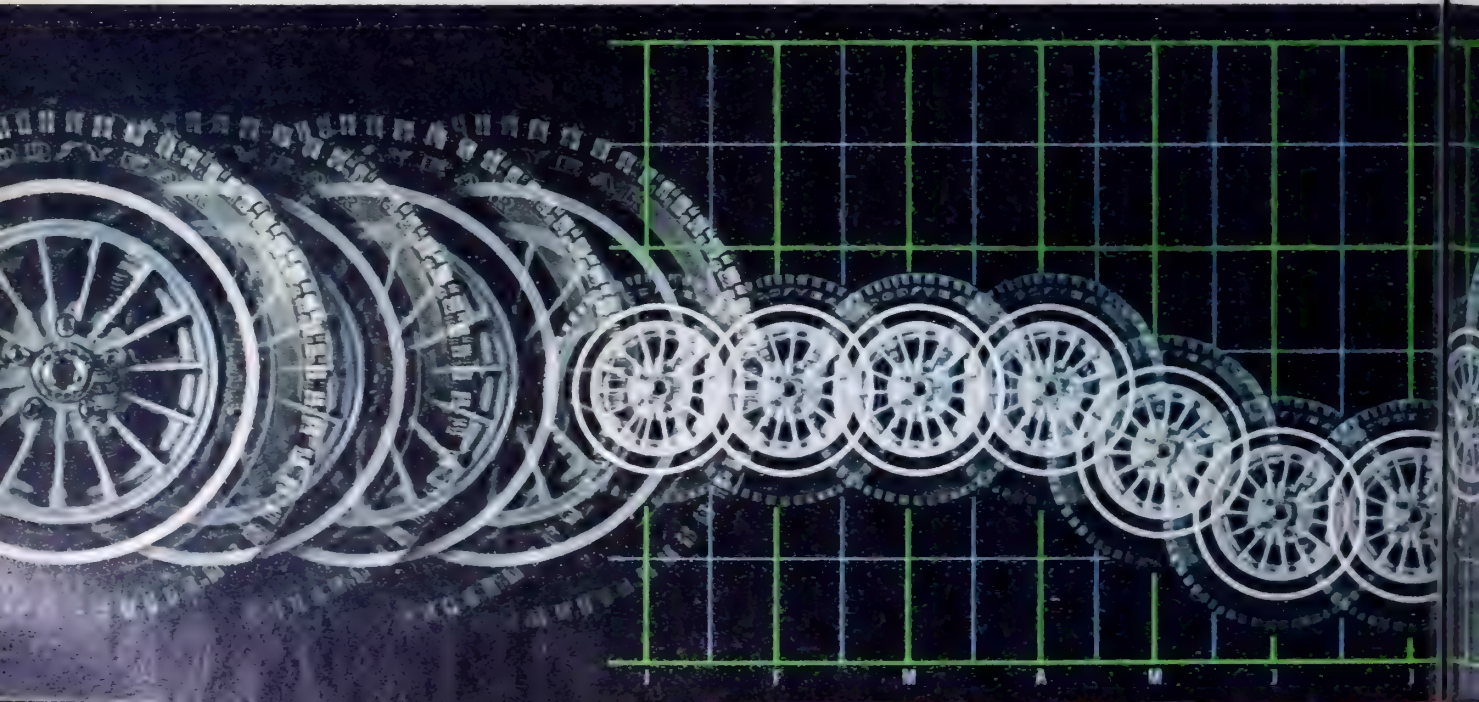
At Goodyear, IBM helps speed service

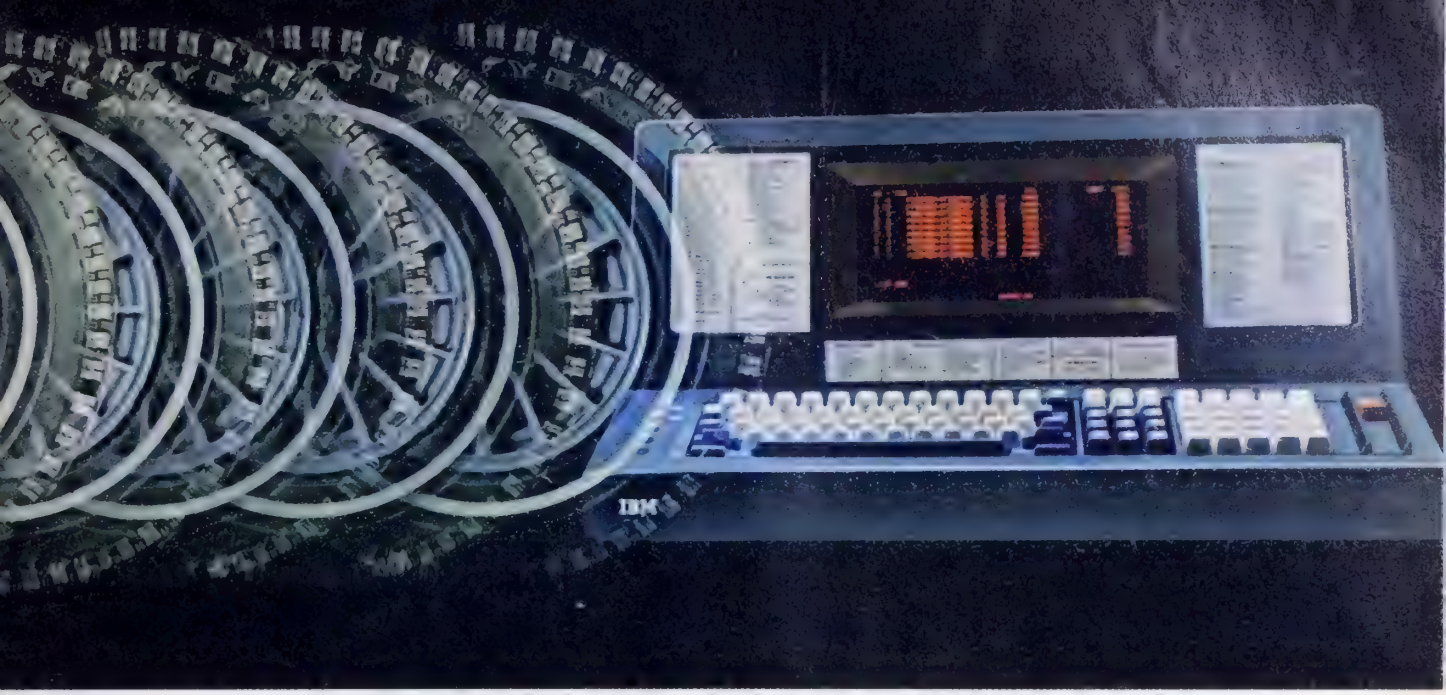
Goodyear service stores stock a diverse array of types, sizes and styles of tires. But an IBM computer terminal can tell a salesperson exactly what's available and the latest price. Whether the sale is credit or cash, customers drive away in less time. And that's just the beginning of how one of the largest IBM distributed processing networks is helping The Goodyear Tire & Rubber Company.

Already operational in approximately 500 of 1,600 Goodyear retail outlets, the system helps managers run their stores more effectively by providing an instant display of sales, inventory, dollar value and profit margin. And since the system also records on a sing receipt all customer payments sent in by mail, som five million cash receipt forms will be eliminated in o year.

Store terminals are online to IBM 3790 Processo that serve a selected area. These are linked Goodyear's headquarters in Akron, Ohio, where a ce tral IBM system processes store data from all over t country and prepares reports for top management.

Says Robert E. Mercer, president of Goodyea "At the retail level, our distributed processing syste helps increase sales, smooth operations, control cos





stomers, information to management.

d improve profitability. At headquarters, fresh, com-ete information pinpoints strengths or weaknesses d supports more responsive management. And the mpany-wide communications network we're building ll put decisions into effect faster."

The IBM Data Processing Division can help you t together a distributed processing solution. With stems – like the IBM 3790 and the new IBM 8100 Information System – flexible enough to operate the way your organization does. A network design that can grow with your needs. And the education, service and support you expect from a leader.

Call your IBM Data Processing Division office for more information. Or write, IBM Data Processing Division, Dept. 83F, 1133 Westchester Avenue, White Plains, N.Y. 10604.

The way we put it all together is what sets us apart.

Four leading utility executives explain why the power situation is even worse than most of us think it is.

Voices in the wilderness, or what not to do until the wolf arrives

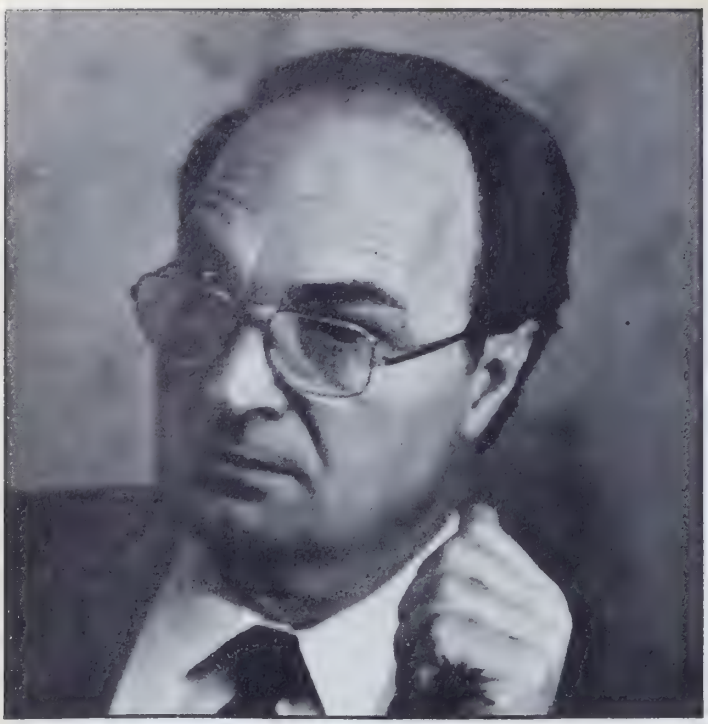
By Jean A. Briggs

ONCE UPON A TIME electric utility stocks were considered splendid investments, especially for people who needed income and safety. If the companies did their jobs well, the theory went, their regulators, the state public service commissions, would allow them to make a fair return. Not spectacular, mind you, but practically risk free. Furthermore, the companies could be expected to grow right along with the population and the economy.

But today the air is blue with clamor against these useful businesses. It comes from virtually every self-appointed champion of the environment, the consumer and the "poor." New York City's popular weekly *Village Voice* routinely treats muggers and rapists more tenderly than the men who run the city's Consolidated Edison. And not just in New York; even in conservative South Carolina the utilities are favorite whipping boys for politicians. When FORBES reported that the highly efficient Duke Power Co.—whose rates are 22% below the national average—had a relatively high ratio of net income to gross revenues, the company was accused by a group of state legislators of bilking its customers. That is something like saying that General Motors is swindling auto buyers because it makes more money than Chrysler, but the charge was made and the local press solemnly reported it.

Not surprisingly, investors shun utility stocks. Today they routinely yield 9% and as high as 11%, not because earnings are high but because the stock prices are so low. Is it possible that all this bad publicity has beaten utility stocks to bargain levels? Or are things as bad as they seem? A small group of top utility executives* gathered recently in New York City and spoke frankly to FORBES about their problems and prospects. Some excerpts from the session:

**The executives: Peter J. McTague, president and chief executive officer of Green Mountain Power Corp., which serves much of Vermont; W.S. (Pete) White Jr., chairman of American Electric Power Co., which serves America's industrial middle—Michigan, Indiana, Ohio, West Virginia, Virginia, Kentucky and Tennessee; W.S. (Bill) Lee, president of Duke Power Co., which serves 1.2 million customers in North Carolina and South Carolina; and Dr. Matthew C. Cordaro, vice president for engineering of Long Island Lighting Co.*



American Electric Power's W.S. (Pete) White Jr.
"To look at the National Energy Act in isolation doesn't really tell you what the true energy policy of the country is. You have to look at it in relation to environmental controls and other matters. . . ."

Duke Power Co.'s W.S. (Bill) Lee
"It is tough to persuade the public that we should be allowed to put these interest charges in our rate base. The public is concerned not with the lights in 1988 but with the bill that came in last month."

FORBES: You people have been accused of not doing enough to encourage conservation of electricity. The recently passed National Energy Act calls on state regulators to consider low utility rates for off-peak hours. Why is it necessary for the governments to force this upon you?

McTague: We already have time-of-day rates now that are very effective. But we expect they will be superseded when we get more storage on our system. We are promoting use of small, room-size heat storage units so heat can be stored and then drawn out as needed. If we have control over when the load goes on, then time-of-day rates become obsolete.

Lee: Our state commission has considered time-of-day rates at our instigation. We have filed a proposed time-of-day rate schedule for a volunteer sample of our customers so that we can test the concept. Another sample of customers is on remote control. We remotely control their heating or their hot water loads and give them stored heat. The customer doesn't care whether his hot water heater has power at that moment or not so long as he has hot water. We would like to reheat his tankful at times of our choosing, assuring him that with reasonable use he won't run out. I think we should communicate with the customer and tell him what his status is. Put a red light in the kitchen, or something, to tell him whether the current is on or off. Our sample of 1,000 is costing us about $300 per customer. It's sort of like color television, though. If it catches on and it is determined to be the economic thing to do, unit costs will come down.

Cordaro: There are problems. The New York State Public Service Commission has been interested in time-of-day rates for a long time. We launched an experimental program but a court suit was brought by an association of large industrial customers claiming it is discriminatory. That's now been settled and we are going ahead with the program, but it was hung up for a long time.

White: There are distinct differences between systems. In our case, peak is from 7 a.m. to 11 p.m. because industries work late and work on different shifts. There is only an eight-hour off-peak period. So there are limits to what time-of-day pricing could achieve. We have been working with two firms to develop a central heat storage system, however. It would go in a home right alongside—or in place of—a furnace.

Lee: In Duke Power's case our summer peak and our winter peak are in balance so a heat storage system doesn't help that much. We have stressed very heavy insulation, limited glass areas, storm windows, weather stripping so that we form a heat storage device out of a structure that would be equally effective summer and winter. We're pushing very hard and are giving a 5% discount across the board in electric rates to customers who insulate according to our standards. We have a program with housing developers, too. It's really catching on.

You know, even without laws and regulations, utilities are motivated in this direction anyway. In the Sixties eve additional kilowatt-hour we sold lower the average cost to everyone. Now eve additional kilowatt-hour we sell rais the average cost to everyone. So we a interested in having the rate of growth lean as we can make it and still fuel t economy.

FORBES: So you people don't thi the Energy Act means all that much

White: To look at the National Ener Act in isolation doesn't really tell y what the true energy policy of the cou try is. You have to look at it in relation environmental controls and also in rel tion to those things that affect the mi ing industry. That tells you what ener policy is. We know that there's been ta about the need to burn coal rather th oil and gas, and yet all of the legislati that we've seen in the last several yea makes coal more difficult and more e pensive to mine and more difficult a expensive to burn. So, while the policy to encourage the use of coal, the la make it more difficult.

FORBES: Hasn't that situation i proved recently?

White: Not really. The plants that ha not been licensed thus far by the vario state agencies and now by the Enviro mental Protection Agency will cost least 40% more than they would ha prior to the new Clean Air Act amen ments. We are waiting for the final reg lations to come out. We're in the proce of trying to get a new coal-fired pla started in Kentucky. We don't yet kno how to design it.

en Mountain Power's Peter J. McTague
s not like going off the edge of a cliff. What will happen reliability will be affected. We will get more interrupns in service for longer periods of time. . . . We have [power] but we don't have it as reliably."

Long Island Lighting's Dr. Matthew C. Cordaro
"Sadly, policy issues and regulatory issues hold us back. There is almost an unlimited supply of energy within our technical grasp. There's no real reason why people, out in time, can't use as much energy as they're able to use."

IcTague: The whole Energy Act is dicated on what they call coal conver-n, really conversion to a solid fuel, l or nuclear. But the other acts that e been passed by Congress tend ongly to deter coal and nuclear. At the ne time the Energy Act outlawed oil. ere isn't anything left.

ORBES: What about natural gas? 't gas getting a big boost now?

IcTague: Well, the Energy Act says can't build gas plants. That's an abite prohibition.

ee: Here's the whipsaw: Convert coal nts to oil for air quality. Now convert m back to coal for fuel savings. And v, even more recently, let's burn some our surplus gas. But don't build any -fired plants.

ORBES: Your critics point out that have been forecasting electricity rtages for a long time now. Where they? Where are the blackouts l brownouts?

hite: You have to look at the economy a whole. Someone said recently that nomists should be the last people in world to cast stones about not being e to predict properly. We have to fore- our loads in light of what the nation-redictions are in terms of the econo- And if those turn out to be wrong, very likely that our load forecasts will wrong.

ordaro: Economic growth clearly has n less than forecast.

ORBES: In other words, doomsday s simply been postponed? Are you l forecasting shortages?

McTague: We could have them in three regions of the country by 1981.

FORBES: You mean the Midwest, the Southeast and the Plains area?

McTague: Yes.

Cordaro: The concern is not only with shortages but also with dependence on foreign oil, especially in the Northeast. If suddenly that supply is cut off or the cost goes up, we're in a bind. How do we generate electricity?

FORBES: So far, we've been talking about fuel. How about finance? Isn't that an equally big problem for you, what with high interest rates, lack of investor interest in your stocks *(see table, p. 74)* and the long lead time it takes to build a new plant?

Lee: Of course. All these things add greatly to the cost of construction, especially where we have to capitalize 10 or 12 years' interest on the cost of the project. It is tough to persuade the public that we should be allowed to put these interest charges in our rate base, so we have to capitalize them. The public is concerned not with the lights in 1988 but with the bill that came in last month.

White: A young commission attorney in one of our jurisdictions, in recommending a lower rate increase than we had asked, said, "This will provide for the customer's instant gratification and that's what America is all about."

McTague: What utilities would like to do, as any company would, is pass on all of their current expenses in current rates. One of their current expenses is the cost of money—the interest cost on the money they're putting into the plants under construction.

White: The way it usually comes out in the newspapers is that the company is asking the customers to pay for the new plant. In the past interest costs were added to the cost of the plant and depreciated over the life of the plant. This was not a problem because the amount that we were trying to finance in relationship to our total capital was relatively small. Now when we build a new plant, we know full well that the cost of that plant is equal to the whole cost of all the other property. We were able to complete plants—coal fired—in the late Sixties for $110 to $125 per kilowatt. The plant that we want to build in Kentucky will cost at least $900 per kilowatt if it comes in in 1985. That's why the burdens on utilities have increased so much.

FORBES: Some utilities are now tapping the municipal bond markets. Isn't Duke Power one of them?

Lee: Yes, in the days of tight money in 1974 we conceived the idea of having some of our municipal customers participate in the financing of that part of our generation that is equivalent to what they need for their own use. So we put together a proposal in October 1975. We design and build our own power plants; so we are in the engineering and construction business, you might say. So we have offered to sell them a plant partially completed if they continue to build the balance of it for their own account.

FORBES: Was yours the first company to do this?

Static numbers tell the story

Below, some telling figures for 12 of the nation's biggest utilities. Note their low profitability and low growth rates compared with the rest of American industry. Note, too, their high yields, low market prices and astronomical dividend payouts. For investors, the numbers are not unrelievedly grim; if utility stocks no longer promise healthy growth, they at least provide an alternative to bonds with, in some cases, a vestigial promise of *some* growth. For the utilities, though, the numbers are bleak; if low growth should have reduced their need for capital, the fact is, a combination of inflation plus low stock prices and minimal earnings plowback have more than offset it, complicating their problems in raising capital. —J.A.B.

†Value Line

Lee: Several have done this; some, I think, out of desperation.

McTague: Offering parts of plants to municipalities is standard in New England. They are automatically offered a piece of any plant that's built, and they decide how much they want of it. Nowadays, we tend to encourage them to build the plant, and we buy it from them.

FORBES: Are there any technological changes in sight that might relieve the bind the industry is in?

McTague: Oh, sure. We're looking at fuel cells, for example, and we have wind and solar power experiments going. But those are 21st century alternatives—if they are alternatives—and that's not when the problem is going to hit. It's going to hit much sooner than that. When you stop to consider how many wind turbines you need to replace one nuclear plant you can't build, you realize that's not feasible. We'd have to fill every ridgeline in the state of Vermont in order to get the equivalent of one nuclear plant. Vermont is not about to do that, even if it were technically feasible. So wind power may have a place, but it's not a replacement.

FORBES: Okay, what about nuclear power? Are any more plants going to be started in this country? Or will the waste issue stop them as it seems to have done in California?

Lee: I'm convinced that technical solutions do exist for the waste problem. Cumulatively in this country today 99% of our total nuclear wastes resulted from the military program. We as a society have to solve that problem with or without nuclear energy. Nuclear energy has contributed 1%, yet it gets the whole paintbrush. Waste is *not* the issue. Spent fuel transportation is not the issue. Whether or not we have nuclear plants is the issue. These are peripheral issues being used in an attempt to stop nuke.

Cordaro: Part of the problem is there are too many solutions to the waste issue. The government has to hear them all; they want to find the best, the optimum, and when there are several, that becomes a more difficult problem.

Lee: I am more confident in the long-term solution of the nuclear waste disposal problem than I am the coal-fired waste disposal problem.

White: Coal produces vast amounts of waste that have to be disposed of. It's really very large in volume compared with nuclear waste.

McTague: It's not really a technical issue. It's a philosophical issue, and to that there is no answer.

White: If we applied the same kind of safety regulations to transportation that are applied to energy I don't think any of us could get back to where we came from this morning. Unless we walked.

FORBES: This is not a very optimistic session. Assuming that things go on in this unsatisfactory way, what do you see ahead?

McTague: It's not like going off the edge of a cliff. What will happen is, reliability will be affected. We will get more interruptions in service for longer periods of time. It's not that all of a sudden you come up to the edge, you drop off and nobody has any power. We have it, but we don't have it as reliably. That situation would just get worse and worse. If it's recognized, there may still be time build oil plants but there won't be tim to do anything else.

White: It would be hard to build ne industrial plants, though, because util ties would be reluctant to take on ne loads. That means fewer jobs.

Lee: What will probably happen is tha about the time there is a discernib change in reliability, utilities will issu public notices that after a certain da they will take no new customers.

FORBES: Has this happened to som degree already?

White: I suspect that in certain energ intensive industries, such as aluminun it has. We have talked a lot about pote tial blackouts and brownouts. As soon the first one comes, the public servic commission will haul us in and sa "Well now, what can you do to stc this?" There are a number of things tha can be done—require production curtai ments and require commercial establisl ments to operate fewer hours. But th point is, the economy will be restraine

McTague: We have an industrial cu tomer that decided to put in gas turbin as a backup source of power because h was concerned about the reliability supply in the future.

Cordaro: There are many technical s lutions to the problem of energy. Sadl policy issues and regulatory issues hol us back. There is almost an unlimite supply of energy within our technic grasp. There's no real reason why peopl out in time, can't use as much energy a they're able to use. It's within our techn cal grasp to satisfy society's demands f energy. ■

Grumman's solar hot water system challenges the Fighting Irish.

Behold the Iona Prep varsity—the Fighting Irish of New Rochelle, N.Y. They play good, clean football, but they always come up very dirty.

After a long tradition of winning football, the Fighting Irish really got taken to the showers by an all-star team: the sun, and a Grumman Sunstream™ solar hot water system.

Sunstream traps the sun's energy in special roof-mounted collectors and uses it to supplement the existing hot water system. It works so well, it cleaned up on the entire Iona Prep squad...yet cut the cost of showering considerably.

Fact is, Sunstream can reduce an average family's water heating bill by as much as 50%. And save valuable energy in the bargain.

Sunstream. Developed with the space age experience that goes into everything we make.

From our aerospace systems, like the F-14 Tomcat fighter which has no equal.

To our diversity of products. Like our Pearson yachts. Data Systems. And our Dormavac system that extends storage life of perishable goods.

We're Grumman. We're technology, performance and reliability. Grumman Corporation, Dept. GCP, Bethpage, New York 11714.

SEAMLESS COPPER WATER TUBE

It'll live another 100 years ...with Phelps Dodge copper.

Some buildings, such as this San Francisco house, are as good today as they were 100 years ago. Some building materials are even better.

Take copper. As a plumbing material, it's unbeatable. Under normal use, it won't clog, rust or corrode. It's not affected by extreme water temperatures. And it's safe—in case of fire, it won't give off toxic gases.

Phelps Dodge, America's second largest copper producer, knows a lot about the red metal. We mine an average of 600 million pounds of copper a year—close to 20% of U.S. production. And process about a billion pounds of copper a year into a wide range of useful products.

With all of copper's traditional advantages, it has even more to recommend it today:

- Copper is one of the few major natural resources in which our country is truly self-sufficient.
- Copper is recyclable. Over 40% of America's red metal needs are met through recycling copper scrap. And copper's salvage value has doubled over the past 25 years.
- Copper conserves energy, requiring far less to produce than competitive materials. Pound for pound, about half as much as aluminum, for example.

Whether you're renovating a century-old home in San Francisco or building a new industrial plant in Maine, you'll want to know more about copper. Write for our free facts booklet.

Phelps Dodge: the time-tested name in copper.

Recalling 1974, American beef farmers refuse to increase their herds despite rising beef prices. Shades of Marie Antoinette.

Let 'em eat soybeans

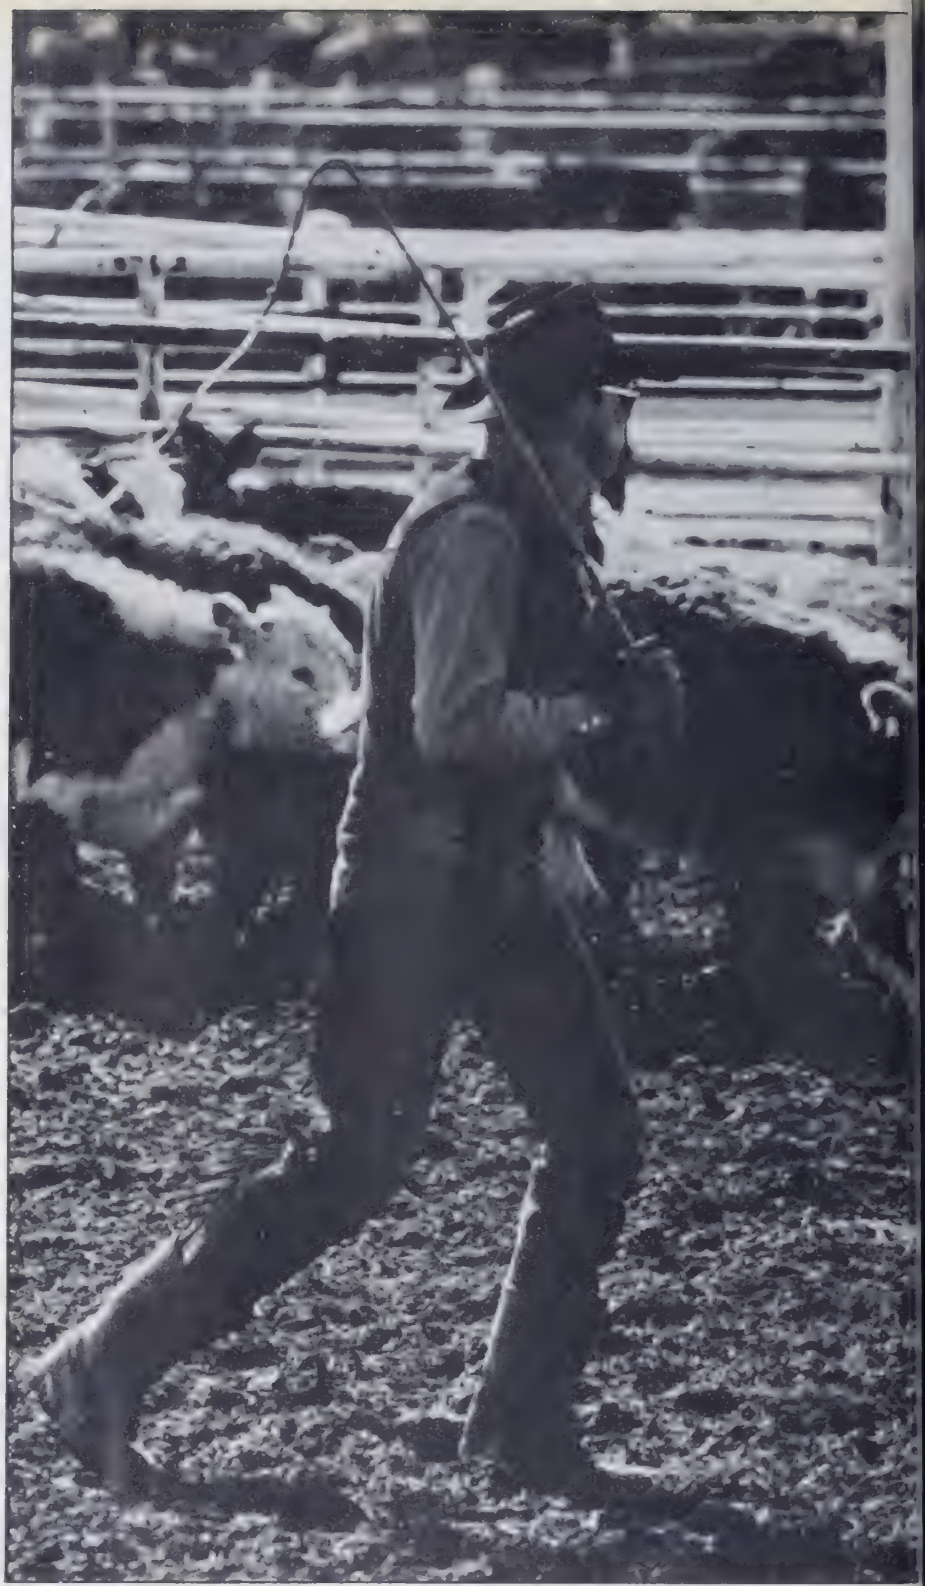
By Elizabeth Bailey

IT WAS DINNER TIME at Pitchfork Land & Cattle near Guthrie, Tex. and R.J. Bell, the veteran cook, was passing around the black-eyed peas, french fries and meat loaf. The cowboys, seated along the varnished pine table, discussed the Super Bowl. By the time R.J. served the cherry cobbler, talk turned to business. "Nobody's building back their herds," said Billy George Brennan, a ranch hand in his 40s. "Guess we'll be seeing soybeans in our burgers. Don't taste so bad." Drawled his neighbor: "Just not the same."

It's easy to understand why cowboys are talking about meat extenders. Hamburger rose 43% in price last year, to about $1.30 a pound today, and the outlook is for worse to come. The cow population, which is the basis for future supplies of meat at the grocery store, is back down to only 49 million—about what it was in 1967 after getting as high as 56.9 million in 1975. The total cattle herd is now about 110 million, down 17% from four years ago.

So, why are cattlemen so slow to rebuild their herds? At current prices of 79 cents a pound for feeder cattle—beasts of roughly 600 pounds raised from birth—the rancher breeding them can earn close to 18% on his investment.

But what you hear out on the flat, unforgiving plains of the Texas Panhandle today is not rejoicing in the good times, but caution bred from the very bad times of the mid-1970s. "We're going to wait until spring to see what kind of herd we build," says Jim Humphreys, the ranch manager who runs the Pitchfork for its owners, a family now living in St. Louis.



Cowboy Bruce McFalk herding cattle at the Coyote Lake Feed Yard near Muleshoe, Tex.
Cowboys know why the price of meat is going up; the size of the herd is down.

Considering that it takes three to four years from the time a rancher decides to start rebuilding the herd until the offspring of that decision come to the retail market as prime ribs, steak and hamburger, the cattleman's caution means years of high beef prices ahead—and more chicken and pork on the American table. Full-time ranchers, like Jim Humphreys, have had all they can take of enthusiasm over beef and cattle in th boom/bust of this decade. They'd like th business to settle down so they coul make a good living without repetitiv cycles of boom and bust.

Jim Humphreys runs a ranch employ ing 15 full-time cowboys taking care c 5,000 cows. That's a big operation in thi business and the Pitchfork is a rarity The massive herds we all remembe

n Western movies are not any longer usual thing in Texas or elsewhere. st typical is a part-time rancher with be 50 cows. "The guy might have a ice station or a welding shop in town raise the cattle on his own land or e it from a neighbor. It doesn't take a le lot of work—maybe he'll throw some hay each day, but that's about That's the way Jim Nix of the *World Food & Agriculture Bulletin* puts it.

In these part-time cowboys lies the problem of the cattle business—and the cause of the sharp swings in the price of hamburger. When things look good, as they did in the early Seventies, everybody gets into the business—doctors, dentists, corporate executives. For them it is an ego trip with speculative thrills. When prices begin to drop—as they did in 1973—these part-timers fall over themselves to get their cattle to market.

Go back to the late Sixties. The business looked good indeed. Demand for beef was expanding at an incredible rate. Americans consumed only 60 pounds of red meat per capita in 1950; by the mid-1970s they were wolfing down 120 pounds. Steak became a great American status symbol—so much so that many people felt underprivileged if they had to cut back on consumption. And at the other end of the scale, hamburger became one of the great staples and McDonald's became a growth company.

"I remember back several years," says John Birdwell, a third-generation rancher in Muleshoe, a small town in the Texas Panhandle, "I was at a meeting in San Diego where Secretary of Agriculture Butz was talking—telling us we couldn't possibly produce enough beef by 1981 or 1982 to keep up with demand. Every man there heard the same thing I did. We all wanted to make money."

So cattlemen took advantage of a more efficient way to raise cattle, and the result was a quantum jump in the beef supply. Previously cattle had been fattened mostly on the range, less than half of them moving to feedlots in the Corn Belt. The advantage of a feedlot is that cattle don't waste energy wandering around looking for food; they can gain up to three pounds a day on a lot compared with about one pound on the range. With the demand for beef soaring, the feedlots moved to the Texas Panhandle, where they were more accessible to ranchers; suddenly over 75% of all cattle were put into feedlots. Since these cattle come out around 100 pounds heavier than their range-grazing counterparts, the supply of meat grew even faster than the size of the herds. Meat poured onto the market.

At first life was cheery indeed. "All the doctors and big money back in New York were jumping into the business," says Humphreys. Speculators would buy up the young cattle, pay the feed bills and hope that the prices paid for finished cattle would rise. "It got ridiculous," remembers one rancher. "These guys would have different agents representing them at the same auction, bidding against each other. It was great for us ranchers, but it drove the price of cattle sky-high."

Between 1972 and 1974, bad weather and poor harvests overseas increased demand for U.S. grain exports and drove the price of corn from $1.57 a bushel to more than $3. The doctors lost their shirts feeding all those feedlot cattle. Investors who were making $70 a head in late 1972 were losing over $100 a head by 1974. Feedlot operators lost over $3 billion in 1974; many quit the business.

This bulge in grain prices, drought and the stirrings of the 1974 recession caused a panic among the ranchers—particularly

Panhandle rancher John Birdwell looking over his spread
"We all wanted to make money," he recalls, "so we produced too much cattle."

the part-time cowboys who had take out loans to buy their cows. But th calves conceived in the dream days 1971 and 1972 were still with the mothers or maybe just weaning, and th supply of beef waiting to go to mark was growing. Speculators started sellin off their cattle—cows and heifers as we as steers. It amounted to a fire sale. Th price of cattle on the hoof dropped fro $43 per 100 pounds in 1973 to less tha $36 per 100 pounds in 1974.

History repeats but rarely in precise the same way. A rerun of the overexpa sion of 1973 is unlikely—which is wh expanding demand is pushing up again a rather static supply.

However, trouble could come from ot er directions. In its truckling to the far vote, the Carter Administration and Co gress have kept quotas low on importe beef—this while the U.S. lectures Europ ans and Japanese on letting in mo American citrus fruit and chickens.

Imported beef still accounts for on about 7% of U.S. consumption, but th quotas are a powerful anti-inflationa weapon. In a token way, President Ca ter has already used the weapon, raisi the beef quota last summer. "Back June," says Birdwell, a large man lookin the part of a successful rancher in press jeans and a monogrammed striped shi "my son Clay had a number of catt ready to go. He priced them at 62½ cen per pound and had a bid for 62 cents. H didn't take it. Then the announceme came about importing 200 million mo pounds and he had to wait two wee before he could get 50 cents."
